There is no doubt but what speed alone has been greatly overrated, and there is no doubt but what a dog can hunt too fast as well as too slow. It is an extreme exception when a dog is hunting, going at his highest speed. Some speedy dogs continually pick out the smoothest and easiest going, though they may keep near enough to likely places to have the appearance of earnest seeking for game. When they succeed in finding, it is mostly in such open ground or thin cover that it makes a pretty scene, and a favorable impression on the spectators. Such dogs are not first-rate finders, but they save themselves from any brier scratches or rough usage in close cover. They never hunt their ground out thoroughly and in actual field shooting make a day of toil for the shooter instead of a pleasant one. Still the spectacular style of going, the seeming superiority of a find at 500yds. over one of 200yds., the high speed which, theoretically, must result in more finds because it results in covering more ground, are all more or less gratuitously credited to the fast dog. Long experience has demonstrated that the fast dog is rarely a finished performer. Half breaking such dogs helps greatly to conceal natural imperfections, for what then appear to be errors from imperfect breaking may really be errors from natural incompetency. The dog being under imperfect control, it is impossible for any one, except a novice, to determine a half-broken dog's capabilities. How often have such half-broken dogs shown apparent high-class qualities, and when a better training was given them the high-class possibilities proved spurious? There is no contention here that a fast dog may not be a first-class dog in every respect; but I do question the high-class quality of a half-broken dog when there is little else to his credit but speed. The fast dog may have all the functional imperfections of a slow dog. His nose may be dull, his judgment poor, with an inclination to hunt for himself more than to hunt for the gun, yet it all has the appearance of high-class possibilities that the errors may be condoned on the score of imperfect breaking.

The diligent dog, which hunts out his ground thoroughly, working out intelligently the likely places, with little or no prompting from his handler, may be a far superior finder and much more satisfactory one to shoot over than his speedy rival. If he works intelligently to the gun, there then is no comparison between the two.

It should be borne in mind that a dog with great speed and little brains—commonly called rattle-headed—is quite as likely to transmit his mental deficiency as he is to transmit his speed. That many unfortunate mistakes have been made in breeding to the dog whose sole recommendation was his high speed, there is no doubt. Greater mistakes have been made in breeding to his brother, perhaps inferior in every desirable quality of field work, but having the one accident of being brother to a fast dog.

There may be harmful extremes in speed as in almost everything else, and there are undoubtedly mistakes in rating a dog's merit by giving speed a value above all other qualities. The dog which has speed enough to beat out a reasonable range and keep ahead of his handler, guiding his efforts by his handler's speed and course, taking advantage of the wind and beating out the ground intelligently, working skillfully to the gun, will show, if he have a good nose, better results by far at the end of a day's shooting. His diligent, all-day manner of hunting may not be so catchy as that of a speedier dog which may be running a large part of the time without seeking for birds. In short, there is need of more "plug-shooting" admixture in the dog which chiefly soars.

909 SECURITY BUILDING, Chicago.

Three years' undisturbed possession of a setter dog will destroy the veracity of the best man in America.—*Texas Siftings.*

# DOG CHAT.

A case that has a bearing on a similar one that occurred at the late Specialty show has just been decided by the English Kennel Club. The Rev. T. Nolan exhibited a Skye terrier, Tackley Roy, and Mr. Young another named Little Dombey. First prize in the winners' class was given to Little Dombey and second to Tackley Roy, but the judge reversed their order on the same dogs again competing together in the open class, and on it being explained to him said he had awarded first to Tackley Roy in both classes, and thereupon got back his slip and altered it, although it had not only been handed in but after the awards had been made public on the board in the evening. Mr. Nolan argued that of course it was a slip of the pen on the judge's part by his inadvertently putting down first to 839 instead of 838, and asked if the club seriously accepted the rule that every slip of the pen must stand as originally written in the judge's book, because in this instance, by this same rule, first in the limit class must go to 832, a dog that was absent from the show, because the judge originally put down the prize to 832 instead of 828, and was only corrected on its being pointed out. The committee decided that a judge could correct any mistake he might make on his judging slip while it was in his possession, but not afterward; and the committee, while deeply regretting the error on the part of the judge, decided that the award must stand. We have no rule that directly covers this point other than that the judge's decision is final in all cases affecting the merits of the dogs, etc., etc. Our judges are, as a rule, very careful in the above respect, but we have come across a few instances where the original awards have been changed, and in the case alluded to at the Specialty show we drew attention to the awards in the fox-terrier puppy class, where the judge's original awards had been altered in his book but not on the steward's slip, which had already gone to the board and the cards had been tacked up according to the original placing, and so stood to the end of the show. It is well to draw attention to these matters, so that judges and exhibitors may be more careful in future.

While on this subject we may as well allude to the confusing practice of some shows where novice and puppy classes are provided, of giving a dog entered in open, novice and puppy classes following numbers. This is confusing both to the public, the men who have to bring the dogs into the ring—leading to much delay as the dog is generally benched according to his open class number, and to those who have to report the shows. The one-dog-one-number system is by far the best and simplest for every one, judges as well.

We have been asked as to what we alluded in referring to Nolan, "the hero of the dog box journey," in our account of the New York Dog Shelter. Nolan, who is well known to those who exhibit frequently at our shows, wished to go to the Detroit show after Washington last year, but the "ways and means" were difficult. One exhibitor, whose name we need not mention, had several large crates containing his great Danes, and a solution of the difficulty was soon found when it was suggested that he ride in one of these. Nolan was forthwith "crated" and shipped on the cars, traveling with the other "jolly dogs" at excess baggage rates. Sustenance was surreptitiously conveyed to him as occasion offered, and he was landed at Detroit right side up. After working as attendant there during the show he was then billed for Indianapolis show, which took place the week after, and the same tactics were resorted to as before, and he arrived at his destination little the worse for wear. Our Sunday paper special writers have given us accounts of their experiences in many strange *rôles*, but no one has yet had the temerity to attempt such a journey as this must have been. Washington to Detroit is about 800 miles, and Detroit to Indianapolis is about 500 miles, so one can imagine that while Mr. Nolan's ambition was not cramped his limbs must have been.

Those who are interested in Dr. Cook's party of hunters and scientists who sailed for Greenland on the Miranda at the beginning of this month, will regret to learn that owing to an argument with an iceberg two days after she left St. Johns, N. F., in which the vessel came off second best, they were compelled to return to St. John for repairs. This led to an alteration in some of the travelers' plans, and several of them left the vessel and proceeded to Upper Labrador by the mail steamer, for the hunting and fishing, accompanying Professor Hite's party as far as Hamilton Inlet. In the Upper Labrador party is Mr. R. D. Perry, the well known fox hunter and member of the Brunswick Fur Club, who is making his second trip to these new hunting grounds.

The Wellman North Pole expedition is reported to have met with disaster. Their ship Ragnvald Jarl and all on board are reported lost. We trust that such may not be the case. The expedition was interesting to dogmen and others on account of Mr. Wellman's predilection for the Belgian draught dogs in preference to the Esquimaux sledgers that previous explorers have been contented with. This is a phase of the expedition in the outcome of which we felt particularly interested, and reports state that at last accounts the only trouble Mr. Wellman had experienced was with these dogs, several of which he had lost.

Field trial men should remember that the entries for the All-Aged Stake of the Manitoba Field Trials Club close Aug. 15, and the secretary, Mr. Gallaugher, would remind intending competitors to send in their entries as early as possible, so that all may be in readiness for their trials on Sept. 5.

We have received several inquiries lately for the names of bull-terrier and great Dane breeders. It would be good policy on the part of the breeders of such dogs if they would give a little more publicity to their doings. A "Kennel Special" will serve the purpose.

Mr. T. W. Zimmerman sends us a charming photograph of puppy character in the picture of ten English setter puppies, the survivals of the fittest from an original thirteen. They are by Rowdy Rod out of Uno Z., a three-year-old bitch that Mr. Zimmerman avers is the best field bitch he ever shot over. Uno Z. is by Marquis Noble ex Vic. Every one knows who Rowdy Rod is. We welcome all puppy pictures; they are usually natural and free from the stilted and strained positions so many of the older dogs are made to assume by their anxious, not to say ambitious, owners, and through which expression and identity are in a great measure lost.

Several letters on the Beagle, English setter and other subjects are held over until next week.

Mr. J. F. Stoddard of Georgetown, N. Y., has bought the well known beagle Tricotrin from the Hornell-Harmony Kennels of Covert, N. Y. "Tric" is a good dog but apt to get himself up a little too gaily at times. Mr. Stoddard's Minnie K. whelped, July 19, half a dozen to champion Royal Krueger.

Although Kingston, Ont., will not have a show this year, Kingston fanciers do not mean to be forgotten, as Mr. McK. Robertson will show his cockers, C. Y. Ford several collies and T. Carson his Irish water spaniels at the coming Toronto show.

The recent action of the Louisiana Legislature authoriz-

ing the sheriff of each parish in that state to procure four "bloodhounds" for the purpose of tracing and pursuing fugitives from justice, and allowing $4 a head per month for their maintenance, savors a good deal of a political jump. Such an order would be a godsend to our bloodhound breeders if by "bloodhound" the dog that we know as such, and as bred by Messrs. Winchell, Lougest, Inness, Glazier, &c., was meant. But the dogs used, and 240 of them will be required to fill the conditions of the bill, there being 60 parishes, will probably be the deep-flewed, heavy-eared Southern foxhound. Our real bloodhound breeders should look into the matter, and introduce their hounds to the sheriffs' notice.

---

Mr. A. C. Wilmerding returned from his brief visit to England on the Britannic last Friday. Contrary to the experiences of his friends, Messrs. Moore, Post and others who went over to try conclusions with English trap-shooters, Mr. Wilmerding returns delighted with his reception among the dogmen he met. Messrs. Cowell, secretary of the Spaniel Club; Woolland, the field and Sussex spaniel breeder; Farrow, the cocker breeder and G. R. Krehl, editor of *Stock-Keeper*, are all mentioned in terms of admiration for their courtesies to the visitor. After looking over several of the principal kennels, a trip to Paris and a run through Ireland, not forgetting a kiss from the Blarney stone, filled up the rest of the time at his disposal.

---

In regard to the peculiar ailment from which the Chesterford Park Kennels lost two valuable dogs recently, the symptoms of which we gave in our issue of July 21, Dr. Sherwood says that from Mr. Elliott's description the symptoms are those of ulcerative and gangrenous stomatitis. Local or internal treatment is necessary.

---

We were startled last Thursday when Mr. Richard Merrill of Milwaukee, Wis., dropped into our sanctum. He is making a visit to Southampton, and can talk of little else but surf-bathing and tennis just now. He reports Paul Bo in good shape, and his prospects for running something in the trials next year are good. He has a young pointer, Hops II. (King of Kent–Hops), that promises well, and an English setter by his Paul Bo, out of Tube Rose. Mr. Merrill, our readers may remember, is "Dick," so often spoken of in Mr. Hough's articles on "Dixie's Land," published in FOREST AND STREAM during the spring. He will probably exhibit Paul Bo at Toronto.

---

The noted pointer bitch Sally Brass II., that Mr. Heber had sent out to California and is now owned by Mr. Vernon, has not contributed much to the welfare of pointers on the Coast. Her last litter of eight to Glenbigh, the English imported dog, all died, and she has only raised three out of the last four litters.

---

Mr. Roberts writes us that he has at last succeeded in getting his judges' list for the Rhode Island show approved, the Fair managers being at first under the impression that it would do just as well if this important announcement was deferred till the show week. To quote Mr. Roberts: "I think you will find the list of judges quite satisfactory to the majority of the exhibitors, but it is somewhat different than I should have arranged had I had the matter in hand before. The specialty clubs are arranging several specials for us and I think the fox terrier classes will be especially warm." Mr. Harry Smith has taken hold, and when this is the case a good entry is sure to result from his hustling tactics The club will have two fox terrier stakes at least judged there, and he expects to arrange for a number of specials, and as there is a club judge up the best of feeling should prevail on all sides. The Boston terrier men do not mean to let this chance escape them either, so they have offered many specials and furnished a club judge, and a good entry is certain. Mr. Roberts has power to add to the premium list and he is now busy on a revision of some of the classes and the changes will be announced next week. The judges selected are: James Mortimer, New York: Mastiffs, St. Bernards, great Danes, bull dogs, Irish, bull, black and tan, Scottish, Dandie Dinmont, Bedlington and Yorkshire terriers; pugs, Japanese, King Charles and toy spaniels and poodles. John Davidson, Monroe, Mich.: Newfoundlands, English bloodhounds, pointers, Dachshunds, Chesapeake Bay dogs, schipperkes, Skye terriers and miscellaneous. William Tallman, Plainfield, N. J.: English, Irish and Gordon setters. Harry W. Smith, Worcester, Mass.: Greyhounds, wolfhounds and deerhounds. J. Otis Fellows. Hornellsville, N. Y.: Foxhounds, field, cocker, Clumber and Irish water spaniels. Joseph Lewis, Moodus, Conn.: Beagles. T. S. Bellin, Albany, N. Y.: Fox terriers. W. C. Hook, Boston, Mass.: Boston terriers. Entries will close Sept. 3, and the fee is $1.50, and should be sent to W. W. Dexter, Sec'y, Providence, R. I.

---

We have heard a good deal lately about the formation of a ladies' kennel club in England, and a meeting was held July 3, at which the club was fairly started. It was intended at first to call it the Ladies' Dog Club, but the English Kennel Club suggested that the "Ladies' Kennel Association" would be better, and this was adopted. The association is not merely a representation of the pet dog fanciers, but all varieties of dogs will be represented, and it is expected that the association will become a power in the land. The Founders will number 75, and the fee is $10.50. A general meeting will be held Sept. 3, and the association will make its debut at the Kennel Club show in October. The main objects of the club are to assist ladies to temporary accommodations during dog shows and insure respectable accommodations for them in strange towns, and generally help them in the many disabilities under which they labor in showing their dogs. A permanent club room in London with an exercising ground for dogs attached will, it is thought, be particularly acceptable to the country cousins of the association when in town, and is to be a gensral meeting place for lady fanciers. Challenge trophies in the shape of bracelets and other jewelry dear to the heart of woman will be put up by the association. There may come a time when America will need such an association, but the present indications do not point that way. The actual exhibitors of the fair sex in America may almost be counted on the fingers of one hand. Some of the highest ladies in the land, from the Queen down, exhibit dogs in England.

---

Hounds which go by the name of bloodhounds have been used extensively in Louisiana recently in tracking criminals, and with such success that the Legislature passed a bill on July 6 authorizing the sheriff of each county to buy a pack of these "bloodhounds," the State to pay for them and support them at an expense of $1 a month. Our real bloodhound breeders and the new club should make an effort to introduce their dogs among these people. The bloodhounds spoken of are doubtless the large, heavily-eared and flewed foxhounds so often seen in the South.

---

At the annual meeting of the Midland Association for the Promotion of Kindness to Animals, held recently in Birmingham, England, among the speakers was Dr. Lawson Tait, who remarked in the course of his motion against vivisection, that the society was doing a great and humane work in freeing the streets from diseased and starving dogs. He was certainly the last person to minimize the row that was being made about hydrophobia, but what the row was about was all moonshine. The cleaning of the streets of diseased dogs was doing more to prevent hydrophobia than all M. Pasteur was doing or would ever do. He had made inquiries in this neighborhood and could only hear of one case of hydrophobia, and that occurred in the practice of Mr. Oliver Pemberton in the year 1834. The percentage was in fact 0.2 in one million. The talk, therefore, about making a Pasteur institute for the treatment of diseases like that was most grotesque nonsense.

---

"Stepping Stone" in *Scottish Fancier*, gives some advice that may be of benefit to our Scottish terrier breeders. In regard to mating he says: "As a lot of bitches are now coming in season perhaps it might not be out of place to advise breeders while selecting the most suitable mate most likely to remedy the weak points of the brood bitch not to be tempted to use light-boned, narrow-chested, leggy dogs, even although they have abnormally straight legs. Stick to a sturdy, short-legged type with powerful quarters, dark eyes, right at shoulder, and as good in front as possible." And the following referring to color may be worth knowing: "A lot of people have a fad for black dogs, which I think is a mistake. A good hardy warm red brindle, or a well-barred gray dog is, in my opinion, preferable, and certainly does not require to be tampered with like the dark dogs, which, as a rule, grow too much coat, and unless in exceptional cases of softer texture."

---

## The Bell-Martin Case.

A perusal of Mr. Bell's letter in another column will suggest to any unbiased mind that had he done in the first instance that which he has done in the last he would have been saved the annoyance of an A. K. C. disqualification; much ill feeling would have been dispensed with, and we should not still have to wonder upon what charge Mr. Bell really was disciplined. Mr. Martin under the circumstances had a perfect right to advertise the fact that he owned Consequence, as he paid $100 for that bitch, and this money had not been returned to Mr. Martin when Mr. Bell advertised Consequence and Rejoice for sale. To our mind the whole thing resolves itself into this: While Mr. Martin has been the victim of mistaken identity, Mr. Bell has been the victim of overweaning reliance on legal advice.

---

Dog shows in England seem to be more of a weary grind than anything else. English exchanges indicate eight shows for the past week, and no wonder club secretaries are continually crying "Wolf," in the shape of no entries. So many of the English shows nowadays are day and half-day events that an exhibitor with a money-earning team can skip from one to the other during the week and afford to give the two and three-day shows the go-by; and that is one reason for the paucity of entries at closing time. Then, for fear the show's reputation will suffer from the lack of a hundred or two entries, the closing date is extended. This demoralizes everyone—exhibitor, secretary and handler—and the Kennel Club will find it necessary to adopt some such rule as obtains in the American Kennel Club. This reads: that entries shall close no less than seven days prior to the first day of the show, and any club accepting any entry after date (unless postmarked on the date of closing entries) shall be subject to a fine of not less than $10 for each entry so accepted. No alteration of the date of closing shall be allowed. If English clubs will adhere strictly to such a rule, exhibitors will know just what to expect, and while it may not work well in a few instances at first there will soon be a healthier feeling all around, and shows that are worth supporting will be placed on a firmer basis. Dog shows, like other ventures, to command respect and be a benefit to all concerned, must be run on business methods. At present in England there is a great outcry about the cancelling of classes at shows, and this cancellation is often not known until the show opens. This in itself is wrong. Show committees should stand by their premium lists and the classes be so arranged in the first instance with a view to the best results, and, come what may, the clubs should be compelled to abide by their classification, either by Kennel Klub rules or, where this is not feasible, by the exhibitors themselves, which they can do by ignoring such shows. The fear that certain classes may be cancelled has no doubt much to do with the no-entry cry, for English exhibitors, having such a number of shows to choose from, will naturally foster those which they know will stand by their guns.

---

There is little sentiment in English showing these days, it is all a question of pounds and pence, and this we gather from the writings of Mr. Freeman Lloyd on the subject. From them we learn that the American custom of handlers taking teams to the shows is largely in evidence, and when this is the case money and not glory will be the basis on which the success of dog showing revolves. A three or four days' show is a tedious affair after the first day, when judging is practically over, and some other attraction must be afforded the public to draw a decent gate. Here our principal shows being held in halls and other buildings, there is no other attraction feasible but the trick dog circus, which has become such a recognized feature at all our kennel club shows. When shows are held in connection with the agricultural fairs this feature is not necessary, as few of these associations charge an admission fee, and the dog show simply becomes a feature of the whole. Still these shows might be made vastly more interesting to both exhibitors and visitors if whippet racing was instituted. It is an honest, clean sport when conducted properly, and there are few kennels that would not enter into the sport with enthusiasm, and as there are always facilities for carrying out such races on the tracks of the Fair grounds, the subject is worthy of careful attention on the part of our Fair managers that give dog shows. In England this sport is fast gaining ground, and as so many of the shows are held in the open in connection with agricultural and flower shows, a whippet handicap will no doubt soon become a recognized feature of the majority of such events, several of them having lately taken place. This is an age of progression, and something new and exciting must be provided to keep the game alive.

---

## Toronto Show.

The list of judges for the Toronto show was received just too late for last week's issue. We would again remind club secretaries and our correspondents generally that copy to insure insertion the current week must be mailed so that it reaches this office not later than Monday.

There is, however, no fault to be found with the list, although two familiar names are absent for the first time in several years. We allude to Messrs. Davidson and Mason. Mr. James Mortimer, fresh from his English refresher and primed with the latest fashions in type and fancy, will have some heavy classes no doubt in mastiffs, St. Bernards, great Danes, Newfoundlands, bloodhounds, Russian wolfhounds, greyhounds, bulldogs, poodles, Scotch terriers, black and tan terriers, Irish, Dandie Dinmont, Bedlington, Skye and Yorkshire terriers, pugs, toy terriers and Italian greyhounds, and the miscellaneous classes.

Mr. T. S. Bellin, of Albany, N. Y. (late of England, please, Mr. Superintendent), will tackle his favorite breeds, fox-terriers and bull-terriers, and we do hope for the good of dogdom that he will be careful when the bull-terrier pups come in. This is not a reflection on this gentleman's judging powers, but merely a reminder of the awful consequences that may happen from "Uncle Dick's" recklessness.

Maj. Taylor will have a big day's work before him with the large entries generally made at this show in pointers, English, Irish and Gordon setters, beagles, English and American foxhounds and dachshunds. He will find considerably more bench show type and not so much of the reckless field imitations as he did at Louisville, and therefore be better able to do himself justice. Mr. E. M. Oldham, of New York city, with Irish water, Clumber, field and cocker spaniels, will be at home and among those who appreciate his judging, but how he will fare with the short-nosed brigade—King Charles, Prince Charles, ruby, Blenheim and Japanese spaniels is yet to be seen, but his task will not be a difficult one. Mr. Robert McEwen, of Byron, Ont, is the only Canadian judge, and in fact the only only one outside of New York State, but he will probably find his office much easier to fill than he did at the specialty show in May last, when, added to the natural nervousness of a first appearance, such a hot lot of dogs were put down before him. The show so far seems to promise a successful issue.

---

The heat in England at present is having almost the same effect at their summer shows as would be the case were such shows held here during the heated term, although with shorter distances to travel the danger is not so great as with us. Dockleaf no doubt wes affected by the heat at Cardiff, although there is now a report that there was foul play in connection with his sudden death. Another crack bulldog, Monkey Brand, is said to have almost succumbed at Reading show on July 12, but happily he has recovered. Bulldogs and pugs and all such peculiarly headed dogs are always more liable to succumb to heat in traveling and at shows. Their short thick necks and obstructed formation of nose and muzzle precluding in a more or less degree a free passage of air as in a setter or pointer or other straight-muzzled dog, and exhibitors should bear this fact in mind when shipping to our fall and early summer shows when the temperature is so liable to sudden changes. As we have previously stated, it is better to run a little risk from draughts than to expose your dog, be it bulldog or collie, to suffocation. Such a loss is nearly always indefensible and heartless. While upon this subject we may allude to the mistaken idea some exhibitors entertain that an open slat crate is the best for shipping dogs in hot weather. This we have repeatedly proved to be erroneous, and no later than the Louisville show this fact was brought prominently to our notice. On the way down, the heat was simply—well, fiendish, and we noticed in one baggage car several dogs crated in open slat boxes. These had no protection from the hot air; it was all around them, back and front, and with tongues lolling out and panting for dear life their situation was truly pitiful. Other dogs were sensibly crated, that is, the crates had solid roofs, sides and bottom, but under the eaves of the roof there were open spaces through which a current of air was continually attracted, and the dogs, although there were often two or more in a crate, were comparatively comfortable, and while the open-slat-crated dogs were continually craving for water and could scarcely be satisfied, the others did not even open their mouths, and often refused water when offered to them. Exhibitors who know their business use such crates as were introduced to this country when the Belmont and Rutherford and Thayer crack fox-terriers were imported some years ago. These, we believe, are known as the "Turner" crates, at least they emanated from that kennel, and are in general use in England, and many of the terrier and collie men have had boxes built on their lines. They are as comfortable for winter traveling as in summer, for the baggage cars on our railroads are often uncomfortably heated in winter, and when dogs are piled on the platform to wait for another train, or when being transferred to the show building in express wagons they are often exposed to a change in temperature of anywhere from 20 to 40° and sometimes more; thus a crate such as we mention becomes indispensable, as it allows no direct draught to play upon the dogs; a tin or zinc shield on the inside of the aperture, and sloping toward the center of the roof, prevents this even if the dog is standing up, the air thus being forced to the top of the crate, and then equally distributed throughout the box.

Our exhibitors should pay more attention to this subject, and if they do they will be saved many anxious moments spent in curing their dogs of pneumonia and rheumatism incurred while traveling. An ounce of prevention is better than a pound of cure.

---

In its report of the Collie Club show, held lately in London, the *Field* has this to say in regard to the modern collie as seen on English benches: "Generally, there does not appear to be any improvement in the form and character of the collie as he is known to-day. A year or two ago we fancied that the long, greyhound-headed type of dog was going out of fashion, but, after seeing the kind of animal which numerically predominated on Tuesday, we are afraid such is scarcely the case. Many of the winners were handsome enough, especially in color, but there appeared to be a lack of expression throughout—a narrowness in the skull and an absence of bright intelligence which ought to be prevailing features in animals of this variety. A long head, small, semi erect ears, and a profuse fluffy coat are evidently here obtained at the sacrifice of more useful properties; lightness of bone, too, appears to be a modern characteristic. Those who are in the habit of seeing collies doing their proper work are no doubt disappointed with the stamp of dog that wins in the show ring nowadays. On many occasions it has been our duty to draw attention to the lack of attention judges give to the action and movement of dogs when in the ring. This was particularly marked on Tuesday, and until some of the bitches were placed before Mr. Rae, the judge, he did not even have the competitors paraded round the ring in the usual fashion; and what use is a collie unless he can move and gallop? A wild fell sheep requires a lot of turning; some we have seen which could actually run away from almost any sheepdog. However, let us hope that the prize winners could move freely, although no opportunity was afforded them to show what they could do in this particular."

---

The well known spaniel judge Mr. E. M. Oldham, sailed for England July 18. He has merely taken a run over on private business and will return in the course of a week or two.

---

Special prizes at the Des Moines show are numerous, the most valuable being a silver cup, value $25, for the best kennel of St. Bernards, and from $10 cash prizes the others range from a set of underwear to a violin. The judge of all classes will be John Davidson.

---

A show was held July 18, at Newcastle-on-Tyne, which is interesting from the fact that it was held in the same building, the Corn Exchange, in which the first dog show took place arranged by Mr. John Shorthose and Mr. W. R. Pape, at the suggestion of Mr. R. Brailsford, father of the well-known field trial man. In that show, held in 1859, there were 60 entries, confined to pointers and setters. An interesting feature of the show was the appearance of Mr. Shorthose who, despite the long lapse of years since his first show, has not allowed his love for dogs to languish. Another old face was that of Mr. John Douglas, who we well remember as an active judge and promoter of dog and horse shows in the early seventies.

---

Mr. James Mortimer, who has not yet been able to tear himself away from his English friends, is still buying dogs. His last investment has been in schipperkes, and they are good ones, too. Black Peter, that he claimed at Barking show, is one, and three others come from Mr. Lullam's kennel. Schipperkes have not taken very well over here, and are confined to a couple of kennels, but if a more earnest effort is made to bring them to the front they may take

Lady Eva, the Irish terrier bitch he bought from Mrs. Butcher, is said to be in whelp to that lady's noted Ted Malone.

---

A new bulldog, Donna Venu, was brought out at Bristol, (Eng,) show by Mr. Hodgson. She is only 9mos. old, but won no less than five firsts, a load of specials and the championship.

---

Mr. Berrie, the president of the Bulldog Club, would seem to be no more happy in his judging selections in bull-terriers than in the older breed. At Bristol he simply flabbergasted the fraternity by giving to Dick Whittington, a local dog, the cream of the prizes, and when it is remarked that the dog was only catalogued at $30 and remained unclaimed even though smothered with honors, there seems good cause for the general complaint. Mr. Berrie is an old and respected judge, but it would seem that the old adage might well be applied to him.

---

Merry Coll, the noted collie, is now the property of Mr. H. Thompson, he having paid $375 for him.

---

Collie men on this side had better be prepared, it may blow "great guns" before long. 'Nuff said.

---

Mr. A. E. Pitts of Columbus, Ohio, so well known as a pug fancier, and who imported Ch. Penrice and others, made us a pleasant call on Tuesday last. He says he likes breeding pugs better than judging kennel prizes. Mr. Pitts has a young bitch by Ch. Penrice, out of Silver Queen, that he sold to Seminole Kennels, which he thinks better than anything he ever had, and will probably show her with others at the New York show next February.

---

### English Setter Blood Lines.

IT is only natural that the sportsmen on the Pacific Coast should feel deeply interested in the articles on English setter breeding by Mr. P. H. Bryson, which recently appeared in FOREST AND STREAM. Both *Breeder and Sportsman* and *Field Sports* reprint the essay on English setter dams, in their issues of June 30. Mr. H. T. Payne, editor of *Field Sports* and owner of Countess Noble and other good field dogs, gives the subject serious consideration, and as he understands his subject his remarks are well worth reading. He writes:

"The article is full of many truths and valuable suggestions, and had Mr. Bryson gone a little deeper into the subject and made a more careful analysis of the blood lines and the manner in which they were crossed, he would have somewhat modified his deductions and made his article one of lasting benefit to the breeder who mixes intelligence with every cross he makes. If his love for his grand old dog Gladstone—whose memory we revere and whose praises we love to sing—has the effect of coloring Mr. Bryson's views to some extent, we can but admire him for it the more. Yet, while we yield to no one in our admiration of the great Gladstone, we wish to do justice to another equally as great, and whose blood for a top cross has even been greater. It is unnecessary to say that we refer to Count Noble. The value of the uniting of the blood of these two dogs is obvious to every one who has watched the breeding of our field trial winners. But the careful observer must have noticed that this blood must be joined in one way, viz.: the Count Noble sire and the Gladstone dam. This Mr. Bryson shows in his article, but neglects to point out to the less observant, that the blood of Gladstone in the dam does not breed on to any great extent unless continued by top crosses of the blood of Count Noble. It may be that Mr. Bryson has not thought this of sufficient importance to call attention to it in his article, or possibly, being more interested in watching the blood descendants of Gladstone he has not noticed it. Be this as it may, it is very important to the breeder and should be carefully considered in the mating of his dogs. Mr. Bryson says that 'few dams breed on unless rich in his (Gladstone) blood.' 'He was the sire of Peep-o'-Day, the dam of Carrie J. and Gath, the latter the sire of Gath's Hope and Gath's Mark, who have a double cross of Gladstone in them through their dam.' 'He was the sire of Twin Maude, the dam of Roderigo,' and 'the sire of Bo-Peep, the dam of Orlando, Antonio, etc.,' 'the dam of Gladstone's Girl, Florence Gladstone and Juno A.' But how many of these noted dams have ever produced a winner except when bred to dogs whose top cross has been of Count Noble blood, that is a direct descendant on the male line from Count Noble.

"Carrie J. only produced winners through Count Noble. Gem produced a wonderful class of winners and sons of winners—four sons getting no less than twenty-seven winners in the trials—when bred to a son of Count Noble, but only one when bred to a son of Gladstone. Twin Maude produced the great Roderigo by Count Noble, while Jean Val Jean is only the sire of six. Bo-Peep when bred to a son of Count Noble produced eight winners. Gladstone's Girl produced five winners when bred to Count Noble and his sons. Florence Gladstone produced two winners by a son of Count Noble. Juno A. produced two winners, one by a son of Count Noble and the other by Dashing Berwyn. Thus it will be seen that only three winners were produced by these famous bitches except when crossed on to the direct male line of descendants of Count Noble. But it is not necessary to stop with these. The record of our field trials lays down a rule for our guidance—a path for us to follow that has been blazed on every field trial ground in America.

"The happy expression of Mr. Bryson's, that 'Gladstone's daughters are the mothers in Israel of our field trial winners,' is true only when the blood of Count Noble furnishes all the top crosses on the side of the sire. Count Noble and his descendants on the male line have now produced 116 field trial winners, only forty-seven of which are out of bitches sired by Gladstone or his descendants. On the other hand the bitches sired by Gladstone and his descendants down to the third generation have only produced ten winners when bred to other than Count Noble dogs. Gladstone dogs have only produced nine winners by Count Noble bitches, while other dogs have produced twenty-nine.

"It has also been demonstrated that the male line descendants of Count Noble cross splendidly on bitches sired by Count Noble dogs, last season's trials furnishing no less than seven winners bred in this way. But it must be remembered that in nearly all of the cases just cited both the sire and dam have a strong cross of Gladstone blood. The conclusion then that we must arrive at is: Breed for as strong an infusion of the blood of both of these great dogs as possible, having the sire a direct descendant of Count Noble on the male line, with his dams strong in Gladstone blood and the bitches bred to, just as strong as possible in Gladstone and Count Noble blood.

"Just how far this plan of breeding—that has for years produced our best dogs—can be carried with safety, without the infusion of other blood, remains to be seen. In many cases it has been carried to a great length, as in the cases of Allene, Bessie Shoupe, Sadie Ross and others, without giving occasion for the least alarm. We believe that it can be carried to almost any length provided a good balance is maintained through the Druid-Ruby or some other level-headed strain that has plenty of hunt in it. Mr. Bryson has has had a great deal of experience in this field and has done as much toward the development of the English setter as any man in America, and we are pleased to see that he is giving his experience and observation to the public, and we can only look at his failure to give the facts cited above as an oversight.

A NOTABLE FAMILY.

Ingleside Maximilian and Gerda II., with Lady Diana, Emperor William, Emperor Maximilian and another.
Owned by Dr. C. A. Lougest, Boston, Mass.

"America is breeding to-day the best dogs in the world, and we are breeding them by combining the blood of these two great dogs in as near equal portions as possible. The best success being obtained when the male line in the sire comes down direct from Count Noble with his dams and the dam's dams coming from Gladstone through the Druid-Ruby or Rake blood."

### Manitoba Field Trials Club's Derby Entries.

ENGLISH SETTERS.

BONNIE LIL—John Wootton's black and white bitch (Orlando—Lady Lit).

COLUMBUS—W. F. Ellis's black, white and tan dog (Duke of Manitoba—Hickory Link).

CORKER—W. F. Ellis's black, white and tan dog (Duke of Manitoba—H. E. N.).

LADY MILDRED—Blue Ridge Kennels' black, white and tan bitch (Antonio—Ruby's Girl).

TOM BEGGS—Blue Ridge Kennels' black, white and tan dog (Antonio—Ruby's Girl).

NELLIE FOX—Blue Ridge Kennels' black, white and tan bitch (Antonio—Can Can).

GENEVIEVE—Blue Ridge Kennels' black, white and tan bitch (Antonio—Countess Rush).

TONY BOY—Blue Ridge Kennels' black, white and tan dog (Antonio—Laundress).

ROSE—J. H. Rose's black, white and tan bitch (Ranger—Daisy).

DASH ANTONIO—R. Baugham's black, white and tan dog (Antonio—Lady Lucifer).

PRINCE LIT—M. Ryan's black and white dog (Orlando—Lady Lit).

MISS LIT—F. G. Simpson's black, white and tan bitch (Orlando—Lady Lit).

NORMA C.—R. Neill's black and white bitch (Manitoba Gladstone—Nora T.).

DOC YORKE—L. W. Smith's black, white and tan dog (Orlando—Atlanta).

ANNIE OAKLEY—L. W. Smith's black, white and tan bitch (Orlando—Atlanta).

CYNOSURE—Avent & Thayer's black, white and tan bitch (Roderigo—Norah II.).

CLEMENTINA—Avent & Thayer's black, white and tan bitch (Rod-erigo—Norah II.).

COLUMBINE—Avent & Thayer's black, white and tan bitch (Roderigo—Norah II.).

ROMANCE—Avent & Thayer's black, white and tan bitch (Roderigo—Novelist).

TORY DOTLET—F. R. Hitchcock's black, white and tan bitch (Count Gladstone IV.—Tory Deller).

SNATCH—T. Cowan's black and white dog (no breeding).

MINAL—Geo. Loames's black and white dog (Roy—Tees).

DRUID—W. T. Kirby's black and white dog (Manitoba Gladstone—Nora T.).

BLUNDER—W. E. McKenny's liver and white dog (Duke of Manitoba—H. E. N.).

IRISH SETTERS.

MONA SADLY—A. D. Wellon's bitch (Finglas—Katie O'Shea).

POINTERS.

TIPPOO—Charlottesville Field Trial Kennels' liver and white dog (Rip Rap—Montorey).

DELHI—Charlottesville Field Trial Kennels' liver and white dog (Rip Rap—Queen II.).

FAUSTINA—T. G. Davey's liver and white bitch (Ridgeview Faust—Peggie).

LUCY—T. G. Davey's liver and white bitch (Ridgeview Faust—Peggie).

SHOT—Dr. Dalgleish's black, white and ticked dog (no breeding).

HEMPSTEAD DON—Hempstead Farm Kennels' liver and white dog (Sandford Druid—Merrylegs.

## ANSWERS TO CORRESPONDENTS.

*There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.*

---

J. H. C., Cincinnati, O.—Pull the skin of the tail toward the root as far as possible, then snip two-thirds of the tail off with a pair of large sharp scissors. Touch the stump with Friar's balsam two or three times and the pup will soon be all right. Docking should be done when about two weeks old, but of course it can be done later. There is no advantage in biting the tail and pulling out the worm, besides it is not nice.

F. T. A., Palenville, N. Y.—My setter dog, adout 7yrs. old, has been troubled for several years with constipation, for which I have doctored him. About nine months past a bunch formed just to the right of the root of the tail. It is now larger than an orange, is soft and seems to be filled with air or gas. It is very unsightly, and besides draws the anus away to one side. I have thought it might have come from constipation, causing a rent in the rectinal canal. Am I right? If not, please state what caused it, and how to cure it. Can it be cured or will it ultimately kill him? Ans. It is probably a serious abscess. You should have it attended to at once, and it will very probably be cured.

### Show Beagles as Practical Field Dogs.

*Editor Forest and Stream:*

Judging from a recent article in your valued journal by Mr. Ellis he is not "dead in love" with beagles, and yet to me it appears his condemnation of the breed is very unjust, simply because he owned one that did not come up to his standard as a hunter. Now I want nearly the same kind of a hunter that Mr. Ellis describes, a dog that really does the hunting, a hound that will range, find his trail, ferret it out, make the start and stay to the finish, be it for one hour or all day, and drive his game all the time. There are plenty of beagles that can, and will, do all this. Beagles from 12 to 15in. at shoulder—beagles built on working lines, not of the pet type, that have bodies like a pug—but those with deep chests, well sprung ribs and well tucked up in flanks.

No sportsman or hunter has harder ground for a dog to work over than the writer, who lives in the foothills of the Adirondacks, and we use beagles exclusively to hunt hare, fox and deer with. Two fine deer were killed ahead of one of our little bitches last season and we shall try for more again this season, but our principal hunting is hare (*Lepus americanus*). Did Mr. Ellis ever see a breed of dogs that did not produce some specimens that we all term "duffers," not only as regards typical points, but in action, disposition and character? They do not differ much in that respect from the human family. How many of our oldest, richest and most respected families but have occasionally a member which but for the good name of a sire, and the wealth at his back, would be called a "duffer," and very often the sire and wealth do not prevent it. Again, if a half hound mongrel that has any sign of hunt in him is owned in a section where game is as plenty as in the locality where Mr. Ellis found his, and is allowed his entire liberty, as his was, could not do better work than a beagle that is owned and kept in a city, either loose or on the streets, confined in a yard or tied on a chain for eleven months in a year, then he should be shot. Just change the two dogs, bring the cur to the city and turn the beagle loose among the rabbits, and then see who does the best work. The beagles or foxhounds who do the best hunting are those owned by men who give them opportunities to develop the natural instincts that are bred in them, and from such stock are bred the best and most natural hunters. I, too, often think that too little attention is given the hunting qualities of this grand little hound by some of our hunters. If every breeder was himself a hunter, a man who loved the music of the hounds, was not too fat or lazy to take a tramp with them often, where there was game, the breed would profit by it, and the pet type and the timid ones would grow less and less each year. Let me repeat it again, there are plenty of beagles in different kennels I know of that can please Mr. E. with their hunting qualities, and any time during open season if he should happen our way would be pleased to name some of them, and if convenient bring the mongrel "whirlwind" along and we may take a tramp after hare, and if he does better work, can handle his game better, knows where to look for them better, or will stay longer and do business, we will "acknowledge the corn" to readers of FOREST AND STREAM. D. E. B. O'NAIR.

GLOVERSVILLE, N. Y., July 21.

• • • •

*Editor Forest and Stream:*

In this week's issue I see that "Agamak" and F. B. Robinson have had something to say in regard to the best dog for rabbit shooting, and this has impelled me to say something, as I can by careful reading see an undercurrent of partiality all round, for the three letters of Ellis, Agamak and Robinson, do not give the value and esteem to our canine friends and companions that they deserve. They appear to look upon a dog as a brute to do their bidding, not a friend or companion, but "my slave." Now I look upon a dog as I would a human being. In man we have different natures; some are quick to learn, bold and courageous, others slow, timid and shy. We have men of great brains while others seem to lack any brains whatever; some are very even-tempered, others very excitable. If every sportsman who owns a dog will just raise him from the mere brute standard, and place him nearer the human standard, and treat him and train him more as you would a child or friend, I think you would not have so many dogs, hounds especially, that do not understand their business. A child can be spoiled, yes, ruined forever, by its bringing up, yet that child may not be a fool. It may have just as many brains, perhaps more, than the child that is properly trained and carefully brought up to be ever after an honor to society and the world at large. And it is just the same with dogs. If a hound is properly and carefully brought up and properly and carefully trained, be he beagle or foxhound or mongrel (as "Agamak" calls them), he will be a good rabbit dog. But they are not all alike, some will be good on one point and not so good on another; some may have a better nose on scent; others may be a little too excitable, and so on, just like man.

The worst idea that a trainer of a hound can get into his

head is that he knows it all and the dog knows nothing. When I train my puppies I do not go into the woods expecting to kill a rabbit; I take my gun and walk along, letting the pup follow. I do not play with him in the woods, but slowly walk around, paying no attention apparently to the pup, yet my eye is on every move, and if curiosity or the natural hunting instinct cause him to turn to one side and smell about I remain just where he left me until his return. I say nothing to him, but remain perfectly still, so as not even to attract his attention. He, not finding me very good company, will soon begin to wander around in search of something to interest him, and possibly he may scare out a rabbit, but never by any means shoot his first rabbit near the pup, unless you wish a gunshy dog. Wait until he gets to trailing and then shoot the rabbit. Do not go near it; let the pup find it if it takes all day, he will surely think he caught it, and you will be surprised to see how the hunting instinct will come out.

There is a great deal of care required after this to develop the intelligence which lies in a hound, but at present I merely wish to show Mr. Ellis, "Agamak" and Mr. Robinson that when we wish to decide which is the best hound for rabbits (as I think that is the point under discussion) we should not, like Mr. Ellis, say that a sheep dog like Snyder, or the slow-pottering old Turk, or the rat-tailed Ranger are the only good rabbit dogs in the world just because he had bad luck with the beagle Question. Who was to blame—Mr. Ellis, the beagle or the trainer of the beagle? And why was he shooting at a rabbit unless his bitch or beagle was on its trail? I should just as soon think of shooting my grandfather down in cold blood as shoot a rabbit unless my dog was trailing it. I go very often into the woods with my dog and gun, and sitting down in a comfortable place near a runway for hares, watch them for hours as they pass me. And sometimes the hare will sit up and look at me with his big wondering eyes. I suppose you would give him about 1⅛oz. No. 5 cold lead, but for the life of me I could not do it. I will shoot him just before I go home and on the run for his life ahead of my dog, or not at all.

Now, "Agamak," perhaps you are a little hasty in saying Mr. Ellis wished to stir up the beagle men; I don't think that is what he meant. He has related his experience as a novice at hunting, and wishes the experience of others to learn if he is right or which is the better dog. Remember, there was a time when you and I only thought of getting the rabbit no matter by what means employed; kill him anyway, even if you have to take a fish line, bend down a sapling and string him up. Thank goodness I have outgrown all this, and no doubt you have if you have been a constant reader of FOREST AND STREAM.

And now, Mr. Robinson, you say you started your beagle on the track. What did you start it for? If your beagle was properly trained there was no need to start it. That is one of the reasons why I stated that many men were disposed to think they know it all, and the dogs know nothing; if your beagle was properly trained it would hunt its own tracks without your help. You also state that you and two other friends shot twenty-one rabbits and three quail with a foxhound, and the four fellows with four beagles got three rabbits. What argument is that against the beagle as a rabbit dog? First—How did you get three quail with a foxhound? Second—Did you not have a great advantage in knowing your rabbit ground, and perhaps more experience in hunting them? Third—Do you always shoot twenty-one or more rabbits with your dog?

It is a known fact if a man goes out just for the sake of killing he can kill more rabbits in a day with one good dog, used to hunting alone, than he can with three or four, be they ever so good, for there never were dogs so near alike but that they would bother each other when running together. Then again, some men are not—well, we will call it lucky, in hunting or fishing as others, but for mercy's sake, do not blame the poor dogs.

To sum this all up and to do justice to all dogs in a conservative manner, without prejudice to any, I will state that I have hunted, raised and trained hounds for thirty years, from the mongrel, so called, to the pedigreed blue blood foxhound and beagle, for rabbit, fox and coon. For an all-round dog for fox give me a foxhound; for coon, a mongrel, half hound and shepherd dog; for rabbits give me the beagle, and I will state here that I can shoot more foxes with a beagle, if especially trained for them, as they do not scare a fox so much with their musical voices.

I like a beagle for rabbits because a beagle can follow a rabbit trail on dry leaves, where a foxhound cannot get a smell, likewise on a crust or wet swamp. They are not so excitable and erratic, and will follow their trail steadily, instead of chasing sheep, like old Snyder, or "anything from a squirrel to a deer," like friend Robinson's hound. It is the beagles' nature, bred and born in them, to stick to what they are trained for. It is claimed that a beagle cannot run in snow a foot deep; my beagles will run or crawl in snow *four* feet deep from morn until night, where the best rabbit foxhound I ever saw gave up in one round, having gone in to his neck at every jump, while the little beagle crawled on top. I have one now, the mother of it from Mr. Reed's (of Vermont) stock, which began to run when five months old and ran every day last winter, Sundays excepted. In snow, blow, rain or sunshine, crust or no crust, she will average ten hours a day for five days a week. This summer, right in the scorching sun she is running now, while I am writing, on the hill near by, and is only sixteen months old this month. There were over 150 hares shot ahead of her this winter.

Never strike a beagle, they are timid, but talk to them just as you would a human being, and they quickly learn to understand. Besides being rabbit dogs, they are the best house pets also; always neat and clean, and very affectionate, and so handy to take in a carriage or sleigh, for they will lie in your lap and help keep your hands warm on a cold ride.

Oh, I could write forty more pages on beagles and foxhounds; on training and their doings, but this letter is too long already. COLOMBIA.

CLAREMONT, N. H., July 22.

• • • •

*Editor Forest and Stream:*

The beagle is perhaps the true and proper form of dog for hunting the rabbit, and it is not the purpose of this writing to decry the handsome little fellows which the breeders are striving so hard to bring to the front as an ideal hunting dog for those who, like myself, are fond of shooting "Br'er Rabbit," careering in front of two or three couples of these musical-voiced little dogs. But it is not always possible for every man to find just the Simon-pure beagle that will suit him; they, like many another good thing, cost money, and if the man who would have a pack is not wealthy, he is forced to buy puppies or breed his pack if he would economize, and any one who has tried this experiment knows just what it means; time, patience and something of skill to properly break the pack to the gun and whistle, ere he has just what he wants. It is commonly supposed that a beagle will break himself, his blood and general make-up preparing him for the chase; but it has been my experience that these dogs will stand all the training that any other dog needs to fit them to hunt with any degree of pleasure to the hunter.

The blue-blooded beagle is a hunter, as game as any other animal with blood; but this breed has not the advantage of years of association with man and the influence of genera tions of trained progenitors, hence they are not always the easiest to control, and sometimes will not submit to control at all. The rabbit dog, on the other hand, is always with us: you can buy a carload of him at almost any price and of all degrees of excellence, and at the risk of being considered a pessimist, I must confess that, in my opinion, the good-looking rabbit dog, showing as much blood as possible and something larger than the standard-bred beagle, is for some countries—like my own, for instance—a better dog than his more highly-bred competitor.

Where I live the cover is rank, the rabbits hunted until cunning as foxes, and it needs a dog with long legs to push them so that the gun gets a chance. It is all very well to have a pack of blue bloods, nothing better, if all are first-class dogs, for then you know just what to expect, but put a genuine rabbit dog or two into the pack, and my word for it, the latter will have the rabbit run to the gun or into a hole almost before the little fellows get well warmed up on the trail.

The prevailing sentiment of the writers on such subjects seems to be that the mere pleasure of hearing the dogs run is sufficient return for the trouble of going afield; but I have long since come to the conclusion that this sounds better on paper than it operates in actual practice. We go hunting for sport and for game, and while the music of the dogs is all very well for the time, it does not fill the empty game pockets worth a cent; any man with a love of sport can enjoy a good race with his beagles and not kill a thing but time, that is all right in its place, but sentiment does not go very well when a man gets away from business for a day's sport and returns at night with nothing more substantial as a result of his day than the remembrance of the canine symphonies he has heard. Now, if this is so, we want a dog to go right down to business, and as I have said, if the ordinary sportsman wants dogs for rabbit hunting he is forced to get a rabbit dog or go without; and if he does get the right kind of such a dog, technically known as a "nigger dog" or "meat hound," he is going to have some superb sport, such sport as will easily console him for the good-natured jibes and taunts of his more exclusive friends, who are able to buy the pure quill, and perhaps if in company with them for a day turn the tables on them by the superior work of his plebian stock.

A recent article in these columns reminded me of the experience I had several years ago when I wanted a rabbit dog. I had just moved into the country, and just as soon as it became known that I wanted to buy a dog, my place was simply taken by storm. At almost any time in the day a dog and a man or boy, might have been seen, either negotiating a sale or making their way toward the house for the same purpose; all were first-class dogs, of course; that was understood at the offstart; pedigree or kind of dog had nothing to do with their ability as rabbit dogs, certainly not; a big woolly dog or a bull-terrier, it was always the same; it is or was the best rabbit dog in the world. I think, without exaggeration, there must have been twenty-five dogs brought in for inspection, only to be turned down, with some emphasis toward the last, the hunting season finding me still dogless. With the open season came a different strain of dogs for inspection, something more like what I wanted. I remember one pair of black and tans; they were beauties, and their owner was a sportsman, too. We turned them down in my orchard one morning, and in a few minutes they were off on a hot trail; they ran like fiends, but in a few minutes they lost, and after some time spent in trailing gave it up and came in. This happened a dozen times during the morning and at noon the owner called them in and left, disgusted, volunteering no excuse, but very sore, for he had boasted not a little of the staying qualities of the pair. I did not then know as much as I do now or I would have bought that pair; the explanation of their poor running was easy to one with experience; the weeds were high, the day dry, and the dogs out for the first time that season. Afterward when they were in better shape I hunted over the same pair and killed, with a companion, eighteen "cottontails" without an error on the part of the dogs.

Billy Fieles, he of Christiana, though he then lived in Baltimore, finally filled the bill for me and the bitch I got from him, albeit somewhat old, is still the pride of my heart; a rabbit-dog pure and simple, though showing signs of good blood somewhere in her breeding, for, while over the standard size, measuring seventeen inches at the shoulder, her long, drooping ears and hound head, and her softly blended black and tan markings, make her a picture worthy of an artist's brush. In the field she is a grand hunter, using both ear and eyes as well as nose; many times I have seen her leave a hot trail after scanning the vicinity and rush to a clump of briers or a rail pile, routing bunny out of his form while the other dogs were still puzzling over the trail. She will find woodcock and open as they flush, and I have killed many Bob Whites with her. (This dog is not for sale, or, thank heaven, she is not the best dog in the world, only a reasonably intelligent animal that it was a pleasure to train, responding with affection to every advance of her master and friend.)

Just at present I have a pair of genuine "nigger dogs," perfect little beauties, too, looking something like beagles, nice size and the most remorseless little fiends on a rabbit's trail I ever saw, and as intelligent as could be desired, but, alas, without the sign of a pedigree. With these and the other mentioned above I have had rare sport, hope to have more in the near future, and probably to my discredit, would not swap the trio for the same number of pedigreed dogs even if I could find any one fool enough to offer me such a deal. SAMUEL J. FORT, M.D.

ELLICOTT CITY, Md.

### Altcar Club Meeting.

WE have not heard from Mr. L. F. Bartels, of Denver, Col., for some time, but when he does favor us with a communication it is generally worth publishing. This time he tells us that at a meeting of the executive committee of the Altcar Club held at Denver July 24, they mapped out the following programme:

Altcar Stakes for aged greyhounds, 32 or more, $10 entrance for members and $12 50 for non-members, $150 added money, with 50% entrance money to first, 25% to second and 12½% to third and fourth each.

Colorado Stakes for dog puppies, 8 or more, entrance $7.50 for members and $10 for non-members, $50 added money, with 50% of entrance money to first, 25% to second and 12½% to third and fourth each.

Holyoke Stakes for bitch puppies, 8 or more, with prizes same as Colorado Stakes.

The club will retain 10% of all entrance moneys to help defray expenses. The meeting will be held at Holyoke, Col., (on the Burlington Railroad), on Nov. 6 and days following. They have secured the services of E. H. Mulcaster as judge and Ralph L. Taylor as slipper. Wallace, Neb., boys have promised that they will hold a meeting the week following the Altcar meeting. This ought to bring a number of entries.

Mr. Bartels informs us that Wallace is only sixty miles from Holyoke on the same railroad. Greyhound owners intending to run dogs can therefore take in these two meetings without having to travel all over the country and "jinning" the dogs all up. Holyoke, Col., is an enterprising city in the eastern part of Colorado; the citizens are thorough sportsmen, and have lent material assistance to all sports in their part of the country. The Burlington railroad have assured the club of their material assistance, and, adds Mr. Bartels, you all know what it means if the Burlington does anything—nothing half-way about it.

Further our correspondent says: But the best piece of news I have for you is this. During an animated discussion as to the merits of some of the more prominent greyhound sires, between a number of our members, I suggested that we have a Produce Stake next year. At our executive committee meeting of the Altcar Club the matter was again brought up, with the result that the club has decided to give a Produce Stake in the fall of 1895 for the produce of 1894. Nominations are to close on Nov. 6, 1894. Entrance money is to be divided 50 per cent. to first, 25 per cent. to second, and 12½ per cent. each to third and fourth. The entrance fee is $5, of which $2.50 is to accompany the nomination, and the balance, $2.50, is to be paid before the draw for the Aged Stake at our next meeting in the fall of 1895. It is safe to say that the following well known sires will be represented: Lord Neversettle, Trales, Babazoun, Miller's Rab, Boomerang, Glenkirk, Royal Crest and Norwegian. You can count on the Colorado boys entering at least thirty, as we have pledged ourselves to do it.

A good Produce Stake will do more to enhance the interests of the greyhound fancier than any other stake. As this is the first Produce Stake for America, we earnestly ask the co-operation of all greyhound fanciers, coursers and sportsmen. Let us have a number of nominations, so that the stake will be well worth winning. It will be the aim of the Altcar Club to add a suitable purse or piece of plate.

The boys are all anxious for Fall to come, to get out with their dogs. Some of them have commenced to "road their dogs" already, preparatory to training them.

• • • •

### HUNTING AND COURSING NOTES.

The next meeting of the National Beagle Club's field trial committee will be held at the A. K. C. rooms, 44 Broadway, New York, on Aug. 9, at 3 P. M. As the several committees appointed to arrange matters for the club's trials will report at this meeting a full attendance is desired so that definite action can be taken. The club will give settled money prizes so that those who run dogs at these trials will know just what they are out for. A new rule this year is that all entries must be entered in the A. K. C. Stud Book, and while this will debar two or three undoubted beagles whose pedigrees in the early generations have been "lost," still in the long run it will be beneficial and preclude any such unfortunate contretemps as occurred last year when Pade played havoc with the blue bloods. Mr. B. S. Turpin will be one of the judges and is a good choice; the other will be a beagle man who has not yet officiated in that capacity, but is said to know his business. Altogether, given a good country, the coming trials promise to be a greater success than ever.

• • • •

Mr. Chapman unsettles us with an invitation to run up and see him in the wilds of Maine where he is busy with his beagles, holding out visions of trout and bass fishing difficult to resist these humid days. Mr. Chapman has a number of Mr. Manice's dachshunds in training for the fall trials and is able to take a few more dogs as he has ample facilities for training young hounds, being in the heart of a good game country, about five miles from Bucksport, Me.

*The* FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

## Yachting.

### FIXTURES.

AUGUST.

2. Rochester, Squad. Sail and Review, Charlotte, L. Ontario.
3. Manchester, Ch. Pen., Mass. B.
4. Squantum, Ladies' Day, Squantum, Mass
4. Cape Cod, Club, Orleans.
4. Beverly, Club Cham., Monument Beach.
4. Fox Lake, Club, Fox Lake, Ill.
4. Lynn, Expert Cup, Lynn, Mass.
4. Winthrop, Club, Boston Har.
4. Indian Harbor, An. Regatta, L. I. Sound.
4. Douglaston, Open, L. I. Sound.
4-5. San Francisco Cor., Cruise, Sausalito.
6. New York, Annual Cruise, Rendezvous Glen Cove.
7. New York, Semi-Centennial Race, Glen Cove.
7-8. Interlake Y. A., 1st Meet, Put-In Bay, Lake Erie.
9. Rochester, Club Sail, Charlotte, Lake Ontario.
9. Interlake Y. A., Cruise, Lake Erie.
10. Manchester, Ch. Pen., Mass. B.
10-11-13. Atlantic City Cor., Special Midsummer Races, Atlantic City.
11. Cape Cod, Club, Orleans.
11. Cleveland, Ladies' Day.

25-26. San Francisco Cor., Cruise, California City.
27. Schoodic, 3d Cup, St. Andrews.
30. Rochester, Club Sail, Charlotte Lake Ontario.

### Larchmont Y. C.—21-Footers and Cabin Cats.

LARCHMONT—LONG ISLAND SOUND.

*Saturday, July 28.*

THE third race of the series for the 21-footers was sailed off Larchmont, on July 28, in connection with a race of cabin catboats for the prize given by Mr. F. W. Flint. The course for the 21-footers was from off the Harbor, around the Scotch Caps buoy, then around the buoy off Execution and home, two rounds. The cats sailed the Hempstead—Matinnicock course, 13 miles, naut. The little boats started at 12:15 P. M. and the cats at 12:25 P. M., the former being a one-gun and the latter a time start. The wind was light from S.W., but freshened considerably as the race progressed. Only two of the new boats came to grief, Maysie hung her fin up on the mooring line of a markboat at the start and was disqualified, while Hoodoo lost her forward centerboard just before the start. The times were:

21FT. CLASS.

| | Finish. | Elapsed. |
|---|---|---|
| Dorothy | 2 48 05 | 2 33 05 |
| Vaquero | 2 49 09 | 2 34 09 |
| Houri | 2 51 12 | 2 36 12 |
| Blonde and Brunette | 2 54 20 | 2 39 20 |
| Celia | 2 55 30 | 2 40 30 |

## New York Y. C.

On the evening of July 30 the New York Y. C. celebrated the fiftieth anniversary of its organization, which took place at a meeting on Mr. John C. Stevens's schooner Gimcrack, at 5 P. M. on July 30, 1844, the yacht being anchored off the Battery, New York. On Tuesday the whole clubhouse was decorated, inside and out, in a way that did credit to the taste of Supt. Neils Olsen, and in the evening a large number of members were present, with officers of other yacht clubs. The following orders have been issued for the annual cruise, which begins next week:

By invitation of the Vice-Commodore, the regatta committee will make the cruise on the Shearwater. Yachts entered for any racing event will display their numbers and private signals as directed in Rule X., section 3. They will show no other colors. Club rules will govern all races, unless otherwise directed. Entries must be made in writing and addressed to the committee, with the exception that for squadron runs, crossing the line will be considered as an entry. The course will be signalled before the preparatory signal is made. Should a signal gun miss fire, a prolonged blast of the whistle will be given. Numbers and extra copies of this circular can be obtained at the club house and on the Shearwater.

The race for the semi-centennial cups will take place at Glen Cove on Aug. 6, and will be open to yachts belonging to the clubs, in cruising trim, and will not be restricted to yachts intending to make the cruise.

In each class a prize for first, if two or more start, and a prize for second if four or more start.

Preparatory signal 11:30 A. M. Entries will be received at the club house, 67 Madison avenue up to 10 P. M., Aug. 5, and on board the Shearwater up to 9 A. M., Aug. 6. They will be bulletined on the Shearwater at 9 A. M., Aug. 6.

Course No 1 (Q F club code), 26 miles: From an imaginary line between the Shearwater and a float 1½ miles W. by S. from Matinicock Point Buoy, to and around a float ¾ mile due N. from Lloyd's Point, leaving it on port in turning; to and around a float ¾ mile due S. from bell buoy on western edge of Green's Ledge (Norwalk Islands) leaving it on port in turning, and finish over a line as drawn for the start.

No. 2 (V N, club code), 26 miles: From an imaginary line between the Shearwater and a float 1½ miles W. by S. from Matinicock Point Buoy; to and around a float ¾ mile due S. from bell buoy on western edge of Green's Ledge (Norwalk Islands), leaving it on starboard in turning; to and around a float ¾ mile due N. from Lloyd's Point Buoy, leaving it on starboard in turning, and finish over a line as drawn for the start.

Note.—The floats will display red flags, with diagonal white stripe. The Green's Ledge float will be marked by a tug showing red ball. All buoys must be passed on the channel side.

The Goelet cups will be sailed for at Newport on Aug. 10. For schooners, a $1,000 cup; for sloops, cutters and yawls, a $500 cup. Offered by Captain Ogden Goelet, N. Y. Y. C., and open to yachts belonging to the club that have not hauled out to clean since the beginning of the cruise. Captain Goelet reserves the privilege of inviting foreign yachts that may be in American waters to enter the race.

Start 10:30 A. M., off Brenton's Reef Lightship. Entries will be received at the club house, New York, up to 10 P. M., Aug. 5, and on board the Shearwater up to 8 A. M., Aug. 10.

There will be the customary runs from port to port in cruising trim. In each class there will be a prize for first, if two or more start, and a prize for second, if four or more start. Yachts alone in their classes will be placed in Class 8 (Rule V., Sec. 4).

After the Vice-Commodore has ordered the squadron under way the committee will establish the start lines, which, like the finish lines, will be between the Shearwater and the points indicated in "Courses."

Courses.—Should other courses be established details will be furnished.

Glen Cove to Morris Cove.—From Mantinicock Point Buoy to a stakeboat displaying large club signal, one mile due south from Luddington Rock, 37 miles.

Glen Cove to New London.—From Mantinicock Point Buoy to New London Light, leaving Bartlett's Reef Lightship on port hand, 37 miles.

Morris Cove to New London.—From stakeboat off breakwater to London Light, leaving Cornfield and Bartlett's Reef lightships on port hand, 40 miles.

New London to Newport.—From Sarah's Ledge Buoy to the "Dumplings," leaving Race Rock on port hand, 40 miles.

Newport to Vineyard Haven.—From Brenton's Reef Lightship to West Chop Buoy (Red No. 2), leaving Vineyard Sound Lightship on port hand, 31 miles.

Vineyard Haven to New Bedford.—From West Chop Buoy to Clark's Point, through Quick's Holl, 21 miles.

New Bedford to Newport.—From Clark's Point Light to Brenton's Reef Lightship, leaving Hen and Chickens Lightship on starboard hand, 27 miles.

Vineyard Haven to Newport.—From West Chop Buoy to Brenton's Reef Lightship, leaving Vineyard Sound Lightship on starboard hand, 37 miles.

On Aug. 6 the Sam Sloane will leave the foot of East Twenty-sixth street at 9:30 A. M.; Long Island City (annex of L. I. R. R.) at 10 o'clock, and will make a landing at Glen Cove. She will touch at these points returning, and will reach East Twenty-sixth street not later than 7 P. M. Members can obtain their tickets, which will not be transferable, and will admit one lady each, from the superintendent, at the club house, 67 Madison avenue, and also at the Long Island City and Glen Cove landings.

On Aug. 10 the Edgar S. Luckenback will leave the foot of Long Wharf, Newport, at 10 A. M. Members can obtain tickets from the superintendent, 67 Madison avenue, or Capt. F. J. Sands, N. Y. Y. C., Station No. 6, Newport. Number limited to 75. Should the race be postponed, these arrangements will hold good on Aug. 11.

A tug will leave Glen Cove at 9:45 P. M., Aug. 6, to enable members and guests leaving the squadron to reach the city.

## Vigilant's Races.

At the time of going to press last week, the details of the Royal Cork regatta were not known, merely the times being cabled over. It appeared in the later despatches that on the second leg of the last round the band on the gaff to which the throat halyards are shackled gave way, cutting into the spar. A lashing was clapped on and the race sailed to a successful finish, Vigilant winning by 3m. 25s., corrected time. As soon as the mishap was known, Admiral St. John came alongside and offered to have the repairs made at the Navy Yard, but it finally appeared that the yard had been closed, the men taking a holiday during the regattas. The work was transferred to the Passage Dry Docks by Mr. L. J. Walker, the American Vice-Consul, in his steam launch the same evening and work begun at once, in order that Vigilant might sail next day. Although the work was pushed all night, it was not completed in a manner satisfactory to Capt. Haff, and Mr. Gould decided not to start. Mr. Jameson offered to wait until the following day if Vigilant would promise to start then; but, as Mr. Gould would make no promise, Britannia sailed alone over half of the course, taking half of the regular prize. While at Cork Mr. Gould offered a cup of American manufacture, to cost 100 guineas ($500) for yachts of over 100 rating in the next regatta. Sir John Arnott, of Cork, also offered a prize of £100 for an ocean race, provided the finish be in Cork harbor, but Mr. Gould has not yet accepted it, objecting to the proposed finish. In addition to the new gaff fittings, Vigilant's mainsail was altered at Cork, presumably by Mr. Wilson and the sailmaker who accompanied him. Atalanta towed both Vigilant and Britannia over to Penzance, arriving on July 26.

The Mount's Bay regatta was sailed on July 28, the course this time being a triangle of 8¼ mile legs, or two rounds to make 50 miles. The wind was light from the south and the water quite smooth, with only a long swell on the Channel. The course was a reach from the line, off Penzance, to a markboat off Mousehole Point, a second reach thence to a markboat off Porthleven, and a run over the third leg. With Britannia and Vigilant was the 40-rater Corsair. Satanita was in port, but her skipper sailed for Falmouth too soon to receive a telegram from Mr. Clarke ordering her to start in the race. There was some sharp work at the start, Corsair going over first and Britannia leading Vigilant by 8s., being under Vigilant's lee bow. Both carried clubtopsails and small jibtopsails for the close reach, the wind heading until both had to tack finally for the Mousehole mark. Britannia from the start worked out from under Vigilant, and soon had a good lead. Owing to a fog they were not timed at the first mark. On the broad reach to the second mark, with big jibtopsails set, Britannia still gained, having nearly 3m. lead at the Porthleven mark. The last leg was run under spinakers, Vigilant gaining a little, the end of the round being timed: Britannia 1:14:22, Vigilant 1:16:30. Corsair was some miles astern, and out of the race.

The first leg of the second round was to windward, Britannia increasing her lead a little. The second leg was a reach, with a beam wind, Britannia still gaining, the times at Portleven being: Britannia 3:24:10, Vigilant 3:27:22.

The last leg was sailed by Britannia under balloon staysail and large jibtopsail, Vigilant carrying spinaker and balloon jibtopsail. The finish was timed: Britannia 4:19:27, Vigilant 4:24:40. Britannia wins by 6m. 23s.

From the reports the long roll of the channel troubled Vigilant more than it did Britannia.

The racers were towed to Falmouth on July 29 for the race of Monday, Satanita being already there, but on Monday morning the wind was again light. Mr. Gould decided that the bobstay was unsafe, being strained in the many races, and the yacht did not start, going straight for Cowes to prepare for the match of Saturday with Britannia. Britannia and Satanita sailed a light-weather race, the former winning by 17m.

On Saturday the match race between Vigilant and Britannia will be sailed, the Queen being present to witness it.

From some accounts, Valkyrie will be ready for the Cowes races next week under Lord Dunraven's flag and with Captain Cranfield and his old crew in command, but a later report states that she will be offered at auction on Friday.

Mr. Herreshoff reached New York on the Britannic on July 26 and started at once for Bristol, the many interviewers getting nothing from him save a denial of various stories to the effect that he had quarreled with the Goulds and with Captain Haff and that he had hurried home to design a new yacht for Mr. Gould.

## The Nepenthe—Annie Match Race.

THE first sweepstake race between the Burgess 45ft. sloop Nepenthe, of the Southern Y. C., and the A. Cary Smith 50ft. sloop Annie, of the Mobile Y. C., was sailed off Fort Morgan, Mobile Bay, on July 20, and was won by the New Orleans sloop. The course was ten miles to windward and return over the deep, open waters of the Gulf of Mexico; there was no time allowance, crews were limited to sixteen men each. Both came for the line together at 1:15 o'clock, wind S.W., ten knots, Annie crossing 5s. in the lead, which she held for two tacks; then in the light winds and heavy seas that followed the deeper model of Nepenthe showed to advantage, and she took the lead and was never headed. She rounded the outer stakeboat at 3:17 and broke out her spinaker to port for the run back. Annie rounded the mark 8m. later. Nepenthe rounded the home stake at 4:30 o'clock. Annie was about 10m. astern. Before she could cross the line a fearful squall struck the fleet, and Annie was unable to finish. The squall was a very severe one, and for three-quarters of an hour the wind blew at the rate of 40 miles an hour. The waves rose to a great height, while spray washed the decks of the excursion steamers, all of which rode it out in safety. The scene on the Gulf was a grand one, not soon to be forgotten. Annie lowered away all her sails except the forestaysail, and drifted about while the gale was at its height. Nepenthe rode out the gale under reefed mainsail. The bar pilots who watched the race said she was the finest sea boat they had ever seen. An idea of the severity of the squall may be imagined from the fact of the pilot boat dragging her heavy anchor three miles to the eastward.

The second match race between Annie and Nepenthe was sailed off Bishop, Miss., on Mississippi Sound, July 24. There was a 7 knot breeze blowing from the southwest at the start. Nepenthe crossed the line at 1:01:48; Annie at 1:03:50. The distance was 21 miles over a triangular course. Nepenthe increased her lead from the first, winning by 15m. 59s. She finished at 4:32:28.

The third race will be sailed at Bay St. Louis, on Saturday, July 28, under the auspices of the Waveland and Bay St. Louis Regatta Association.

Nepenthe is matched to race the Mobile pilot boat Glide, from Fort Morgan to Ship Island, Mississippi Sound, for $250 a side in the near future. The crew of Nepenthe included Com. Alex. Brewster, sailing master; C. P. Richardson, owner; N. E. Baumgarden, Thomas Campbell, Hon. Sam Gautler, Jonas Latill, John Oriol, M. de Fuentes, Jim Hopkins, L. P. Joung. Crew of Annie included Tom Murray, sailing master; W. M. Marshall, owner; Com. Hall of the Mobile Y. C., Lyman Dorgan, Ed. Hugar, I. K. Vincent, Tom Cook, Aleck Johnson (pilot), Kirk Johnson, Percy Pettus, Jack Norville, W. B. Curran, of Mobile, and Henry and Walter Gautler, of Pascagoula.

The Southern Y. C. sails from West End, Lake Pontchartrain, on its annual cruise on Thursday, July 25. The fleet will be made up as follows: Steam yacht Helen, Com. Thos. Sully, flag ship; launch Bijou, schooners Adrienne, Gertie and Louis B. Sloops Zoe, Montauk, Agnes, Alice, Lady Luckett, Barkley B., Varuna, Lufki Humma, Gypsy; yawl Presto and catboat St. John. The Waveland and Bay St. Louis Regatta Association will give a regatta in their honor. L. D. S.

## Corinthian Y. C. 80th Regatta.

MARBLEHEAD—MASSACHUSETTS BAY.

*Saturday, July 28.*

THE race of the Corinthian Y. C. on July 28 was a handicap for cruising boats, knockabouts and dories, for cash prizes, and was sailed in a moderate S.W. breeze, the times being:

CLASS A.

| | Elapsed. | Corrected. |
|---|---|---|
| Hawk, G. Dexter | 2 05 20 | 2 05 20 |
| Fancy, C. F. Lyman | 2 07 02 | 2 07 02 |
| Anuqua, Loring | 2 18 21 | 2 12 21 |
| Lilian, Whitney | 2 22 33 | 2 15 33 |
| Marena, D. H. Follett, Jr | 2 21 23 | 2 16 23 |
| Ariel, J. Barratt | 2 23 28 | 2 16 28 |

| Witch, Ramsdell | 2 04 34 |
| Mabel, Rich | 2 07 00 |
| Iney, Martin | 2 10 44 |
| Nyfty, Pate | 2 18 00 |

The judges were George W. Mansfield and Howard Whitcomb.

## Bayswater Y. C.

FAR ROCKAWAY—JAMAICA BAY.

*Saturday, July 28.*

THE club race was sailed over the usual course on Jamaica Bay, wind S.W., distance 10 miles:

SLOOPS.

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Millie, Cyrus Mott | 26.01 | 2 37 13 | 2 37 13 |
| Tuant, Mr. Harriman | 22.03 | 3 05 00 | 3 01 10 |
| Toboggan, Mr. Babcock | | | |

FIRST CLASS—CATBOATS.

| | | | |
|---|---|---|---|
| Edith, Com. Armstrong | 23.04 | 2 33 20 | 2 33 20 |
| Alert, John Fallow | 22.03 | 2 32 51 | 2 31 46 |
| Bertha, Clinton Bowker | 21.00 | 2 32 47 | 2 29 12 |

SECOND CLASS—CATBOATS.

| | | | |
|---|---|---|---|
| Susie R., Edw. Roehr | 16.06 | 1 25 34 | 1 23 42 |
| Meta, L. D. Pettit | 19.00 | 1 22 27 | 1 22 27 |

SHARPIES.

| | | | |
|---|---|---|---|
| Maggie, John J. O'Kane | 17.06 | 1 33 25 | 1 33 25 |
| Maud, Benj. Chapper | 16.09 | 1 30 20 | 1 29 57 |

Winners: Class 1, Millie; first class cats, Bertha; second class cats, Meta; sharpies, Maud.

Toboggan was ruled out for hoisting balloon jib, contrary to rules for open jib and mainsail.

Regatta committee, F. L. Richmond, Richard Mott, B. J. Danklefsen.

## Pine Lake Y. C.

PINE LAKE, WAUKESHA CO., WIS.

*Saturday, July 28.*

THE Pfister Cup was sailed for to-day over a six-mile course, weather threatening, followed by fair, wind S.S.W. gale:

| | Length. | Start. | Finish. | Elapsed. | Cor. |
|---|---|---|---|---|---|
| Marvel, R. Nunnemacher | 22.06 | 2 30 35 | Withdrew. | | |
| Amalia, J. C. Iversen | 22.04 | 2 31 03 | Withdrew. | | |
| Naucris, F. Rietbrock | 21.04 | 2 30 12 | 3 50 35 | 1 20 23 | 1 19 20 |
| Novice, H. V. Lester | 20.06 | 2 33 23 | Capsized. | | |
| Martha, J. C. Koch | 19.09 | 2 33 54 | Capsized. | | |
| Nyack, H. Niedecken | 18.01 | 2 32 24 | Withdrew. | | |
| Hildesia, A. C. Helmholz | 17.06 | 2 34 35 | Capsized. | | |
| Rocket, A. H. Vogel | 17.09 | 2 35 00 | 4 16 07 | 1 41 07 | 1 36 23 |
| Ducky Daddles, F. C. Winkler | 17.06 | 2 30 45 | Capsized. | | |
| Arion, R. Nunnemacher | 21.01 | 2 31 49 | Withdrew. | | |

Naucris wins. By inspection of above you can see that out of ten starters only two finished, the breeze being too much for the balance. First race for the Pfister cup; to be won three times, one race a year. Regatta committee, Crom. F. Rietbrock, Vice-Com. J. Barth. Judges, Gen. F. C. Winkler, C. F. Pfister, O. C. Hansen.

## Hull Y. C. Open Regatta.

HULL—BOSTON HARBOR.

*Saturday, July 28.*

THE Hull Y. C. sailed a very successful regatta on July 28 in a fresh S.W. wind. The times were:

FIRST CLASS.

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Whisper, W. H. Simpson | 28.05 | 2 02 29 | 1 31 00 |

SEVENTH CLASS.

| | | | |
|---|---|---|---|
| Princess, E. D. Gay | 15 04 | 0 54 27 | 0 37 23 |
| Icurez, Walsh Bros. | 14.02 | 0 55 55 | 0 38 43 |
| Katydid, C. B. Pear | 14.04 | 0 57 36 | 0 39 40 |
| Imp, L. H. Horton | 15.11 | 0 55 38 | 0 39 40 |
| Penguin, J. E. Robinson | 14.04 | 0 58 35 | 0 41 31 |
| Seaweed, S. C. Higgins | 16.00 | 0 59 15 | 0 42 27 |

Hullo and Spinster protest each other for fouling. Dandelion protests Primrose and In It on Measurement. Willett protests In It on measurement. Mirage protests Duck and In It on measurement and also Duck for carrying too many men.

The prize winners, subject to the above protests, were: First class—Whisper $30, Mattie $15. Second class—Beatrice $20, Amorita $15, Gypsy $10 and Sea Bird $5. Third class—Vanessa $20, Romance $15, Alpine $10 and Eureka $5. Fourth class—Hullo $40, Seconset $30, Spinster $20 and Nike $10. Fifth class—Magpie $20, Opechee $15, Harriet $10 and Koorali $5. Sixth class—Primrose $15, Duck $12, Willett $8 and In It $5. Mosquito class—Princess $10, Icurez $5 and Katydid $3.

The judges were C. V. Souther, L. Foster Clark, Edward K. Friend, and William E. Sherriffs.

## Hempstead Y. C. Annual Regatta.

GLEN COVE—LONG ISLAND SOUND.

*Saturday, July 21.*

THE annual regatta of the Hempstead Harbor Y. C. on July 21 was spoiled by calm weather and a misunderstanding as to the course, which was described as from the stake boats off club house, to and around easterly buoy on Execution Reef, from there to and around buoy off Matinnicock Point, thence to finish line. In the Sea Cliff race the Saturday before, the sailing rules, giving course designated black and white horizontal striped buoy as easterly buoy on Execution Reef, and in consequence many of the boats turned this buoy, some of them losing time to do so. Others turned the red buoy, which the regatta committee claimed was the one that should have been turned. Among those who turned the buoy claimed to be the wrong one were the cabin cats Onaway and Eloise. As will be seen, Onaway easily beat Mary, and Eloise and Kittie had their usual tussle and close finish. The regatta committee, realizing that it was their negligence in not naming color of buoy, which caused the error, have as yet rendered no final decision. The chart shows the two buoys to be on almost exactly a north and south line, but the Lighthouse Service, in answer to a query, state that the red buoy is 125ft. further east. The fact of the two buoys being so close together, and actually, by chart on a north and south line east of lighthouse, together with its being obviously the regatta committee which was at fault in getting up an incomplete programme, may result in the race being resailed, which would seem to be the only fair thing to do. The official times were, long course of 12 miles:

## Mandeville, Y. C. Second Annual Regatta.

MANDEVILLE—LAKE PONCHARTRAIN.

*Saturday, July 21.*

The Mandeville Y. C., situated across Lake Ponchartrain, twenty-two miles from New Orleans, held its second annual regatta on July 21. Half a dozen Southern Y. C. boats participated and succeeded in carrying off some of the prizes. The weather was very favorable, the southwest breeze averaging twelve knots and at times rising to fifteen knots. Eight races of different classes were sailed over a five-mile triangle, three times around. In the schooner class Adrienne won; first class sloops, Montana won; open sloops under 20 feet, Nympha won; sloops over 20 feet, Varuna won; round-bottom catboats, St. John won; square-knuckle catboat class under 20 feet, Lady Sarah won; square-knuckle catboat class over 20 feet, Ellen D won.

## Beverly Y. C.

The 210th regatta, second open sweepstakes, was sailed at Quinett July 21. All classes ran down to Gunnery Point Buoy. From there second and third classes had a dead beat to Wepecket Buoy and a run home, 8¼ miles, while fourth class beat to Uncatena Buoy and ran home, 7 miles. Wind at first was a good whole sail S.W. breeze, but in the windward work it fell light and fluky; the boats scattered, some going broad off in the bay and holding by far the best breeze, while those who hugged the shore, notably Scintilla and Kaloolah, had it very light.

Grilse and Fin started together, and as long as wind lasted Grilse had the race, but as it got lighter she had not sail enough. Her sail has been cut down one-third since her arrival, and is too small for moderate breezes. Both boats took a central course, while Turkey and Kitten, far out in bay, held a better wind and beat both.

Mist made a mess of the start. She crossed line and was timed at 12:36, but went back and started again at 12:44:45, long after the handicap times. The handicap of 8¾ minutes killed her; her actual sailing time would have given her second place.

SECOND CLASS CATS.

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Bernice, N. Huckins, Onset | 23.05 | 1 45 16 | 1 33 57 |

FOURTH CLASS CATS.

| | | | |
|---|---|---|---|
| Dawdle, R. S. Hardy, B. C. C. | 16.01 | 1 47 40 | 1 30 27 |
| Whim, J. M. Harriman, Matta | 16.05 | 1 49 02 | 1 32 03 |
| Dodo, H. Parker, B. Y. C. | 16.06 | 1 53 31 | 1 36 39 |

Bernice wins first in first class cats, Gymnote second, Ulula third; in second class jib and mainsails Bob wins first; in third class cats Nobska wins first, Allegro second, Gilt Edge third; in fourth class jib and mainsails Turkey wins first, Kitten second, Grilse third; in fourth class cats Dawdle wins.

Judges: N. H. Emmons, H. S. Carruth, W. Lloyd Jeffries.

The 211th race, second championship, was sailed at Marblehead in a strong S.E. by S. breeze. First, second and knockabout classes ran to Bowditch Ledge, beam wind to Gale's Ledge, a beat to Southeast Breaker, close haul to Halfway Rock and a run home; 10½ miles. The rest ran to Bowditch, beam wind to Curtis Point and a beat home; 7½ miles First class race was very close. Hawk did the best running, but Fancy beat her to windward and crossed line 12s. ahead, winning leg for pennant, but prize is in doubt till they are measured The knockabouts surprised everybody by going to pieces, Esther, Otatsee and Trouble breaking down soon after striking the rougher water by Baker's Island. Spinster was leading, hard pressed by Paul, when she drew the turnbuckle of her shroud and had to withdraw. After that it was Carl's race. In third class the Minnetonka boat Apukwa ran them all badly, and led by 5m at Curtis Point. She made bad work of it to windward. Her competitor, a Swampscott dory, passed her, as well as all the cats, and she finally broke down

## Newburyport Y. C. Seaver Cup.

NEWBURYPORT, JULY 22.

There have already been two races. There was arranged by this club a series of three club races, and a series of five races for a cup called the Seaver cup, presented to the club for this purpose. The series of three is to be sailed in with the series of five. Three of the Seaver races have been sailed and two of the club races, leaving one more club race and two more Seaver races, as these races are reckoned on percentage. They are sailed with a flying start. The open regatta of this year will be of special interest as a large number of Boston boats as well as many others along the coast to the southward signify their intention of coming.

Third Seaver cup and second club race. Distance, first class 9 miles, second class 7½ miles, third class 6½ miles. Weather showery with no wind. Wind north by east. Tide five hours flood:

FIRST CLASS.

| Tippoo | 14.10 | 3 19 00 | 1 13 03 | 1 12 59 |

Winners: First class, Ganet; third class, Gadfly; fourth class, Vesper.

Judge, A. S. Murray, Gardner House, Jamestown, R. I.

## Indian Harbor Y. C.

FINCH'S ISLAND, GREENWICH, CONN.—LONG ISLAND SOUND.

A special race was sailed on July 21. Courses: 21-footers, eastern buoy, Little Captain's Island, Matinicock Buoy, Center Island Buoy, home; 20ft. cats, same line, Matinicock—home; distance, 15 nautical miles; weather fair, at first light, later squally; wind S.W, then N.E.; tide, ebb:

21-FOOTERS.

| | Length | Elapsed. | Corrected. |
|---|---|---|---|
| Houri | | 5 28 41 | 5 28 41 |
| Maysie | | 6 01 43 | 6 01 43 |
| Celia | | 5 29 02 | 5 29 02 |
| Vaquero | | 5 27 03 | 5 27 03 |
| Hoodoo | | 5 57 02 | 5 57 02 |

20FT. OPEN CATS.

| | | | |
|---|---|---|---|
| Merula | 19.92 | 5 01 21 | 5 01 11 |
| Zelica | 19.50 | ..... | ..... |
| Chippie | 17.75 | ..... | ..... |
| Jewel | 19.92 | 4 36 53 | 4 36 43 |
| Kismet | 19.50 | ..... | ..... |
| Janet S. | 19.25 | 5 22 27 | 5 21 10 |
| H. C. Miner | 19.67 | did not finish. | |
| Zelda | 19.33 | did not finish. | |

Class one, winner 3 points, Vaquero; 2 points, Houri; 1 point Celia. Jewel wins Moller cup. First race of a series of three for 21 footers, for Osborn cup. Regatta committee and judges: Frank Bawne Jones, D. Walcolm Winne, E. T. Birdsall.

## A New Yacht Club at Cohasset.

Cohasset, Mass., the home of Dr. John Bryant and the famous old Shadow, has just started a yacht club on a very substantial basis, beginning with fifty members, three handsome silver cups, and the prospect of a club house before the end of the season, on the grounds of Dr. John Bryant. The first commodore is Mr. George Ripley Howe, owner of the Burgess cat Grimalkin, and formerly owner of Sea Mew, Mabel, Leda, Hera and Nimbus. The Vice-Com. is Mr. H. E. Mapes, owner of the fast Hanley cat Duster. Mr. Chas. H. Coursens of the Smalley catboat Madge, is Treasurer. The executive committee are Wm. H. Crane, stmr. The Senator; John C. Howe, L. D. Willcutt, Morton S. Crehore, A. P. Smith and A. A. Lawrence. Ralph B. Williams will be recognized on the regatta committee as owner of the Watson cat In It, with Ellery Clark of the same boat. The club will hold races every Saturday.

# Canoeing.

## FIXTURES.

AUGUST.

4-11. Owanux Meet, Woodmont, Ct

SEPTEMBER.

3. Holyoke, Ann., Holyoke, Mass.
3 5. Passaic River Meet.
5. Ianthe, An., Passaic River.
15. Red Dragon, Fall Regatta, Delaware River.

The idea is quite widespread, not only among the members at large, but among the higher officers, that there is still a general meeting of the American Canoe Association during the annual meet, at which business may be transacted and amendments to the rules, or other similar motions, voted on. From 1880 up to 1886 such annual business meetings were actually held at each meet, the officers being at first elected there and general business transacted. With the adoption of the division scheme this was changed, the officers being elected by the executive committee in camp, and not at a general meeting of all members present; all changes of the rules being made at the annual meeting of the executive committee in November. The name of the general meeting has, however, survived to the present day, and a semblance of the old meeting has been kept. The order of exercises, as all will remember who have attended the meets for the last half dozen years, is simple but tiresome, being in three parts, the presentation of prizes, the passing of polite but meaningless votes of thanks to different persons, and a long address by a certain prominent member, in which he sets forth in lengthy detail his own individual views on such matters as personally interest him. The attempt to carry on any regular business of the Association at such a meeting is both absurd and unconstitutional; and it would be a decided improvement if the whole "general meeting" resolved itself into merely the presentation of prizes.

Whether, as Mr. Burns's proposal suggests, it would be well to return to the old plan of having a general meeting of the members in camp for the transaction of business, is an entirely different question which we believe will be answered in the negative by those who have seen its working in the past, when the Association was still smaller and more compact than now; but if any serious business is to be transacted it must be carefully done by daylight, and not in the hurry and darkness of an evening camp-fire.

The present meet inaugurates a new feature in the government of the A. C. A., in the establishment of a board of governors which shall have a general supervision of the finances and especially of the expenditures. The plan has much to commend it, and we have favored it from the first in spite of the obvious objection that it places a great deal of power in the hands of a few men or of a single man, as we have felt that out of the number of capable men in the A. C. A., the chances were small that any but the best and ablest would be chosen In the case of three of the divisions, the man chosen is the recognized leader of the division; and those who know either of them at all well will know that in each case it was the office which sought the man. In the case of the fourth division the same, unfortunately, cannot be said, as the successful candidate for the longest term and the highest office of the new board has not only sought the office but has worked for it early and late since the scheme was first mooted nearly three years since. The position is one of peculiar power, greater by far than the commodore is endowed with, and the good or ill results to the Association depend largely on how this power is used, for the general good or for the mere furtherance of personal ambition.

One innovation in this year's camp which seems to be a success is the change of date, some two weeks earlier than usual. So far as the camp itself is concerned, in the attendance and other similar matters, the date is quite as good as the older and later one; and there is further this great advantage, the A. C. A. meet is the great yearly stimulant of canoeing and canoe racing, but thus far it has come too late in the season to do the most good, the canoes are not home in time for the Labor Day races, and little time is left, in the best part of the season, for the fall regattas. This year the meet is over before the end of July, and the canoes will be at home early in August, while men will go home from camp not only with their love of cruising and racing renewed by its influence, but with plenty of time left to enjoy the sport before fall. Thus far we have heard no objection to the change inaugurated by Commodore Dorland.

Again the war canoes have been present at a meet, and again this interesting race has failed. An accident to one of the canoes, the rollers from a passing steamer throwing her on the beach and staving in the side, delayed the race in the first place, and by the time that repairs were made most of the crews had left camp.

It is a pleasure to be able to note that the work of the various committees was well done this year, the transportation was good, the camp site well laid out and all details well arranged, and the races were run off promply, with few or no postponements, and no delay over protests.

## AMERICAN CANOE ASSOCIATION.

### Fifteenth Annual Meet.

CROTON POINT—HUDSON RIVER.

*July 13-28.*

As usual the breaking up of the camp began on Friday of the second week, tents going down very fast. Less than a quarter of the camp was left by Friday night, and on Saturday nearly everyone departed, leaving only a few lucky ones, whose leisure will permit them to spend another week or so in quiet camp life. It is too soon to say whether the Croton Point meet will prove one of those which men like to talk of and refer to as particularly pleasant and successful; but the material features of camp site, transportation, etc., were good; in fact, the general arrangements were carried out remarkably well, and those good grounds for complaint over serious mistakes and omissions which have existed in many cases, were not present this year. To the newer men at least the camp was undoubtedly a pleasant one, and if anything was lacking to the older men, it was due not to defects in the material arrangements, but to the absence of old friends and to the great change which is undeniably taking place in the Association.

For our own part, we confess that the A. C. A. meet is not what it once was, for every old friend we meet we miss a dozen equally dear to us, and the conviction that we are growing older at a little quicker pace each year is never forced on us more strongly than when we set foot on the camp dock and start through the camp to look for old friends and familiar faces. In drifting about the camp we have met, among the older A. C. A. men, a certain feeling of disappointment, which has found vent in the desire to compare and criticise the camp and to suggest various changes of the rules and customs as calculated to bring back something which is felt to be missing, a feeling with which we are in full sympathy. At the same time, while we believe that many changes may be made with advantage to suit the present condition of canoeing and the Association, we realize fully that there is nothing which can bring back the old men and the old spirit of fellowship which once prevailed.

Since the Jessup's Neck meet of 1890 there has been a greater falling off each year of the old men who came into canoeing and the A. C. A. in the third and fourth year of the latter, who were present at all of the Grindstone meets, who followed the Association to Bow Arrow and Lake George, and who, after partly missing a year at Stave Island, came together for the last time as a body at Jessup's Neck to celebrate the first salt-water meet. Since then some have been seen at one camp and some at another, but the number at any one of the later meets has been small and steadily decreasing, until now the list of those who were not at Croton Point in 1894 would be largely identical with the camp roll of Grindstone in 1886.

In this course of dropping away, first the big club delegation, such as the New York, Mohican, Rochester, Vesper and many other clubs once sent, has been broken up; only the more enthusiastic members of the club attending the meet. Then there come two or three members, attracted by the racing or still faithful to the old recollections, and staying for the full two weeks, camping out as usual. Sooner or later these same men run into camp for two or three days, just for a look, sleeping at some farmhouse or hotel where a comfortable bed may be had; and after this the most that is seen of them is when the camp is located, as this year, in a peculiarly convenient place, so that they can come to camp in the morning in boiled shirt and store clothes, returning to town in the afternoon. This stage, as a rule, ends their active interest in the Association; for some years they continue to pay dues and to attend the meeting in the various cities, but it is only a question of time when they drop out entirely.

The number of old leaders who have gone or are going this course is a matter of serious import to the Association, as it is already evident that the new men do not by any means fill the places of the old. One reason for this is that the old men came together practically as a body to form the American Canoe Association, every one doing his part, and thus coming into the closest and most intimate relations with the others. The more recent members, on the other hand, have found the Association ready made for them; they join it and work for it in a greater or less degree, but they are not thrown into the close personal contact once a year as were the older men, nor do they naturally take the same interest in the Association which they have joined as do those who feel that it is something which they have made.

This condition of affairs in the A. C. A. is one which every club and association must encounter at times in its existence, and one that is beyond any remedy through changes of rules. It is quite possible that in time it may remedy itself to a certain extent; but in the meantime it demands the earnest consideration of every member of the Association.

On several occasions in the past the Association has shown wonderful recuperative powers, recovering rapidly from the financial mistakes of different administrations which have threatened to bankrupt it; and frequently incurring an annual expense far beyond what its regular income would warrant. In times of difficulty the old men have turned to with a will to aid the executive and put the Association on an even keel as they did with Com. Winne after the disastrous years of 1890-91. In our opinion the time has come when the aid so freely and so frequently given in the past cannot be longer relied on; and there is a far more pressing necessity than ever before for careful management and rigid economy in order to avoid those difficulties which have been surmounted in the past, but which may prove destructive in the future.

The new Board of Governors is a step to this end; and with good judgment on the part of them and of the annual officers, it should be possible to manage the Association on the present membership so as to give good meets without exceeding the present income.

### The Camp.

Before criticising the camp site itself, it must be remembered that Croton Point was selected with some misgivings, not as altogether suitable, but as the best place available in the Atlantic Division and short of the St. Lawrence River; but the site is one that will stand on its own merits, without any excuse on this score. While there were several drawbacks, they were not serious, and the camp site will compare favorably with many previous ones. The hilly nature of the ground made it necessary to scatter the tents over quite a large area, and the compact formation of Grindstone and Jessup's Neck was not possible; at the same time the camp, though extending along a large piece of shore front, was not broken up into a number of isolated divisions, as was the first Willsborough camp. The dock and store were nearly a quarter of a mile from the high hill on which headquarters were located, though the distance was considerably less by canoe from the dock to the beach direct; and the extreme end of the ladies' camp was another eighth mile south. From the north end of the main camp, however, to the south end of Squaw Point, the row of tents was unbroken along the beach except by the bluff in front of headquarters. To have made the most possible out of the site it would have been necessary to have built a good stairway down the face of the bluff and a long dock directly in front; a matter of too great expense to be thought of a moment. Even as it was there was little trouble, two or three large wagons being at hand to transport

tents and baggage from the dock to the camp and back, while it was quite a short trip by canoe from the dock to Squaw Point.

The meet would unquestionably have been far pleasanter had the weather been cooler, but as the entire country up and down the river was suffering at the same time, this is nothing against the camp site; opinions differed among those who went to business in New York every day as to which was the warmer, the city or the camp; but at the latter there was the best of bathing, plenty of shade, and often a cool breeze. The Point being high and wooded, the up-river breeze did not always strike the camp, but on the whole the campers were quite as comfortable as they would have been at home. While there were no refreshing showers, on the other hand the usual violent squall, and the wet weather such as has marred the Lake Champlain camps, was entirely missing. The ground being high and rolling would have answered well in wet weather, and the sand would have absorbed a week's rain without turning into a bog. As it was, with a hot sun overhead and no rain for days, the dry sand became very hard to walk in, and the paths up the hills, covered with dry and slippery grass, were like toboggan slides. As there was more or less hill climbing to be done at all times, the camp was probably harder on the feet than any previous one.

To turn to the advantages, the view from all points was a fine one, with the river and the mountains on every hand, and the camp itself was most picturesque. There was no lack of shade, mostly old apple trees, Squaw Point in particular being located in an orchard, on ground sloping prettily to the river. On the back of the Point was a vineyard, the grapes being not yet ripe.

Headquarters was well located, on a high bluff, the tents being a little back, while out over the water was a field piece for saluting, and two flag poles for the code signals. The beach was of fine sand, hard and clean, with few stones or pebbles, and canoes were easily beached. There were no floats or skids, and wet feet were sometimes necessary in launching, but in such weather this made little difference. There were several wells of good water on the ground, and a water cart went round every day with water for the club messes at a distance from the wells.

The racing course was within easy view of the whole camp, and the bluff in front of headquarters was the favorite rendezvous while the races were on, though a good view could be had from any point along the beach. The winds were light during the meet, the races being sailed mostly on smooth water. There was some tide, a rise and fall of about 3ft., but it did not trouble the racers.

The transportation was the best yet provided at an A. C. A. camp, but 2¾ miles to Sing Sing, at which the steamer from New York also landed, while the station of the New York Central R. R. was but 100yds. distant. A small screw steamer which runs between Sing Sing, Haverstraw and Rockland made regular trips to the camp, carrying passengers for 15 cents, and connecting with many trains. Quite a number of canoeists went from camp to New York every day, rowing across early in the morning to Sing Sing and returning on the last trip of the steamer, meeting the train which reached Sing Sing at 6 P. M. Altogether the arrangements both for men and baggage were most satisfactory.

The mess question was settled to the satisfaction of every one, as, in spite of the notice to the contrary, a general mess was finally arranged, giving very fair meals for $1 per day. In the meanwhile, however, a number of large club messes had been arranged by the Knickerbocker, Ianthe and other clubs, each in charge of a cook and a helper, providing excellent meals at the same cost or a little more. Meat, groceries and ice were to be had on the grounds, and many came prepared to cook for themselves. Whether or not the decision of the executive committee to abandon the general mess was a wise one, a very good result followed in inducing men to come to the meet prepared to camp out; and it was a pleasing sight to see the many rough fireplaces built of broken brick, throughout both the main and ladies' camps.

In point of numbers, the attendance was only about the average, and under what was to be expected so near New York and in the most convenient camp yet held for the Eastern as well as the Atlantic Division. There were 240 names on the camp register, and probably some who forgot to register and go through the accompanying formality. One of the pleasantest sights in camp to an old A. C. A. man was that of a couple of small tents and a rough table just on the border of the main camp where were located Mr. Nate Smith, of Newburgh and his chum, Mr. Van Dalfsen. These two gentlemen, so well known some years since, have not been seen of late, and their return gave a homelike and familiar look which was further heightened by the Peterboro canoe Verena on the beach nearby, with her owner, Mr. E. B. Edwards, as usual, whittling a paddle out of a piece of red cedar. A little further along was the Deowainsta tent, occupied only by Mr. Huntington, though Mr. Stryker and one or two more Rome men were in camp for a short time.

Half way up the side of the bluff was a tent hung on to the hillside, in which was another old A. C. A. man, French of Buffalo, absent since 1890, with him being Mr. Stewart, also of Buffalo. Among the few men from the Northern Division were Sparrow, still sailing the Eel, ex-Secretary Burns, Archbald, and Mr. O'Brien, the paddler, as well as Herbert Tilley.

The Red Dragon C. C. sent a good delegation. The Knickerbocker C. C. had, as stated, a large club mess and a number of members in camp. Vice-Com. Witherbee and Purser Cragge had several tents in Squaw Point, and the Ianthe and Arlington clubs were well represented.

The most striking illustration of the change we have mentioned was the absence of the Vesper camp, always an institution in itself since 1885, and the presence in camp of Mr. Butler for a few hours only. The Vesper shop and the Vesper fleet were sadly missed, to say nothing of Butler, Gage, Goddard, Gray and the old Vesper men. Mr. Barney was in camp for several days, staying at the farmhouse at night. Mr. Butler, as stated, only spent a few hours in camp. Mr. Foster, who did such good work on the camp site committee at Lake George in 1888, spent one day in camp. Mr. Gibson is cruising in his naphtha launch on Lake Champlain. Mr. Whitlock is on a canoe cruise in Norway in company with Mr Sutherland Smith, an old New York C. C. man. Gen. Oliver is in Canada. Dr. Parmele did not report at all. Ford Jones is practising law out by the Rocky Mountains. Oxholm spent part of the time in camp, going down to business between the races. Cartwright, Robertson, Lawson, Parmele and the other prominent Eastern men were absent, with the exception of Appollonio. Ex-Com. Winne was in camp for some time, but the Mohican delegation was quite small.

If this meet had been arranged especially for the convenience of the J. Trusty Holdens of the A. C. A. it could not have been better placed; but they (and they are a large party) were not there. The round trip from New York to the camp and return cost but $1.30, and a man could leave the city in the morning and be in camp before he had read the morning paper through, getting back to the city by 7 P.M. Such an opportunity never before presented itself to the man who is deterred by time and distance from visiting an A. C. A. meet, and who writes during the winter to know what he could get for his dollar if he really attended one. Sad to say, the attendance from the vicinity of New York was disappointing, both on the part of old and new men; in fact a meet of about the same size, with from 220 to 250 in camp, can be held at any fairly good spot not over 500 miles from New York, and the number is hardly greater when the distance is decreased to but 30 miles.

## The Canoes.

The entry list gives the names of the racing men and also of the canoes, the latter requiring little notice. Mab, Mr. Archbald's canoe, has been seen at two previous meets, and is only changed in the addition of a 7ft. slide to the deck seat and a stronger and heavier thwartship tiller. With her was a new Gilbert canoe, Claire, a handsome boat of the same model. The only canoes calling for special notice were the two bilge-board boats Chiquita and Foggy Dew, the former designed by Mr. D. S. Goodsell and built by Stevens, of Lowell, the latter designed and built by Capt. Ruggles, who, by the way, was on hand through the meet. These are able and powerful cruising boats, of good model, fitted with long slides and carrying some 160 feet of sail at times; but each is so fitted that the hatches and canvas bucket may be quickly removed, leaving room for sleeping. In match sailing they are hardly to be compared with a pure racer like Mab, but Mr. Oxholm sailed Chiquita in all of the races in order to test the type and to demonstrate how little is really gained in speed by the bucket well machine; and this he succeeded in doing. Capt. Ruggles had several handsome canoes, Zaidee, Massawippa, Bullywagga and Gull, but with nothing specially new about them. The rigs were those so long seen only the Vesper being absent.

The location was most favorable for the attendance of small cruisers and unclassified craft, but few were present. Mr. Bennett had La Gloria, and Scarecrow came up in anticipation of a special race, which for some reason fell through. Mr. Wheeler, of Albany, had a second Scarecrow model. There was also a handsome little yawl, Tadpole, designed by Mr. McCormick, of Red Dragon C. C., an amateur, who also designed the canoe Fineen, a very good boat. Messrs. Smith and Van Dalfsen had each a trim little cruiser, with square stern and well fitted up. There were also half a dozen yachts, one from the Ianthe C. C., one from Arlington and one from Trenton; but the attendance of small cruisers and larger yachts was anything but what it should have been on the Hudson near New York.

The races themselves require no special notice, the entries being few and the contests lacking the old-time excitement, even the sailing trophy being uninteresting. The paddling trophy was won very easily, but the winner was hardly in camp at all, staying over night at the farmhouse and leaving on the first boat after the finish of the race. In some cases men came up from the city, ran over to camp for one race, and returned as soon as it was finished.

We made a suggestion last year that a clause should be inserted in the racing rules to the effect that any programme race in which less than three entries shall present themselves shall be declared off; and the present year has demonstrated the necessity of such a rule. Not only was the regatta committee compelled to walk the beach before a race and beg men to enter, but the resulting competition, in over half a dozen races, was but a farce. It is unfair to impose such extra work on a committee, and it is absurd to give prizes, as is being done of late years, for races in which there is no competition, or at least only a nominal amount. This year the club four race was a purely local affair, and other races were lacking in interest through the small number of competitors. Two races on the programme were entirely abandoned, after the committee had begged in vain for entries, the passenger sailing and war canoe; but so good a race as that for outclassed canoes, such as Mr. J. Trusty Holden's, was a mere farce, with two entries. The whole story of the racing is told in the following tables. One of the most notable incidents of the racing was the return of an old racing man, Mr. L. B. Palmer, for several years practically out of racing, who won the record as well as other races, in his old canoe Cricket.

## A. C. A. Regatta Programme, 1894.

Event No. 1.—Record race. Paddling and sailing combined; ½ miles alternately, total 3 miles. Time limit 1½ hours. Sails to be known as lowering sails.—July 24, 4:13 P. M.

Event No. 2.—Record race. Paddling; ½ mile, straightaway. Same canoe to be used as in event No. 1.—July 23, 12:18 P. M.

Event No. 3.—Record race. Sailing; 4½ miles. Time limit 2 hours. Same canoe and sails, seat, etc., to be used as in event No. 1.—July 23, 2:48 P. M.

Note.—For record races see Rule 5, sailing regulations.

Event No. 4.—Trophy paddling; 1 mile straightaway.—July 24, 11:58 A. M.

Event No. 5.—Paddling. Open canoes, not under 50lbs. weight; ½ mile straightaway. Single blades.—July 24, 11:10 A. M.

Event No. 6.—Unlimited sailing; 6 miles. Time limit 2½ hours. Starters in the trophy sailing race to be selected from this race. See Rule 5, sailing regulations.—July 23, 9:44 A. M.

Event No. 7.—Trophy sailing; 9 miles. Time limit 3½ hours. Starters to be selected as per Rule 5, sailing regulations.—July 25, 11:23 A. M.

Event No. 8.—Dolphin sailing trophy; 7½ miles. Time limit 3 hours. The canoe winning first place in event No. 7 will not be allowed to compete in this event.—July 27, 1:55 P. M.

Note.—This race will not be called until event No. 7 has been sailed.

Event No. 9.—Novice sailing; 3 miles. Time limit 1½ hours. Open only to members who have not sailed a canoe prior to Sept. 1, 1893.—July 23, 9:44 A. M.

Event No. 10.—Club sailing; 4½ miles. Time limit 2 hours. First three members of any one club to count. No club can be represented unless it enters at least three men. All men entered must have become members of the club they represent before the first day of the 1894 A. C. A. meet.—July 25, 4:20 P. M.

Event No. 11.—Passenger cruising sailing; 3 miles. Time limit 1½ hours. Canoes to enter this event must come within the regular classification to have a well 16in. wide for a length of 3ft. 6in., with a sleeping space of 6ft., of which at least 5ft. shall be clear. Lowering sails must be used. No limit on seats. Canoes must carry a passenger weighing at least 110 lbs.—Not sailed.

Event No. 12.—Outclassed sailing; 3 miles. Time limit 1½ hours.—July 25, 10:23 A. M.

Note.—It is the intention to give this race for the outclassed canoes without bathtub wells, etc. Conditions will be posted when the committee sees what class and number of boats there will be to enter this race.

Event No. 13.—Unclassified sailing; 4½ miles. Time limit 2 hours. Conditions to be posted.—July 23, 4:13 P. M.

Event No. 14.—Tandem paddling; ½ mile straightaway. Decked sailing canoes, double blades; open canoes, single blades.—July 24, 12:45 P. M.

Event No. 15.—Club four paddling; ½ mile straightaway. Not limited to a 16ft.x30in. canoe.—July 24, 3:41 P. M.

Event No. 16.—Sailing upset and manœuvering. At signal throw paddle over stern and recover; second signal, canoe to be heeled over until top of mast touches the water. Canoes to be righted and cross finish line under sail.—July 23, 5:41 P. M.

Event No. 17.—Paddling upset. Usual conditions. No special appliances.—July 26, 10:47 A. M.

Event No. 18.—Hurry-scurry. Run, swim and paddle. Short distance.—July 26, 11:40 A. M.

Event No. 19.—Gymnastics.—July 26.

Event No. 20.—War canoe; 1 mile. Conditions to be posted.

Note.—This race will be made a special feature if the committee receive enough entries.—Not paddled.

## Entry List, Meet of 1894.

| Canoe. | Crew. | Club. | Place. |
|---|---|---|---|
| Bullywagga | W. C. Witherbe | Bulwagga | Port Henry. |
| Sunbeam | D'Arcy Scott | Ottawa | Ottawa. |
| Beta | Thos. Hale, Jr | Yonkers | Yonkers. |
| Mab | C. E. Archbald | Pointe Claire | Montreal. |
| Dragonet | M. D. Wilt | Red Dragon | Philadelphia. |
| Torment | F. C. Moore | Knickerbocker | New York. |

## Record of Races.

Event No. 1, combined race, July 24, distance 3 miles, weather cloudy wind S.W., light and shifting:

| | Start. | 1st round. | Finish. | Elapsed. | Record. Total points. |
|---|---|---|---|---|---|
| Cricket, L. B. Palmer | 4 13 10 | 4 47 50 | 5 09 30 | 0 56 20 | 15 |
| Eel, J. W. Sparrow | 4 13 10 | 4 45 40 | 5 12 00 | 0 58 50 | 10 |
| Zaidee, H. V. Backus | 4 13 10 | 4 46 40 | 5 12 05 | 0 58 55 | 5 |
| Beta, Thos. Hale, Jr | 4 13 10 | 4 51 30 | 5 17 35 | 1 04 25 | 8 |
| Bo-Peep, D. B. Goodsell | 4 13 10 | 4 50 00 | 5 18 03 | 1 04 53 | 6 |

Winners: First prize, Cricket; second prize, Eel.

Event No. 2, Record paddling race, July 23, distance ½ mile, weather clear, wind E., puffy, water smooth:

| | Start. | Elapsed. |
|---|---|---|
| Cricket, L. B. Palmer | 12 18 20 | 0 6 25 |
| Eel, J. W. Sparrow | 12 18 20 | 0 6 38 |
| Beta, Thos. Hale, Jr | 12 18 20 | 0 7 40 |
| Zaidee, H. V. Backus | 12 18 20 | 0 8 04 |
| Bo-Peep, D. L. Goodsell | 12 18 20 | 0 8 11 |
| Fineen, J. M. Hamilton | 12 18 20 | Withdrew |

Winners: First prize, Cricket; second prize, Eel.

Event No. 3, Record sailing race, July 23, distance 4½ miles, weather cloudy, wind E., moderate, water smooth. Start 2:48:10:

| | 1st round. | 2d round. | Finish. | Elapsed. |
|---|---|---|---|---|
| Cricket, L. B. Palmer | 3 11 36 | 3 36 15 | 3 59 21 | 1 11 11 |
| Bo-Peep, D. S. Goodsell | 2 12 26 | 3 36 10 | 4 00 28 | 1 12 18 |
| Beta, Thos. Hale, Jr | 3 12 50 | 3 38 50 | 4 06 20 | 1 18 20 |
| Eel, J. W. Sparrow | 3 17 11 | 3 43 40 | 4 13 00 | 1 24 50 |
| Fineen, J. W. Hamilton | 3 19 35 | Withdrew. | | |
| Zaidee, H. V. Backus | Withdrew. | | | |

Winners: First prize, Cricket; second prize, Bo-Peep.

Event No. 4, trophy paddling, July 24, distance 1 mile, weather cloudy, wind calm, water smooth:

| | Start. | Elapsed. |
|---|---|---|
| Marguerite, Clarence Euson | 11 58 30 | 0 10 27½ |
| Sunbeam, D'Arcy Scott | 11 58 30 | 0 11 22½ |
| Wish, A. H. O'Brien | 11 58 30 | 0 12 36½ |
| Dragonet, M. D. Wilt | 11 58 30 | Not timed. |
| ——, E. L. French | 11 58 30 | Not timed. |
| ——, H. R. Tilley | 11 58 30 | Not timed. |

Mr. Euson paddled in fine form, and ran away from the others at the start, winning without an effort. Mr. Tilley was ill during his stay in camp, and in a poor condition for racing.

Event No. 5, paddling, open service canoes, July 24, distance ½ mile, weather cloudy, wind calm, water smooth:

| | Start. | Elapsed. |
|---|---|---|
| Silence, C. E. Archbald | 11 10 00 | 0 06 40 |
| Freda, R. Easton Burns | 11 10 00 | 0 07 00 |
| Wanderer, Geo. P. Douglas | 11 10 00 | 0 07 23 |
| N G, J. W. Sparrow | 11 10 00 | 0 07 45 |
| Kiowilla, C. E. Cragg | 11 10 00 | 0 09 33 |

First prize, Silence; second, Freda.

Event No. 6, unlimited sailing, July 22, distance 6 miles, weather clear, wind N. light, water smooth. Start 9:44:00:

| | 1st Round. | 2d Round. | 3d Round. | Finish. | Elapsed. |
|---|---|---|---|---|---|
| Mab, C. E. Archbald | 10 07 40 | 10 30 20 | 10 51 31 | 11 21 29 | 1 37 29 |
| Chiquita, T. S. Oxholm | 10 08 26 | 10 31 29 | 10 53 20 | 11 25 15 | 1 41 15 |
| Beta, Thos. Hale, Jr | 10 11 28 | 10 36 50 | 11 00 00 | 11 25 46 | 1 41 31 |
| Bo-Peep, R. S. Goodsell | 10 10 08 | 10 33 20 | 11 05 35 | Withdrew. | |
| ——, E. Aston, Jr. | 10 13 45 | 10 42 00 | 11 14 55 | Withdrew. | |
| Zaidee H. V. Backus | 10 14 30 | 10 53 40 | Withdrew. | | |
| Gull, H. D. McVean | 10 15 03 | Withdrew. | | | |
| Cricket, L. B. Palmer | 10 10 43 | Withdrew. | | | |
| Bullywagga, W. Witherbee | Withdrew. | | | | |
| Fineen, J. W. Hamilton | Withdrew. | | | | |
| Claire, F. C. Johnson | Withdrew. | | | | |
| Eel, J. W. Sparrow | 10 13 40 | Withdrew. | | | |

First prize, Mab; second, Chiquita.

Event No. 7, Trophy Sailing, July 25, weather clear, water lumpy in channel, wind S.E., moderate to light:

| 1st. | 2d. | 3d. | 4th. | 5th. | Finish. | Elapsed. |
|---|---|---|---|---|---|---|
| | | Mab, C. E. Archbald. | | | | |
| 11 43 55 | 12 04 15 | 12 24 40 | 12 55 20 | 1 26 45 | 2 05 34 | 2 43 34 |
| | | Bo-Peep, D S. Goodsell. | | | | |

First prize, Mab.

## Cruising.

The present camp offered unusual facilities to the out-classed cruiser, which of course he did not avail himself of. The short distance made it easy to cruise to camp from New York, the Sound and the Passaic, and a few did so, but by no means as many as was to be expected; and this feature of accessibility by canoe alone, is no

worth considering in selecting future camp sites. Mr. Wakeman cruised from Bridgeport to the camp, and other men cruised to camp with tent and duffle in their canoes, cooking all the time in true camp style.

Once in camp, there was fine water for day trips and short cruises, but very few were made.

### Business.

The annual meetings of the four divisions were held in camp, there was also held a meeting of the executive committee for the election of the commodore and secretary-treasurer, a meeting of the new board of governors for organization and the so-called general meeting. At the meeting of the Atlantic Division on July 21 the following officers were elected: Vice-Com., H. L. Quick, Yonkers C. C.; Rear-Com., J. E. Murray, Red Dragon C. C.; Purser, Thos. Hale, Jr., Yonkers C. C.; Executive Committee, I V. Dorland, H. H. Smythe and J. K. Hand; Member of Board of Governors, R. J. Wilkin, Brooklyn C. C.

On July 25 the Northern Division elected the following officers: Vice-Com., Wm. L Scott, Ottawa C. C.; Rear-Com., J. W. Sparrow, Toronto C. C.; Executive Committe, C. E. Archbald, Pointe Claire B. C., Montreal, and A. H. O'Brien, Argonaut C. C., Toronto; Member of Board of Governors, E. B. Ewards.

The Eastern Division on July 23 elected the following officers: Vice-Com., Raymond Appolonio, Shuh Shuh Gar C. C., Winchester, Mass.; Rear-Com., Robert Wakeman, Owanux C. A., Bridgeport, Conn.; Purser, Louis F. Cutter, Shuh Shuh Gar C. C., Winchester, Mass.; Executive Committee, Dr. George R. Parmele, Hartford C. C., and Howard Frost, Tatassit C. C., Worcester, Mass; Member of Board of Governors, Paul Butler, Vesper B. C., Lowell, Mass.

The meeting decided that the Eastern Division was not in a position to warrant it in taking the commodoreship and meet, which go to it by turn, and offered a formal waiver of both with a wish that the executive committee might select Vice-Com. Witherbee for the chief office of the Association. The meeting of the Central Division was held on Wednesday night, the present vice-commodore and purser being re-elected.

The meeting of the executive committee was held on the same evening, during the session of the Central Division. Some detail business was attended to, including votes of thanks to Mr. John Cockroft, the owner of the land on which the meet was held, who has been most kind and obliging from the first; to the Sing Sing Y. C. for the silver cup presented by it, as well as for other courtesies, and to the Yonkers C. C. for the Dolphin trophy, presented under the conditions given last week. After the meeting of the Central Division was concluded, the name of Mr. W. R. Huntington was presented for Commodore of the Association, but as he positively declined to accept the office, Vice-Com. Witherbee was nominated. He also declined to serve, and a long discussion followed, Mr Huntington being again requested to take the office, but refusing. After some further persuasion Mr. Witherbee was elected, in spite of his objection, and Purser Cragge was elected secretary-treasurer. This made two vacant offices in the Central Division, which were filled by holding another meeting and electing Vice-Com., Charles G. Belman, Amsterdam C. C.; Rear-Com., H. D. McVean, Rochester C. C.; Purser, W. S. Hackett, Mohican, C. C., Albany, N.Y.; Executive Committee, Officers Nate S. Smith, Newburgh Boating and Canoeing Association, and William R. Huntington Deowainsta, C. C., Member of Board of Governors, Charles V. Winne, Mohican C. C., Albany, N. Y.

The so-called "general meeting" of the Association was called to order quite late in the evening after the other meetings were over, most of those in camp being gathered around the camp-fire. The races not being over, the principal function, the presentation of prizes, was deferred, and several votes of thanks were tendered to Mr. Cockroft and other parties. Com. Dorland called for a report from the committee appointed at the November meeting to consider the question of future camp sites for the Association, Messrs. Oliver, Edwards, Gray, MacKendrick, Seavey, Peebles, Huntington, Parmele and Stephens. The chairman, Mr. Stephens, reported that the committee had been unable to meet personally, the members residing in distant places, and that much difficulty had been experienced in carrying on a discussion of the question by correspondence, suggesting that as a majority of the committee was then in camp, it would be possible to discuss the matter at length, and draft a report, to be submitted to the absent members and laid before the executive committee at the November meeting. Mr. Wilkin made a lengthy and eloquent speech in which he denounced the appointment of the committee as an attempt to force the Association to adopt one permanent camp site, and finally made a motion that the committee be immediately discharged. Mr. Stephens opposed the motion, without arguing any of the many points made by the other side, on the point of order that the so-called general meeting was purely an informal gathering of the persons in camp, with no power to vote on any question, or to discharge the committee. Com. Dorland sustained the point of order, and Mr. Wilkin again addressed the meeting at length, finally offering another motion, that it was the sense of the meeting that the executive committee be requested to discharge the committee as soon as possible. An aye and nay vote was first taken, but in the darkness it was impossible to see who voted. A rising vote was then called for, and a majority arose in favor of Mr. Wilkin's motion, but a point of order was raised by Mr. Masten as to whether only qualified members of the Association had voted. Again a rising vote was called for, and Secretary Douglas made the count with the aid of a lantern dimly burning, the result being about two-thirds in favor of the motion. Mr. Burns then offered a motion requesting the executive committee to consider such a change of the constitution as should make it possible for the members in camp at the meets to vote on matters relating to the management of the Association. The motion was seconded but lost, after which the meeting adjourned.

On Tuesday morning a meeting of the new board of governors was held for organization, Com. Dorland presiding, and Messrs. Wilkin, Edwards, Butler and Winne being present. As it is provided that the term of office shall be four years, one member retiring each year, it was necessary to settle the lengths of term of each new member, and Mr. Wilkin drew the four-year term, Mr. Butler the three-year, Mr. Winne the two and Mr. Edwards the one-year term. Mr. Wilkin was elected president and Mr. Winne recorder.

On Thursday a meeting of the committee on future camp sites was held, at which it was resolved that, in view of Mr. Wilkin's motion, the committee request of the executive committee that it be at once discharged, and Com. Dorland was accordingly notified. A meeting of the executive committee was called on Friday morning, but as no quorum responded no action was taken.

The amusements of the camp offered nothing out of the common; the usual camp-fires were held, the ladies being invited to many of them; but the special attractions of some former years were very wisely omitted, as they had reached a point in the elaborate tableaux and pyrotechnic display of 1892 where they encroached on the domain of the roof garden rather than a camp in the woods by the disciples of "Rob Roy," "Nessmuk" and "Seneca." By way of diversion, however, and to enliven the Knickerbocker camp fire, which was one of the pleasantest of the meet, Mr Seavey sent up five huge stage birds, made of wire, canvas and papier maché, covered with palm leaves to represent feathers. These huge creatures were first introduced to the camp at sundown, each towed on a float, then they indulged in a dance on the beach, and later they appeared at the camp-fire on the steep hill in front of the Knickerbocker camp. The club had imported from New York a "coon band," as nearly as possible like that at Jessup's Neck, which regaled the assembly with "Watermelon Growing on de Vine" and other ditties, after which three of the immense birds made their entry from the darkness and engaged in a dance, the band singing "Dere's a Lock on de Chicken Coop Door" A very nice spread was provided and the evening passed very pleasantly. The camp-fire was dispersed by 11 P. M. by two or three drops of rain, after which all adjourned to headquarters, where the prizes were distributed.

This year there was no "Visitor's Day," nor was there any trouble from strangers in camp during the meet. Though so near to Sing Sing and also to New York, there were fewer strangers than in more isolated locations, and no parties or excursions, such as might be expected, attempted to land. On Friday night a band from Sing Sing visited the camp and played at the camp-fire. In the matter of social life the camp was a pleasant and congenial one, especially when the large proportion of new and comparatively strange members is taken into account.

## The Wawbewawa War Canoe Racing Association.

Some of the active canoeists in the vicinity of Boston have recently organized the Wawbewawa War Canoe Racing Association, and it is their desire to awaken an interest in canoe events of this kind. They have already made application for membership in the New England Amateur Rowing Association, and there is no doubt but that they will enter at least one crew in the races to be held on the Charles River on Labor Day. The Springfield C. C. has just been admitted to the Association, and the Tatassit Club of Worcester has been a member for several years. It is possible that the Arlington Boat Club may also enter a crew. Altogether the prospects for an interesting race are very bright. After the most successful war canoe race at Springfield on May 30 last, during the Eastern Division meet of the A. C. A., it seems as though this kind of canoe racing will be a prominent feature in all future regattas. It is hoped that the Hartford C. C. will soon fall in line and join the N. E. A. R. A.

The Wawbewawa War Canoe Racing Association is composed of paddlers living in the vicinity of the Hub, and they certainly ought to make a good showing, as they are all A. C. A. members and canoeists of experience. The club is limited to twenty, and there is a waiting list already. The officers are as follows: Louis S. Drake, Captain; Walter L. Perry, Secretary; Francis J. Burrage, Purser.

## Prudish Purity from Puritanville.

*Editor Forest and Stream:*

Canoeing circles in Boston of late have been shaken with the throes of discussion. The topic has, strange to say, been that of dress, a subject usually scorned by canoemen. The cause of this distressing agitation is found in the recent suspension of several active members of the Newton Boat Club ostensibly because they appeared upon the club floats in a training costume, which comprised shoes, stockings, knickerbockers and sleeveless rowing shirts. When argued with about their action, the officials of that large club wanted it distinctly understood that "the club was not a boating but a social organization." Now every one knew that before the committee made such a statement, but no canoeist in Boston ever entertained the idea that a club whose constitution set forth that it was organized for purposes of maintaining and fostering aquatic sports would take such extreme means to kill all the athletic tendencies of its members. Can it be that the representatives of the fair sex who visit the N. B. C are so vastly different from those who complacently sit and watch a Harvard-Yale race, where the contestants oftentimes compete dressed in but little more than a breech cloth, or who occupy the seats on Holmes's Field and watch the half nude figures of sprinters dash across the tape amidst thunders of applause? The young women who indulge in the canoeing pleasures on Charles River are admirable in many respects; they are of good social standing; unlike most of the members, many are strong paddlers: they are eminently respectable and are endowed with that innate modesty for which the American girl is noted. But I venture to say that by far the greater portion of them modestly admire the sight of a well set up, muscular form, as they properly should. Is it possible that any pure-minded woman will revolt at the sight of a pair of bare, muscular and sun-bronzed arms? I hope not. And all would be tranquil in canoeing circles if their prudish swains could command an equal amount of sound common sense. Why, since the old Greek days and earlier the hardy and well-formed athlete has been the cynosure of all feminine eyes, while the weakling has been pitied and scorned. Who is crowned by fair hands with the laurel wreath of victory now, as then—the manly figure of the perfectly-formed man or the cigarette-smoking dudeling who idly watches others win renown?

Away with such false modesty, the meanest of all small qualities. Let the American girl continue to applaud the man to whom is due the physical elevation of our race, and let the inane splutterings of mock modesty receive the contempt that is its due. Ilex.

Boston.

## Mr. Howard's Races.

*From the Field.*

This question of what is and what is not a canoe-yawl has a rather important bearing upon two events which are to come off early in August. In the first place, the British Canoe Association's challenge cup at Salcombe, is open to canoe-yawls, and we are informed by the owner of an Oxford canoe-yawl that he is going to Salcombe. His craft is a ½-rater, she has a counter and a transom stern, and she is sloop rigged. There is no definition of a canoe-yawl in the club's rules under which the cup is to be raced for; and possibly, after a long and expensive journey, this craft may be shut out, should the club elect to use the R. C. C definition. On the other hand, sailing canoes, such as Dragon, of 36in. beam, 14ft. water-line and 0·3 rating, will have to race on open salt water against a regular 0·5-rater racing craft of 17ft. water-line and some 5ft. 6in. beam.

In the second place, with regard to what is a correct definition of canoe-yawl, we are informed that the American challenge issued by Mr. Howard to sail his canoe Yankee against any English canoeman on open water, has been taken up by Mr. Brand, who is willing to match his Oxford canoe-yawl Spruce II, against the Yankee. Of course, if each man has seen the boat of the other and is not afraid of her, definitions concocted by clubs need not enter the question; but if the idea is to hold a canoe-sailing match under an international halo, probably, in the absence at present of a canoe-racing association, some definitions or rules will be advisable if not absolutely necessary. If the definition of the Royal C C. be taken, Spruce could not sail because she has a transomed counter, and her rudder is not "at the after-end of the boat." In light to moderate winds, on open water, Yankee, with her 5ft sliding seat, would probably walk clean away from the ½-rater if much reaching were found on the course; but in a rough peg-and-run, with frequent turning in lumpy water, Yankee would be out of it. We do not see any "matching" between such very different types of boats—viz., 30in. beam, and crew out on a 5ft. slide, with 112 sq. ft. of sail, against 5ft. 6in. beam and 175ft. of sail, load-line lengths being about the same. If a match is made it should not be considered a canoe-sailing race, nor any test of what a canoe-yawl is or is not in competition with a typical American canoe.

A despatch on July 28, states that Mr. Brand has accepted Mr. Howard's challenge, and will race him in either a canoe or canoe-yawl.

Central Division.—John L. Warner and John J. Howe, Jr., of New Jersey. Dr. Jas. T. Vredenburgh.

# Rifle Range and Gallery.

## Zettler Rifle Club.

Eleven members of the Zettler Club assembled at Wissel's Cypress Hill Park, July 29, to participate in the bi-monthly shoot. The weather was hot and dry, a combination that made shooting somewhat laborious. The powder had a disagreeable way of sticking to the inside of the rifle barrel, thereby causing much vexation to the perspiring shooter. Messrs. Ross, Holges and Hansen, who shoot the Schalk system, seemed to have but little trouble with their rifles Ross in particular shot in brilliant form, and in a series of 50 shots made the following scores: 226 226 223 225 229—1129. Among the group of experts who were trying to extract their measure of pleasure from the unfavorable conditions was that old veteran and aged shooter Ferdinand Fabarius. Although 74 years of age Mr. Fabarius seems to shoot his rifle with as much pleasure as in his younger days. The best scores on the ring target were made by Ross, whose average was 225.8. Holges was second. There was considerable interest centered on the man-target, where Busse, Walther, Ross, Holges and others were having a hot race for first position. Several of the competitors quit only when their ammunition became exhausted Scores:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| F C Ross | 22 | 23 | 23 | 25 | 24 | 20 | 24 | 24 | 19 | 32—226 |
| | 21 | 24 | 23 | 22 | 25 | 23 | 23 | 20 | 21 | 24—226 |
| | 25 | 21 | 23 | 25 | 22 | 22 | 20 | 23 | 25 | 23—229 |
| H Holges | 20 | 25 | 23 | 20 | 25 | 23 | 20 | 25 | 23 | 21—225 |
| | 24 | 24 | 23 | 22 | 21 | 20 | 23 | 24 | 23 | 20—224 |

Man target, 3 shots, possible 60: Ross 57, Walther 56, Busse 55, Holges 55, Engel 54.

Bullseye target, 3 shots, 4in. center, possible 3: Hansen 1, Plaisted 1, Holges 1.

## Rifle Notes.

A meeting of the board of delegates of the National Bund of North America, was held at No. 12 St. Marks Place on Friday night of last week, for the purpose of hearing the final report of the committee on parks. By a unanimous vote it was decided to hold the festival at Glendale Park, Long Island.

The New York Central Corps, Capt. D. Meerse, held its 24th annual festival at the Union Hill Park, on Wednesday and Thursday of this week.

## Rifle at the Golden Gate.

San Francisco, July 22.—The prolonged strike has arrested my regular reports of shooting notes from the Golden Gate, and, moreover, I have been in the mountains on a rough, though short, trip after blacktails and health.

Three weeks ago the Grütli Verein gave their annual public prize shoot with a liberal list of cash and merchandise prizes on the San Rafael range. The attendance was large. The most valuable prize, a solid gold Waltham watch, was won by Dr. Rodgers on his second ticket (24 23 25—72); Wm. Glindeman, second, won $25 coin (24 25 23—72); H. Strecker, third, won $20 gold coin (71 rings), etc.

Two weeks ago the monthly medal and usual all-comers' contests of the Columbia Pistol and Rifle Club were held. There were present Mr. A. McBean of Chicago, and Mr. Schmidt, formerly of Milwaukee, both well known riflemen. Each essayed a score for the Roos rifle medal and shot well, considering that they were out of practice. The attendance on the range was small, as the strikers were in an ugly mood and were in force near the range. Weather conditions good.

Scores, for members only, no re-entry, pistol, 50yds: Champion class—F. O. Young 94, C. M. Daiss 87, A. Johnson 87. First class—A. H. Pape 89, F. Gehret 85, D. McLaughlin 84, Dr. Rodgers 83, F. Poalter 79, P. Bohr 79.

Rifle, for members only, no re-entry, 200yds.: Champion class—D. McLaughlin 85, F. O. Young 80, Dr. Rodgers 75. First class—P. Bohr 76, F. Gehret 72, A. H. Pape 72. Second class—C. C. Ludington 54.

All comers' medals and cash, re-entry in all. Scores:

Pistol—A. McBean 93, Dr. Rodgers 93, F. O. Young 93, A. H. Pape 90, C. M. Daiss 88, F. Gehret 85, P. Bohr 85, E. Hovey 85, D. W. McLaughlin 80.

Target Rifle—Dr. L. O. Rodgers 88, D. McLaughlin 87, A. H. Pape 86, A. McBean 84, F. Gehret 83.

Springfield rifle, standard American target—F. Gehret 82, A. H. Pape 80.

To-day the above club held another semi-monthly all comers' shoot. Scores:

Pistol—C. M. Daiss 94, F. O. Young 92, Dr. Rodgers 91, A. H. Pape 90, F. Gehret 89, A. McBean 89.

Target rifle—F. O. Young 90, A. McBean 87, F. Gehret 84.

Springfield rifle—L. O. Rodgers 73.

The California Schuetzen Club are making preparations for their popular fall festival to be held next month at San Rafael. Roeel.

## New York Central Schuetzen Corps.

The New York Central Schuetzen Corps held its monthly shoot at Union Hill Schuetzen Park, July 24. Capt. D. Meers with 40 members participated. Soooting was not as good as it should have been, the weather was too warm. Scores, ring target:

Championship Class.

| | | | | | |
|---|---|---|---|---|---|
| P F Schmidt | 66 | 65—131 | A W Roose | 65 | 58—123 |
| D Meerse | 64 | 63—127 | H D Muller | 62 | 60—122 |
| F Schmidt | 62 | 61—123 | F Schroder | 61 | 55—116 |
| J Reiturissner | 35 | 25— 60 | | | |

Class I.

| | | | | | |
|---|---|---|---|---|---|
| J Eisenhardt | 67 | 57—124 | C Pletz | 54 | 48—102 |
| E Richardt | 54 | 54—108 | | | |

| J Schneweiss | 60 | 48—108 | | | |

Class IV. A Luck 54 38— 92

Bullseye target—Championship class: P. Schmidt 6, Schroeder 3, Muller 2, Roos 1. Class I.—Eissenhardt 1, Flurole 1. Class II.—W. Teschmaker 1, Berkman 1. Class III.—Schneweiss 3.

## Excelsior Rifle Club.

Five members of the Excelsior Rifle Club, of Jersey City, visited Armbruster's Park on Friday of last week for an afternoon practice at 200yds. range. The weather was hot with a strong southerly wind sweeping across the range. The principal feature of the afternoon's shooting was an impromptu 50 shot handicap match between Messrs. Hansen, Plaisted and Boyce for a nominal stake; Hansen and Plaisted granting Boyce 33 points handicap. The finish of the first 10 shot string was decidedly in favor of Hansen, who, with a total of 217, was leading Plaisted 3 points and Boyce 27, from this point on to the last string. Hansen fell off in his average while his competitors kept improving. Hansen's fifth and last score was an exhibition of good holding, and resulted in the fine score of 220. His effort, however, came too late to land him a winner in the race. He got second place, beating Boyce by the small margin of 3 points. The scores are appended, 50 shots, German ring target, 200yds.:

| | | | |
|---|---|---|---|
| Plaisted | 214 224 221 216 207—1082 | Boyce | 190 212 194 215 209—1020 |
| Hansen | 217 205 201 213 220—1056 | Handicap | 33 |
| | | | 1053 |

The scores of the members who were present and participated in the regular club event are appended, 10 shots, German target:

| | | | |
|---|---|---|---|
| Speicher | 22 22 17 19 25 10 19 23 17 17 | | 191 |
| Boyce | 19 24 25 21 23 16 22 22 19 24 | | 215 |
| Haase | 19 10 20 22 5 8 21 16 24 19 | | 168 |
| Weber | 20 19 22 18 23 20 21 20 22 17 | | 202 |

## Challenge by a Youngster.

Chicago, Ill., July 18.—*Editor Forest and Stream:* I will let my boy Alfred shoot a match with any one, professionals barred, as follows: 50 shots, 50ft, American standard target; 54 shots at running balls, 3 balls to be shot at while going away from the shooter, or 3 shots to count, rifle to be shouldered after the balls are in motion, each broken ball scored 10 points; 50 shots at swinging target, shots to be fired either right or left end of swing, to the choice of the shooter, and one shot to be fired at each swing of target from first shot or scored lost, each bell scored 10 points; 50 shots rapid firing, 50ft., German ring target, by series of 10 shots each inside of 12 seconds, and one point added for each 1-5 second under set time; 30 shots with shotgun at inanimate targets, known traps and angles, each dead scored 10 points. No coaching, instructing or interfering will be allowed while the shooter is at the score; 10-gauges and globe sights barred. Alfred is under 12 years of age but age will not bar anybody willing to accept challenge. C. H. Bisson.

## Cypress Hills Park, July 29.

There was a large gathering of German-American shooting societies in this park to-day. The weather was hot but hot weather only adds to the pleasure of the jolly Teuton when out for a picnic. A programme of twelve prizes on the 50yds. range was put up for competition for visiting riflemen. A number of the members of the Zettler Club who had been engaged in long range practice in the early part of the day, took a hand in the short-range shooting with much success. The scores are appended:

| | | | | | |
|---|---|---|---|---|---|
| L Flach | 74 | 74—148 | B Zettler | 72 | 72—144 |
| B Walther | 73 | 74—147 | G Worn | 72 | 72—144 |
| H Holges | 73 | 74—147 | Muth | 71 | 72—143 |
| C Ross | 73 | 73—146 | Kahers | 66 | 73—139 |
| C Horney, Jr | 72 | 73—145 | Muller | 69 | 70—139 |
| G Krauss | 72 | 72—144 | Hokwyos | 50 | 60—110 |

## Blumenthaler Co., No. 6.

New York, July 23.—The Blumenthaler Co, No. 6, N. Y. S. Co. No. 1 held its last shoot this eve at its range on Ninth avenue. Capt Fred Schill and fifteen members were present and participated in the shooting. The scores are appended:

| | | | | | |
|---|---|---|---|---|---|
| F Schill | 240 336 234 232 232—1174 | | Norwicke | 232 231 252 | — 694 |
| H Muller | 239 235 235 235 | — 944 | F Necoise | 120 111 | |
| W Hicks | 238 229 229 222 | — 918 | | | |

Point target, champion class: Schroeder 60, Muller 39, F. Schmidt 24, Reitwersner 2. Second class: Ernie Berckman 44, Koch 43, Jordan 30. Third class: Schneweiss 39, Lower 30, Forsch 8. Fourth class: Tonjes 32.

Main target: Reitweisner 56, Ficken 55, Eisenhardt 53, P. Schmidt 53, Schroeder 53, Roos 52, F. Schmidt 51, Berckman 51.

Henry D. Muller.

## Greenville Rifle Club.

There was quite a falling off in the attendance of the members of the Greenville Rifle Club at the weekly gallery shoot on July 27. A rifle gallery is not the coolest spot to pass an evening these hot nights. Fourteen members were present and entered into the competitions for the class prizes. The scores are appended: Ten shots, German ring target:

First class: J. Boag 234, Collins 240, Scheeline 222, C. Boag 226, Plaisted 227, Perkins 240.

Second class: Agneau 231, Charlock 223, Gotthardt 223, Chase 221.

Third class: Graef 212, Hill 206, Renker 213, Daniels 200.

## Rifle at San Antonio.

The San Antonio Rifle Club held its regular weekly shoot on July 22 as follows. Regular medal shoot, rest, 200 yards, 10 shots per man:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| A Guenther | 9 | 9 | 9 | 9 | 11 | 12 | 9 | 9 | 10 | 9—96 |
| E Dosch | 7 | 10 | 9 | 9 | 9 | 6 | 8 | 12 | 7 | 9—86 |
| Ad Altman | 8 | 9 | 8 | 9 | 11 | 9 | 10 | 8 | 19 | 9—91 |
| E Steves | 9 | 12 | 8 | 12 | 7 | 7 | 8 | 9 | 10 | 10—92 |
| A Uhl | 12 | 8 | 11 | 9 | 9 | 9 | 9 | 10 | 9 | 11—97 |
| R Neuman | 10 | 8 | 9 | 9 | 7 | 7 | 8 | 8 | 7 | 7—80 |
| O Koehler | 4 | 7 | 6 | 5 | 9 | 6 | 5 | 9 | 6 | 9—66 |
| E Seffel | 8 | 10 | 8 | 8 | 9 | 8 | 8 | 12 | 10 | 11—92 |
| A Herff | 10 | 6 | 10 | 9 | 12 | 10 | 9 | 5 | 9 | 12—92 |

Medal offhand shoot, 200 yards. 10 shots per man:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| A Guenther | 4 | 10 | 5 | 0 | 6 | 7 | 6 | 5 | 5 | 5—53 |

# Trap-Shooting.

## FIXTURES.

Aug. 7.—Albany, N. Y.—Eastern New York League tournament, under the auspices of the West End Gun Club. Horace B. Derby, League Secretary.

Aug. 7-9.—Memphis (Tenn.) Gun Club tournament.

Aug. 8.—W. H. Kearfott's semi-annual bluerock target tournamen at Kearneysville, Jefferson county, W. Va.

Aug. 8-10.—Missouri State Amateur Association, at Richmond, Mo.; $300 added.

Aug. 13-18.—John Parker's fourth international tournament, blue rock targets and live birds, at Des-chree-shos-ka Island, near Detroit, Mich.

Aug. 15-16.—Richmond (Me.) State shoot. C. O. Rowe, Sec'y.

Aug. 21-23.—Hot Springs (S. D.) Gun Club's tournament; $250 added.

Aug. 21-24.—Pennsylvania State Sportsmen's Association annual tournament, under auspices of Altoona Rod and Gun Club, at Wopsononock Park, Altoona.

Aug. 22-24.—Central Illinois Sportsmen's Association annual tournament, at Bunker Hill, Ill.

Aug. 23.—New England Shooting Association championship tournament, under the auspices of the Atlantic Trap Shooting Association at Lynn, Mass.

Aug. 29.—Central New York Trap-Shooters' League, fifth tournament, at Auburn.

## DRIVERS AND TWISTERS.

*Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.*

Says the New York *Sun* of July 28th: "There may be such a thing as fair play in England. For years and years and years Englishmen have been boasting about it, but the treatment shown the American gentlemen who went over two months or so ago to shoot pigeons with the Britishers shows that some members of those swell organizations, the Gun Club and the Hurlingham Gun Club, have no other idea of sport than to win at all hazards. Some of the tricks alleged to have been played on the Americans would have made even the 'sure-thing' boys who flourished at Guttenburg blush, and the men who played them pass for sportsmen and gentlemen. Messrs. F. G. Moore, E. A. Post, A. Clinton Wilmerding and J T. Alburger, who, with Captain A. W. Money, R. A. Welch and John Seaver Page, shot in numerous matches against the English cracks at the clubs named, arrived on the Britannia yesterday, and they sailed into the gentlemen sharps without gloves. 'We went abroad expecting to compete against gentlemen,' said Mr. Moore, 'but we got a good dose of English fair play which we won't soon forget At the Gun Club in the international tournament all of our men were shooting fairly well, but not brilliantly. Our scores were poor indeed, and the birds were faster than lightning. We noticed that the pullers invariably liberated the birds in traps Nos. 1 and 5 for us, while the Englishmen got the three inside boxes. This would not have made such a great difference to us had there been no selection of birds, but all the fast ones were put in the end traps. The birds from Nos. 2, 3 and 4 were in many instances as slow as chickens on the wing. The fraud became so palpable that Captain Leighton and several other members of the club threatened to resign unless an investigation was made. The executive committee met, and as a result the trap-pullers, who had been paid by some of the betting members, were dismissed. And at Hurlingham,' continued Mr. Moore, 'we found more gentlemen sharpers. They handicapped us heavily. We were shooting at 29 and 31 yards rise to 26 for the Englishmen, who were picked as the best shots in the country. All of us noticed that we were shooting under the birds, but couldn't understand it. Finally a Frenchman who was backing us insisted that a measure be brought. Then it was discovered that we had been shooting two yards back of our handicaps. There was no investigation over this. Some English sportsmen have a very poor idea of fair play.' The Americans won, besides a number of cups, about $3,000 in sweeps. Mr. Moore broke the record at Hurlingham by killing 32 birds straight at 29 yards rise. Captain Money and R. A. Welch will return early this month."

The annual shoot of the Nassau Gun Club was held on July 25 at Dexter Park. Each member competing gave a prize and was a recipient of one. The contest was under the usual rules, and as each contestant was unaware of the prizes to be won, considerable fun took place. Each shot at 10 birds, all at 28 yards rise. E. Helgans was the winner with ten, and had the first choice of prizes; R. Woods with G. N. Forbell took the second choice with nine each; J. Young got the third with eight. Score: Club shoot, 28 yards—E. Helgans 10, R. Woods 9, G. N. Forbell 9, J. Young 8, W. Selover 7, W. Levens 7, C. Magee 6, Von Drelle 6. Sweepstake shoot five birds, 28 yards—W. Selover 5, R. Woods 4, E. Helgans 4, G. U. Forbell 4, J. Young 4, H. Bramwell 3, C Magee 2, P. Von Drelle 2. At the close of the shoot the annual meeting of the club was held and the following were elected as officers for the ensuing year: President, J. F. Van Wicklen; Vice-President, W. H. Selover; Treasurer, C. Magee; Secretary, W. Hartye; Executive Committee, G. U. Forbell, P. Von Drede and E Halgans; Directors, G. U. Forbell, C. Magee and P. Von Drede; Steward, Louis Miller.

The Hell Gate Gun Club held its monthly shoot at Dexter Park on July 24, there being twenty-two members on hand. The club match was at 10 live birds, American Association rules, the scores to count in the yearly averages. The result: Chris Moltzen, 25yds., killed 8; John Schim, 25yds., 6; H. Rabenstein, 28yds., 5; Chas. Rieger, 28yds., 7; John Linck, 28yds., 4; John H. Voss, 28yds., 9; H. Thau, 30yds., 8; Philip Woelfel, 28yds., 5; J. Neumann, 25yds., 3; John Brodie, 28yds., 8; Conrad Webber, 28yds., 10; J. Friesen, 25yds., 5; Chris Rabenstein, 28yds., 8; Eugene Doinck, 28yds., 8; Louis Frazneck, 28yds., 7; Richard Regan, 28yds., 8; Robert Lindner, 28yds., 7; H. Knobel, 28yds., 7; J. P. Dannenfelser, 28yds., 7; H. W. Voss, 28yds., 7; Fred Trostel, 28yds., 10; Louis Shortemeier, 28yds., 8. Then followed a sweepstake at 20 targets each, 20yds. rise, with this result: Louis Shortemeier 17, Chris Rabenstein 15, John H. Voss 12, Eugene Doeinck 12, Chas. Rueger 10, John Brodie 8, Conrad Webber 7, L. Fraznix 6, Fred Trostel 5, H. Rabenstein 1.

The monthly target contest of the Paterson Gun Club took place on July 24 at Williard's Park, each man shooting at 25 targets from five traps, 16yds. rise. T. W. Morfey was in good fettle and had no trouble in winning the medal. The scores were:

| | |
|---|---|
| Morfey | 1111111111111110111111111—24 |
| Wright | 1111101011111111111011111—22 |
| Morgan | 11101 11001100101100111100—15 |
| Hopper | 0001010010010110110111000—14 |

The next event was at 5 pairs, Morfey scoring 9, Wright 8, Morgan 5 and Hopper 4. The wind-up was at 15 singles, Wright getting 15, Morfey 14, Morgan 12 and Hopper 9.

The third tournament of the Eastern New York League will be held at Albany on Tuesday, Aug. 7, under the auspices of the West End Gun Club. The programme comprises four 10 target event $1; four 15-target events, $1.50 and one at 20 targets, $2. Prizes of $5, $4, $3, $2 and $1 will be awarded to average winners in events 2 to 10 inclusive. Dinner will be served at R. Schaefer's Lake House. Take West Albany electric cars at intersection of State street and Broadway, to Watervleit avenue, where conveyances will be in readiness to take shooters to the grounds.

Altoona, Pa., July 25.—Will you please make a note in your next issue that I shall be pleased to mail a copy of the programme for the Pennsylvania State Shoot to any one who may want one, and who has been overlooked in our mailing list. The shoot is going to be a "corker," I believe, and "Wopsy" will be looking her prettiest, if only the weather clerk is favorable to us, and that, at this season of the year, is not very unlikely, as in August fine weather predominates in the Alleghenies.—Edward Banks Sec'y.

Memphis will catch all the cracks next week and great will be the tussle for that $760 added to the purses.

The third championship contest of the New England Shooting Association will be held at Worcester, Mass., on Aug. 10 under the auspices of the Worcester Gun Club. The badge matches are open to residents of New England only. The programme is as follows: 10 singles, known angles, $1 entry; 10 singles, unknown angles, $1; 7 singles, straightaway, 25yds. rise, 75 cents; 15 singles, known angles, $1.25; 10 singles, unknown angles, $1; team championship, 5 men to a team, 15 targets per man, known angles, entrance price of targets; 10 singles, known angles, $1; individual championship, 30 singles, known angles, entrance price of targets; 5 pairs, 75 cents; 7 singles, straightaway, 25yds. rise, 75 cents. In the championship events the gun must be below the armpit until target is in the air.

Eight members of the Down-town Gun Club of New York were present on July 26 at Dexter Park to compete for the club's gold medal. Each shot at 10 birds, club handicap, under American Association rules. J. Huff was the winner, with 9 out of 10; four others had a close race with him with eight each. A team shoot followed, with A. Goetz and J. Huff as captains. Goetz's team won, and the losers paid for the birds. Score: J. Huff, 22yds., 9; H. Muller, 25yds., 8; A. Goetz, 25yds., 8; H. Fajer, 22yds., 8; C. Wolff, 30yds., 8; W. Joost, 21yds., 6; J. Ahders, 21yds., 6; W. Lang, 21yds., 6. Team shoot: A. Goetz 2, H. Muller 2, H. Fajen 1, W. Joost 1; total 6. J. Huff 1, C. Wolff 2, H. Lang 1, J. Ahders 1; total 5.

Atlantic City, N. J., will draw many shooters on Tuesday and Wednesday of next week, when will be held the midsummer tournament of the Pier Gun Club. The shooting will be done from traps placed on the end of the pier, 1,500ft. from shore, and barring the appearance of a West Indian hurricane, the affair should be a pleasant and successful one. Enoch D. Miller, Harry Thurman and Wm. Garvin will be the prime hustlers.

The annual bluerock tournament under the management of W. H. Kearfott will be held at Kearneysville, W. Va., on Aug. 8, and judging from the programme it should attract a big crowd. There are 13 events on the programme, 4 of them being for merchandise prizes, these including a Winchester rifle and a shotgun. The programme says: "Only one kicker will be allowed on the grounds and he has been engaged—an Englishman by the name of Hamburger."

In a recent team shoot between the Forester, West End, and Highland gun clubs at Davenport, Ia., the following scores were made: Foresters—Maser 19, Kroy 19, Shado 19, Severance 18. Young 19, Cook 22—116. Highlands—Henry 20, Lafin 19, Montgomery 19, Mauzy 14, Rost 20, Cooper 12—104. West Ends—Schmidt 17, Roeschman 22, Black 12, Lambach 13, Edwards 18, Hanson 14—96.

The annual tournament of the Standard Keystone Target Co. will be held at New London, Conn., Sept 4, 5, 6 and 7. Besides the regular trophy events there will be a race for State teams of five men each with 100,000 targets to go to the winning team. The management will also endeavor to add a shotgun, bicycle or boat to a given event each day.

PRES. W. A. WITHERBEE.
SEC'Y W. F. BROWN. VICE-PRES. E. C. DODGE.

NEW ENGLAND OFFICIALS.

Uncle Al! Uncle Al!! Uncle Al Heritage!!! why don't you make a move toward that meeting tending to give New Jersey a genuine sportsmen's association, one with a little snap and vim? All the Jersey sportsmen are ripe for the scheme, so don't wait until they get lukewarm!

Rockford, Ill., has a Mayor who is able to bestow skillful handling upon a shotgun, judging from his target scores. At the July medal shoot of the Rockford Gun Club, at 50 targets each, Mayor Hutchins broke 47, tying with Mike Eichs. In the shoot off at 5 targets each, the Mayor won, breaking 4 to Eichs' 3.

On Aug. 9 the Parkway Gun Club of Brooklyn and the Newark Gun Club will meet in a friendly contest for teams of 12 or 15 men each, at 10 live birds per man, on Erb's "Old Stone House" grounds in Newark. The Newarks will put out one of their famous lunches for the visitors.

T. H. Keller, Chas. Smith, E. D. Miller and other prominent members of the New Jersey Trap-Shooters' League strongly favor consolidation with the State Sportsmen's Association and the adoption of the plan of the New York Association.

Next week will send a big lot of shooters to Memphis to contest for the $760 put up by the Memphis Gun Club. The contests are all good ones, and the conditions such that the man who wins will have to do some straight pointing.

At the shoot of the Chillicothe (Ohio) Gun Club on July 24, at 30 singles the scores were: Chapman 25, Blacker 22, Robinson 22. Ware 21, Dickey 20, Hess 20, Caldwell 19, Maginn 17, Freeman 17, Dehus 16, Schaumeker 15.

On July 26 James Timmons and Wm. Armstrong shot a 50 bird match on Class's Morristown grounds, 28yds. rise, for $100. At the finish the score was Timmons 40 and Armstrong 36.

In the trophy shoot of the Pansy Gun Club, of Kingston, N. Y., on July 21, at 31 targets each, Myer and Hume tied on 26 breaks each, Myer winning by a score of 9 to 8 on the shoot-off.

The monthly live bird shoot of the Paterson Gun Club will be held on Tuesday. There will be plenty of birds at hand for open sweeps before and after the club contest.

Al Rust, field captain of the Keystone Shooting League, proposes to hold a live bird tournament in October on the League grounds at Holmesburg Junction, Pa.

"Uncle Jake" Pentz will be master of ceremonies at the friendly shoot between the Newark and Parkway gun clubs at Erb's next Thursday.

The team of the Oneida County Sportsmen's Association struck a hot pace at Syracuse in the Central League contest.

Over $500 in cash and merchandise will be given away at the Kearfott tournament at Kearneyville, W. Va., on Aug. 8.

Tho "Knoxville hustling act" at the Memphis shoot next week will be performed by Sommer and Roger Van Gilder.

C. H. Townsend.

## Frankford Gun Club Shoot.

Frankford, Pa., July 30.—The opening tournament of the Frankford Gun Club was held Saturday on their new grounds, near the Pennsylvania Railroad, at Bridesburg Station. The tournament commenced at 10 o'clock and lasted until 5. A crowd of shooters and spectators witnessed the shooting and partook of the lunch put up by the club. Some of the prominent shooters who attended were: Ivan Houpt and John Jones, of Dreshertown; Capt. Edwin Beck, Allie Mehrer and Harry Lawhead, of Frankford. The shooting was conducted by the captain of the club, Edwin Beck, and went off without a flaw. The targets were sprung from five Keystone traps, arranged for the rapid-shooting system. The scores were as follows:

No. 1: Peters 5, Beck 2, I. Houpt 5, Crouther 3, B. Bourne 2, White 5, Buck 2.

No. 2: White 3, Peters 5, Crouther 4, Buck 3. Beck 4, I. Houpt 6.

No. 3: George 0, Buck 4, White 3, Peters 3, T. Houpt 4, Beck 0, Crouther 2, Betson 4.

No. 4: Peters 5, Beck 6, Buck 4, T. Houpt 9, Betson 8, Crouther Stearne 3.

No. 5: White 3, Peters 3, Buck 2, T. Houpt 5, Beck 2, Crouther 3, Betson 2.

No. 6: Peters 3, White 5, T. Houpt 5, Betson 7, Beck 6, Buck 3, Crouther 7.

No. 7: Peters 2, White 5, Beck 2, Betson 3, George 2, T. Houpt 5, Crouther 3, B. Bourne 4,

No. 8: White 5, Peters 2, Betson 3, T. Houpt 3, Crouther 4, B. Bourne 4, Beck 4.

No. 9: White 4, Beck 3, Betson 4, Peters 3, Crouther 3, B. Bourne 2, T. Houpt 4.

No. 10: Beck 2, Peters 3, Betson 5, T. Houpt 4, Jachops 3, White 3, Crouther 4.

No. 11: Peters 3, Beck 3, T. Houpt 4, Crouther 3, Buck 2, White 3, Betson 4, Jachops 3, Jones 3.

No. 12: B. Bourn 5, Buck 4, Peters 2, T. Houpt 4, Crouther 3, Beck 4, Betson 4, Jones 5, White 0, Jachops 3.

No. 13: W. Bourne 4, Peters 1, Beck 3, Buck 5, Mehrer 2, Betson 4, Crouther 5.

No. 14: W. Bourne 5, Beck 2, Peters 4, Houpt 5, Mehrer 4, Beck 3, Betson 4, J. Jones 5, M. Jones 2.

No. 15: Peters 8, Mercer 5, Buck 7, B. Browne 7, Houpt 8, Beck 3, Crouther 7, Jachops 7, Betson 6, Dawson 7, Lawhead 5, J. Jones 8.

No. 16: B. Bourne 4, Peters 2, Houpt 3, Betson 3, Mehrer 2, W. Jones Jachops 4, Mercer 0, J. Jones 4.

## Pigeon Shooting at Saratoga.

Saratoga is a paradise for the idler and the dreamer, and when a busy bee of the world's workers drifts into this handsome hive of drones and sees the groups gathered upon veranda and piazza, or lending the various colors of their robes to the enchanting hues of lawn and garden, or the daintily attired creatures that ride silently about the smooth surfaces of the drives, all bearing the same air of lassitude and languor, then does the observer marvel that rational, intelligent beings in this bustling world of ours could be content to spend a single summer of their lives in such a "lotus dream of ease." But he soon discovers that this gilded idleness is but a veneer; that underneath its surface may be found a fierce whirl of excitement that would satisfy the most ardent devotee of enjoyment—a very feast of pleasure, to which the spice of variety is unstintedly added.

"What in the world has all this got to do with trap-shooting?" some sturdy sportsman will ask. Simply this, my brother: Trap-shooting was long ago added to the attractions for the pleasure seeker and excitement hunter at the spa; her sons are ardent devotees of the rod and gun and experts in the use thereof; big purses have been ungrudgingly offered to visiting competitors at the gun club grounds, and pigeon shooting has become the medium for the placing of heavy stakes.

It was under the last named condition that an Albany shooter gained a modest winning from a Saratogian on the 25th. A few days previously a game or two at pool, with a stake attached, had gone against the Albanian. The mineral water drinker desired to add to the discomfiture of the defeated one, and later, in one of Saratoga's immense caravanseries, his effervescence caused him to lift up his voice and cry aloud, "I can beat you shooting! I will shoot you a 50 bird race for $100 a side."

"I will go you; name your time and place," answered the boy from Saratoga.

It's about time I named the shooters? Well, here they are, Walter Hanson, of Saratoga, a slashing looking fellow, clever with the gun, but with no well won reputation as a shooter, and Harry L. Sweny, a member of the West End and the Forester gun clubs, of Albany, a youth whose brief career as a trap-shot has not allowed his reputation to extend over our Eastern New York League circuit, but whose steady pace at various shooting grounds is telling a tale of success, and who will yet be known throughout the State.

The arranging of this match to take place at Saratoga, Wednesday, July 25, took the Albany correspondent of Forest and Stream to the Springs on that day. Quite a representation of Albany and Troy shooters was present at an early hour, and the morning gave an opportunity for pleasant fraternizing with the stars of the Saratoga Gun Club—Ramsdill, Levengston, Gibbs, Bockes and Pike. The afternoon saw us all at the club grounds, so well known for its natural advantages of level plain and clear background. A large crowd of spectators were on hand, and the racing season being on, there was a liberal sprinkling of sports. The occasion was graced by the presence of a solitary lady, a dainty maiden visiting the Springs from Titusville—one of the prettiest creatures the sun ever shone upon. Two nobby-looking New Yorkers attracted general attention. One was quite an imposing-looking fellow, with a grand showing of brawny strength, the other a shapely little chap, with a strangely sharp look in his eyes, which were as piercing as those of a lynx. The identy of the strangers was revealed when I was introduced to David S. Johnson and Ned Garrison, the latter a famous jockey.

The contestants arrived on the ground in good time, and without any preliminary practice shooting they proceeded at once to the work in hand, after choosing Mr. Johnson as referee and the writer as official scorer. Sweny won the toss for choice of position and decided that his opponent should face the traps first.

A match is rarely made where a man is so clearly outclassed as was Hanson. Beginning fairly well, he went all to pieces after the twentieth round and gave up the race at the end of the twenty-eighth. Sweny shot a steady and creditable pace, and his score is a good one even on summer birds, which in this instance were an excellent lot for the time of year. The score shows the stumbling gait of Hanson, the brilliant run with which Sweny opened his performance and the fine total which landed him an easy winney. The conditions of the match were 50 birds per man, $100 a side, American Shooting Association rules to govern:

| | |
|---|---|
| H R Sweny | 1121111111111111111021•11101—25 |
| Walter Hanson | 2011220121112•1101011000•0000—15 |

The Albanians present were confident that Hanson would prove a "dead easy" mark for Sweny but they had no idea that the Saratogian would be shot to a standstill when the match was little more than half over, so Harry got no congratulations. After the match was over there was a lot of birds left which some of the bloods present at once utilized in a couple of team matches. In the first of these Levengston and Pike of Saratoga were pitted against Johnson and Garrison of New York, 10 birds per man, $10 per team. The score shows that the Saratogians outshot the New Yorkers by a narrow margin:

| | | | |
|---|---|---|---|
| Levengston | 2211•21101—8 | Garrison | 0122102112—8 |
| Pike | 21011•1121—8—16 | Johnson | 0111120120—7—15 |

A 3-man team match followed, 5 birds per man, $10 per team, with Levengston, Pike and Sweny, against Johnson, Garrison and ex-champion W. T. Lord, of Troy. Another close race, with Levengston's team the victor:

| | | | |
|---|---|---|---|
| Levengston | 12111—5 | Johnson | 11101—4 |
| Pike | •1012—3 | Garrison | ••222—3 |
| Sweny | 22111—5—13 | Lord | 11113—5—12 |

The excellent form in which young Sweny shot in the individual and team matches made him a favorite among the sporting men, and as I write these lines (July 28) a message has been received from Dave Johnson, stating that he will back Sweny against Garrison in a 50 bird race, for $50 a side. It is pretty definitely settled that the match will come off Tuesday, July 31, and your correspondent will be on hand for details.

Horace B. Derby.

## Freehold 229, Dayton 228.

The team shoot between the Freehold and Dayton gun clubs shot at Freehold, N. J., on Saturday, July 28, was one of the most interesting contests ever shot in the State, the lead alternating with monotonous regularity up to the final shot. Each team put out twelve men and each man shot at 30 targets, 15 being from known and 15 from unknown angles. The scores:

## Trap at San Antonio.

At the regular weekly shoot of the San Antonio Gun Club the following scores were made:

No. 1, 15 singles: McCormack 10, Smith 11, Veith 8, Grossman 8, Rothwell 15, Vollbrecht 5, France 9, Shields 9, Rahmstorf 4, Phillips 11.

No. 2, trophy shoot, 20 singles and 5 pairs: Rothwell 22, Smith 20, Grossman 18, McCormack 27, France 20, Seam 16, Phillips 17, Vollbrecht 15, Shields 16, Veith 21, Barr 18, Biesenbach 21.

No. 3, 15 singles: McCormack 11, Veith 8, Barr 9, Shields 6, Biesenback 12, Smith 10, France 14, Grossman 12, Phillips 10.

No. 4, 15 singles: McCormack 8, Shields 10, Grossman 16, Rothwell 14, Barr 10, France 11.

O. C. G.

## Eureka vs. Garfield.

The first match of the season between the Eureka and Garfield gun clubs of Chicago took place on the former's grounds on July 21, under favorable weather conditions so far as light and heat were concerned. The wind, however, played all sorts of antics, and in many cases the angles of the targets were not only unknown but unknowable. The spectators were puzzled to see scores as good as were made in such a wind. A fair-sized crowd of sepectators were present, including a number of ladies.

The shooting of the Eureka team members was far below the average of its members, such men as Bingham, Willard and Adams, who usually top a 90% gait, going below 80%, and others also fell off in average. Below are the scores of the team shoot, the conditions being fifteen men per team, 25 singles, known traps and unknown angles.

## Pennsylvania State Tournament.

Visitors to the Pennsylvania State Sportsmen's Association's Tournament for the year 1894 will never have cause to regret the trip to Altoona over the main line of the Pennsylvania Railroad and thence by the narrow gauge tracks of the Altoona, Clearfield and Northern Railroad to Wopsy, a summer resort, situated on the highest peak of the Alleghenies, 2,660ft. above sea level. From Harrisburg on the east, and from Pittsburg on the west, the scenery through which the line of the Pennsylvania runs is magnificent. It is only, however, a foretaste of what is to come as, seated in the observation cars of the Altoona, Clearfield and Northern Railroad, one climbs the steep ascent to Wopsononock. It is at the Lookout that the target shooting will take place. A four-storied pavilion has been erected at this point, with two sets of traps, one on each side of the building. The panorama spread out before the shooter on a clear day is something marvelous. The skyline is perfect, nothing but the sky itself to shoot against. If there are not some big records made it will not be the fault of the background against which the targets are thrown. It's impossible to give an idea of the view from the point; the only way is to come and judge for yourself.

The annual meeting of the Pennsylvania State Sportsmen's Association will be held at the Hotel Wopsononock on the night of August 21. This will be an important meeting, as it is intended next year to make special efforts toward obtaining a uniform game law for this State. Aug. 22, the second day of the tournament, will be the fourth anniversary of the organization of this association; so far no arrangements have been made as to celebrating that event, but there is no doubt but that it will be fittingly observed.

To reach Lookout Point, on your arrival in Altoona take the electric street-cars and tell the conductor to put you off at the Wopsy station; the trip by street car occupies about twelve minutes. Arrived at the station, cars on the Altoona, Clearfield & Northern Railroad will land you in 25 minutes at Hotel Wopsononock. This hotel is the headquarters for shooters on the mountain, the Brant House being headquarters in the city. Hacks will carry shooters to Lookout Point free of charge, the distance from the hotel to the Lookout being one-third of a mile. Trains will run on the A., C. & N. R. R. at frequent intervals during the days of the tournament. All inquiries as to the hours at which the trains will leave for Wopsononock will be cheerfully answered at the Brant House, one minute's walk from the Altoona station, or at "Bill" Clark's Red Lion Hotel, a few steps further away.

Shooting will begin at 9 A. M. each day. Targets will be deducted from entrance money at the rate of three cents each. Live birds will be charged for at the rate of 25 cents each. All ties in open events divided. On each of the first three days of the tournament the Altoona Rod and Gun Club will donate the sum of $30, divided into 40, 30, 20 and 10 per cent., to the highest four averages made during each day by shooters who shall shoot in every programme event decided on that day. State events will not count in averages. All open events governed by State Association rules. Rule 22 runs as follows: "At all annual tournaments given by this Association the graduating handicap shall be used in all events (except trophy events, which shall be named by the donors). Winners of first and second money must shoot in the next event which they enter at known traps and unknown angles. If in this event they fail to secure either first or second prize, they will fall back to known trap and known angle in the next event they shoot at and so continue to graduate," etc.

All purses in open events divided 40, 30, 20 and 10 per cent. All events, except trophy contests, open to all. If you're satisfied with the above, come and see us in August. If you're not satisfied with it, come and see us anyway.

All the sweepstake events will be at 20 singles, $2.50 entry. Of these there will be ten on the first day, seven on the second day, nine on the third day. There will be a 25-target event also on the third day, for a purse of $75 ($50 from W. G. Clark and $25 from the managing club), for which the price of entry is the price of targets only. On the first day there will also be the contest for the Wm. Wolstencroft & Son's trophy, which represents the individual championship of the State of Pennsylvania at targets, and which is valued at $100, each contestant to shoot at 50 single targets, entrance $5, 10-gauge guns 18yds. rise, 12-gauge guns 16yds. rise.

*The Second Day.*

Reading Shooting Association's silver trophy, valued at $200, the ownership to represent the five-men team championship of the State. Teams of five men, *bona fide* members of any club or association in the State Association. An entrance fee of $10 shall be charged each team, one-half of which shall be in payment of targets, the balance, 50 per cent., to the donors or holders of the trophy, the remainder, 30 and 20 per cent., to the teams next in order; 25 targets per man shall be shot at known angles, rapid firing system, 10 and 12-gauge guns, 16yds. rise.

Harrisburg Shooting Association's trophy, valued at $200, was donated by the Harrisburg Shooting Association, and represents the team championship of Pennsylvania. Teams of six men, *bona fide* members of any club or association in the State Association. An entrance fee of $10 shall be paid by each team, one-half of which shall be in payment of targets; the balance, 50 per cent., to the winner of the trophy, and 30 and 20 per cent. to the teams next in order. Twenty-five targets shall be shot at per man, known angles, rapid-firing system, 10 and 12-gauge guns, 16yds. rise. No one man shall shoot on more than one team.

The American Wood Powder Company's trophy, a silver cup, to be contested for annually by teams of three men, *bona fide* members of any club or association in the State Association, no one man to shoot on more than one team. The contest is at 25 singles and 5 pairs, entrance $6 per team. The prize and 40 per cent. of the purse to the team making the highest score, the balance, 30, 20 and 10 per cent., to the teams next in order.

*The Fourth Day.*

L. C. Smith Gun Trophy.—Conditions: Teams of three men, at 15 live birds per man, 45 birds to the team, Pennsylvania Association rules to govern Teams to be composed of *bona fide* members of any club or association in the State of Pennsylvania members of the State Association and residents of the State; no man to shoot on more than one team. To the team making the highest score 40 per cent. of the purse and the trophy, the balance, 35 and 25 per cent, to the two teams next in order; entrance $25 per team, including birds.

The Williamsport Trophy.—A diamond badge, valued at $250, presented by the citizens of Williamsport, which represents the individual championship of the State of Pennsylvania at live birds. Each contestant shall be a *bona fide* member of the State Sportsmen's Association. Entrance fee $10. First prize, the diamond badge, to highest score, the next three highest scores to receive 50, 30 and 20 per cent. of the balance of the purse after 40 per cent. of the whole has been deducted from that purse, the said sum of 40 per cent. to be paid to the winner of the badge in the previous year. Each contestant shall shoot at 15 live birds, under American Shooting Association rules, with the exception that 1¼oz. of shot be allowed for 12-gauge guns.

For programmes and information address the secretary, at Altoona,

Edward Banks.

## New England League at Willimantic.

It was one of the hottest days of the season on which the second tournament of the New England Shooting Association was held, the scene being the grounds of the Willimantic Gun Club, at Willimantic, Conn. July 26 was the date, and from daybreak it was a stifling day. Hot in the hotels, hotter still on the streets, stifling in the cabs and simply unbearable on the grounds, where shade cannot be found until time for the shades of evening to settle down. Of wind there was not a faint rumor until nearly 4 o'clock, and fans and ice water (mostly) were in great demand. The grounds of the Willimantic Gun Club are situated on a broad plateau over a hundred feet above the level of the city and distant about two miles therefrom. From the surroundings one would take it for a comparatively cool spot and one where an afternoon breeze might be depended upon. But a day's experience in its torrid heat convinced us that for one day at least the breeze failed to materialize.

The club grounds are well placed so far as location goes, but we are certainly not partial to traps facing so nearly south as do these, this exposing the entire front of the club house to the rays of the sun as well as compelling the shooters to face it for at least three-fourths of the time. There were five bluerock traps set behind a permanent screen extending the length of the line, these being worked by a lever pull. The foreground (barring the appearance therein of "King Sol") is excellent. The club house is a one-story structure, about 20×12ft. in the interior, with an extension 10×5 on one end for office purposes, and a verandah running across the rest of the front of the house.

The New England Shooting Association is, according to the announcement published in their programme, "composed of the leading manufacturers and dealers of America," and further, "beg to announce a series of competitions to be held at the principal cities of New England for the New England individual and team championships. Gold badges, valued at $300, emblematic of the individual team championships, will be offered by this Association for competition."

The conditions governing the championship contests are thus detailed:

"American Association rules will govern all badge contests held by this Association, omitting Rule 14. Position of gun must be below the armpit until the bird takes wing. This rule will be strictly adhered to. The individual championship event will be shot at 30 targets, thrown from 5 traps, known angles, keystone system. The team championship event will consist of 5 men to a team, each contestant to shoot at 15 targets thrown from 5 traps, known angles, keystone system. All gun clubs and associations located within the New England States are eligible to one or more teams in this event, and any individual, a resident of New England, may contest for the individual trophy. At the end of the series, badges will be presented their respective winners, but such badges are subject to challenge at any time, and must be protected by the possessors or forfeited the challenger, ten days after issue of such challenge. Any party or parties challenging are requested to notify this Association ten days previous to date of such challenge. Winners of the several events will meet at the close of this series to decide the individual and team championships of the New England States on such grounds as this Association might select."

The first contest of the Association was held in Hartford, Conn., on June 28, and was considered satisfactory by the management. On that occasion there were about 50 shooters on the grounds, the entries running from 23 to 34 in an event, the latter being the number of contestants in the race for the individual championship, which was won by "Wood" of Hartford on 29 breaks. The team race, with four entries, went to Cost team No. 1 on 68 out of a possible 75 breaks. This club entered four teams.

At Willimantic, however, the shooters were most conspicuous by their absence. We reached the town on the evening preceding the shoot, and after ornamenting the register of the Windham House, strolled across the street and found an old friend in the person of H. L. Edgerton, secretary of the local club, who is proprietor of the leading restaurant of the place. As a shot, Mr. Edgerton needs little to be said in his praise, his scores having been among the leaders for years. All readers of Forest and Stream are familiar, of course, with his exploit at the last big tournament of the Saratoga Gun Club, when for four days he and his loads of black powder kept "on the heels" of Rollo Heikes for first average, Rollo only winning after a bruising finish. It is also needless to say that Mr. Edgerton was glad to welcome Forest and Stream to his town.

While in confab with the above gentleman we also discovered another "regular" in the person of "Charley" Hebberd, whose residence is in Elizabeth, N. J., and whose object in visiting was to look after Empire target interests and incidentally to superintend the running of the tournament. A moment later up sauntered Wm. C. Colville, better known, perhaps, as "Dick Swiveller," who was looking as fit as a trivet even on this sultry evening. About 9:30 the Boston express brought along President Weatherbee and secretary-treasurer of the New England Association. Both these gentlemen are well known in their respective sections, Mr. Weatherbee living in Boston and Mr. Brown in Lynn, but they are comparative strangers in Connecticut. James McDonald, a member of the local club, we also met before retiring, which all hands did at an early hour, some to enjoy a good night's rest and others, not so fortunate in choice of room, to pass the latter part of the night in tossing about, manipulating a fan and swallowing ice water. We regret to admit that in our particular case the latter conditions prevailed.

On Thursday morning we boarded a hack, and after twenty minutes' ride over an intolerably dusty road we were landed on the club grounds. As a matter of course we cast our optics about in an effort to discover that big crowd of which Sec'y-Treas. Brown was so confident. But alas and lack-a-day, the highest count we could reach (and this was nearly noon) was nine—just a lonesome 9—and oh, how befagged they did look after an hour and a half's exposure to that more than tropical glare. And who were the "lonesome 9" who were sighing wistfully for the missing ninety. Three of these were mentioned as being met on the previous evening. Of the others there was S. W. Tucker, R. S. Gaines and L. J. Gaines, all of the Parker Brothers, Meriden, Conn.; Mr. Seeley, of Bridgeport, and Messrs. Chase and Wood. Mr. Hebberd appeared for the second event, and here we had five trade representatives, one Association officer and three visitors or outsiders, surely a meagre attendance, and one not at all encouraging to the management, who kept consoling themselves with the belief that "the next train" would surely bring a crowd. But the crowd failed to materialize, whether on account of the intense heat, the scarcity of money or other reason, no one could say.

The shooting was not hurried as it would have been on a cooler day, but even with a slow and easy pace the shooters got the sport they wanted, some of them firing as many as 200 shots. The highest number of entries was thirteen, and it was only for the championship event that this number reported. The published programme was discarded in the main, none of the contestants caring to shoot at straightaways at 25yds. rise. Sec'y Brown, who performed all the duties of the cashier's office, consented to any changes that would keep the ball rolling. And by the way, Mr. Brown proved to be an adept at office work, and with the aid of a Forest and Stream "Ready Reckoner" he performed with ease the work usually requiring the services of two men. Not a complaint was heard in reference to the office work.

The contest for the individual championship, at 30 singles, was the most important event of the day. In the first squad Edgarton loomed up with a score of 26 breaks, and some thought this gave him a mortgage on the badge, but in the second squad there was an old and seasoned war horse yclept Tucker, who also cast longing eyes in the direction of the place where the badge is quartered, and when he sauntered away from the score at the conclusion of the race his face bore a big-four-I-told-you-so look, and the score sheet showed him to be the badge winner for the month. His victory was a popular one and he was warmly congratulated on all sides.

Event No. 1 was the club contest for teams of five men each at 15 singles per man, the Willimantic Gun Club team having a walkover, none others materializing. Their score was 55. In both the individual and team championship contests, contestants were obliged to hold the butt of the gun below the armpit until the target was in the air, a rule which did not greatly affect the scores, but which is obsolete and nonsensical withal. This is 1894 and if the New England Association is desirous of achieving success it will do so only by following up the advanced ideas in shooting matters and will not try to progress backward. The consensus of opinion on both sides of the ocean is against any restrictions on the holding of the gun, and the association should endeavor to please the public by taking the latest rules for their guidance.

Taken as a whole the shoot was an extremely pleasant one for all parties interested, and barring the inconvenience occasioned, the shooters enjoyed themselves as well as if there had been a hundred contestants. Everybody was in a jolly, free-and-easy, go as-you-please temper, and joke and repartee were kept flying about at a lively rate. The entries being small, no one carried away any great winnings nor was any one a heavy loser. The Empire targets worked well and proved to be all that was desired as breakers. The next shoot takes place at Worcester, Mass., on August 10, when it is hoped there will be a larger attendance.

The scores of the day are here appended:

No. 1, 10 birds, known angles, entrance $1:

| | | | |
|---|---|---|---|
| Edgarton | 1111110111—9 | Tucker | 1111111110—9 |
| Chase | 0010111110—6 | Gaines | 0110001111—6 |
| Seeley | 0101111011—7 | L J Gaines | 0100101101—5 |
| Wood | 1011100111—7 | Swiveller | 1110111011—8 |
| Wetherbee | 0001101111—6 | | |

No. 2, 10 birds, unknown angles, entrance $1:

| | | | | | |
|---|---|---|---|---|---|
| Seeley | 6 | Tucker | 9 | Swiveller | 9 |
| Hibbard | 10 | Wetherbee | 8 | J Gaines | 6 |
| Wood | 9 | Edgarton | 8 | Gaines | 5 |

No. 3, 7 birds, unknown traps, one man up, entrance 75 cents:

| | | | | | |
|---|---|---|---|---|---|
| Wood | 7 | Seeley | 3 | J Gaines | 1 |
| Edgarton | 5 | Tucker | 5 | Gaines | 3 |
| Hebbard | 6 | Wetherbee | 3 | | |

No. 4, 15 birds, known traps, entrance $1.25:

| | | | |
|---|---|---|---|
| Tucker | 110101111101111—12 | Swiveller | 111111111110101—13 |

C. H. Townsend.

## The San Antonio Tournament of 1891.

In reply to a communication which appeared in a recent issue, in which the writer said of the San Antonio shoot of 1891 that the "programme was strictly carried out to the letter, and the Association was given one of the finest entertainments in its history, and I dare say the least appreciated, owing to the conduct of Mr. Guessaz," Mr. Guessaz sends us a reiteration of his previous statement that certain contributed cash should have been given as added money, but was not so given; and he adds that his "conduct" in connection with the affair was justifiable action on his part in bringing the matter to the attention of the Association, of which he was president. Now that all parties have had their say, it would be unprofitable to continue this dispute further. The original question has developed into a discussion of the San Antonio Club's management of the State Association tournament, given by it in 1891, and this is but a threshing of old straw.

## Opening of the Keystone Grounds.

It was a jolly crowd of experts, amateurs, novices and friends of both who took advantage of the hospitality of the Keystone Shooting League and attended their inaugural invitation tournament on July 25 and 26 The League grounds are at Holmesburg Junction, Pa., and are considered among the finest in the country. They are embellished with a $1,500 club house, furnished with all the modern improvements. The grounds have all the latest appliances for both live birds and target shooting.

The opening affair was a grand success, and the club dispensed refreshments—both liquid and solid—with a lavish hand. The management was in the hands of A. J. Rust, A. L. Lumb, H. David, J. W. Tredway and W. H. Wolstencroft. The second day was ladies' day, and among those who visited the grounds were Mrs. E. D. Miller, Mrs. M. F. Lindsley, Mrs A. J. Rust, Mrs. A. L. Lumb, Mrs Jas. Wolstencroft, Mrs. W. H. Wolstencroft, Mrs. W. H. Pack, Mrs. Geo. Pack, Mrs. J. F. Kleinz, Mrs. J. Tredway, Miss May Rust, Miss Morris, Miss Handley, Miss K. Jackson, Miss M. Jackson, Mrs. J. Hack, Mrs. H. Thurman, Mrs. P. J. Rust, Mrs. W. G. Rust, Mrs. Wolf, Mrs. E. David, Mrs. H. David, Miss Hack, Mrs. Betz, Miss Mays, Miss Swope, Mrs. De Motte, Miss Latune, Mrs. A. Coney, Miss A. Kleinz and Miss Johnson. A band of music kept the party in a lively humor.

The League presented a pretty souvenir to all the participants in the two days' shooting. In accepting his souvenir, Mr. Bartlett (who gave a remarkable exhibition of fancy shooting), said that he had never in his whole experience at gun club tournaments, been the recipient of such lavish and hearty hospitality. The kindness of John T. Bailey & Co., in loaning two large tents for refreshment purposes, was fully appreciated. The scores follow:

*First Day.*

No. 1, 10 targets: Thurman, Clark and Schmeck, 9 each; Henry and Landis, 8 each; Lane, 6; J. Wolstencroft, Bartlett and W. Wolstencroft, 7 each.

No. 2, 10 targets, unknown angles: Lane, J. Wolstencroft and Henry, 9 each; Schmeck, Davis, Bartlett, French and Thurman, 8 each; Clark and Landis, 6 each; Harrison and Whitcomb, 5 each.

No. 3, fifteen targets, known angles: W. Wolstencroft, and Van-Dyke, 13 each; Schmeck, Bartlett, Harrison, French and Henry, 12 each; Clark, Lane and Davis, 11 each; Landis and Hope, 10 each.

No 4, 15 targets, unknown angles: Landis, 14; Schmeck, Lane and French, 13 each; W. Wolstencroft, Harrison, Van Dyke, Fields and Pack, 12 each; Thurman, 11.

No. 5, 20 targets, known angles: J. W. Evans, first clean score of the tournament, 20 birds; W. Wolstencroft and Thurman, 19 each; Bartlett, Landis and Schmeck, 17 each; Van Dyke and Pack, 16 each.

No. 6: This event was a three-man team shoot, money divided between winning team, 25 birds allowed to each man. Winning team was composed of Jack Brewer, Bartlett and Van Dyke. Five teams entered this contest.

No. 7, 10 targets, known angles: J. Wolstencroft, W. H. Wildblumen, Landis and Thurman, 10 each; Brewer, Fields, E. D. Miller and Treadway, 9 each; Schmeck, Clark and Whitcomb, 8 each; Kerr and Bilderbeck, 7 each.

No. 8, 10 targets, unknown angles: W. Wolstencroft, Bartlett and Harrison 9 each; H. Cleaver, Moore, Rusk, J Wolstencroft and Lents 8 each: Fields, Wile, Schmeck, Thurman, Van Dyke, J. W. Erin Freneh Whitcomb, Reading, Brewer and Dr. Kerr 7 each; Landis, Hope, C. Wildblumen, David, Lane, Bilderbeck, Leaming and Miller 6 each.

No. 9, 25 targets, known angles: Fields and Miller 23 each. J. White and Thurman 22 each; Van Dyke, Landis, Schmeck, Clark, Moore and French 21 each; Lindsley, Bartlett, W. Wolstencroft, Brewer, Cleaver and Tredway 20 each.

No. 10, 10 targets, known angles: Landis, J. White and Schmeck 10 each; Fields, Tredway, Thurman, Moore, French and Henry 9 each; W. Wolstencroft, Brewer, Clark and Van Dyke 8 each; Miller, Dr. Kerr, J. Wolstencroft and Reading 7 each.

No. 11: This was the star event, each man was to shoot 50 birds, 17 contestants entered, and the fortunate four were E D. Miller with 46, Field 45, Landis 42 and W. H. Wolstencroft 41. This was a particularly interesting event and the scores were considered high under the conditions prevailing.

No. 12, 15 targets, known angles: Landis 15; Fields, J. White, Schmeck; J. Wolstencroft and Van Dyke 14 each; Thurman and Henry 13 each; Leaming and Moore 12 each.

No. 13, 15 targets, unknown angles: Miller, W. H. Wildblumen, Landis and Henry 14 each; Fields, Pack and Van Dyke 13 each; J. White, Bartlett, French and David 12 each; Tredway, Moore and Leaming 11 each.

*Second Day.*

The fine shooting of the many prominent shots present drew forth much applause from the spectators. At the close of the last event Capt. B. A. Bartlett, of Buffalo, gave an exhibition of fancy shooting.

No. 1, 10 targets, known angles: French, a clean score; Vandyke and Heck, 9 each; Schmeck and Cleaver, 8 each.

No. 2, 10 targets, unknown angles: Thurman and Miller, 9 each; Vandyke, Bartlett, W. Wolstencroft and French, 8 each; Landis and Schmeck, 7 each.

No. 3, 15 targets, known angles: Vandyke, Miller and W. Wolstencroft, 14 each; Landis and Harrison, 13 each; Lindsey and French, 10 each.

No. 4, 15 targets, known angles: Miller, 13; Rusk, Vandyke, French and Landis, 12 each; Bartlett, 11; Schmeck, 10.

No. 5, 20 targets, known angles: Van Dyke and French, 18 each; Landis and J. Wolstencroft, 17 each; Thurman, W. Wolstencroft, Leaming and Henry, 16 each: Lindsley, Cleaver and Peck, 15 each.

No. 6, 3-man team shoot, 25 targets to each man; four teams competed in this match, which was won by the team composed of Bartlett, Van Dyke and Landis, with a score of 60 birds out of a possible 75.

No. 7, 10 targets, known angles: Landis, clean score: Van Dyke. Bartlett, Henry and French, 9 each; Cleaver. Wilson, W. Wolstencroft, White, Thurman and Schmeck, 8 each; Harrison, David, Leonard and Treadway, 7 each.

No. 8, 10 targets, unknown angles: Van Dyke and Bartlett, each with a clean score; Miller and White. 9 each; Landis, Thurman, W. Wolstencroft, Harrison and Treadway, 8 each; Leaming and David, 7 each.

No. 9, 25 targets, known angles: Van Dyke, Miller and Thurman, 23 each; Leaming and Schmeck, 22 each; Pack, 21; David 20.

Between the ninth and tenth event there was an extra team shoot in which four teams of six men each competed. Each man shot at 15 birds. This event was won by the team composed as follows: Rust 9, W Wolstencroft 15, Miller 12, J. Wolstencroft 10, Tredway 13, and Thurman 11, making a total of 70 birds out of a possible 90.

No. 10, 10 targets, known angles: W. Wolstencroft and Schmeck each with a clean score; Van Dyke, J. White and Wilson, 9 each; third money to Miller, Thurman and David, 8 each; Landis, Green and Pack, 7 each.

No. 11, 50 targets, unknown angles: Van Dyck 44, Bartlett 42, W. Wolstencroft and D. Wilson 40 each.

No. 12, 15 targets. known angles: Thurman with a clean score; Van Dyke 14, J. White, Bartlett, Miller and W. Wolstencroft, 13 each. Leaming 12.

No. 13, 15 targets, unknown angles: Miller and W. Wolstencroft, 14 each; Van Dyke, Bartlett, Landis, J. White and Leonard, 13 each; Leaming 12.

The Keystone Shooting Leage vs. The Field team shoot resulted as follows:

| The Field. | | Keystone Shooting League. | |
|---|---|---|---|
| Van Dyke | 12 | A J Rust | 9 |
| Schmeck | 10 | W H Wolstencroft | 15 |
| Hartlove | 10 | E D Miller | 12 |
| Leonard | 8 | J White | 10 |
| French | 5 | J Tredway | 13 |
| Becasie | 10 | H Thurman | 11 |
| J Brewer | 10 | W H Pack | 10 |
| Stout | 11 | J Leaming | 14 |
| Henry | 6 | David | 13 |
| Harrison | 10 | W M Pack | 10 |
| Lindsley | 10 | J Wolstencroft | 6 |
| Simons | 11—114 | Landis | 10—133 |

## "Mamaluke's" Weir City Notes.

Weir City, Kans., July 26.—Inclosed I hand you scores made by members of the Business Men's Gun Club at this place in their medal shoot. This is the first shoot held here in which our handicap of birds allowed proved to be wholly out of joint. Kirk, who won the first gold medal, as shown below, made his appearance for the fifth time at the traps, and as he started out at the rate of about 2 in 25, the handicapper thought that 10 birds allowed would about make him "in it" He was strictly "in it," as he killed 23, which with his allowance made his score hard to beat from the scratch. The club intends now to match him against Rolla O. Heikes for the world's championship, but we are afraid that Heikes won't meet him. Below is the score:

| | |
|---|---|
| McIlhany | 1111111111111111111101110—23 |
| Calhoun | 1111111111111011101110111011—22 |
| Holmes (given 4) | 1111011011111111111111100—25 |
| Morrison (8) | 0111100010110111111101011—25 |
| McKim (4) | 1111000110101110011119100—19 |
| Granat (8) | 0100101001000101000110001—17 |
| Abbott (4) | 1100011010111101001110011—19 |
| Ayers (8) | 0100111011100011101110111—23 |
| Kirk (10) | 1110011111111111111111111—33 |
| King (20) | 0000000010100000110000110—26 |

First medal won by Kirk, second by King.

Sweep, 10 singles:

| | | | |
|---|---|---|---|
| Abbott | 1110101111— 8 | King | 0110010010— 4 |
| McKim | 0111111111— 9 | Ayers | 1111111111—10 |
| Granat | 0100110101— 5 | Kirk | 1110101011— 7 |
| Morrison | 0110111010— 6 | | |

MAMALUKE.

## At the "Soo."

Grand Rapids, Mich., July 22.—I had the pleasure during the past week of refereeing a match at 125 targets a side between T. J. Graham and D. A. Aitkin, both of Sault Ste. Marie, Mich. The match was for $50 a side, and the score will show that the boys in the north end of our State are able to "snuff 'em out" in pretty good style.

The Gun Club at the Sault is arranging for a tournament to be given the last week in August, and will add $400 in cash to the purses. Owing to the fact that the Sault is one of the points of greatest interest in the United States, there will no doubt be a very large attendance. The trip from Detroit, Chicago and all the Lake cities by water is one of the most pleasant. Will send you exact dates of the shoot in a few days.

Following is score of match above mentioned:

| | |
|---|---|
| D A Aitkin | 1111111111111111111111111—25 |
| | 1111001101101111111110011—19 |
| | 1110111111110011110110111—20 |
| | 1110000101111111111111111—20 |
| | 1111111111111111111111111—25—109 |
| T J Graham | 0111101111111101111111111—22 |
| | 1111111101111111111111111—24 |
| | 1101111111111111111111110—23 |
| | 1111101111111111111111111—24 |
| | 1111111011111111011111111—23—116 |

M. K. Walton.

## Garfield—Eureka Club Shoot.

The return match was shot on the grounds of the Garfield Gun Club, Saturday, July 28. A stiff 7 o'clock wind blew across the traps during the time the first two squads shot. Each squad of six had three members of each club who shot alternately. The Eureka Club was handicapped by some of its best shots being absent:

Garfield Club—Coppernoll 16, W. Palmer 18, Mott 23, Young 22, Bowers 23, Drake 17, Dr. Meek 19, Fleming 16, S. Palmer 20, Hicks 23, Tefft 22, F. Adams 20, O'Brien 22, Kleinman 19, O. Von Lengerke 22; total 302.

Eureka Gun Club—Adams 21, Buck 17, Steck 18, Paterson 21, Goodricq 16, Lamphere 23, Dr. Miller 14, Dr. Carson 17, Dr. Ellicott 18, C. Palmer 15, Ferguson 18, Isgrigg 18, Stannard 24, Frothingham 21, Glover 18; total 277.

## "Trap-Shooter's Ready Reckoner."

There has just come from the Forest and Stream press an extremely useful pocket reference book for trap-shooters. Its full title reads: "Trap-Shooter's Ready Reckoner. A series of tables showing at a glance the division of purses under all conditions, simple and complex, with entries from one to fifty. For use by individuals, clubs, and tournaments. Compiled by J. C. Clark, Secretary Kansas State Sportsmen's Association." Price 25 cents, postpaid, by Forest and Stream Pub. Co.

# Answers to Correspondents.

**No notice taken of anonymous communications**

F. G., New Orleans.—You may learn about salaries of fisheries superintendents by writing to the United States Fish Commission, Washington, D. C.

C. C., Rushville, Ind.—Can you give me any information about cartridges made specially for buckshot? I want to buy some buckshot cartridges for my own use if there are any such made. Ans. There are no special shells for buckshot.

The Alva Camping Club of West Hoboken, N. J., will camp this year at Pike county, Pa. All information, etc., regarding Pike county will be gratefully received. The members, as last year, will be under command of Captain James E. Nolan.

W. H. K., New York.—Please tell me if there is any shooting at South Glastonburg, Conn., or three miles south of it. Ans. Nothing before the October season. Possibly quail, grouse and squirrels then; but we have no specific reports from there.

Inquirer, Newburg, N. Y.—Can you or any of your numerous correspondents give me any information as to the effectiveness of .44cal. shot cartridges to be used in a Winchester rifle. Ans. For a practical demonstration visit the Wild West show in South Brooklyn and see Buffalo Bill shoot.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where we get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 Vesey Street, New York City

MARSTERS HAS WORMS

Sand Worms 12 and 15c. per doz. White or Blood Worms, 25c. per doz.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and not decreasing the quality, it increases my business every year.

One lot of Split Bamboo Fly and Bass Rods will be sold at $1.19 until all are sold. These rods are all nickel mounted, solid reel seats, silk wound, extra tip, complete in wood form and will give satisfaction.

Length and weight of the Fly Rods are: 9ft., 6oz.; 9½ft. 6½oz.; 10ft., 7oz.; 10½ft., 7½oz.; 11ft., 8oz. Reel seats below hand.

Length and weight of the bass rods are: 8½ft., 9oz.; 9ft., 10oz.; 9½ft., 11oz.; 10ft., 12oz., 10½ft., 14oz. Reel seats above hand.

No. H—A special lot of Hard Rubber and Nickel, Raised Pillar, Multiplying Reels with Balance Handle and Side Spring Click, 40yds., 63 cts.; 60yds., 78 cts.; 80yds., 88 cts.; 100yds., 98 cts. Any of the above reels sent by mail for price and 10 cts. extra for postage.

No. E—Special lot Hard Rubber and Nickel Raised Pillar Click Reels, 40yds., 38cts., 60yds., 48cts. Sent by mail 5cts. extra for postage.

No. C—Nickel-Plated, Raised Pillar Multiplying Reels, with click and drag and screen oil cup, 40yds., 58c.; 60yds., 68c.; 80yds., 78c.; 100yds., 88c.; 150yds., 98c. 10c. extra for postage.

Single Gut Leaders, mist color, 1yd., 20c. per doz.; 2yds., 40c. per doz.; 3yds., 60c. doz. Double Gut Leaders, mist color, 2yds., 75c. doz. Hand Twisted Gut Leaders, 10c. each, 90c. doz.

A special lot of Trout Flies at 25 cents per dozen assorted, sent by mail 1 cent per dozen extra for postage.

A special lot of Bass and Pickerel Spoons at 5 cents each sent by mail, 1 cent extra for postage.

All kinds of Hollow Point best quality Hooks snelled to single gut 10 cts. doz.; double gut, 15cts. doz.; treble, 20 cts. doz.; four ply, 25 cts. doz. 1 cent extra per dozen for postage.

300ft. Braided Linen Reel Line on Block, 41 cts.; 300ft. of Hand-Made Linen Reel Lines on Block, 9 thread, 38 cts., sent by mail 3 cts. extra for postage.

Brass Box Swivels, all sizes No. 1 to No. 12., 15 cts. per dozen, sent by mail 1 cent per dozen extra for postage.

Special lot of best quality 100ft. Linen Reel Lines, 8 cts., 200ft., 15 cts. 300ft., 22 cts.; 3 cts. extra for postage.

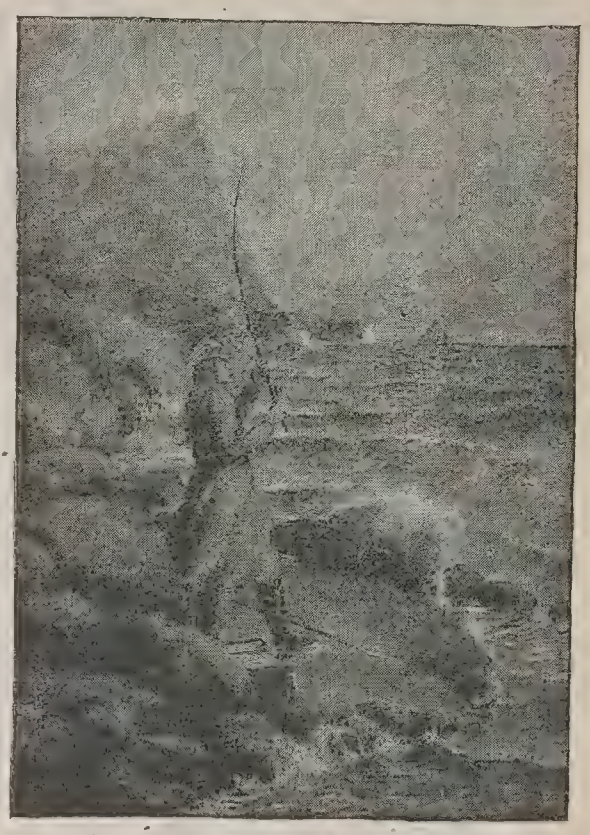
# Forest and Stream's Outdoor Scenes.

FROM ORIGINALS IN WATER COLOR AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

HE'S GOT THEM.

## AS PREMIUMS.



We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

**Forest and Stream** *one year and the four pictures*, **$5.**
**Forest and Stream** 6 *months and any two pictures*, **$3.**

If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately; price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.

Copies of them may be seen at this office, and inspection is invited.

## Mr. Grinnell's Indian Books.

# BLACKFOOT AND PAWNEE.

These two volumes treating of two different tribes of Indians are full of fascination for lovers of outdoor life. Each contains a number of the stories current in the tribe to which it relates, and these are followed by a series of graphic pictures of the old wild life which is now only a memory. The stories deal with hunting, war, love, ghosts, magic and natural phenomena. They are given just as related by the old men who told them to the author, and show Indian life from the Indian point of view.

### *THE NEW YORK DEER SEASON.*

THIS is the statement of the New York law as to deer seasons given in the *Game Laws in Brief* revised for 1894:

*Deer.*—Act of May 5, 1892.—SEC. 40. Wild deer shall not be killed between the 1st day of November and the 15th day of August following. No person shall kill more than two deer in any season. In the counties of Ulster, Greene, Sullivan and Delaware no wild deer shall be killed at any time within five years from the passage of this act.

*Hounding.*—SEC. 44. Deer shall not be hunted with dogs between the 11th day of October and the 10th day of September following. Deer shall not be hunted with dogs in the counties of St. Lawrence, Delaware, Greene, Ulster at any time, or in Sullivan county between the 1st day of December and the 1st day of October.

*Deer in Sullivan County.*—SEC. 56. No person shall kill, pursue with dogs, chase or take alive any wild deer in the county of Sullivan, save only from the 1st day of October to the 1st day of November.

*Deer on Long Island.*—SEC. 170. Deer shall not be shot at, hunted with dogs or otherwise, or killed, except from the 10th to the 16th day of November inclusive.

According to the *Brief*, then, the open season for the State at large will begin on Aug. 15, Wednesday of next week; and will close on Oct. 31, Nov. 1 being the first close day.

Sec. 56 was added by the last Legislature; the full text of Sec. 20 of the amending act of 1894 (Chap. 627) reading as follows:

SEC. 20. Article three of said act is hereby amended by adding a new section at the end thereof, to be known as section fifty-six, to read as follows:

SEC. 56. No person, corporation, association or company, shall hunt, kill, pursue with dogs, chase or take alive any wild deer in the county of Sullivan, save only from the first day of October to the first day of November. No person, corporation, association or company shall have in his or its possession or expose for sale after the same has been killed, any wild deer or venison, save only from the first day of October to the fifteenth day of November in each year. Any person, corporation, association or company offending against any of the provisions of this section, shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of one hundred dollars for each wild deer so killed, hunted, taken alive or pursued.

This new Sec. 56 appears to have afforded grounds for an erroneous report, widely circulated of late, that the general open deer season throughout the State is only from Oct. 1 to Nov. 15.

The authority for the report is found in a decision, which was rendered last week by Attorney-General Hancock, to the effect that the provision of the second sentence of Sec. 56—

No person, corporation, association or company shall have in his or its possession, or expose for sale after the same has been killed, any wild deer or venison, save only from the first day of October to the fifteenth day of November each year—

is general, and that it was the intent of the Legislature that it should apply to the entire State. We are free to say that this opinion is one which we believe would not hold for a moment if put to the test of the courts. It appears to us to be founded upon a strained construction of the section and upon a manifest misapprehension not only of the natural reading of the text but of the intent of the Legislature's enactment as well.

Our opinion is that the entire section is confined to Sullivan, and that it cannot be construed to change the general deer law. Let us apply a little common sense to the muddle.

1. By natural and reasonable implication, the second sentence of Sec. 56 refers only to the particular county of Sullivan designated in the first sentence. The first sentence prescribes the season for taking in Sullivan county; the second sentence prescribes the season for possession there. It allows fifteen days for possession after the close of the county season for killing, just as Sec. 41 of the general law allows fifteen days for possession after the close of the State season for killing.

2. Had the Legislature intended to change the general deer season, it would have followed the usual and customary method of amending specifically that particular section (Sec. 40) which has to do with the general season. In particular would it have followed this method in adopting an amendment of such importance as is this one. A radical alteration of the deer seasons like this means change of outing programmes for hundreds of Adirondack visitors; and involves thousands of dollars to the hotels in that region. A designed amendment of the law would have been put into clear and indisputable terms.

3. Even if we assumed that the second sentence of Sec. 56 relates to the State at large, it would limit only the possession or sale of venison, but not the killing of deer; and would not even then repeal Sec. 40. We would then have a law, which in one section permitted the killing of deer from Aug. 15 to Nov. 1, and in another section forbade during six weeks of this period the possession of venison at the very time when it might lawfully be taken. The Legislature could not have intended any such ridiculous complication as that would be. No game protector in his senses—not being guided by the Attorney General's opinion—would presume to interfere with a hunter for taking into possession in August and September the deer which the law says he may kill in August or September. Again there would be a conflict with Sec. 41 with respect to possession and sale; and it is not to be presumed that the Legislature intended any such conflict.

We repeat that according to the reasonable and natural interpretation of the law, the general deer season in this State will open on next Wednesday, Aug. 15. We believe that the Attorney General's opinion to the contrary would not hold if tested in the courts. If the game protectors act in conformity with that opinion—as of course they must—and enforce the law as interpreted by it, the FOREST AND STREAM will provide for an immediate test in the courts of the points at issue.

---

There remains, however, one perfectly clear contradiction in the deer law as contained in sections 40 and 56, for while Sec. 40 forbids the killing of deer in Sullivan county for five years from the passage of the act (1892), Sec. 56 provides that deer shall not be killed in Sullivan save only from Oct. 1 to Nov. 1. Sec. 56 has been construed by some person as repealing Sec. 40 with respect to Sullivan county. Our opinion is that it cannot be interpreted in that way; but that notwithstanding Sec. 56, deer are still protected in Sullivan county, and that the open season prescribed in Sec. 56 can have application only after the expiration of the five-year term (*i. e.*, in 1898), unless Sec. 40 shall be otherwise amended at some future session before that time. Similar apparent conflicts of certain sections prescribing annual seasons and long extended close times are found in some other States, and in such cases the long-term close time prevails. It would be a tremendous shame to open Sullivan county to deer hunting now during the progress of the work of the Forestry Commissioners in restocking the district with deer brought from the Adirondacks.

### *THE NESSMUK MEMORIAL.*

THE Nessmuk memorial stone has for some time been in place in the village cemetry of Wellsboro, Pa.; and we reprint from a previous issue the portrait bronze, which forms a part of the monument. The bronze is set into a granite shaft, which stands on a hewn natural boulder. On the cut face of the boulder is the name "Nessmuk," with the design of a broken camp axe. The entire piece is artistic and beautiful, yet modest and appropriate to the purpose. It is in design and character such as "Nessmuk" himself might have chosen; and in providing it the FOREST AND STREAM has endeavored to carry out what was thought to be the wish of the subscribers. We have sent to the individual contributors to the fund a financial statement of the receipts and expenditures; and we take this occasion to express anew publicly our appreciation their co-operation.

The one to whom is due the credit for the happy carrying out of the plan of a "Nessmuk" memorial is Mr. George T. Brewster, one of the younger sculptors of America, who is already well known by his completed works, such as the "Indiana," of the Soldiers' and Sailors' Monument at Indianapolis, Ind.; and is destined to be better known by other works now in progress, such as the admirable symbolical figure of the "Mother of the Republic," designed for the Soldiers' Monument at Malden, Mass.

Mr. Brewster was one of the "Nessmuk" school. He had read the writings of Mr. Sears in FOREST AND STREAM, knew "Woodcraft" by heart, and was familiar with "Forest Runes." Like so many others, he had formed an attachment for the veteran woodsman; and when the memorial project was broached, he offered to furnish the design for the work. This he did, giving the design as his personal contribution to the enterprise, and devoting time and attention to the work as it progressed. His portrait medallion of Mr. Sears is a likeness wonderfully true to the original; and the design of the memorial is both the product of excellent taste and the fruit as well of loving personal interest.

### *A PROPOSED SPORTSMAN'S EXPOSITION.*

SPORTSMEN'S expositions have been given in Europe with decided success. They have proved interesting to sportsmen, naturalists and the general public. They have been given on a large scale, have received generous patronage, and we believe have been not unprofitable to their promoters. Certainly they have proved of immense benefit to all those classes which can profit by a stimulation of public interest in the sports of the field. What they can do in Europe we can do in America. Why should we not have in the United States, say here in New York, a sportsman's exposition, not equaling but excelling those of Great Britain and the Continent? The possibilities surely are generous, and the enterprise of improving them is an inviting one.

Mr. Armin Tenner, who is known to be enterprising, has come to the front with a plan for an American sportsmen's exposition, and we hope that he may receive the support and co-operation required to put the project into effect.

The scope of such an affair should be broad enough to comprise all that is of interest in the several branches of what we may term field sportsmanship, shooting, fishing, camp life, and the allied branches of yachting and boating. The European expositions have included ancient and modern weapons of the chase, illustrating the history and development of the past and the perfection of the present; all varieties of sporting explosives, projectiles and ammunition; fire-arms in all stages of construction; the thousand and one appliances and tools connected with shooting and fishing; modes and methods, field equipment and practice; trophies of rod and gun; collections of game and fish. If the proposed New York exposition shall be laid out on broad lines, gathering its displays not from America alone but from the world, we shall have a collection which will call out cordial and ample support, and whose influence will have a stimulating effect on American sportsmanship for years to come.

### *SNAP SHOTS.*

It is a pleasure to publish Capt. Money's assurance that the American shooters who visited the Hurlingham and London Gun Club grounds this summer had no ground of complaint because of the treatment they received there. Capt. Money pertinently points out that the clubs concerned are of a standing which would utterly preclude any suspicion of unfair play. The charges brought against the Englishmen by the one disgruntled individual are specifically repudiated by other members of the party, who are indignant that their English hosts should have been thus maligned.

---

THE Supreme Court of Minnesota has rendered an important decision upholding the game laws of the State. The salient points are that the provision of the law which declares game and fish to be the property of the State is constitutional; and the State has an undoubted right to prescribe that game and fish may on capture become only qualified property of the citizen, to be used for certain designated purposes only. We shall review the case in our next issue

# The Sportsman Tourist.

## ON THEIR FIRST MOOSE HUNT.

AMBROSE wants it to be recorded that he called a moose as late as the night of the 13th day of October, in the year 1893.

Ambrose and Ned, from the Indian village at the mouth of Tobique, were in nearly complete charge of a party of youths from New York at Gulquac Lake. To the ear trained to keenness by woods life, which could not be said of all the party, the neighborhood abounded in moose from 10 o'clock that night until at least 3 o'clock in the morning. At long intervals between periods of absolute silence, twigs snapped with startling distinctness, tree trunks were pounded by wrathful antlers, not to speak of the bellow and prolonged roars uttered far away at the first blast from Ambrose's moose horn. How big he was, or what he was like, history can never record; but the imagination can picture his puzzled looks and even guess the thoughts that flitted through his brain, as from the secure shadow of black forest he contemplated the objects in the birch canoes, only a short ways from shore.

Ambrose insists the fault was none of his—and who is a better judge than Ambrose?—but some say that Ambrose couldn't draw the moose out of the woods into the open, and merely wanted an excuse therefor. That must be left for them to settle between them, for with that history has nothing to do. Ambrose began to call at the setting of the sun, and as the woods grew dark a silence settled upon the whole earth. This is the Silence of the Woods, a silence punctured by little sounds, the splash of a musk-rat, the cry of a distant owl—nothing else. The Boy was forbidden to smoke, but after he had smoked one pipeful he laid it aside wearily, and raised his heavy Winchester from his lap to rest his stiff legs. To his ears there was nothing to break the oppressive stillness but Ambrose calling, with marvelous regularity, at intervals of half an hour.

When at last a far-away echo came floating up the lake, answered promptly by the Indian, and replied to by louder roars, and when Joe excitedly whispered, "Moose!" there was excitement for a time, which even the Boy shared. But at length all grew still again, and it was hard to keep awake. Only the initiated recognized, or heard, the snapping of a twig now and then, and it seemed every moment that the moose, then not 60yds. away, must step into the water. But as the Indians sat bent over in their blankets, listening, a long drawn, resonant sound rose close at hand. It startled them at first. But another followed, and another; then as if gaining confidence, the sound swelled out with the slow, regular beat so familiar. The Boy was sleeping. Ambrose seized him by the shoulder and roughly shook him, but he only turned over upon the other side and snored on, now more earnestly than ever. Ambrose laid down the horn and seized the paddle with positive quickness. Joe did the same, and the two paddled back to camp in silence. The Boy waked up in time to tell the cook, with a display of that brightness so often characteristic of the lately awakened, "Oh, yes; a moose walked right into camp, and I was asleep!" But there was compensation for all, excepting Ambrose, in the thought that there was already in camp as fine a pair of moose antlers as could be found in many a day. They measured 59in. across, though it was a pity that the prong which gives the greatest width had been broken off, apparently several weeks before. The horns were very symmetrical, very wide across the palmation and were believed to be the biggest pair that ever came off Tobique of which there is any record or recollection among the people there. Any one may see them, together with the great hide to which they are attached, in the center of the new moose group being built at the American Museum of Natural History.

There was still further compensation which, to be taken in the order of its occurrence, should be mentioned about six hours before the vocal performance of that unlucky 13th of October, just chronicled. The two canoes were proceeding to the calling spot at the foot of the lake, while the sun was yet an hour high, and as they turned around the little island in the middle of the lake there, two moose were discovered several hundred yards off in the yellow sunlight that backed the opposite shore. They were a big cow and her strapping big calf standing knee deep in the water, apparently feeding on the lilies that somehow managed to survive the incessant depredations of both moose and muskrats. Preparations were made to shoot, for it was not discovered that neither was a bull until the canoes, driven head on with great speed, were half way there. At 100yds. distance they stopped and watched the two moose, who now paused in their feeding and regarded them with mild curiosity. Then the old cow proceeded to feed. Standing squarely on her four legs she thrust her head down to the bottom of the lake until her eyes were submerged. After a few seconds she drew forth, and when the water had ceased dripping down her face she was seen chewing away at a lily root and curiously looking at the men, just as a cow in a barn-yard might be expected to do.

Then the camera, a 4×5, was speedily brought into action. At the click of the shutter both animals jerked their heads up as high, apparently, as a horse, and stood a few seconds gazing, then each turned its head to the other, as much as to inquire, "Is it all right?" And being apparently satisfied, continued to nose the water as before.

The canoes were advanced another twenty-five yards, and a second snap taken, at which their heads were jerked violently up, and with heads held perpendicularly and great ears thrown forward, they stood fixed for a long minute. Not till then had they shown more fright than that caused by the sharp "click" of the camera. They had not minded the talking nor other quiet sounds, but the sharp knock of the shutter made them start perceptibly. Now, however, they were suspicious, and began walking shoreward, frequently pausing to gaze. Then they mounted the bank, and after shaking themselves like dogs, limbered up and disappeared into the woods. The immediate question was, how near might they have been approached? The belief was that the canoes, if driven quickly and quietly on, could have gone within a few yards of them. For purposes of photography that would have been a chance not to be lost, but it was thought best not to alarm them, lest the old cow's mate be near by in the woods, and it was he they wanted most.

The photographs were not satisfactory, owing to ther distance and smallness of the lens. Glass plates were used. At 100ft. (judged) the animals are scarcely perceptible. At the closer point they appear sharp and clear, but still not an eighth of an inch tall.

Corrobarating the recent evidence in FOREST AND STREAM, the big moose did not at any time thrust out her nose, but held it vertically quite as a horse may be seen to do when regarding the passers-by from over a pasture fence. Yet from our position and with the aid of an opera glass, the moose's head nevertheless was held so high that the nose was almost on a level with its back.

The Boy had one more encounter with moose, which should be a warning to all who travel in the woods with imperfect means of defense. The Boy was on the way to the settlement, down the little river, for a fresh supply of flour, in company with Jimmie, the man of all work, and a very characteristic type of the young lumberman—noisy, good-humored, but not pretending to be a hunter. As the canoe dropped around a turn in the stream, a stretch of 200yds. opened to view, and there, behold! in the middle of the shallow bed stood three moose, a bull, a cow and a calf. The Boy saw them gazing up stream, and he minded the last word of warning from the elder brother, "Don't take any risks with a moose!"

So he sprang out of the canoe, before Jimmie could stop either it or him, and with all speed scrambled up a white birch that leaned over the stream, from which, well out of reach he had a clear view of the whole stream. Instantly he whipped out his 32cal. revolver, and began to fire—for he really was a capital shot. Jimmie, with all he could do to hold the heavy canoe in mid stream, was beseeching him for the revolver, so that he could drop down on top of the beasts and shoot one. Jimmie begged and implored. But it was no use. Disarm himself that way? No! He proceeded with careful aim to fire, and strange to say actually hit the bull moose. Evidently—for on a sudden it gave a grunt and jumped for the shore, scrambled up the low bank and disappeared with cow and calf behind him. Jimmie swore that he would have dropped down to within 20ft. of these moose, and he would have done so. The moose were surprised. But the Boy has the right stuff in him, and when he discovers that even Indian guides have a sense of humor, and learns not to mind them, he will love the North more than ever.

T. A.

## A REMINISCENCE OF COBB'S ISLAND.

JUST an old brier pipe, but I would not part with it. Why? Look at its honest old bowl; read the inscriptions thereon: Crusoe Island, Powhatan, Norfolk, Buck River, Assateague, Chincoteague, Cobb's Island, Del. Breakwater.

Some "dime novel hero" I have read about used to notch the stock of his rifle every time a "painted varmint" bit the dust with one of its bullets in his "brain case." Robinson Crusoe made his record of time by notching a post, and I have carved a few reminders of my outdoor life with rod and gun upon the shining face of my dear old brier.

Your columns have contained from time to time items of interest from Cobb's Island. As we have been there I trust a reminiscence from my pen will be in order.

*May 7, 1894.*—On Board the Good Yacht Celeste.—Fred Montgomery (better known among his friends as the "Bald Eagle of the James"), builder, owner and captain. The crew: Sidney and Archie, both bronzed piratical looking fellows, with an air of "deep sea" about them, Willum the cabin boy and expert gull charmer, and lastly "Pardner," myself, and this old pipe.

A fresh breeze was rushing our white craft over the long seas, the Virginia coast lay away to leeward hidden in purple haze; only the boundless ocean with its heaving swell, so resistless, so merciless when aroused, swinging up to us, then under and away, with a smother of foam at the stem as it left. Well forward I sat, in perfect content, listening to the creak! creak! of the booms as we rose and fell upon the following seas. Hour after hour we bowled along, the salt breeze singing in the canvas, the rush of foam under the bow.

Far ahead we catch the gleam of a snow white object as it rises on the crest of a wave. Soon it resolves itself into the form of a seabird as we draw nearer, and—well, as usual, a tragedy was enacted, and we found ourselves in possession of a superb gannet, an old male in immaculate plumage. Eight miles or so from shore, he was resting on the ocean when fate overtook him amid the waves.

Dark, smoky clouds have been gradually working up the western sky, and an occasional growl of thunder mutters ominously, though the ripples still sparkle on the sunlit wave crests. Blacker grows the sky shoreward, the sunlight now comes feebly through the intervening scud, already flying over head. The foam roars with a louder note as our course is changed, and we bear away for the inlet.

All is gloom about us as the squall comes raging onward, now the breeze has left and we are tossing on the troubled waters. Not for long. With a roar of angry winds, whose mighty voices strengthen as they near, it rushes toward us. Under the sting of its lash we drive wildly on through the whirl of elements. A fleeting glimpse of low-lying shores with their pounding breakers, a cluster of cottages, then blinding rain envelopes everything. Quickly the yacht points into the wind and we feel the shiver of the hull as the anchor chain is payed out; a gentle rocking motion follows; we ride safely. Such my introduction to Cobb's Island.

Clad in oilers we walk the deck as the downpour lessens, trying to make out our surroundings. Fifty rods away on the beach a tall figure in hip boots and rubber coat stands watching us through the driving rain—the only sign of life on shore. We tumble into the yawl and pull for this lone individual, finding him to be none other than the genial Capt. C. H. Crumb, of the life crew at Cobbs; a "crumb from the Master's table," he styles himself, and further acquaintance has convinced us that if the quality of the crumb be any criterion, the whole loaf must be something unusually good. A few words informed us that we had unwittingly secured a fine berth for the schooner, and we then and there captured this "Crumb" and took him aboard, where he soon became one of us.

A bright morning followed the night of squalls, and we were early ashore, inspecting the collection of mounted birds, collected and mounted by the "Captain," who, in addition to being a skillful taxidermist, is an authority widely quoted on the shore birds of Virginia.

The settlement at Cobb's numbers some eighty-five esidents. During the summer transient visitors largely predominate. The Rev. Thomas Dixon, Jr., has built a cosy cottage near the Life Station, and although this was unoccupied at the time of our visit, I felt that I knew the man already, for high on its front that faces the restless ocean I read the inscription, "Ye Curlew's Nest," and while looking thereon the plaintive calls of migrating curlew came softly across the water from the meadows of Bone Island and filled the twilight with sweet wild music. Prettily named this little home, may time deal gently with its inmates.

The island is being surely but slowly devoured by old ocean. Originally some 500 acres in extent, it has dwindled to less than ninety, as I am informed. And when one sees the ceaseless movement of the tides which rip and tear thereabout, he will easily accept the statement. Ebb and flood, they are constantly on the go, slack water seemingly lasts but a moment, when round swings the yacht's head and the tide is running.

Of the brant shooting the captain speaks in glowing terms, and a sweep of the glass about the broad waters reveals the remnants of scores of last autumn's blinds. Of the boats with their leg-o'-mutton sails too much cannot be said in praise. They are great sea craft, point finely, and will "turn on their heels" almost, so quickly do they respond to skillful handling. We enjoyed a glorious sail with the Captain in a gale of wind to New Inlet, eight miles dead to windward. It was wild but exhilarating in the extreme.

What? Pipe out? I must close. Go there, friends. You will find more than a Crumb of comfort. The air is balmy, sport is good, and the sea breeze will drive the clouds away and let sunshine into your lives.

WILMOT TOWNSEND.

## A WYOMING REMEMBRANCE.

OUR tough, wiry little team of bronchos were toiling along the white road in a blazing sun, which made the heat waves roll shimmering upward from the dry alkali plain. The thermometer was at 120° in the shade and had hung there persistently for the past six weeks. Everything was burnt up, even the hardy sage brush and heat-defying cactus had commenced to shrivel from the white sultriness. Our pipe smoke hung around our dust-begrimed faces, and the white alkali fog, disturbed by the horses' hoofs, drifted up in choking clouds, followed along and settled on the whole outfit, horses, wagon and ourselves until we looked as though we had camped under the lee of a flour mill for a week. Along the margin of the few stagnant, white-rimmed pools, where the sage brush was thickest, a few panting sage hens stood with outstretched necks and distended wings vainly trying to find a bit of shade and cool air enough to breathe.

The mirage shone in the west, obliterating the topography of the Butte country, painting, to our smarting eyes, beautiful lakes and rivers, cool and enticing vistas of shade and comfort. It had only the charm of novelty to us, as we well knew that the only water fit for man or beast for miles around was swashing about in our ten-gallon keg, and we also knew, from past experience, that it was as hot as sun could make it. Here and there an occasional 'long horn" cow stood pensively waiting for sundown in the meager shade afforded by the few stunted cedars struggling for an existence on the ashy hillsides. A couple of antelope were feeding, unmindful of the heat, along the edge of a one-time water hole, munching the yellow, sickly grass with apparent relish. Nothing else in sight save the gray-brown sameness of the buttes for miles, until they faded away in the dancing heat and mirage.

Away in the northwest a pile of mountainous, heavy-looking clouds had been slowly rising, advancing and distending their white columns, until they covered a quarter circle of the blazing sky. We had cast a wistful eye toward them since morning, and speculation was rife between us as to the probability of that rarity of the Bad Lands, a real rain storm, coming our way.

It was now September, and we had been part and parcel of this country since May and had yet to see our first rain.

A faint puff of wind from the south gave us hope; then a lull drooped our spirits again clear below zero. Another puff, hot as a gust from a furnace, drifted the dust away in a lazy fashion, trailing along the sagebrush tops, only to let it settle despondently down again. After a little the occasional puffs became a steady breeze, which carried the choking dust to leeward for good, and gave us a chance for breath unmixed with alkali, and best of all, time to wash the smarting stuff from our cracked lips and aching eyes with the water in the keg. The breeze gave a sensation of coolness, though the heat waves rolled along and anon puffed an oven-like breath in our faces.

The clouds rose slowly, majestically, and at last obscured the sun, giving us a change that was delightful compared with what we had endured since leaving Sundance, 30 miles behind us. A low muttering began among the hill-tops; cattle moved about uneasily, coming out from among the cañons and other unseen places which had afforded a little shade, up on the mesas and flats, to congregate in bunches or singly, feeding in a restless, intermittent fashion, which showed their uneasiness. Our team, too, would hold up their heads and listen to the distant growl with tilted ear and watchful eye.

The wind increased until a gale was blowing from the south. The white cloud had got above us and was of a decided gray hue now, while away in the northwest a darkening curtain had dropped to the earth and supplied a background against which the buttes were thrown in sharp outline and contrasting colors unthought of an hour ago. Extra lashings were passed through the eyebolts on the wagon cover to keep the thrashing canvas on the bars. Lightning began to cut the black curtain of cloud into rags and tatters and then the wind died down for a few minutes, only to come with a roar from the direction of the storm, bringing the fragrance of rain which was delightfully cool and refreshing. A few minutes ago the heat was oppressive; now a coat feels comfortable. We jog along on the homeward trail glad for the change the rain is bound to make in this desert country and for the influence it will have for days to come.

With a crash that startles our horses and stampedes the cattle the storm breaks over us, and in five minutes the driving water compels us to turn away, for the horses refuse to face it and exhibit their natural tendency to drift. We pull up by the roadside "stern on" and wait for it to blow over. The lightning flashes and the thunder peals among the hills, while the rain drifts by in sheets, completely hiding the nearest butte. Our horses stand with heads hung down and sides streaming, quiet and unmind

ful of the gale, which tosses their manes and tails in wild confusion, and lashes the white wagon cover in vain endeavor to reach us.

After an hour of this the cloud drifts by, the sun comes out and we start on for the ranch, slipping, sliding along, past Mt. Zahn, where I killed a deer last week, past the spring where the antelopes drink, past Hat Butte, with its sugar loaf top, across the Dry Cottonwood, now quite a stream; and climb the slope to the ranch, where we can camp in more comfortable shape than we can on the trail this kind of a night. EL COMANCHO.

## WIL'UM AND BOOZE.

"The cat will mew, and dog will have his day."

IN no age of the world has the dog enjoyed such consideration as the present accords to his genius and worth; nor does the "valued file" in this distinguish for especial favor "the swift, the subtle, the slow, the housekeeper or the hunter," but every one is honored "according to the gift that bounteous nature has in him closed." Even the plebeian "cut-tail" cousin of the noble race has found advocates of late; not that his defense is an innovation, having the sanction both of history and genius upon it, but because in truth he has been much maligned, for the most upon the time-honored theory, "Give a dog a bad name."

In history the cur figures as a subject for legislation by a great nation, and his name was evolved from the resulting law. In literature he occupies a place peculiar to his attainments, or to speak "by the card," his unmannerly deficiencies; but his dishonorable mention is found upon pages that will never die. Faithfulness to the hand that feeds him is the saving grace he owns, as is eloquently attested in the South by a proverb: "A yallow dog's love for a nigger;" and in death, if fat, his "ile," much esteemed by some as a cure for certain ills, with this, excuses his worthless life.

"Love me, love my dog," was uttered perhaps by the primeval savage, who first awakened the latent desire for human companionship in the canine breast; and the refinement of no civilization has been able to restrain or repress a momentary return to the "first estate" that inflicts vengeance upon all who invade the rights or threaten the well-being of our four-footed friends. Like Launce, we are ever ready to suffer for our "Crab." "I did the thing you wot of" is often on our lips when the cur alone is guilty; and the fellow who would whip the dog is oftener chastised by the master for his temerity.

---

Among my earliest recollections is an old basket-maker named Douce, who made weekly trips to our village all through the summer and fall to sell his wares. His home was in the hill country, locally known as the "Barrens," about ten miles distant, and his earthly possessions being limited to one son, "Wil'um," whose broad shoulders were unequal to the weight of a man in addition to the baskets intended for market, his journeying to and fro was always accomplished on foot. It was observed of these basket venders that they were seldom or never seen upon the road; indeed, rarely in motion. Usually they reached the village before any one was abroad for the day, and then remained until they could steal away quietly under cover of the dark. The old man, taciturn to a degree, seldom uttered a word except in reply to questions concerning his wares, and the boy, as if intent upon carrying out to the letter the pack-horse part imposed upon him, was as dumb as any mule in the fields or ox in the shambles.

About the time I was ten years old the Douces created a mild sensation one morning by their appearance in town two days in succession. They were observed at sunrise in their accustomed place upon the sidewalk in front of the principal store, with the difference that the elder was stretched upon the ground instead of seated upon his heels, his favorite posture. When the owner of the store came to investigate a proceeding so strange, the boy found his voice for the first time in the knowledge of our citizens, saying:

"Dad tuckered out las' nite."

"Dead?" asked the merchant

"Yars. He 'lowed ter me, 'Wil'um, Ise er guine. Arst sum un ter holp yer gin me er plantin'.'"

Douce was friendless in life, but now that he was dead a generous county furnished a coffin wherein he was placed by kindly hands and laid away in the village burying-ground to rest until the great resurrection. After the funeral Wil'um set up his household gods, an unsold basket or two, in a deserted cabin on the outskirts of the village, and became a fixture among us. A marked change was noticeable in him from that day. He no longer shunned companionship, and while never loquacious, his voice, perpetually in the "goslins," became familiar on the streets. In him the boys of the town found at once a playmate, a henchman, a scapegoat and a butt for every species of deviltry that the diabolical ingenuity of youth could devise; and I am informed that even now, after the lapse of twenty years, he enacts the same roll with the boys of to-day.

Let the game be what it may, Wil'um furnishes the fun or performs all the labor. At "bull-pen," he is the target for every ball that is thrown; at "knucks," he furnishes the knuckles to be pounded. When they fish, he digs the worms or catches the minnows, and when they hunt, he wields the axe and carries the game. In all these years he has never been known to rebel at any ill usage, except upon a single occasion, and then not against his usual tyrants. A giant in stature and of prodigious strength, he is the "mildest-mannered man" that ever condoned a wrong. In fact, he is the very antithesis of resentment, suffering in practice the theoretical admonition of the gentle Galileean; receiving a buffet upon one cheek, he makes no effort to protect the other from similar indignity. In appearance he is peculiar. Beardless as an Indian, his countenance expresses that youth in age or age in youth that makes it impossible for a stranger to determine whether he is eighteen or forty; and time only intensifies the perplexing lines and shadows that produce this phenomenon.

Phrenologically, Wil'um is nothing if not reverential. During the annual protracted meetings held at each of the two village churches he literally revels in religious glory. Baptist and Methodist alike count with certainty upon beginning revival with him for the first and most ardent convert to their doctrines. At the earliest call for "mourners" he invariably goes forward; and in only one instance has he been known to adhere to one faith for twelve months consecutively, and then it happened that the summer revivals of both denominations concurred—whether or not for his especial benefit I am unable to determine. One perplexing phase of his frequent repentings and conversions, however, that gives much concern to disputants upon doctrinal points, is his inordinate belief in the efficacy of water—with every change of front he insists upon renewing the ordinance of baptism, with the result that the number of sprinklings and immersions he has enjoyed, if administered to individuals, would constitute a respectable congregation.

---

Nothing opens to the imagination of the village youngster a vista more replete with glowing possibilities than the presence of a stray dog in town. About a year after Wil'um's permanent advent among us, we discovered upon the street one day a small black cur that no one would own. To fasten a tin can to his tail, collect all the dogs of the neighborhood, and convey our prize to the common was a labor of love that was quickly accomplished. Such a chase as we had! The cur proved a sprinter, and for full half a mile fairly distanced pursuit—unimpeded would doubtless have escaped.

Boys are thoughtless, but seldom cruel, and when we found that our victim had broken his leg in the scrimmage our glee was quickly changed to sorrow. Of course it "was all Wil'um's fault; he should have rescued him sooner." So, as usual, he assumed the blame, carried the cur to his cabin, bound up his wounds, and having gravely christened him "Booze" in the presence of us all, formally adopted him as the child of his affection. From that hour they were inseparable.

One afternoon early in November, about two years later, there was an informal convention held by the boys on the sunny side of my grandfather's barn to devise ways and means for immediate "fun." We had been unusually quiet since the opening of school, and this excessive virtue was clamoring for relief. Many motions were lost, as their ends were too mild for an exaggerated case, and a coon hunt for that night would doubtless have been tabled had not some enterprising genius suggested that we take Wil'um along and lead him so far astray that it would take him until daylight to reach home. As Wil'um professed, without shame, the utmost horror of the dark, this plan seemed to meet every requirement of the situation; so the convention at once resolved itself into a committee of the whole and adjourned to wait upon the gentleman.

Wil'um was openly averse to the proposition, averring that he "hain't los' no coon, an' didn't want ter go nohow," and it required extravagant praise of his skill as an axeman, many unmerited compliments to Booze, and, most potent of all, a present bribe of a pint of corn whisky, a can of core oysters, and a pound of cheese to induce him to accompany us.

As we were starting for the woods we chanced to meet one Jones, another local celebrity, as notorious as a bully as was Wil'um for cowardice. Nothing was so grateful to Jones's narrow soul as the perpetration of cruel practical jokes upon those too weak or afraid to resent them; and Wil'um was his favorite victim. In a burst of unguarded confidence one of the boys let him into the secret of our movements, and he at once announced an intention of accompanying us, much to our disgust.

It was so dark in the woods Wil'um protested that we should wait until the moon rose, about two hours later; but as a pretense of losing our bearings in the dark was the part of the programme arranged for his benefit, we insisted that "varmints" did not "walk" when they could see their shadow, and headed direct for the thickest and most dismal part of the swamp.

We had advanced but a little way, when the dogs struck a trail, leading us a merry scramble for more than a mile before the coon would climb. The tree was small, and the axe, wielded by expert and willing hands, quickly brought it to the ground, where the coon received his quietus in short order.

Under the excitement of the chase no one remembered to observe any landmarks, even had it been possible to do so, and we found that our wishes had been granted with a vengeance, so far as getting lost was concerned. We could not so much as conjecture the direction of the open and efforts to extricate ourselves only served to carry us deeper into the swamp, finally delivering us helpless wanderers to a wilderness of mud and water half-way to our knees.

In the midst of this predicament, anxious for escape, we failed for some time to notice that our intended victim did not murmur once, or that Jones, who was "out to see the fun," had grumbled and cursed himself into a condition bordering upon maudlin idiocy.

We had floundered about for an hour, perhaps, before Wil'um broke silence for the first time by drawling out: "It haint no use er tryin' ter git out, boys, until ther moon's up. Yer mout es well clam' er log an' wait."

"Wil'um's er preachin'," said one of the boys. "Let's find a big log and make him pass his bottle and divvy with his gros'ries."

We found the log with little trouble, but Wil'um and his supplies were one. "No-sir-ree-Jock-Robinson!" he said in reply to an invitation to "set 'em up." "I'm mor'n hongry 'enough to eat every scrap o' grub I fotch, an' I haint guine gin yer ther speerets an' freeze my own self; an' er trade 's er trade. I don't b'lieve in no Injun givin'."

As the moments dragged their weary length along, it seemed to our anxious souls that the moon was "stuck" in its orbit, and a more miserable lot of shivering mortals was never seen than his first pale beams looked upon on that log. Even Jones was long since too miserable to swear; and our fell purpose forgotten, we only wished for escape. Alas! the way of these transgressors was mud, and proved as unknown by moonlight as in darkness to our befuddled intelligence. Hour after hour we wandered and waded, dispairing of home, in search of just enough dry land to build a fire upon that we might snatch a bit of comfort until day; and no castaway at sea ever hailed a friendly shore with greater rejoicing than we the little knoll that at last firmly bore our footing. While we were gathering wood for a fire, Wil'um, the uncomplaining, announced that he "knowed where we wus."

"How far are we from home?" demanded Jones.

"'Bout er mile."

"Then, for heaven's sake, get us out of this."

"I haint got my barrings yit," replied Wil'um, interrupted by a howl of disappointed derision. "Yer fellers needn't rar so," he continued. "Foller me an' I'll tek yer ter ther river, over thar, erbout er hundred yards."

Another howl from the crowd, of delight this time, as each of us could find the way from the river with ease. So great was our relief when at length we looked upon the mighty Tennessee, that even the dismal Jones recovered his "deviltry," if not his good humor.

"I'll tell you what," he remarked aside to some of the boys, "I don't intend to go through with all this and not have some fun out of Wil'um. He thinks more of that mangy cur of his than the law allows, and I'll bet a dollar if I should throw Booze in the river he would jump in and pull him out. Just watch me. I say, Wil'um," he continued, "Booze is all covered with mud. I am going to give him a bath."

"Booze 's all right, Jones," replied Wil'um, with an unsuspicious grin.

"Oh, no he ain't," said Jones, seizing the dog and throwing him as far into the stream as his strength would allow.

The top of the river bank at this point was about four feet above the water, and the descent was almost perpendicular. Poor little Booze came to the surface struggling and whining and then struck out bravely for the shore, where he clung, moaning piteously for rescue. Sympathy for his distress quickly changed the laugh that greeted his immersion to silent shame, and a dozen hands were stretched to his assistance, all to no purpose, as he was beyond our reach. Our efforts in his behalf seemed to add to the satisfaction Jones experienced from his diabolical deed. He stood aloof chuckling with delight, occasioned in part by the would-be witty suggestions he threw in from time to time. "Catch little Dicky Gray by the heels and fish him out," was his master-stroke.

This idea proved a whetstone for Wil'um's dull intelligence. Springing to his feet he rushed upon his tormentor ike a tiger, and winding his sinewy arms about him lifted he bully as though he were a child and flung him after he dog, saying: "I'll feesh 'im out with you, dad-burn 'e!"

Jones came to the surface spluttering and cursing, and as soon making desperate efforts to climb the bank.

"Fetch that dog with yer," sternly demanded Wil'um.

"You won't want any dog when I get through with you," growled Jones with an oath as he succeeded in placing one knee on the bank.

"Fetch that dorg," said Wil'um, chasing him back into the water.

Again Jones essayed to climb out and again Wil'um thrust him back into the water, cooling his resentment this time to the point of entreaty: "For the Lord's sake, boys, keep him off; I'm freezing," he chattered.

"Don't yer tech me, boys, er I'll fling the whole dern curpoodle on yer in thar. He's got ter fetch thet dorg," said Wil'um.

Jones made one more effort, but Wil'um was as relentless as fate, and a fourth ducking conquered the bully effectually. When he came to the surface he quietly tucked Booze under one arm and held up his other hand for assistance.

"Here's your dog, Wil'um, and now I am going to give you the worst hiding you ever had," he said, attempting at the same time to execute his threat. Wil'um dodged the blow, closed with his antagonist, and in an instant the river closed over his form for the fifth time. He came up begging and praying for a truce that should last forever.

"All right, Jones," said Wil'um, helping him ashore, "but I haint done with yer yit; yer got to tote Booze plum home afore I let yer off."

"I'll die first," said Jones.

"Back yer go in ther water, then."

"For God's sake, Wil'um," shrieked the trembling wretch, "I'll do anything you say."

"Pick up thet dorg, then, an' git fer home."

The sun was well up when we reached the village, the most woebegone huntsmen that were ever seen. Jones begged with tears in his eyes that he might be spared the shame of facing his neighbors with the dog in his arms, but Wil'um was obdurate, insisting that Booze must be deposited at his door before his resentment would cease.

Fully half the village was abroad to witness the remarkable spectacle we presented with Jones and the dog in the van. The "dread laugh" that greeted us was too much for the bully, and he made one last effort to retrieve his reputation by attempting anew to give Wil'um a thrashing. But alack and alas! Wil'um again asserted his manhood, and for the first and only time in his life fought and won a "stand up" battle. This defeat was too much for the bully. Like Pindarus, he ran from the field and hid his shame, no man knows where.

For quite a week the victor received from our boyish hearts the adulation accorded heroes, but by the end of that period we discovered that he found in his accustomed rut too much of familiar ease to desire a *rôle* so difficult and strange, and we learned with many a pang that Wil'um and Booze had had their day. WILL SCRIBBLER.

GREENBRIER, Ala.

---

### Long Island Sound.

BRIDGEPORT, Conn., Aug. 3.—Mr. Pulaski Benjamin of Stratford, Conn., is a well-known sportsman of the old school, who wets his line in the waters at the mouth of the Housatonic River. In conversation with me the other evening he said: "I have never known a summer when the striped bass were so scarce in these waters. The other day I trolled for two hours without the slightest encouragement. The water is too warm and the fish refuse to come inshore, preferring the deeper waters. Two days' good rain, with easterly or southeasterly winds, would probably bring them in, but the big fellows will not show up until after September."

Mr. Benjamin is a veteran fisherman and perhaps better acquainted with the waters in this neighborhood than any one.

Weakfish or "yellow-fin," as they are called up here, have not been very plentiful. About a week ago, fishing with a float and light bass tackle, I captured three, the largest of which weighed about 2lbs.

My freedom from the sick room makes me feel like acting upon the advice of our friend "Ransacker," and deluging you with verse, but I have no desire to be laid up again, so refrain. THE GENERAL.

*The* FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

# "Forest and Stream's" Yellowstone Park Game Exploration.

No. 11.

## THE COUNTING OF THE ELK.

### Ease with Dignity at the Post.

It was very comfortable at Ft. Yellowstone in the good hands of Captain Anderson, the commanding officer, and for my part I did not care to leave either the Park itself or that portion thereof in which I was then located. There was a comfortable willingness to lie still a day or so, and a cheerful disposition to obey the command of the ranking officer to keep still, retain my clothing on my person and take it easy for a while before doing any more snowshoe travel. Very valuable also were these days of rest at the Post, for during them I learned still more of the thorough method by which the Park is governed, of the perfected system in force, and of the painstaking and conscientious labor performed by every branch of the military body to whose care the great preserve has been handed over. At that time, March 29, it should be remembered, there was no law by which a poacher or violator of the Park could be punished, except as under military regulations. The latter, though acknowledged to be inefficient, were naturally construed as severely as possible. At that time the poacher Howell was reposing as deep in the guard house as Capt. Anderson could throw him, and Capt. Anderson, with some quiet chuckles, told me how sometimes Capt. Scott, whose troop was stationed, in the tourist season, at the Geyser Basins of the upper Park, had found occasion to make some exuberant bridegroom, who had written his name and that of his beloved on a geyser formation, walk back twenty miles from the next stage station and scrub out his immortality by means of soap and brush.

Our rest, however, was not of long duration, for it was thought best to make the trip over to the wintering ground of the elk, so that a personal investigation could be made as to their numbers. This would take us over toward the northeast corner of the Park, to the country about Yancey's, and the East Fork beyond Yancey's. The distance to Yancey s was twenty miles, to be made in one journey. A Chinook was on, and the shoeing had now become simply awful. Mr. Haynes had been over to Yancey's, and described it as the worst time he had ever had in his life. With this outook we did not feel exuberant over the trip.

To give some sort of notion of that country, in the absence of a map, let us suppose a large letter V. The legs of the V are made of the Yellowstone and Gardiner rivers. Ft. Yellowstone we may call located near the apex or point of the V, and we will say Yancey's is at the base, calling it about twenty miles across the base. Yancey's is, however, on the level of the Yellowstone River. These rivers here all run down hill, and they run at the bottom of deep valleys or cañons. The Post being located outside of the V, that is, to say, on the left hand side of the Gardiner Valley, there were, in *ski* talk, three "hills" to be accounted for in this trip (in reality there may have been 3,000). The first was the west side of the Gardiner, or from the Post down to the Gardiner River, maybe a couple of miles or less. Then came the climb up so-called "Gardiner Hill," two miles or so more, to an elevation much greater than that of the Mammoth Hot Springs. This would bring us to the great plateau—a very broken and hilly one we found it—which we will say lies between the two arms of the V. Across this plateau was ten or twelve miles, and we would then be within five miles of Yancey's, that is to say, at the top of the left side of the Yellowstone arm of the V. Yancey's, being at the level of the bottom of the valley, would of course be far below, but once at the top of the hill we were the same as there, it was said, for everybody agreed that once at the Devil's Gut at the top of the Yancey Hill, it would take us a very short space of time to get to the bottom, always provided that we could keep up with our *skis*.

It will be seen that we had only one "hill" to climb going east, the Gardiner Hill leading up to the plateau. Coming back, we would have two "hills" to negotiate. Capt. Anderson very kindly offered us a solution of a portion of our difficulties. He thought that as the snow was going so fast at these lower altitudes, he could set us in an ambulance across the Gardiner River and pretty well up the Gardiner Hills behind. He further promised that if we would set a day for our return he would have the ambulance meet us as far up the Gardiner Hill as it could get on that day. All of which was not only kind but valuable assistance, as it would save us one run down and one climb up, on a locality where the shoeing was very bad.

COW ELK IN HAYDEN VALLEY.

Photo by Haynes.

BUFFALO ON ALUM CREEK.

Photo by Haynes.

It was about 9 o'clock of the morning of March 30 when we left the Post for Yancey's. Billy took along his big camera, and we both had along in our packs the necessary articles. We had along this time private Hunt, Capt. Anderson having detailed him in place of Larsen—who had started early the night before for the Lake Hotel with the detail sent out to bring in the buffalo heads stored there by the first party out of the Howell plunder. This would give Larsen 140 miles or so more on top of what we had traveled, enough to get him in condition, anyhow.

I have often had occasion to admire the skill of the real Western mountain teamster, which is something no tenderfoot driver can appreciate without seeing. A tenderfoot teamster would have turned back at the end of the first half mile and called this road impassable, for the mules were breaking through, plunging and wallowing shoulder deep in the snow. Our teamster took it all coolly, never hurried his mules, and let them take their time. Those beasts seemed skilled and sapient also in this sort of work. They seemed never to get rattled when they went down nearly out of sight in the snow, but lay still and took it easy till they got their breath, and then slowly and carefully tried it for a few yards further on. By this curious illustration of an adaptation to environment, we got on slowly even so far as the Gardiner River and a little way up the hill beyond, to a point where the snow was too deep for the mules, and apparently hard enough for the *skis*. The snow was melting along the ground and not on top, as we learned by slumping through into streams of water when we got out to help the mules. We did not dare take many chances about getting our feet wet in the valley flats, but here on the hill the snow was not so hard, so after leaving the team we walked on foot nearly to the top of the Gardiner Hill. The mail carrier, Church, perhaps the most skillful winter driver in that region, had taken his team with a sled up this hill. Church took a buckboard to the point where we left our team, then left the buckboard and took to his sled. When he could get no further he hitched his horses and took to his *skis*. He carried the Yancey's and Soda Butte mail, and was rarely behind in any weather. How he did it was a mystery. The snow he passed through and over was from 3 to 30ft. deep, and it probably averaged 6 or 8ft. He managed to find bare ridges and get along. As I have stated, the snow does not lie so evenly in this part of the Park, being blown about more.

We found Church's trail up the Gardiner Hill of much service, as it packed the snow so that it would bear our weight that morning without the *skis*. We found that the best place to step was about 4in. inside the track of the sled runner, where the snow seemed to be compressed most. If one stepped on the ridge between the horses' tracks he was apt to break through. When he did that he would sink down full-leg depth, get a bad jar, and have a hard time regaining his footing. Repeat this a hundred times, and the result is annoying and tiring. It was noon, and we were tired enough already, when we topped the long, steep and winding Gardiner Hill, and turned out into the timber just above the beautiful Gardiner Falls to eat lunch and put our *skis* in order. We were now what is called five miles on our way, and at the edge of the plateau, if the succession of mountain spurs and foothills can so be called.

As has been earlier taken up, there are certain gentlemen who profess to be anxious to build a railroad through the Park to Cooke City, up the Yellowstone, or that is to say, up one arm of the V of which we have been speaking. It may be that railroads can be built with ease over a country where a good *ski* runner can't go, though I doubt it. Anyhow, we knew it would be impossible to get up the proposed route of the Cooke City air line, and took this easier route, away back from the sharper dips and cañons close to the deep valley of the Yellowstone. I should say that our route, being the easier of the two, would be the better one for the Cooke City air line. It would be necessary, however, for the line to be equipped with a vertical elevator of sufficient power to lift the railway trains three-quarters of a mile straight up into the air. This would be simple, and would bring the right of way up to the level of the "plateau." I think they would then be plenty busy enough to get a grade across that interesting country, which is about as level as the fingers of your hand when you stick them up straight. I will not say that a road could not be built across this "plateau" if a company had a few million dollars, but it certainly would have to have an elevator on each side of the plateau, at

the Gardiner Hill and at Yancey's. I don't know of any road so equipped, so the Cooke City Air Line, when built, would be in a manner unique. It could get a good deal of advertising out of its mile-high elevators, and I advise the Cooke City men to build the road, by all means. People would come a long way to see it, and to ride up and down the elevators on the trains. The road in this way might be built, and this might be called a practical scheme. Of course nobody really thinks that a railroad could be built up the Valley of the Yellowstone, and no engineer has ever called that a practical route. Some roads are built along a bluff, and some roads are run on top of a bluff, and some roads are backed only by a bluff. The Cooke City Air Line is one of the latter sort. But I wish the gentlemen would consider my elevator scheme. It might give new life to their project, which I understand to be in rather a languishing condition. Some of these things occurred to us as we looked over toward the tremendous landscape which hedged the Yellowstone, a landscape mostly set on edge.

### Awful Going.

The country we were now crossing was high and cold, nearly bare of timber near the trail, something like the Hayden Valley, but much more broken, I should say. It was not such very hard *ski* country, but the condition of the snow made the going simply awful. The snow was, in some places, crusted hard enough to bear us up on the *skis*, and in others so soft as to let us sink down below the surface. Then there were strips of country along the ridges quite bare, or so nearly so as to compel us to take off our *skis* and go across on foot—something which the *ski* runner declares tires him more than five times the distance of straight travel, because he does not like to stoop over and fix his straps, or to carry the slippery *skis* over his shoulder. Of course the condition of the snow depended much on the way the sun struck it, so that one side of a hill might be soft and the other with a hard crust. Again, the hour of the day had much to do with it. The snow was melting underneath and settling fast, but at mid-day this did not matter so much. In the afternoon, however, a crust began to form, and this crust was just strong enough to break through about every few yards. When it broke down the unfortunate *ski* man would find himself a couple of feet below the surface of the snow. Attempting to step out, he would break in again. Struggling still further, he perhaps would thrust the toe of his *ski* far under the unbroken crust about him and have a fine time in getting it out again. Breaking up the crust by treading it between his feet, he might make a last try for liberty, only to slip back into the hole at the last instant. The continual straining and struggling we found very wearing. To make it all worse, Hunt was having trouble with his shoes, which were sticking badly. We stopped twice to wax up, building a fire and melting snow at one place, and thus getting a drink of rather smoky water.

### In the Elk Country.

We could now see plenty of evidence that we were getting into the elk country We could see trails and pawings in greatest abundance in every direction. The elk seemed to be more numerous in the section about the Blacktail Creek. We saw one band of 48 elk, distant perhaps half a mile or more on the left of the trail. Being well pushed for time on account of the fearful shoeing, we did not leave the line of march to look up any bands of elk, indeed, it was not at that time thought there were so many in the Blacktail country.

### The Run of the Yancey Hill.

It was 6 o'clock in the evening, and time to be getting somewhere, when we at length found ourselves at the summit of the Yancey Hill. Billy was ahead here, and disappeared from view on a long, gentle, curving slide around and down the last hill that side of the deep gash through the mountains known as the Devil's Gut. I followed, with a serene sense of relief at the easy, gliding motion of a down grade and good snow. All at once the whole earth seemed to fall out from in front of me, and all I could see was blue air below. My serenity vanished, and I hurriedly got across the *ski* pole to put on brakes, but before I had time to do that fully, I was at the bottom of the chute, where Billy stood looking at my look of astonishment. This was the last sharp drop down into the Devil's Gut. We all got handsome croppers here, but the snow was soft and it didn't matter.

"We're in the Gut now," said Billy, "and just the same as at Yancey's. It's five miles, but every inch of it's down hill."

With this latter statement we were later disposed to agree, but with the essential statement that we were as good as there, we had cause to differ. We had a frightful time getting down that hill, and were heartily glad when this part of the day's journey was over.

I suppose the Yancey Hill is riskier to run than the Golden Gate Hill, because on the Yancey Hill some of the grades, though shorter, are very steep indeed. The descent is by means of a series of sharp pitches or steps, with now and then a long run nearly level between them. For five miles this goes on, the drop being tremendous down to "Pleasant Valley," as Uncle John Yancey calls the sheltered bight of the mountains which he has made his home. I do not know the difference in elevations, but, roughly speaking, it seemed to us to be about five miles forward and one mile down.

Given a good snow, and the run down either the Golden Gate or the Yancey Hill would be pleasant to a good *ski* man. But here the snow was in the worst possible condition. It was covered, in these deep defiles, with a glassy crust, over which light snow had drifted in places. Moreover the team of the dare-devil mail carrier Church—by what means let somebody else explain—had been down this hill and cut up the snow into rough hillocks along the trail. The crust would hardly hold one on foot. To run it on the *skis* looked like doing five miles of nutmeg grater *glacé*. Still, we had to do it, and each man did it in his own way, plunging down as best he could and falling probably fifty times. The falls hurt us all, too, because the crust was hard enough to cut.

More than once I was astonished to see the ease with which the *skis* took the inequalities of the surface. Dashing down the steep pitches over the rough tracks left by the horse team, I could feel the *skis* jumping and jarring beneath me, and could see a long stream of holes and hillocks go by and back of me, but the *skis* kept on jumping and jumping and going ahead and down, over country where one would expect them to be brought up standing any minute. The good luck did not last forever, though, for in one of these rough stretches my toe got into or under something and I got a nasty fall, which did my game ankle no good, and made me mighty timid for a long while. Hunt was carrying Billy's camera part of the time, and I believe he went down the Yancey Hill as much on his back as on his feet. Anyhow, it was good rolling and sliding when a fellow couldn't stand up, so we all got down someway, Billy of course much better than Hunt or myself, who had not so long a schooling on the *skis*. On the last steep pitch just above Yancey's, Billy took to the woods, and sitting down on his *skis* slid down through a thicket of quaking asps. I walked or plowed down the steepest part of the run, coming on Hunt, who was lying on his back in the snow, resting after a tumble. From below there came a hearty peal of laughter at his mishap, and I knew that at last we were at the end of the march. We then all got upright on our *skis*, and ran down with a flourish to the two log cabins, in front of which stood the entire population of "Yancey's," consisting of Uncle John himself, proprietor in general; Taswill Woody, the well-known mountain man and guide; Brown, the cook, and old Bill Jump, who has a cabin just back of Yancey's, and a stable for the mail carrier's horses. Nor should I forget Uncle John's two staghounds, Pinkie and Green, fine specimens, albeit of touch-and-go temperament. Bill Jump has a dog also, which may or may not be a staghound. Pinkie and Green lick him so easy that he is afraid to call his soul his own, and so takes it out barking at strangers.

### The Population at Yancey's.

The population now nearly doubled by our advent, adjourned indoors. We were at home again, and a very pleasant home we found the cosy cabin, with its blazing fire, its abundant hearty food and the general air of free and easy Western hospitality. There were some saddles and saddle-blankets on the floor, and the fellow who was willing to fight Pinkie or Green for a blanket could make himself hugely comfortable in the warm corners back of

DEER HORNS GNAWED BY PORCUPINE.

the fire. Here we went into executive session of story-telling, and few parts of our stay in the Park were pleasanter than the days at Yancey's.

Uncle John Yancey is one of the features of the Park, just as much as the geysers or the Cañon. My impression is that he was there before the Cañon was finished. He is one of the few persons who are allowed leases in the Park, it being in his case thought well to have a place in that part of the Park where some sort of accommodations could be had by travelers. Here there is a little garden, a cow or two, and always a bed and a good plain table. Some of the very best trout fishing in the Park is near Yancey's, and the place is one of the prettiest and pleasant of all the possible stopping places.

Uncle John is a Kentuckian by birth, long a citizen of the West and by far the leading attraction of Pleasant Valley, if only you strike him right. He has a wholesome contempt for tenderfeet who get too "peart," and a hearty respect for the mountain qualities of manhood. Some of the tourists irritate him very much.

"They're sech fools," he said frankly, "some of 'em. Onct one rode up to the door here and ast me how fur it wuz to the Mammoth Hot Springs.

"'It's twenty miles,' sez I.

"'The book sez it ain't,' sez he.

"'I don't give a dash what the book sez,' sez I. Then I went right on in and shet the door, an' left him out thar a-settin' on to his hoss."

One time a citizen still more seriously offended Uncle John, who didn't like the way he acted around the house.

"I wuz a great mind to kill that feller several times," said Uncle John calmly, in telling about it. "I reckon I would a killed him on'y I didn't want him layin' around here until I could git word over to the Post an' have some one come over an' remove him. I felt very hostyle to that feller."

Uncle John loves a good joke, and can tell one on himself if needs be. He tells one about an experience of his which happened when he was younger.

"I wuz livin' in Mizzoury then," said he, "an' I reckon wuz a kinder wild young feller. You see, I wuz goin' to town one day, an' I had to cross a river, an' they wuz on'y one boat there, which wuz owned by some folks who lived clos't by the river. The owner wuzn't to home, but his wife wuz. She wuz a great big woman, 'bout six feet high and big proportionate. She wuz a young woman, but savager any young woman ought nacherl to be. I ast her fer the boat, an' she said 'No!' ez if I wuz a insultin' of her. That sort of riled me, an' I 'lowed I'd hev to take the boat anyhow. So I goes down an' I lays hold of the boat fer to push it off. The woman, she gathers a club, not sayin' a word, an' she comes fer me. She wuz big ez three of me, an' I didn't know what to do, so 'lowin' I'd quiet her down a little whil I wuz thinkin' it over, I hit her a whack hard ez I could over the head with a oar. She set down pretty hard an' kept quiet, an' I went on acrost the river.

"When I come to find out, I learned the feller that wuz that woman's husband wuz a touchy sort of feller, an' I 'lowed when I seed him I wuz apt to have trouble, an' I s'posed nothin' would do exceptin' I had to kill him or him kill me, which wuzn't pleasant nohow. Well, one day I met him. We wuz both on horseback, an' I saw him ridin' on down the road towards me. I got all ready, 'lowin' the shootin'd shore have to begin, but not thinkin' it wuz egzacktly perlite to hit a man's wife with a oar an' then begin shootin' over it befo' he did. Well, he rides on up towards me, an' we both stops, I a-bein' mighty careful like, a' the upshot of it all is, I out an' tell him the whole story, 'lowin' his wife hadn't treated me no ways right. The feller he listens to me all through, an' says he, 'Stranger,' says he, 'I wish to God you'd done that sooner to that there woman. She's been a different wife to me since then.'

"That kind of relieved me, you know. Yes, it shorely did relieve me."

### The Second Silent Man.

I have mentioned John Folsom, winter keeper of the Cañon Hotel, as the most silent man I ever knew. The second silent man is Taswill Woody. During the whole of our stay at Yancey's Woody hardly spoke a word unless accosted. He spent hour after hour and day after day playing solitaire. Woody is a man of large stature, over 60 years of age and quite gray. I think he has more natural dignity than any man I ever knew in any walk of life. He is a well known mountain guide and has been much out with Mr. Roosevelt and his friends. He says Mr. Roosevelt is the best big-game shot he ever knew. Woody was born in Missouri, and has long lived on the front. He was a '49er, has been to the Australian gold fields, and, in short, has seen all the wild life of the world and all the glories of our now faded West. Of his experiences as scout and Indian fighter it was extremely difficult to get him to talk. Acting on Uncle John's advice, I tried to get Woody to tell me something of the fight on Bouvier (?) Creek (on the present Crow reservation), where he, Charlie Cox and Hubbell holed up in a willow thicket and stood off probably 1,000 Sioux all day, killing eight or ten of them. I waited for a whole day, till Woody and I were alone, climbing up the mountain side to go over and see some elk, and then I said, carelessly:

"How about that fight you were in with the Indians, over east, here. Wasn't it a pretty close thing?"

"What fight?" asked Woody, calmly. Then he relapsed into silence. The above was all the description I could get out of him about that fight. Later on, however, making an evident effort to be communicative, he told me a few things about Indian fights in general. He claimed that the Indians were very poor rifle shots, and that the closer they were to you, the less apt they were to hit you. At long range they were better shots. "They seem to get excited and trembly, close to you," said Woody. 'A lot of 'em shot at me and a Dutchman one day. They rose up not 50ft. away from us, and ought to have killed both of us. I stayed back with the Dutchman, and we stood them off.' (I could not learn whether the Dutchman was hurt or whether Woody himself was hurt). The solitaire game always broke up the talk.

### In the Heart of the Elk Country.

We learned that we were now in the heart of the winter range of the elk. From the cabin door we could see a little band of elk feeding on top of the bald ridge which rises at the upper end of "Pleasant Valley." Learning of our purpose, Woody quietly told us that he could take us to a point within two miles where we could see over 1,000 elk at one sight. As I shall later show, he did it, too.

## Natural History.

### WHAT BECOMES OF DEER ANTLERS.

GENESEO, N. Y., July 21.—*Editor Forest and Stream* We have heard a good deal at one time and another as to what becomes of the deer horns after they are shed, and now I'm going to tell you what happened to part of one pair that never had been shed.

My guide and I were making our way down a big beaver meadow in the Wahnaputac Lake region of Ontario one evening a few weeks ago, and were just thinking of putting up our little Protean tent and going into camp for the night, when the guide held up his hand with a "Hist!" Listening, I heard a strange, rasping sound, apparently a hundred yards or so to our left in the bush. Dropping our stuff on the ground, in we went to investigate; and as we advanced the crunching became louder and louder. It sounded exactly as though some fellow with heavy, hobnailed boots was shuffling over a cobblestone pavement. The guide whispered; "Well, I'll be strung up if ever I heard such a nsise as that before in the bush;" and for myself I began to think a good gun would be about the proper article to have along just then instead of an axe and a Kodak.

After considerable sneaking and crawling we managed to get to the edge of a little clear place, from which the sounds came; and then we both laughed, for there was only an old fat porcupine chawing away at some white bones. He paid no attention whatever to us, but went right on at what he was about; and on looking closer we saw that he was eating one of the horns of a big buck, which evidently had been killed by the wolves in the winter.

We watched the brute chew up almost all of one horn and begin on the other. I brought the skull and what was left of the antlers out with me, and think it is quite a curiosity. I send it by express to you, so that if you care to, you can make a cut of it. You will notice that the marks of the porcupine's teeth are almost as sharp and clean cut as though made with a chisel. CARIBOU.

### Mongolian Pheasants in New York.

GENESEO, N. Y., July 29.—We have lots of Mongolian pheasants here now, and I am making some notes to send you as soon as I get time for it. C.

## SIERRA NEVADA FOOTHILL BIRDS.

(Concluded from Page 93.)

Waxwing, Cedar-bird or Cherry-bird (*Ampelis cedrorum*).—On this day two large flocks of these birds were seen. One flock was perched in a large pine tree, and the other was on the wing, hurrying out of the trees of an irate cherry grower, who had just decimated their numbers with his gun. It is extraordinary what a quantity of cherries a flock of these birds will eat in a day. They will alight in a tree and gorge themselves most greedily, until they can hold no more, when they will fly a short distance and settle down to digest their meal. This is done with incredible quickness, whereupon they renew their raid upon the fruit as greedily as before. This they keep up all day long, and every day throughout the cherry season. Fortunately their numbers are not great, or they would be a very serious nuisance. They have nothing but their beauty to recommend them to the mercy of man, and their destructive habits so far prevail against this one merit, that I fear they are destined to destruction in the fruit growing sections.

Butcher-bird, White-rumped Shrike (*Lanius ludovicianus excubitorides*).—Quite a common bird, and resident. On this day a number were observed, and three of them were heard singing. According to my observation their song is a rare one, and I was surprised to hear so many in one day. To me it is a slouchy looking bird, as it has when perched a habit of letting its tail hang down like a string. It also has a sly, cunning manner of getting about that I don't like. Perhaps since one snapped off the head of a favorite canary I am not unprejudiced. The bold criminal came upon the porch where the cage of the canary hung, and managed to catch the poor captive through his prison bars, and being unable to drag the body through the wires, carried off the head. The great dramatist says: "What's gone and what's past help, should be past grief." Therefore should I forgive him; but, "I cannot forgive him, an' I would."

Blue Linnet, Painted Finch, Lazuli Painted Finch (*Passerina amœna*).—What is that flash of bright azure that just now caught my eye? I will stop and investigate. Ah! yes, as I thought, there is the dainty little fellow, clad in the white of the morning, the azure of the midday, add the ruddy glow of the evening sky! This truly delightful feathered beauty, in his "red, white and blue" uniform, is not uncommon here. It is rather a shy bird, however, and is not to be seen every day. It is a lover of the orchards, and maybe steals a cherry now and then—ut what of it?

Arkansas Tyrant Flycatcher (*Tyrannis verticalis*).—The twitter of this lively bird is a frequent sound to-day. It appears to take kindly to the eucalyptus trees for nesting places, and as these have been very generally planted around dwellings, this makes the bird a very sociable one. As it has no bad habits it is never molested, except by the wanton small boy with his pestilent air gun. It is not so fiercely courageous as the Eastern kingbird, but will drive off hawks and owls with a fair show of spirit, and is very vindictive toward the jays, which it pursues with great ardor. It is also down on the shrike pretty severely. Its pugnacious character seems to be appreciated by the other small birds, and one is almost sure to find nests of different species in close proximity to that of a "kingbird," as it is universally named by residents. Curious how man arrogates to himself alone the power of reasoning! If this is not an exhibition of that power in birds, what is it?

Western Pewee (*Contopus richardsonii?*).—I am not entirely satisfied as to my identification of this bird, but think it was this variety I saw sitting on a limb, over a little pond of water in a cañon, taking short flights for the circling insects. Its nest was underneath a small bridge spanning an irrigating ditch, and as I crossed the bridge one of the birds flew out and joined its mate. I have crossed this ditch several times lately, and the bird always flies out; so that I am certain it had its nest there. I tried to see the nest on one occasion, but the bridge was so close to the water that I could not look underneath.

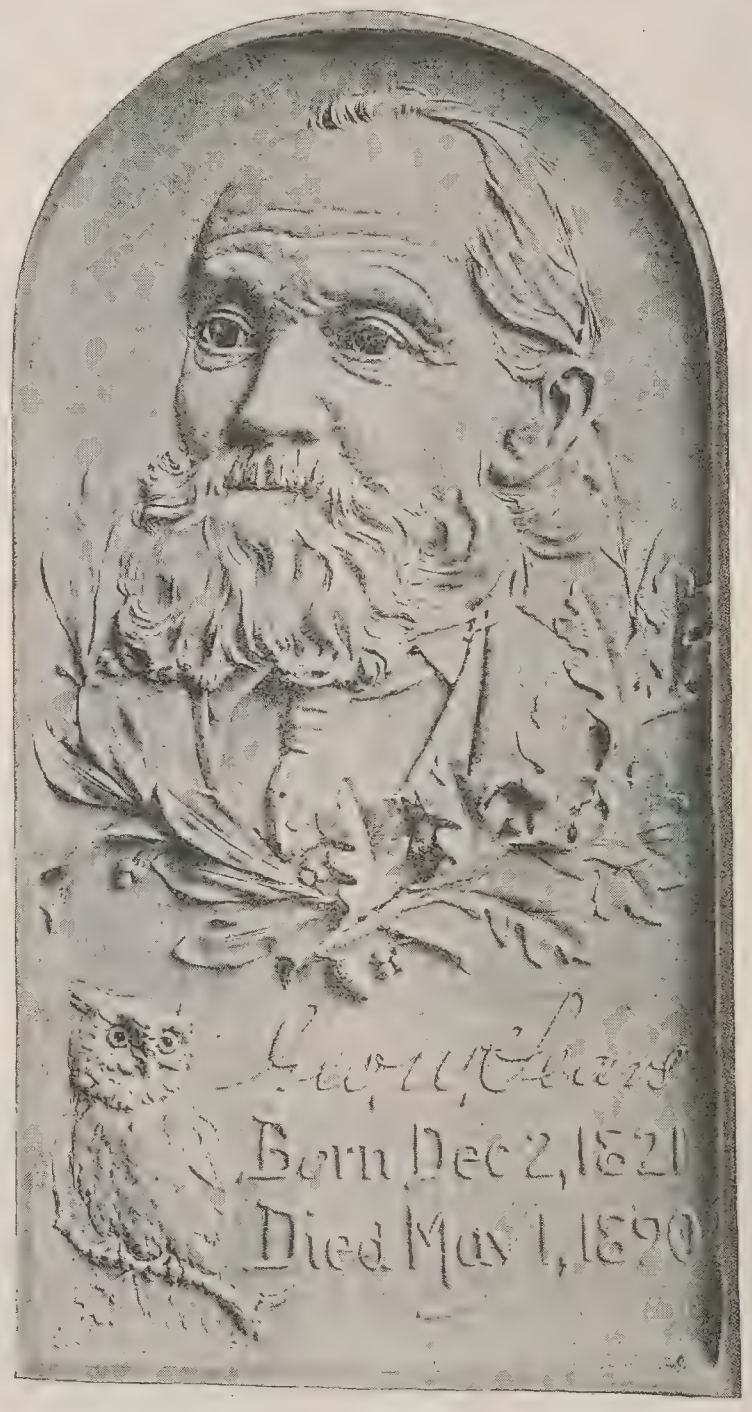
Brewer's Blackbird (*Scolecophagus cyanocephalus*).—Fairly common. Saw half a dozen around the edges of the pond where I observed the pewee. It is so closely allied to the Eastern blackbird that it needs no comment.

Kildeer Plover (*Ægialitis vocifera*).—Quite common in all marshy spots throughout the foothills. So generally distributed over the continent that it needs no comment.

Robin (*Merula migratoria*) —Resident, in limited numbers in summer, in countless hosts in winter, when the berries of the toyon are ripe. It seems to conceal its nest with more art than in the East, and does not court the vicinity of man, as it does there; keeps pretty closely to brush, and meddles but little with the cherries or other fruit.

California Thrasher, or Sickle-Billed Thrush (*Harporhynchus redivivus*).—Fairly common. Called Californian mocking bird by residents. This rather shy bird is seldom seen, excepting at this time of year, when the male can be observed, at all hours, perched on the top of a small pine, or in some other conspicuous spot, where he sings throughout the day. The song is disjointed, but long continued, and very entertaining. It is made up in great measure of the calls, cries and part songs of other birds, mixed up with its own rich notes. It makes a very interesting pet in captivity, and rivals the true mocking bird in its powers of mimicry. It is a lover of the thick chaparral, and for that reason is seldom seen, even where fairly common.

Long-tailed Chat (*Icteria virens longicauda*)—As I am riding along a little run, thickly grown with willows, the harlequin-like notes of this shy bird ring out upon the air. I cannot see him, neither, in all probability, could I if I were to stay and watch for an hour; yet he is there in that large willow, just across the stream, and his mouth is seldom closed for a moment at a time. *Phweep, phweep, phweep, chr-r-r-r-r-r, coop, coop, coop, keck, keck, keck, keck, rl-l-l-l-l-l-l!*—the last sound like a prolonged rattle—his song comes loud and ringing on the air. I cannot say I saw this bird, yet his unmistakeable song was such positive evidence of his presence that I unhesitatingly place him upon the list. I have never seen the long-tailed chat away from the willows and in close proximity to a stream save once. I surprised one among the oaks one day, some distance from water, and crawled upon him quietly, until I had him under full observation. He soon spied me, however, and how he did hustle for cover! The disjointed song of this bird is very pleasing to me, and I always pause to listen, no matter how great my hurry. I have heard him sing in the night more than once, when his whistles and notes sound quite uncanny.



Yellow Warbler (*Dendroica æstiva*).—Fairly common. Can be observed in nearly all orchards. To-day they are singing busily everywhere. One pair has a nest in my own yard, in a cork-elm tree, almost side by side with a "chippy's" nest. For the protection of these I wage an unceasing warfare against the English sparrow. By the way, you do not have to kick a sparrow in order to make him take a hint. There is not one of these birds in my neighborhood but what knows I am their enemy, and will keep clear of my premises whenever I am in sight. If one alights in my trees and sets up his diabolical, maddening chirp, he leaves the instant I appear and look toward him. I shoot every one of the pests I can and they know it. *Anathema maranatha* upon the blooming idiot that brought them into our country.

Chipping Sparrow (*Spizella socialis*).—The dear little "chippy" can be seen around every house, near which he confidingly builds his nest. He is essentially the same bird wherever he may dwell, and needs no further notice.

Gambel's Crown Sparrow (*Zonotrichia gambeli*).—Very common. Seen along the roadside everywhere especially in the vicinity of brush fences, in company with the grass finch.

Grass Finch (*Poocætes gramineus confinis*).—One of our most common birds at all times of the year. Very quiet; seldom to be heard; quite tame. Although so plain in garb, its frequency attracts the attention from the sun-browned vegetation of summer, amid which it loves to dwell.

Song Sparrow (*Melospiza fasciata guttata*).—These Western representatives of the familiar Eastern song

THE "NESSMUK" MEMORIAL BRONZE.

sparrow were quite numerous to-day. Heard their song on six different occasions, but only saw the bird twice. Not very common.

Western Nuthatch (*Sitta carolinensis aculeata*).—Saw one specimen investigating the crevices in the bark of a black walnut tree, near a residence. Not plentiful.

Tufted Titmouse or Plain Crested Titmouse (*Parus inornatus*).—Observed two specimens in a live oak. Have seen them in same locality on several occasions, no doubt nesting near by.

Barn Swallow (*Chelidon erythrogaster*).—Abundant.

Cliff Swallow (*Petrochelidon lunifrons*).—Abundant.

Chimney Swift, Chimney "Swallow" (*Chætura vauxii*).—Abundant. Have not yet generally acquired the habit of nesting in chimneys as in the East. Slightly different in coloration from the Eastern swift, and a little smaller, but apparently identical when in flight.

Broad-Tailed Hummingbird (*Trochilus platycercus*).—Observed one of these birds visiting the flowers of a pomegranate tree. Was close to it, and watched it for some time, until it darted off in pursuit of an oriole.

Black-Chinned Hummingbird (*Trochilus alexandri*).—Also saw one of these birds in the same garden where the broad-tailed one was seen. Rare.

Purple Martin (*Progne subis*).—Fairly common. Have a colony on my own premises.

Evening Grosbeak (*Coccothraustes vespertina*). —I have reached the last bird on the day's list, and the one which prompted this list to be given. The evening grosbeak is a rare winter resident here, and how it came to be so late in its migration is a source of surprise to me. The first time that the bird had been observed in this locality, within my knowledge, was when a member of Dr. Hart Merriam's Death Valley exploration party secured a specimen, while stopping here for a few days. On Nov. 17, 1893, I observed a large flock in some dense pines about twelve miles above Auburn, at an altitude of about 2,000ft. Again, on March 20 of this year, a rancher, ten miles below, shot two specimens, a male and female, and brought them to me for identification. He stated that quite a numerous flock had wintered around his premises, and having never seen the birds before, he was curious about them. On this day, June 10, '94, while winding down a long cañon, well wooded with pines, oaks, buckeyes, etc., I had my attention arrested by bird calls that much resembled the *peep* of a very young chicken, when lost. I soon located several of the birds in the surrounding pines, and after careful scrutiny with my pocket glasses, I found they were evening grosbeaks. The following day I saw the birds in the same locality, but not afterward. They were probably on their way north, as they winter as far south as Mexico, perhaps further. As I have before noted in these columns, I have observed the evening grosbeak breeding in these mountains, at an altitude of between 5,000 and 6,000ft. It is a most interesting and beautiful bird, and rare enough to excite a bird lover, when seen. I was quite surprised to note it so late in migrating. Its nest and eggs have never yet been described, to my knowledge. This western bird differs in some slight respects from the eastern variety, which nests in the far north. Its bill is not nearly so large, and is of a darker green color, and there is not so much yellow on the head.

This completes my list of identified birds for the day, and makes a respectable showing. I saw many small birds on the wing, as well as hawks and buzzards, but noted nothing I could not surely name. I trust that the list may prove of as much interest to the bird lover as its compilation was to

AREFAR.

Auburn, Cal., June 28.

## WHAT A TRAPPER TOLD.

Pursuing my way one morning along the upper Wisconsin River in search of deer, I met a half-breed returning to a camp which I had just passed. In his right hand he held a gun, and from his left dangled the skin of a wolverine and the bloody carcass of a pine marten. The matted state of the hair and the many small wounds about the head and neck of the dead body, gave evidence of a fierce combat with a matched enemy, and an ugly bite across the breast proved the superior strength of some large animal.

The half-breed was only too glad to relate to us his adventure, which, on account of its singularity, gave life to his usually silent tongue. This was his tale:

"About two miles back of my camp there is a small stream that empties into the Wisconsin some distance below. Seeing traces of mink and marten along it banks, I began trapping them, and was rewarded with good success for several nights. But at length some beast—that proved to be this wolverine—regularly stole the choice morsels of meat, and further occupied itself by scattering the dead-falls in all directions, and hiding the various pieces beyond recovery."

On the morning of our meeting, he told us, he had set out at dawn to intercept, if possible, this destructive beast in its nocturnal pilfering. Taking advantage of a deep bed of moss that grew under the shade of a hemlock wood, he approached the edge of the stream almost noiselessly. Arriving there, he knew by the absence of the mink dead-fall on the opposite side, that the wolverine had already committed its acts of destruction.

In despair of meeting the animal until the following night, the trapper was about to retrace his steps, when he caught sight of a pine marten whose fierce aspect betrayed the nearness of a foe, and being anxious to see what might follow, the man seated himself to watch the proceedings.

The marten, a medium-sized animal, was a short distance above the site of the destroyed dead-fall, and was slowly making its way toward the mangled body of a dead fish that lay partly submerged in the water not far ahead. The little animal presented a very fierce and agitated appearance, such as only a weasel can show. Its back was arched like a cat's when in a like mood, and the hair thereon, like its tail, stood straight and stiff. Its glaring eyes glanced alternately at the mangled fish and at a small hole in a root a few feet distant, where the two bead-like eyes of a mink were visible. Meanwhile the tree weasel having reached the object which his hunger craved, lowered his head to pick it up, when like a flash the heretofore hidden mink shot from its hole, the marten with equal quickness assumed a fighting position, and the two stood glaring at each other, spitting and hissing, their tails lashing their sides. This formidable attitude was at length broken by the marten, who, seizing the disputed morsel, made a dash for the nearest tree. But the plan of escape failed, for hardly was the movement begun before the mink was upon the thief with tooth and nail.

Then began a fight which the half-breed said he "would not have missed for a hundred dollars." It was weasel against weasel. Their fury knew no bounds. They squealed, spit and bit with the fury of maniacs, hair and water flew in all directions, blood flowed from their wounds, and with such rapidity did they roll around that it was difficult to identify either animal. Thus the fight went on for some time without any apparent advantage on either side, but at length the mink, though the smaller, seemed to begin to have the upper hand. He forced his antagonist deeper into the water, and the frequent cries of despair from the marten gave evidence of his growing weakness.

Just as the trapper was about to raise his gun to lay the victor on a level with his victim, he caught sight of a large, blackish creature rapidly running through the woods on the opposite side toward the scene of the audible combat. Sneaking to the edge of the little bank it caught sight of the furious contestants, and with one great bound it cleared the intervening space. The wary mink by a quick and sudden dive made good his escape into the water, leaving the wolverine to land squarely on the poor marten, whose weak condition made capture easy.

Dispatching its prey by a bite across the breast, the wolverine proceeded to carry it off, but here a bullet from the trapper's gun ended forever the thefts of the cunning pest, and the roar that attended it announced to the silent forest the end of this strange sylvan scene.

Of all the animals that annoy and perplex the marten trapper, none are so thorough in their depredations as the wolverine. Avoiding with singular cunning all devices constructed for its capture, and displaying in its mania for hiding all things that are of value and consequence to the trapper, yet of no profit to itself, an almost human sense of roguishness and deviltry.

In consequence of these exasperating acts committed by the glutton, we are loath to attribute anything to its

character that is not unbecoming. But there is a conspicuous credit that stands in favor of the wolverine, but one that need not alter our prejudice against that animal, for it is a good turn done with evil intent. It must be remembered that every winter since the fur business began in America, wolverines as well as wolves, lynx and fishers, by destroying the deadfalls on marten roads, have prevented the capture of thousands of these valuable fur-bearing little animals, and indeed in many localities preserved the race. *

### Rattlesnakes in Vermont.

FERRISBURGH, Vt., July 28.—One day last week a townsman of ours, Hon. M. F. Allen, while walking from the head of Whalon's Bay to Split Rock Light House, encountered a wanderer from the great Split Rock Mountain rattlesnake den, of which a correspondent wrote some weeks ago. Mr. Allen heard the alarm note directly before him, and though it is a sound to which the ears of Vermonters are unaccustomed, at once recognized it, and presently discovered the reptile a lyin' in the path, in position for the deadly spring. He did not crush the serpent with his heel, but as our adopted Canadian fellow citizen would say, "kicked it wid a stick," which at once destroyed its usefulness. Mr. Allen brought his trophy home, where in the hamlet of North Ferrisburgh it drew enough visitors to have made a crowd if they had all come at once, for in Vermont rattlesnakes in the flesh are a rarity, though in spite of our prohibitory laws they do sometimes appear in visions to such as have too much communication with forbidden spirits.

Several years ago an old Canadian backwoodsman of the Adirondacks used to make the tour of the Vermont side of the Champlain Valley with an ancient horse and a dilapidated lumber wagon, in which were stowed a box of live rattlesnakes with fangs extracted, a few tubs of very brown maple sugar, and some kits of salted trout. The sugar and fish were for sale, the rattlesnakes for exbibition, to which he invited the bystanders by making loud proclamation: "A-ny mans wan' see it nain rattlimsnek for twanty-five cen', jomp on de woggin."

Mr. Allen's snake measured forty-two inches in length, had seven rattles, and was of a diameter that invited dissection, which revealed a full grown red squirrel. Do venomous snakes poison their food in eating it? If not, how not, if the fangs are raised by the act of opening the mouth? If it does, how does the snake escape injury from the poisoned food, while its self-inflicted bite is fatal? Mr. Allen tells me that one hundred and twenty rattlers have been killed this season in the neighborhood of the Split Rock Mountain. AWAHSOOSE.

[Rattlesnake venom may be taken into the stomach without injury, it being a blood poison, not a stomach poison.]

### The Mongoose Again.

There were brought from India the other day, consigned to Mr. O. H. P. Belmont, Newport, a small menagerie, comprising six sacred cows, three bulls, two "mouse" deer, one kite, two shikar deer, four cranes, four storks, ten jungle fowl, nine China ducks, nine blood pigeons, three Chinese squirrels, four mongoose, six partridges and eight pheasants. It is reported that the ultimate destination of the importation is Mr. Vanderbilt's estate at Asheville, N. C. The possible results of the introduction of the mongoose, if set at large, are so grave that this note of warning from "Didymus" is well founded:

"Can it be possible that the owners of these members of the mongoose family intend to turn them loose? If they do they will make themselves targets for the maledictions of every thinking person in the country. It might be many years before much damage could be done by them, but they would eventually prove a curse of the worst description, as they have on the island of Jamaica.

"After the clinching arguments which have been advanced by FOREST AND STREAM against their introduction here a man can have no plea except *gross ignorance* for bringing them. In Jamaica the game, of all kinds, has been nearly exterminated, while there is no possibility of exterminating the mongoose.

"Congress should pass a law inflicting the severest possible penalty upon any one who brings a curse of that kind into the country, even for exhibition, for fear of escape. Messrs. Belmont and Vanderbilt are certainly 'old enough to know better.'" DIDYMUS.

# Game Bag and Gun.

## CHICAGO AND THE WEST.

[*From a Staff Correspondent.*]

### Advice About Chickens.

CHICAGO, Ill., Aug. 4.—These are the days when everybody is either going chicken shooting or wishing he could go. All who can go are asking about locations, routes, dogs, etc. There is some color to a wish for a chicken shoot this season, because there are really some birds. Probably this is the best chicken year for the past six or eight years, at least so far as abundance of birds is concerned. The drought which has been general throughout the West may spoil the fun some, but one can always help out a little by taking a cask of water for the dogs along in the field wagon.

There are birds in half a dozen States this year in numbers enough to promise good sport. The Dakotas, of course, will attract many shooters, but it is not necessary to go so far. There are chickens in Iowa, this year, enough to set all the illegal shooters to work long before this, but also enough to afford shooting in season for gentlemen. I should advise any one wanting to make a nice little hunt to take the Albert Lea route to St. Paul, and to stop off at some little town say forty miles below the north line of Iowa, then working over to the westward. Iowa has always been illegally shot to death, and her laws have been about as bad and as badly administered as they could be, but since the glory of her days departed a great many shooters have gone elsewhere, so that the local head of game has slowly increased. Sometimes it is better to drop into a place which has been let alone that way for a while, than to go to a more popular locality. Just now the Dakotas are the popular thing. One may be abe to get good, fair shooting in northwestern Iowa. Chicken shooting is all too easy. I beg all friends to set a limit to each day's bag, and to adhere to it firmly. The game is going all too fast. Just now protection is beginning to show its good effect. Let us not go to work to see how many we kill, but how much pleasure we can have in killing a nice gentlemanly bag. Suppose four guns go out. If they find plenty of birds, in two hours each gun can kill 25. There you have 100 great birds. What are you going to do with them? Do you think it right to go out and kill even 25 birds a day, one day after another? Isn't one "good day" about enough for a gentleman, and can't he afford a little moderation after that? This is worth thinking over.

### Points on the Northwest.

For the use or information of those who are going shooting or would like to go, I will give a few points as to some towns of the Northwest, inasmuch as a great many people at this season of the year write in to FOREST AND STREAM wanting to know chapter, page and verse in reply to their queries as to shooting country. I feel sure that I can pretty near guarantee good sport this fall at the points I name below, by exerting the proper kind of gentlemanly zeal in the way of making local inquiries. Any stranger's success in going into a strange country depends largely on the way he conducts himself.

I do not mean to say that one needs to go so far north as the towns named to find good sport, but once so far north the matter is less of a chance and more of a certainty. Thus, lower Minnesota often has fine chicken shooting, but sometimes does not, the season governing that. This season I know there is game at the points I will mention.

### Brainerd, Minn.

They do tell me that if the right man goes to the president of the First National Bank of Brainerd he can get exceeding straight tips on where to go in the fall for chickens and ducks, and can, moreover, be assured of good fishing.

### Moorhead, Minn.

What I shall say about Fargo, N. D., could be almost said in advance in regard to Moorhead, as the latter place is only just across the river from Fargo.

When you get to Moorhead just check your grip at the

GEORGE T. BREWSTER.
Designer of the "Nessmuk" Memorial.

depot and start right up to the Mayor's office. The Mayor, Mr. Arthur Lewis, is just the man you are looking for. He can tell you just where you will need to go after chickens, and how to get there. He knows all the shooters, all the grounds, and all the dogs—if you want to buy a dog. If I were going shooting in Dakota, I would rather buy a good local chicken dog than take on the best sort of an untried chicken dog from the East. Mr. Lewis is a shooter besides being a mayor. A powerful, vigorous man, and the soul of good nature. I hope he will long be mayor of Moorhead, and long be as kindly to all strangers as he was to me when I was there.

Mayor Lewis is the head and front of a goodly trapshooting club at Moorhead. Hearty, pleasant men one will find these citizens of the new Northwest.

If Mayor Lewis is out shooting when you strike Moorhead, ask for "Babe" Daubener, who runs a restaurant down on Front street. I saw a lot of bird dogs around there, and know what that means, though Mr. Daubener was out of town when I called.

### Fargo, North Dakota.

At Fargo the traveler may want some more money. The First National Bank has money, and moreover its officers are shooters. Mr. S. S. Lyon, the cashier, is president of the Fargo Gun Club, and Mr. C. E. Robbins is secretary. These two started their club, which afterward grew to 25 members, by themselves. They used to shoot tin targets, but have long since blossomed out with electric trap pulls and all that sort of thing. Mr. Robbins got up a novel scheme for this little club, a member's target ticket, which costs $1, and is good for 100 targets, at any date, the number shot on any day being entered on the card. Unused cards are redeemed by the secretary. On this basis it is cheaper to break targets on the grounds than it would be to do it throwing rocks in the barrel. That doesn't look like a wolf club.

Of the Fargo Union Gun Club G. E. Bowers is president and Clint. Smith secretary. Here one gets a lot of shooters, who next year will want Elmer Shaner and the Interstate Association to come up to Fargo, and who even now are beginning to work for a North Dakota State Sportsmen's Association. If you go down to Clint. Smith's blacksmith shop you will be apt to see some more chicken dogs lying around. That is the way to tell the sportsmen's rendezvous in the Northwest. There is where you can learn where the chickens are, if you are willing to behave like a gentleman, and not try to see how many you can kill.

### The Meat Dog a Sign of Game.

If you can afford it, when you are going out on a chicken hunt, you want to have two dogs along, one a field trial dog, to look pretty and to talk about, and the other a meat dog, to do your chicken shooting over. When I get out into a country where I can once more meet my old friend of earlier years, the genuine, old-fashioned chicken dog, I always know I am in a chicken country. I knew this when at Fargo I heard Mr. G. E. Bowers speak of his dog, which "hunted thirteen days out of the sixteen days we were out." This dog was a liver and white pointer that weighed 62½lbs. He might not win on the bench, but he or some other meat dog that will jolt the wagon that runs over him can carry my money in the field.

It should not be understood that chicken shooting is at its best right in the edge of Fargo and Moorhead. Ten years ago the case was different. The chickens were then literally abundant in the edge of town, and the wild ducks were numerous along all the railroad ditches. Now the Fargo men go 200 miles west for duck shooting. For their best chicken shooting they go fifteen to thirty miles southwest of town into the sandhill country. There the birds are plentiful enough for anybody.

The Fargo and Moorehead men all say that in their neighborhood the game laws were remarkably well observed during the past year. They say spring shooting also was little practiced. Not 150 ducks were killed, and not a dozen illegal chickens. Stop the visiting shooter and the market shooters, and I imagine the Dakota men would have their game forever. Let it not be supposed for a moment that they are not in the front rank of game protection.

Mr. C. E. Robbins, of Fargo, is State secretary for the N. G. B. & F. P. A., and will cheerfully try to cinch you if you try to ship or carry chickens or ducks out of the State, or if you will kill any more than twenty-five of either in any one day.

Fargo is a great town for frogs. They breed in the ditches, start overland for the Red River and fall into the cellar windows along the street by dozens and hundreds.

### Jamestown, N. D.

If you get to the edge of the State, probably you want to go on further out into the State. It is a nice little run out to Jamestown, over the Northern Pacific, and when you get to Jamestown you are in a fine game country. No chicken roosting on the court house steps, as you perhaps expect, but all the chickens in working distance a gentleman need want. Note the use of the word gentlemen. I do not so classify those who want to slaughter and ship. James A. Rankin or Will Gross might possibly not object to being looked up at Jamestown.

### Spiritwood, N. D.

Spiritwood is not far from Jamestown, and in a good chicken country. Some fishing in Spiritwood Lake, but Dakota isn't the place to go fishing.

### Eldridge, N. D.

Eldridge is a little place not far west of Jamestown. It is not much better than plenty of other little places in around there, but there are lots of chickens all through there this year.

### Turtle Mountain Country.

The Turtle Mountain country, north of the N. P. road, is historic for chickens, and I do not need mention it. It is thought to be good this year. It has been much frequented by those who wanted to ship or slaughter.

### Dawson, N. D.

Dawson is the place on the N. P. road where the special hunting cars sidetrack in the fall, carrying the fellows who kill sacksful of chickens, ducks and geese, which they ship illegally by tons. I wish the Dakota game protectors would slip a good man or so in at Dawson this fall. They could catch a fine grist of fine-haired Eastern law breakers. It is time to call a halt on the old destructive ways.

If you want a guide at Dawson, get J. J. Gokey or C. L. Pettibone.

At Dawson illegal chicken shooting is the common thing.

Dawson is on the same flight of geese which crosses the Platte near Grand Island, Neb.

### Crystal Springs, N. D.

This town is near Dawson on the east. It is especially good for ducks. But few snipe stop in this section. In the fall there is a good flight of avocets, golden plover and a few curlew.

### Mandan, N. D.

From Dawson all the way west to Mandan, about sixty miles, there is good chicken shooting. Mandan, as should be known by all persons, is on the west bank of the Missouri. On the east bank is Bismarck. I shall speak of the two as practically the same for all purposes. Mandan is near the place where Lewis and Clark wintered on their glorious journey into the then unknown West. They found good hunting all through there. Even now there is very good deer shooting near Mandan. There would be more if the Indians did not kill so many in the flood times of the Missouri, when the deer are driven out of the thickets on the bottoms. The farmers have been killing hundreds of deer illegally in that section. A party of Russian farmers went out hunting and camped on the Mandan Lake last fall. They shot at everything they saw, but got no deer. When they counted noses they were one Russian shy. They got one Russian. In the Killdeer Mountains, about forty miles from Dickinson, the deer are abundant. They still cling to the dense thickets of the Missouri Bottoms. On the Little Heart River, thirty miles southwest of Mandan, there is good deer hunting.

All around Mandan there is good chicken shooting. In the fall, about October 15 or 20, the goose shooting is fine. It is a notable fact that about twenty miles east of Mandan the geese are nearly all the snow geese. West of the Missouri, they are nearly all Hutchins geese or Canada geese. On the 23d and 25th of last March one party killed 41 Canada geese. This was on old stubble. All last fall the goose hunting about Mandan was very good. All over Dakota the game this spring was reported to have gone north in almost phenomenal numbers. When I was at Mandan in April the flight had not gone north entirely. I saw a Canada goose there which weighed 13lbs. It was very lean. It was a giant in frame and I never knew a goose grew so large. A trumpeter swan was also killed that week, and I saw the big skin in course of mounting.

Sometime later I shall write a lot more things about Mandan, after the flurry for chicken country subsides.

J. D. Allen, the well known taxidermist and dealer in Indian goods and curiosities, will set any visitor at Mandan straight, and so would W. W. Warthen, who knows all about where to go shooting, because he shoots so much himself.

### Plenty of Owls.

A shooter who loves owls ought to find good sport near Mandan. Mr. Allen has in his shop the largest collection of snowy or Arctic owls on earth, no doubt. There are over 500 of them, all mounted. They fill the floor of a room. The owl industry became a great one when Mr. Allen opened the market. The farmers trapped them for a business, and some trappers had an owl route fifteen miles long. These big owls have a habit of lighting on any little eminence above the surrounding level of the ground. The trapper would dig up a few sods and throw them together, and so make a hill good enough for a hill in that flat country. The owl would hasten to light on the hill, and would insert a foot or two in the steel trap left there for his benefit. An owl looks a lot wiser than he is, just as some men do. This is worth money, if there is no hill and trap left around to stand on.

### Not All the Good Chicken Country.

The above localities named do not cover all the good chicken country this fall by any means. South Dakota and northern Minnesota are just as good. I am only giving localities of which I know personally. There may be better, but not much better, and these are good enough.

### Don't Forget It.

Don't forget to take along your little *Game Laws in Brief*. It costs 25 cents, but may save you a lot of money. They are watching illegal shooters out there pretty close nowadays, and ignorance is no excuse. E. Hough.

909 Security Building, Chicago.

## MUD HENS.

*Editor Forest and Stream:*

In your issue of March 24 there is an article from "Culpepper" saying that the mud hens are to be slaughtered as nuisances by the Long Beach Club, near Los Angeles, Cal., in a "grand mud hen tournament." A quarter of a century hence this will read queerly, because there will be few of either ducks or mud hens to shoot. I write this in the belief that "Culpepper" refers to the coot, properly so called, or the *Fulica* of scientists, and wish to put in a word for this most unjustly reviled bird, which is excellent for the table, if for nothing else.

In the fall of 1855 I was a hunter, trapper and lead miner by turns, at Potosi, Grant county, Wis., and there shot my first mud hen, a bird that I had not met in my boyhood shooting in the East. After looking it over, and by dissection finding that it was a grain-eater, with the appearance of an overgrown rail except its half-webbed feet, I took it home and cooked it. Then and there it was voted that as a table duck it took fifth rank among the water fowl that fell to my gun, in the following order: Mallard, wood duck, green and blue-winged teal. It took precedence, I thought, of pintails, black ducks, bluebills and all the host of other ducks that swarmed down the Mississippi, not excepting the canvasbacks and redheads, which, as I remember, do not attain the excellence there that they do in Chesapeake Bay. The natives about Potosi soon learned that I had eaten this bird that they would not touch on account of tradition, and they guyed me unmercifully about it; but I knew that the birds were delicious, and kept on eating them.

The slow-flying mud hen, or "blue peter," as it is called about Currituck Sound, may not be a bird that calls forth all the marksman's skill, and it may not have a lively sale in the markets where people are shy of buying any sort of food that they are not familiar with; but it is a good table bird, and I have bought many in the New York markets during the past ten years and have found them of varying degrees of excellence; some were not as good as others, and I had no means of learning where they came from nor what they had fed upon.

In Kansas, in 1857, after I stopped shooting turkeys in early spring, because of the approaching breeding season, there was a flight of these mud hens and they furnished me meat for some days until the rains brought the sickle-bill curlew, and after them the spring run of fish, and I remember the despised mud hen with the kindest of feeling, and therefore dislike to hear it disrespectfully spoken of as a table bird, no matter what its rank as game may be. I firmly believe that this bird has been refused a place at table because our grandfathers did not like its semi-palmated feet and said, "It is not fit to eat." This same ban to-day bars the sturgeon from the tables of the fishermen of Connecticut, while it remains the royal favorite of Britain's Queen, who has the first caught sturgeon from the Thames sent to her table; and it is the same unreasoning prejudice that forbids eels, skates, sculpins and other wholesome and toothsome fish to appear on certain tables.

Prejudice is a thing well worth the attention of those who study that most singular animal that we call "man." He is full of it, and mainly by inheritance. For years I claimed to be free from it, and as a member of the defunct, or dormant, Icthyophagous Club we ate of unusual aquatic food and tried to disgust our guests with strange sea food, but in the solitude of my den I find that a severe cross-questioning develops the fact that while I have eaten of shark cutlets, squids, razor clams, fried sand-worms and other queer things, I have never had the courage to taste tripe. Eels, frogs and turtles are dainties and clean, but having seen the tripe in its habitat was enough. I love the mud hen, but the habits of the tripe are such that I have not yet tasted it, although opportunity has not been lacking.

The mud hen is a bird that lives chiefly upon seeds and is a very clean feeder, and is therefore fitted for the table. I had six of them in my flock of wild fowl for about three years and noted their habits. They were very fond of corn, wheat and other grains, but they never bred and fell one by one before the ruthless mink, and to-day they abide not with me. They are interesting birds in confinement and can run "like a deer," when pinioned, and if a wood duck, teal or pintail crosses their bows, one stroke of that sharp beak is sufficient to impress upon them that they must not let it occur again.

Fred Mather.

Cold Spring Harbor, N. Y., July 29.

## NEW DU PONT SMOKELESS POWDER.

*Editor Forest and Stream:*

Messrs. Du Pont de Nemours & Co. have recently placed upon the market a new smokeless gunpowder. In its appearance this new propelling agent has much in common with the Schultze powder, its color being a trifle darker and playing more into a faint red than that of Schultze; the grain has a comparatively hard surface, surpassing in this quality even the latest product of the Schultze Powder Company—their hard-gra n compound.

The chemical composition of the Du Pont powder appears to approach that of the E. C. powder; like the latter, it may be classified among the gun cotton powders, its base being the pure article of that so extensively used explosive.

Your readers have heard of the Du Pont smokeless powder before and at the time the report of the Chicago powder test appeared in the columns of your journal.

It was only through the courtesy of Mr. E. S. Rice, at Chicago, Ill., the Western agent of the firm named, that the Du Pont powder could be included in the Chicago trial; for at that time it was not in the market, and only a few privileged persons had ever seen a sample of it.

Your readers will remember that the Du Pont powder on that occasion failed to receive a very high rating. Its ballistic properties at that time and stage did not meet with all the requirements essential to a superior propelling agent. Its defects were clearly pointed out in the report, and I expressed the opinion then that Messrs. Du Pont should not experience much difficulty in perfecting their powder in every respect and direction. I know not whether these gentlemen paid any attention to my views and suggestions then submitted, but I have every reason to believe that they accepted the findings of the trial in good faith and in the spirit they were laid before the public. Once more I am called upon to make your readers acquainted with the ballistic qualities and value of the Du Pont smokeless powder, as it is now placed at the disposal of the American shooting fraternity.

Upon the request of a great number of American sportsmen the Du Pont powder has been subjected to a very severe and thorough test, which alone serves as a reliable basis for judging the properties of a propelling agent.

The American Testing Institution ordinarily gives only its members the benefit of its labors and researches, but in a case like this an exception is in its place. The result of the test should be made known to all interested in the question at issue, and from all indications the great mass of American sportsmen are anxious to learn how the Du Pont powder compares with other similar propelling agents. They also are aware of the fact that the individual sportsmen is very rarely in a position to determine all the qualities of a powder conclusively.

The powder is presented to the sportsmen upon extremely few and modest claims, and when the manufacturers were notified that their powder would be subjected to a public test, they coupled their consent with the request that in the report all references to other powders should be avoided. This request undoubtedly was prompted on their part by the desire to avoid, if possible, all cause for a controversy, and since the ground taken by them is a very creditable one, their wish has been complied with. But in the absence of a standard of comparison, the sportsman might experience some difficulty in drawing correct conclusions from the bare figures as they appear in the report. He might be unable to determine whether the quoted values are below or above the average, and it what particular direction the powder shows an inferiority or superiorty when compared with other propelling agents. To overcome this objection the average values produced by the better class of powders now in use will be given in every important case, and they should be taken in consideration and employed as a basis of comparison. Every intelligent reader will thus find no difficulty to draw his own conclusions and to digest the report fully and in all its details.

### The Question of Gas Pressure in the Barrel.

The American Testing Institution has of late subjected a number of American-made shotguns to the so-called proof-house test. These guns were proved for Mr. D. Kirkwood, of Boston, who fully appreciates the value of such a test. Arrangements are pending with one of our arms companies to have every gun turned out by them put to the most severe proof test prior to its being placed upon the market. The load employed for proving a finished gun is, for 12-bore guns, 6½drs. Du Pont Eagle ducking black powder and 1¼oz. shot No. 7. Such a load produces a gas pressure or bursting strain in the gun barrel of over 13,000lbs. to the square inch. No ordinary gun will of course withstand such an enormous strain for any length of time, but it will unquestionably after passing the proof test withstand the pressure produced by any standard load. A gas pressure of 10,000lbs. to the square inch may be regarded as the permissible limit for a gun, and every day's use. As long as the gas pressures move in values below 8,000lbs. they may be looked upon as being practically and comparatively safe for a well made gun; lower pressures are of course preferable. The average gas pressures produced by the service loads of the various nitro powders in use at the present day are found between 4,500 and 8,000lbs.

### Velocity.

Velocity or live force, penetrative is killing power. For live bird and game shooting the greatest striking force at impact is most desirable. It is the striking force which causes that nervous shock requisite for a sudden killing effect. Theoretically, striking force and penetration are identical. Practically, however, a line must be drawn between the striking force and the penetrative quality, the depth of penetration of a projectile. While the striking force of a bullet, for instance, is always in proportion to the distance it has departed from the muzzle, it is different with the penetrative quality. Lead bullets will as a rule penetrate a certain object further at a point from 300 to 1,500yds. than at 40ft. from the muzzle. To a certain extent the same rule applies to a shot pellet, whether hard (chilled) or soft. In point of penetration, chilled shot differs very little from soft shot, and this can hardly be otherwise when we consider that a great deal of hard shot in the market is composed of 99 per cent. of lead and only about 1 per cent. of tin, antimony and arsenic. Some American chilled shot is much harder than the best European hard shot. Tatham's chilled shot, for instance, contains nearly 5 per cent. of tin, antimony and arsenic, other American shot may show a similar superiority. The principal advantage of chilled shot lies in its diminished tendency of leading the barrel. It is still an open question which of the two kinds produces the better killing effect.

As a rule a shot pellet propelled by a high velocity will penetrate a given object deeper than one imparted with a lower velocity. But often this rule does not hold good. For the same reason that a bullet will frequently penetrate an object deeper at a further range than at close quarters, a shot pellet imparted with a very high velocity will not find time to create a channel for its passage; it will deform and thus be prevented from penetrating very far, and consequently all penetration tests made with the cardboard rack are unreliable and misleading. The velocities of shot pellets are usually taken at a point 40yds. from the muzzle. The reader can easily compute the corresponding velocities at 40 or 60yds. if he will remember that when, for instance, the velocity at 30yds., and of shot No. 7, is 830ft., the corresponding velocity at 20yds. is 906, at 40yds. 775, at 60yds. 650ft.

When the velocity is 950ft. at 30yds., it is 1,060 at 20, 860 at 40 and 695ft. at 60yds.

When it is 1,030ft. at 30yds., it is 1,120 at 20, 908 at 40, 732 at 60yds.

A mean velocity of 860ft. represents a striking force of 1.83 foot-pounds. A mean velocity of 910ft. is equal to a striking force of 1.87lbs. per pellet, shot No. 7.

For a live bird a striking force at 40yds. of 1.80 may be considered the lowest limit, for the force drops very rapidly beyond 40yds. At 60yds. the force is only about one-half of that at 40yds. Larger size pellets represent a much greater striking force in proportion to their velocity. A pellet shot No. 1, for instance, imparted with a velocity of 990ft. at 40yds. represents a striking force of 5.25 foot pounds. Asphalt targets can successfully be broken with a lower velocity. About 800ft. velocity will suffice for targets, but nothing short of 875ft. will constitute an effectual live bird load.

### Gas Pressure and Velocity Test.

First series.—Load: 2½drs. = 31grs. DuPont's smokeless powder, Smokeless shell, 1 trap, 1 11-gauge felt, 1 cardboard wad, 1⅛oz. Tatham's shot No. 5:

Pressures: 3675 3959 3690 3950 3840 Av. 3825lbs. Diff. 294lbs.
Velocities: 848 888 851 865 865 Av. 863ft. Diff. 40ft.

Second series.—Load: 2¾drs. DuPont's powder = 34grs., same shell, wadding and shot:

Pressures: 4263 4336 4116 4042 3969 Av. 4145lbs. Diff. 367lbs.
Velocities: 972 978 957 930 948 Av. 957ft Diff. 48ft.

Third series.—Load: 3drs. = 37grs. DuPont's powder, same wadding and shot:

Pressures: 6468 7056 6027 6174 5880 Av. 6321lbs. Diff. 1176lbs.
Velocities: 1015 1000 1048 1060 1075 Av. 1040ft. Diff. 75ft.

Fourth series.—Load: 3drs. DuPont's powder = 37grs., same shell, 1 trap, 2 black-edge wads, 1¼oz shot No. 6:

Pressures: 6888 7280 7004 7312 6994 Av. 7096lbs Diff. 424lbs.
Velocities: 980 960 988 994 997 Av. 984ft. Diff. 37ft.

Fifth series.—Load: 2¾drs. DuPont's powder in Rapid shell, wadding and shot as Series 1:

Pressures: 4116 6027 4674 4718 5850 Av 5077lbs. Diff. 1911lbs.
Velocities: 884 990 908 954 966 Av. 940ft. Diff. 106ft.

Sixth series.—Load: 2¾drs. DuPont's powder in Nitro Club shell, wadding and shot as last series:

Pressures: 3921 4215 4362 3604 3709 Av. 3962lbs Diff. 758lbs.
Velocities: 872 946 950 924 910 Av. 920ft. Diff. 78ft.

Seventh series.—Load: 2¾drs. DuPont's powder in Climax shell, wadding and shot as before:

Pressures: 4130 4174 3469 4556 4204 Av. 4106lbs. Diff. 1087lbs.
Velocities: 910 812 761 938 779 Av. 840ft. Diff. 177ft.

Eighth series.—Load: 3drs. DuPont's powder in Climax shell, primed with 1gr. black powder, wadding and shot as before:

Pressures: 6909 7497 7880 7644 7056 Av. 7397lbs. Diff. 971lbs.
Velocities: 1014 924 960 891 906 Av. 939ft. Diff. 123ft.

Ninth series.—Load: 2¾drs. DuPont's powder in Leader shell, wadding and shot as before:

Pressures: 3675 3969 3675 3940 4427 Av. 3937lbs. Diff. 750lbs.
Velocities: 820 850 868 880 900 Av. 863ft. Diff. 80ft.

Tenth series.—Load: 2¾drs. DuPont's powder in Eley shell, wadding and shot as before:

Pressures: 5159 5292 5119 5203 5280 Av. 5209lbs. Diff. 177lbs.
Velocities: 935 985 935 969 920 Av. 948ft. Diff. 65ft.

As will be noticed, the best values were obtained with the Smokeless shell. The Rapid shell did pretty well, and also the Nitro Club. The difference between the Rapid, Nitro Club and Eley is small.

The Du Pont powder is comparatively well adapted for even the cheaper shells, more so than other powders, but the special shells give as usual the better results.

When common shells are employed and primed with black powder, not more than one-half grain fine grain of the latter should be used. The gas pressure can thus be brought down to the values given by the strong primers. Priming common shells should only be resorted to when economy dictates such a step. It is a shift, nothing more. The regularity of a primed shell never approaches that of a good, strong primer.

### Pattern Test.

For this trial the Smokeless and Climax shells, the latter primed, were employed. All shots were fired at muzzle rest. The target was placed at the usual distance of 40yds., and in the center of the 30in. ring the skeleton of a pigeon was substituted for the bullseye, for the purpose of ascertaining the uniform distribution of the shot charge. The pellets counted in each case in the skeleton are noted in parenthesis. They are added to the main values. The gun employed is chambered for a 2⅝ inch shell, and the left barrel, which was used exclusively, is full choke. To obtain the best possible results a 11-gauge white felt wad was employed generally. The gun and barrel gives with the standard load of shot, and a good powder an average pattern of 215 to 240 pellets with 1⅛oz. shot No. 7, 370 pellets. Tatham's chilled shot No. 7 was employed throughout.

Eleventh series.—Load: 2½drs. DuPont powder, 1⅛oz. of shot, 1 trap, 1 11-gauge felt, 1 cardboard wad:

215 (9) 254 (7) 207 (7) 209 (6) 238 (10). Av. 224 pel. Diff. 47 pel.

Twelfth series.—Load: 2¾drs. PuPont powder in Smokeless shell as before, wadded and shotted as last:

262 (23) 261 (8) 248 (7) 252 (11) 215 (14). Av. 247 pel. Diff. 47 pel.

Thirteenth series.—Load: 3drs. DuPont powder, in Smokeless shell, wadding and shot as previously:

226 (4) 258 (8) 208 (9) 255 (6) 237 (8). 242 (9). Av. 240 pel. Diff. 50 pel.

Fourteenth series.—Load: 3drs. DuPont powder, in Smokeless shell, 1¼oz. = 415 pellets shot, 1 trap, 2 black edge wads.

195 (7) 294 (16) 280 (10) 202 (5) 240 (6). Av. 242 pel. Diff. 99 pel.

Fifteenth series.—Load: 2¾drs. DuPont powder, in Climax shell, primed, wadded and shotted as series 11.

256 (9) 228 (5) 264 (7) 239 (3) 209 (4). Av. 238 pel. Diff. 55 pel.

The values obtained are above the standard figures. The best results were secured with 1⅛oz. of shot, which is nothing unusual.

The next important question now occurring to the shooter is, how does the DuPont powder behave under climatic influences, how is it affected by humidity and dry heat.

It was tested in both directions. The moisture test was a very severe one. The powder was placed in a refrigera-

tor for thirty-six hours and here exposed to the effect of 90 per cent. humidity. It had absorbed only a trifle over 2 per cent. moisture, which is a very good showing under the circumstances, and the velocities obtained with the wet powder showed a loss of 15 per cent., which again is a comparatively small one.

The dry-heat test was carried out at a temperature of 120° Fahrenheit. After the powder had cooled it was loaded nnd fired.

The values obtained did not materially differ from those secured under normal conditions. For wing-shooting it is essential that a powder should develop its gases quickly.

In this connection the primer plays a very important part. While the Du Pont powder appears to ignite easier than some other nitro powders, the strong primer of course may be expected to produce the best and quickest ignition. This assumption is amply sustained by the figures obtained at the

### Primer Test.

Here the times elapsing between the moment of pulling the trigger and the moment the shot column quits the muzzle were measured with the chronograph. The figures given represent the fractions of seconds elapsed in each case:

| | | | | | |
|---|---|---|---|---|---|
| Three drams of Du Pont powder in Climax shell: | | | | | |
| .0770 | .0774 | .0760 | .0770 | .0766. | Average .0768. |
| Same load in Leader shells: | | | | | |
| .0728 | .0764 | .0776 | .0770 | .0734. | Average .0754. |
| Same load in Nitro Club shell: | | | | | |
| .0740 | .0720 | .0710 | .0715 | .0715. | Average .0720. |
| Same load in "Rapid" shell: | | | | | |
| .0682 | .0685 | .0670 | .0675 | .0665. | Average .0675. |
| Same load in Eley shell: | | | | | |
| .0670 | .0660 | .0658 | .0665 | .0648. | Average .0660. |
| Same load in Smokeless shell: | | | | | |
| .0605 | .0590 | .0600 | .0595 | .0610. | Average .0600. |

### Summary of the Tests.

By following the values given and comparing them with the standard values named in the several instances the reader will find that the new Du Pont powder may be regarded as one of the most meritorious propelling agents in the market. It is quick in action, gives a high penetration and a remarkably good pattern.

It is not affected by dry heat at all, and only to the usual extent by moisture. It is almost smokeless, produces a light recoil and leaves no perceptible solid residue in the gun barrels, fouls them less than some of the other smokeless powders, does not clog the gun's action, nor pit the barrels under ordinary conditions. Its chemical composition and the results of the tests warrant the presumption that the keeping qualities of the powder are good. Judging the general characteristics of the Du Pont powder and its properties as they were ascertained in the course of the trial, and comparing them with the qualities of other powders now in use, one is reminded of the old law of nature, according to which it is the fate of the old and good to eventually make space for the new and better. The Du Pont powder is a superior propelling agent, and if not the best in use at the present day, certainly is not excelled by any other. It is a powder of which every American sportsman, from the standpoint of American patriotism, has reason to feel proud.

ARMIN TENNER,
Supt. American Testing Institution.

### Notes From the National Park.

YELLOWSTONE NATIONAL PARK, July 28.—*Editor Forest and Stream:* There has been a good deal of excitement in the Park for the last thirty days, a part of it arising from happenings off the reservation, and a part from events within its boundaries.

On July 7, telegraphic orders came to Capt. Anderson to send all his available strength to protect the Northern Pacific Railroad which was threatened by strikers. Capt. Anderson accompanied his troop north and remained with it some time, returning about the middle of the month to Fort Yellowstone to attend to imperative Park business. The troop is still out but is expected back before very long.

I see that copies of the National Park Protective Act reprinted from FOREST AND STREAM are being freely distributed to tourists in the Park. This is a most excellent measure; a good thing not only for the Park, but for the tourists as well. The average traveler cannot be expected to know the law, but the distribution of these copies takes away any excuse of ignorance that might be pleaded by careless or malicious persons. I think that at each hotel in the Park there ought to be a free distribution of copies of this law, so long as the travel lasts each season.

It is understood that bids for the contract for the erection of a jail and commissioner's office are to be opened on July 31, and it is thought that the building will be ready for occupancy by winter. Gen. J. W. Meldrum, the Commissioner for the Park, is here and has made a very good impression. It is believed that he will fill the office very acceptably.

Last Friday a fire started near the Fountain Hotel, and just as it started Capt. Anderson reached there. It took but a very short time to get the troop out, and the soldiers fought it with tremendous energy, and ultimate success, for about two hours. At the end of that time it was quite under control, but a guard was left to watch it for twenty-four hours longer. If it had not been for the promptness and energy of officers and men, the fire might have been a very destructive one, and I have heard the opinion expressed that if the men had been twenty minutes later getting to it, it would have gone across the whole plateau to the lake and the Yellowstone River.

Large game of all descriptions is being constantly seen and in considerable abundance, and from the southwest corner of the Park near Snake River, a number of moose have been reported. This is the corner that would have been cut off by one of the segregation bills which is now sleeping in Congress.

I understand that Capt. Anderson has in contemplation the building of a fence inclosing a square mile on Alum Creek into which he hopes to entice some elk and bison by next winter.

A few days ago a tremendous grizzly bear which had been caught in a large trap near the slaughter house at Mammoth Hot Springs was sent to Washington. He is certainly the largest bear that has ever been sent out of the Park. The Attorney General has construed the new law as permitting the capture of animals for the National Zoological Park, at Washington, but the opinion was delivered so late that it was impracticable to get any young animals this season.

Careful examination of the dead buffalo originally found by Messrs. Hough and Hofer, in the Hayden Valley, fails to show that any portion of the carcasses was taken away. Of course, they were torn and carried off by wolves and other wild animals, but it is evident no attempt was made to remove the scalps and horns. It seems to me incredible that they should have died a natural death, and if not they must have been killed out of pure wantonness.

Travel to the Park up to the present time has been very light, but just now the season seems to be picking up, which is gratifying to everyone, as hotel and stage companies have both made unusual preparations this year for the accommodation of travelers.

So far as learned there have been no special infractions of the law and poachers are not as bold as they have been in previous years. Very likely they have heard that offenders can now be punished. LAZY TOURIST.

### "Some Palpable Mistakes."

THE New York *Tribune* of July 31 had an editorial on "Some Palpable Mistakes." It was political in tenor, and the mistakes referred to were those of politicians. On another page of the same issue was what purported to be a statement of the game laws of New York. Some of the seasons were given correctly; a majority were given incorrectly. The seasons for deer, black and gray squirrels, hares (rabbits), woodcock and grouse (partridge) were given incorrectly, and the intelligent writer scored a double "goose-egg" on woodcock, mis-stating the general season and the local Long Island season.

## NEW YORK DEER LAW.

### The Attorney-General Reverses His First Opinion with a New One. This Fully Sustains the "Forest and Stream" and the "Brief."

SINCE the form containing our editorial page went to press, we have received from Mr. John Liberty, Clerk of the Chief Game Protector's office in Albany a dispatch, telling us that Attorney-General Hancock has to-day (Tuesday) given a new opinion on the deer law. It reverses the one rendered last week, holds that the deer season for the State will open on Aug. 15, and thus fully sustains the FOREST AND STREAM in the views expressed on our editorial page, and upholds the correctness of the *Game Laws in Brief*. We have only to add that we had so much confidence in the acumen of Attorney-General Hancock as to anticipate that upon a closer examination of the statute and a more mature consideration of its terms, he would agree in the interpretation we had given it. We reflect the general feeling of the sportsmen of the State when we express our satisfaction with the outcome of the deer law complications. They were complications which never should have arisen.

# Sea and River Fishing.

## NOTES FROM THE SALMON WATERS.

BOSTON, Mass.—*Editor Forest and Stream:* Had any one told me while on the river at Gaspé that I would not send to FOREST AND STREAM another chronicle of our doings while there, I should instantly have disputed it. But such is the fact, I must acknowledge that casting for salmon and admiration for the beautiful country claimed all my time. Now that I am once more at home, I can calmly look back and realize more fully what a matchless outing I have enjoyed. A more honorable, wholesouled sportsman does not exist than John Fottler, Jr., to whom the writer is indebted for all that he knows, and has enjoyed, of salmon fishing.

Wednesday, July 25, I left Mossy Cliff Camp and turned my face toward Boston. Mr. and Mrs. Fottler and their daughter waved me adieu from across the river, and I trust that they are still enjoying the "dear old St. John." We had grand sport and plenty of it. I must say that I killed salmon to my heart's content (and not one was wasted either)—something I expected hardly ever to realize. To be sure, we encountered the usual number of dumbledories, mooseflies, mosquitos and sandflies; but on the whole, I think I rather enjoyed even these pests. Mr. Fottler invariably placed the cream of the fishing at my disposal, and as a natural consequence the pupil led the tutor in kills when the finish came—a result which he enjoyed as much as I.

Thursday, July 5, saw Sir John Hopkins, of H. M. S. Blake, in camp for a few days with the salmon. He is a grand angler, and a genial democratic gentleman of the first water. A rather hard looking 18ft. greenheart rod, not very nicely lashed together with waxed strings; a suit of gray Nova Scotia homespun, encasing nearly 6ft. of stalwart bone and muscle, a large head, a kindly florid face, the whole surmounted with a stiff, narrow-brimmed gray derby hat, the band of which was decorated with all sorts of salmon flies—that's Sir John as I saw him. But couldn't he drop a salmon-fly on the water? Just as lightly as love pressed the lips of a sleeping babe. When you come to mention discipline, I guess the least said the better. He doesn't carry any into fishing camps worth mentioning, and I will wager that he can keep a half-starved camp full of men and women waiting longer for dinner and supper than any other man in the British navy. Sir John led nine salmon to the net and any number of sea trout; and he enjoyed his few days with Mr. and Mrs. Fottler exceedingly. Flag Officer, Lieutenant Sandeman and Private Secretary Rowe accompanied the Admiral, and they well represented the younger official element of the R. N.

My score at the finish was thirty-eight salmon and one grilse, and they averaged within a fraction of 14lbs., which is nearly up to the figures of Mr. Fred. Curtis on these same waters twenty years ago. My best fly was the silver-gray, with which I killed sixteen of my fish. Jock-Scott and the black-dose were nearly equal for second place. Going over the same ground again and with the knowledge I now possess, I think I should take out two varieties of flies with me, viz., silver-gray and Jock-Scott. With those two flies I think an angler would kill just as many fish as he would with twenty different kinds, and would save a lot of trouble in fly-changing.

Now a word from the novice regarding weather and water conditions, and rising salmon. As far as I am able to judge, a rising fish will come under any conditions of weather or water. I have taken him with the sun full upon a still pool. I have had my best day on a rising, madly rushing torrent, so dirty that you could not see the bottom through a foot of it. I have had them rise well when the water was receding, and lastly I have covered nearly thirty miles of that same river in a day which the old salmon angler characterized as being perfect as to conditions, and had not a rise. Can any one tell why? Here was a day with the water at just the right pitch, the sun obscured, and in one pool we counted twenty salmon, but not a rise. It is very queer. Salmon and their habits have provoked as much discussion as some theological subjects of controvesy. I heard an expert salmon angler say this season that a jumping fish would not take the fly. Within twenty-four hours I had a chance to test that statement. Mr. Fottler's daughter saw a salmon leap from the pool right in front of the camp the next day. She called to her father and Mr. Fottler told me to make a cast over him. I did so and the first time the fly went near him, he rose and took it. I killed him and the theory also.

To my mind, the most wonderful thing about this wonderful fish is its marvelous growth during its first season in salt water. It leaves the fresh water this season (if I understand it rightly), about a year old more or less and from 4 to 6in. length. It returns next season a grilse of from 3 to 7 or 8lbs. in weight. If such is the case, I can understand why they do not care to feed in fresh water.

Mr. Ivers Adams, in speaking of the Nepisiquit grilse in your issue of June 16, says that he "never saw a female grilse." That's queer too, isn't it? What becomes of them? Do they loaf around a couple of years in salt water, or what? And his whereabouts while in salt water; another mystery. J. W. B.

### Too Hot for Fishing.

CHARLESTOWN, N. H., Aug. 2.—Drought! Drought! meets the ear as well as the eye from every quarter. The springs which supply our village with drinking water are all giving out again, the farmers are complaining of the want of feed in the hill pastures, and the trout brooks are almost dry. I crossed one in the railroad cars, four miles down the river, close to its mouth, night before last, in which, fifty years ago, I used to count my catch by the dozen, and there was no water running in it. A few still, shallow pools were to be seen, but a couple of barefoot boys were busy in the bed of the stream turning over the stones, presumably for helgramites for bass bait.

A month since I crossed the lower end of Little Sugar River, of which your correspondent "Columbia" writes, in the train and it had shrunk to the smallest sort of a brook. I am glad to learn that he had some success in it; I never tried it but once and that was late in the summer two years ago and the water was low and the sun bright, and I had no luck. Although it crosses the town at the north end its nearest point to me is six miles away, and there are half a dozen brooks which were once good nearer, to which I could walk in the morning when a boy, fish all day and come back by another road; and since I have been home again I have not thought the fishing worth the cost of horse-hire. I have preferred to pay railroad fares and go further north, where I felt sure of the existence of trout. In fact, in old days we always considered Little Sugar, though it crosses our town, as rather appertaining to the fishing waters of Claremont, to which it is nearer. Still I have heard of one or two baskets of 6 or 8lbs. being taken from it early in the season by young fellows from this village who fish for the market, and who could stand the long tramp to which I am unequal now.

Neither have I yet tried the river, for since the Connecticut River Lumber Co.'s drive of logs went by, it has been too insufferably hot and bright to trust myself in an open boat on the water. One of my little granddaughters put my thermometer out in the sun Friday afternoon, July 13, and it went up to 121°, and it has not been much cooler since! I went down to the river for a swim yesterday afternoon at 5 o'clock, and while there two boats came up, whose occupants had been down a mile and a half trolling and had not had a bite. This was, however, what I should have expected in such weather in midafternoon. It is somewhat cloudy to-day and I hope for rain; if it comes I will have a try at the pike when it clears up. VON W.

### The Cascapedia.

EAST SAGINAW, Mich.—I got back from Cascapedia River, Quebec, about ten days ago. We stayed there a month; have a new cottage there just finished, and were as comfortable as could be; no flies nor mosquitos and nice, cool weather all the time. I had my wife and children with me and we fished every day. While I was not very successful with the salmon, yet my wife and I each killed our fish. The trout fishing was something superb. My largest weighed 5½lbs., and I had three weighing 5lbs. each, and any number from that down. They were all taken with a fly and on a light rod. I had two salmon on my trout rod. One was not well hooked and got away, and the other, after running out a mile of line, turned around and came toward me like a steam engine, and the consequence was the little trout reel was not large enough to take up the line fast enough.

Moose are said to be very plentiful down in that country. One passed through a pasture field within a few miles of where I was fishing while I was there. The natives report that this game seems to be increasing right along. W. B. MERSHON.

*The* FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

## CATFISHING IN THE ST. FRANCIS.

*Editor Forest and Stream:*

The following letter, vividly realistic of fish and fishing in Arkansas, was so interesting to myself that the thought came to me that it might prove equally interesting to your readers. One can readily perceive that, to be equal to the emergencies of fishing in the Arkansas waters, an angler (or rodster if you please) must be of Spartan fiber and thoroughly skilled in his art. The writer of the following letter is an eminent sportsman and angler, hence, for the truthfulness of the incidents therein, no further mention is necessary. W.

---

*My Dear W.:*

You promised to take an outing with me this summer on the St. Francis. I shall expect you to make that promise good. I will write you a month in advance of the ripening of the summer crop of bass.

As is well known to the thoroughly informed, Arkansas has more fish to the cubic meter of water than any country in the known world. It has been truthfully said by a correspondent in FOREST AND STREAM that the catfish get upon the fences in Arkansas and mew.

I have known them to do even more remarkable things than this. Last summer while fishing the St. Francis above Friend's and Katzenberger's shooting box near Lead Fork, I had secreted myself in the flags and was tickling the palate of the bass with a gaudy fly known to the guild as a Johnson.

After I had lured to the icebox a dozen or more bass with this bunch of feathers and bit of steel, I noticed wave after wave approaching the shore, and the bass began to scamper as an immense catfish appeared upon the scene of action, and swam up to where I was fishing with as much *sang froid* as that of a first season's belle when she views the downfall of her rival.

Well, I thought a 100lbs. catfish a little larger game than I was loaded for with a 6oz. rod and a bass fly, so I held my fly some 6ft. over the water, thinking H. M. could pass on down stream, when placidly he folded his pectoral fins upon his exigastrium, and proceeded deliberately to eye my bass fly; then, doubling himself for a mighty effort, he projected himself 4ft. into the air, and it was with the greatest difficulty I could prevent his getting my fly.

Do you know, that catfish continued those atmospheric gyrations and aerial somersaults until great beads of perspiration stood upon his cat-like brow.

There was another incident connected with this trip that will remain photographed upon my memory for a lifetime. Thursday, Sept. 21, 1893, was destined to be the red-letter day in my fishing calendar. Early in the morning, with two well filled minnow pails in tow, armed with a fish-spoon, frog-fork, a .38cal. Winchester, my ejector, fishing rods, tackle, icebox and lunch, we started in the early morn for Cross Cypress. Lem Biggs, the most expert oarsman on the St. Francis, occupied the stern of the boat while I was seated on the forward end of the icebox amidship. As Biggs poled up the St. Francis the bass were holding high carnival, rising to moth and ephemera of every description. Said I to Biggs, "I guess it is about time to try my musical reel. I bought one last season while in Italy, and I have never used it." He urged me to put it on by all means, saying that he had never seen or heard one of these piscatorial musical boxes warble, and that he was fond of music. We had just seen a patriarchal bass break water under a lily-pad, some 50ft. away, so attaching the reel to my bait-casting rod, reeling on a new line, slipping on float and sinker, and tying on a 4-0 Schneck, and impaling a minnow through the nether lip and inner canthus of the eye, I laid that minnow under that lily-pad with as much dexterity as that with which a man's spouse runs her delicate hand in his trousers pocket while he is taking a morning nap.

The great horn spoon! what a swirl. I thought the St. Francis had found a subterranean outlet. But my minnow was in the wild marauder's maw. So I gave a gentle jerk, and the music began. Lighting a Havanna I leaned back on the icebox, and for fifteen minutes listened to the soft strains of Beethoven, as they rang out upon the morning air. This was repeated again and again as we ascended the river, until we reached the mouth of Melancholy Pass, just below Cross Cypress, where the river makes detour of a mile or more. The bass had been so furious in their attacks upon all manner of bait that our icebox had long ago been filled, and Biggs had appropriated a stout piece of cord, on which he had strung twenty or more and tied it around his leg for convenience.

We were now at the mouth of Melancholy Pass, and a deep pool spread out for a hundred yards or more below. Here in twenty feet of water lay great schools of lusty bass. I told Biggs to anchor the boat at the upper edge of the pass alongside the flags, and I would fish the pool below. We had not fished long until Biggs observed some aquatic monster coming down the pass, when he remarked: "Keep low behind the flags; he will come square across the bow of your boat, not six feet away. Take the spear, aim low and well forward, and give it to him hard. I think it is an otter, and if it is and you get him I will row you the remainder of the week for the pelt." Biggs had hardly done speaking, when the monster was immediately in front and not four feet away. I gave the spear a mighty thrust at his head. With one stroke of his mighty tail he lashed the river to foam. The spear had missed its mark five feet and had imbedded three twelve-inch tines of barbed steel deep under his dorsal fin. He started for the great Mississippi a hundred miles below. The Russian sash cord that attached the spear to the bow of the boat, "ran out like varnished lightning." The boat was turned half around in a moment, and Biggs was left to founder in twenty feet of water, with fifty pounds of bass tied to one of his legs. I was thrown over backward in the bottom of the boat, but soon recovered. A hundred yards below as we grated over a bar the minnow pails left their moorings. Here now was a beautiful stretch of water for a mile or so more. Talk about your Maud S., Nancy Hanks, Sunol, Arion, Directum or Salvator; these were only pacemakers to the gait we were traveling. A crimson tide followed in our wake.

I have made pelagic wanderings from St. George's and St. Paul's in the Pribilov group to Cape Horn. I have driven gaff in everything that wears scales, from a pickerel to a right whale; I have seen 6,000ft. of line go off the reel to a well directed harpoon; but here was the beginning of a chapter in my fishing diary that was growing monotonous with remarkable rapidity.

What was to be the outcome of all this? On, and still on, we speed. Now we are passing Friend's and Katzenberger's shooting box. Hatchie Coon Club House looms up in the distance. Ah! Now he takes down Favorite Chute, across which the beaver have thrown a dam. Now we have you in a pocket. But if you keep up this gait you will run that corrugated beak of yours 6ft. in the mud.

But on, and still the speed was not abated. The dam looms up directly in front. I grasped the gunwale of the canoe as a shipwrecked sailor grasps a spar. He gathers himself together for one mighty effort; throws himself 6ft. in mid air, and fish and boat land 40ft. beyond, as easily as Carter Harrison was wont to take a 3ft. hurdle. I landed 8ft. back with my feet pointing toward the stellar world, which was distinctly visible. Still the procession moved on. My rod was taking its bath opposite Friend's; my gun was submerged in the pool where I had left Biggs; my tackle was strewn for miles up the St. Francis. The rifle and I were the only occupants of that "limited." I felt for my knife, with which to cut myself loose from the predatory demon. Alas! It had been left submerged with Biggs. How to turn loose this cyclone was the absorbing question of my life. The roof of the Osceola Ducking Club's house was receding in the distance. Below I could hear the puffing of the locomotive on the K. C. R. R. at Marked Tree.

But now he tires. Gathering his mighty forces in one supreme effort, he throws himself 6ft. in the air and shakes himself as if in the agonies of a wild despair. Then as he calmly turns upon his side oblivious to fate, his mighty heart breaks, while I take the rifle and speed a bullet through his brain. He was 14ft. 5½in. long by Chief DeFuniak's steel tape, and tipped the railroad scales at Marked Tree 314lbs. and a few ounces, not many.

TARQUIN.

---

## MAINE WATERS AND WOODS.

SPEAKING of deer in Maine, Mr. Frank Lewis, of Lawrence, mentions seeing over twenty deer in one day at Passadumcook Lake, a tributary of the Penobscot River. He was on his spring fishing trip with friends. They left the Bangor & Aroostook Railroad at Norcross, and thence through the woods to the lake. He says that no one can have any idea of the number of deer in those woods till one has been there. The best feature of all is, according to Mr. Lewis, that nobody is illegally shooting there, or was earlier in the season. He says that the prevailing sentiment is that it is too bad to shoot a deer in June or July, when the fawns are young and helpless, besides being a foolish waste, for the animals are poor in flesh and fit only to be abandoned to decay.

Mr. John J. McNally, of the Boston *Herald*, with his family, is spending his vacation at Lake Maranocook, Winthrop, Me. In the party is also Manager William Harris, Mr. Samuel Sterne and Mr. Richard S. Brews of Boston. Last Wednesday they went bass fishing, with the result of thirty-two bass for five hours' fishing at Craig's Point. The fish were all caught with the fly, though the sunken grasshopper and frog bait are very successful. They are trying the bass nearly every day with considerable success, taking lots of fish 2 and 2½lbs. The bass fishing has been excellent in Anabessagook and Monmouth Pond. Lake Cobosseecontee in the same region has afforded excellent sport with both pickerel and bass this season. Mr. Samuel Smith of Boston made a couple of good hauls from that lake the other day. Hundreds of bass rods are being used this season on the Maine lakes and ponds, and really a good deal of sport is obtained from black bass fishing, though to the trout fisherman the sport is rather unsatisfactory.

There is a story in the Maine papers of the fasting of a trout, which, if true, is worth investigating. The fish, a 5lbs. Belfast trout, was in the aquarium of Mr. F. H. Francis, and is reported to have lived eight months without any food whatever. It simply would not eat, finally dying presumably of hunger or starvation. It had shrunken to half its former weight. After death the fish was dissected for the purpose of discovering the cause of its long fast. The intestines were all right, but there was not one drop of blood in the fish, either gills or body. The flesh had lost its salmon tint and was dry and white. A male trout in the same tank will eat anything.

Mr. James H. Jones has been away on his vacation. With his wife he has visited his home town, Buckfield, Me., and has done the streams of his boyhood for trout. He found the water generally very low and the weather hot. In the holes he would generally get about one trout each and it was a good day's work to gather in a dozen rather small ones. He found a good deal of sport in fishing for black bass in the stream that runs by that town, or, perhaps, it should be dignified under the name of river. The bass have run down from the ponds above, which have been stocked for several years. But perch and pickerel fishing was the better sport after all, since when the fish were caught they were of some value. Pickerel can be caught readily in the waters about that town when fishing for perch. They take the bait the same as the perch.

Mr. Wm. H. Coggin went down to Bangor, Me., last week, and with a friend from that city drove back to Harmon Pond the next morning. They went pickerel and white perch fishing. They caught several bass, though it requires live bait generally to catch them in that pond. A fisherman a few rods away from their boat landed a big one, judged to weigh something like 5lbs. Mr. Coggin is of the opinion that with the right sort of line, bait and suitable weather one may get all the perch and pickerel he may desire from that pond. Considerable bait and fly-fishing is done there, and it takes live bait to excite the cupidity of the well fed fish there. Mr. Coggin is talking of a hunting and fishing trip, the last of September; leaving the Bangor and Aroostook Railroad at Norcross. He hears glorious accounts of that region, something like the deer story mentioned above.

Mr. George H. Cutting writes us from Andover, Me., that the prospects for game in that section are unusually good. Partridges will be fairly plenty, and a good many wild ducks have bred at the lakes. Deer are most remarkably abundant, and on the first snows it will be an easy thing for a hunter of any skill whatever to get one. Mr. Cutting got his three deer last year very early; that is, with only a couple of days' hunting on the first snows. Mr. G. N. Smalley and Harry W. Smalley, of Boston, with Mr. and Mrs. Forbes, of Stamford, Conn., and Frank Smalley, of So. Framingham, Mass., have been camping at Rangeley for some weeks. Mr. G. N. Smalley is there for fly-fishing altogether. In fact, he does not care much for trolling. It was he, with his friend, C. Z. Basset, of Boston, who, two years ago, took the big trout with the fly in the trolling season, from the middle of Cupsuptic Lake. All the fishermen in that vicinity at the time were surprised. But since then trout have been taken from the same location, and it proves that there is a reef of rocks there, where the trout doubtless come to feed.

## SOMETHING ABOUT THE OUANANICHE.

WITHIN a few years and with wonderful rapidity the immense wilderness of Canada has come into prominence as a veritable paradise for sportsmen. This arises from the fact that the results of trips made there are so thoroughly successful. Success there rewards the fisherman and hunter alike.

This wilderness extends entirely across Canada from east to west, commencing from 100 to 200 miles north of the St. Lawrence River and extends away beyond the confines of Hudson's and St. James bays. The territory embraced is practically limitless, and only awaits the advance of the sportsman to become opened up and known. The fishing waters—lakes, ponds, rivers and streams—are as numberless as the sands of the sea, and the portion that has ever been fished thus far is infinitely small. There are just as good fish in these waters and innumerably more than ever were caught.

Every one who has sought the wilds of Canada has his favorite place, whether it be the Muskoka Lakes, Georgian Bay, Victoria or Peterboro lakes, Temisconata country, the Mastigouche, or Lake St. John territory. All have their admirers, many of them, and great is the increase in number each year. But one fact is to be deduced from this: We must seek that country for satisfactory sport. No other choice is left. Very few places even approximating fair fishing are left on our side of the boundary. There are too many fishermen and too few fish.

The greater part of the trout fishing in Canada is to be left to Americans as a general rule, and how great are the possibilities in that line. Quantity and size are both to be found there, and *such* quantity and size.

Those who would have sport almost equalling salmon fishing, and when size is considered, equal if not superior; and at a minimum of expense, should seek the Lake St. John country. There, angling for that lusty warrior, the ouananiche, will afford all the elements of sport found in catching salmon, except as to size. There one is not confined to trout fishing only, as one must be in all other parts of Canada, but can seek both fish or either, as inclination may prompt.

The fact is becoming patent that the trout is to be held secondary to the ouananiche, or land-locked salmon. I find that this is the general opinion of those who have been fortunate enough to angle for this fish. As an example of the effect this fishing has on those who catch them for the first time, I will quote the remark of a friend of mine who recently returned from Lake St. John, his first visit there. "I never would believe before, but now I can understand why a brook trout or a black bass can be considered secondary to any other fresh-water fish. The ouananiche leads them by long odds in fighting qualities."

To those who have seen a black bass when hooked, fight at his best, leap, tug, jerk, rush and spin, and have seen the trout do the same in its peculiar, nerve-straining way; to such the stories of this wonderful fishing seem to be "fish stories," fairy tales, or what you will. But let them once feel the weight of a 3½lbs. ouananiche struggling as only that fish can struggle, at the other end of a 7oz. rod and 50ft. of line, and they, too, will catch the fever.

I have a friend, an ardent salmon fisher, who is a member of a club owning one of the salmon rivers entering the Saguenay. During a number of years past both he and other members of the club have occasionally in their salmon casting had a strike from a ouananiche. As he has frequently remarked to me, "Loud exclamations at once make the fact known to others fishing near by, and the fortunate one at once prepares for a struggle that he is not accustomed to from a salmon of the same or even heavier weight. I have taken several in the few years past, and I consider them stronger and harder fighters than the salmon of approximately the same size."

He became so enamored of the ouananiche fishing that he spent a part of his outing this season at Lake St. John, away from his salmon pools. He had splendid success, and I understand that he is so taken with this fishing that he intends to visit that region again each year. Certainly if ouananiche that average only from 3½ to 4lbs. can fight sufficiently hard to attract an old time salmon fisher from his pools they must be fighters indeed, and foemen worthy of any rod. It does not seem to me that any further proof is necessary.

I could enumerate any number of like stories but will confine myself to the following extract from a letter recently sent me by a gentleman while at Lake St. John:

"I can appreciate now all that you have said and written on 'The Leaping Ouananiche.' Well, I have met that 'jumping Injun' and I greatly respect his fighting qualities. Our party of four killed 203 of those fish in two days on the Grand Discharge, 87 of the number being my share, and one of 3½lbs. being the heaviest fish. But when you tackle 3½lbs. of chain lightning in the form of an ouananiche you will think that he weighs a ton. I greatly respect that fish for his fighting qualities and his peculiar tactics. It is exciting sport, and when your fish makes from six to ten mighty leaps you cannot but get excited. Yesterday while on the Ouiatchouaniche River, a spring hole was pointed out where you caught 100 trout, but I beat you. Such fishing I never experienced before. We (four) took over 800 good trout in two days, and after feeding eight Indians and four white men, we brought back to the hotel in good order, one of those large camp cans full of dressed trout, running from ¼lb. to 1lb. in weight. Before closing I want to say to you on my own part and on behalf of the expressed desire of my three friends, that you have not exaggerated about 'the leaping ouananiche,' and that we thank you for putting us on the track of such a glorious outing."

The fishing is there for the seeker, and will be for a generation to come. Ordinary skill will aid in hooking, handling and landing ouananiche, but to do it successfully can come from practical experience only. This

noted fish must be studied; all written advice can only aid in a slight degree. Practical experience is the only teacher.

These are some of my "fish stories" as they have been so often called, and some corroboration of their truth. Others can now, and many more will in the future, corroborate still further their correctness.

EUGENE McCARTHY.

## ANGLING NOTES.

### Condition of Fishways in the Hudson.

LAST spring I noted in this column that a petition had been presented to the Legislature asking that the location of the fishway in the dam across the Hudson River at Thomson's Mills be changed, because as at present situated the fishway collected drift. In commenting upon the petition I said that the fishway was located by its inventor probably after considering the driftwood question, and that if the fishway did not work it must be due to other causes than a collection of drift, and it was more than likely that Mr. Rogers, the builder, would visit the fishways in person early in the season and inspect them. Mr. Rogers confirmed this in a letter which I published later, and now he writes me under date of July 25 as follows:

"I had occasion to visit Albany a few weeks ago, to see the State Engineer about a fishway at Baldwinsville, N. Y., where a State dam is now being built. I examined the dam and found it but about one-third built, which made it quite impracticable to place a fishway this season. While at Albany I had a day or two to wait for the Engineer and improved the time by examining the fishways at Mechanicville and Thomson's Mills, both of which were found in perfect repair. At Thomson's Mills the headgate of fishway was closed—to save the water the foreman told me, while a quantity was wasting over the dam at the time. As the fishway draws such an insignificant quantity of water, this excuse seems quite unreasonable. In rebuilding the wrecked portion of the dam and the upper end of fishway, the two top buckets were left out, and a straight run put in instead. This, however, will not prevent the fish from passing—not half so much as a closed headgate will. The matter of driftwood was considered, and $5 or $10 at the most, will remedy the evil perfectly. A small wicket placed in the mill frame about 6ft. from the fishway, and arranged to slide up and down at the will of the mill men as they clear the debris from their rack, is all that is needed to keep all drift from the fishway. The foreman agreed with my idea and said it would cause no inconvenience. The wicket would sink about 2ft., and the fish would pass under. Had I not been limited for time I should have placed the wicket myself and thus have relieved the fishway of blame that does not belong to it. Knowing you were away from home at the time of my visit I did not go up to Glens Falls.

"No salmon were seen at Mechanicville up to the time of my visit. It was the opinion of those acquainted with the river and the fish, that they were not able to pass the Troy dam since it was repaired.

"However, I have no knowledge on this matter, but there is certainly nothing to prevent them from passing the Mechanicville dam if they one get to it."

It will be noticed in the concluding paragraph that Mr. Rogers is silent about the salmon passing the Thomson's Mills fishway, although he states positively that the fishway is in perfect repair, and it is easy to see why the salmon cannot pass when the headgate is closed. With one exception I have not known a season since the Thomson's Mills fishway was built that salmon have been seen above it, and this is not the first time that I have heard of the headgate in the fishway being closed at a time when water was wasting over the dam.

One of the owners of the mill assured me that the fishway should not be closed, and I cannot yet think that he knows that it has been. In fact, very recently an officer of Washington county came to me and said that he knew positively of the fishway being closed when water was wasting over the dam, and he proposed to institute legal proceedings to determine the rights of the fish and the mill owners, and I advised him to first see the mill owner and inform him of the closing of the fishway. There has been no trouble of this sort with the Mechanicville people, and there should not be with the fishway above it.

A Fish Commissioner of the State once told me that some of the stockholders in the Mechanicville mill were also stockholders in mill property at Holyoke, Mass., and it was at Holyoke that a suit was commenced which was carried to the United States Supreme Court where a decision was given adverse to the mill owners and from which I take a single extract: "Ownership of the banks and bed of the stream, as before remarked, give to the proprietor the exclusive right of fishing opposite his land as well as the right to use the water to create power to operate mills, but neither the one nor the other right, nor both combined confer any right to erect obstructions in the river to prevent the free passage of fish up and down the river at their accustomed season." There is more of this decision to the same effect, and it is given by the highest court in the land sustaining a similar decision of the Massachusetts State courts.

### Black Bass Fishing in Glen Lake.

Every year I have inquiries about the black bass fishing in Glen Lake, N. Y., where the largest small-mouthed bass in the world have been caught. This year is no exception, but I was away from home when the season opened in the lake (by supervisors' law the open season begins July 10), and of course I knew nothing of the fishing before that time, and I could only reply that I knew nothing about it, but would not advise any one to make a long journey (one query came from Indiana), to fish the lake with the hope of catching one of the monster bass, as the fishing was altogether too uncertain in its results. Since my return home I have been to the lake and have made inquiry about the fishing. The largest bass that has been killed was one of 6½lbs. Mr. Charles H. Hitchcock, a member of the Mohican Rod and Gun Club, spent ten days at the lake, and his largest fish were as follows: 6½lbs., 6lbs., 5¼lbs. and 4¼lbs. One of 7lbs. was reported, but I have not been able to confirm the weight. I believe that some men are honestly mistaken about the weight of fish taken years before the time of relating it when they trust to memory alone. A case in point.

This morning I was questioning a caller about the fishing in Glen Lake, and he mentioned a bass of 10½lbs. taken some years ago from the lake by a man with whom he was fishing. I said I never heard of the fact, when he exclaimed, "Why you had the fish and sent it to FOREST AND STREAM, and it was exhibited in New York city and later was sent to Washington, as I understood." Turning to the issue of FOREST AND STREAM of Oct. 2, 1884, I read to my caller a letter of my own about that very fish: "I weighed it, as did many others, and found it weighed plump 8¼lbs., etc." His lips parted, and he looked as though he had seen a ghost, and then said, "Of course that is correct, but do you know I have told fifty people that that bass weighad 10¼lbs., and I thought I was telling the bare truth." No doubt he was honest in the matter but his memory had failed him.

To return to Mr. Hitchcock, who has seen most, if not all, the big bass taken from Glen Lake in the past eighteen years. He is a man with a level head and good judgment, and in estimating the weight of fish in the water his opinion is as good as any man's. I know this is a delicate subject and I tell his story for, as he would say, what it is worth, but I know it is his honest judgment. Early one morning Mr. Hitchcock was rowing along the shore from his cottage on his way for mink. The water was perfectly still and he noticed a sunfish on its spawning bed near the shore and checked his boat to watch the sunfish, the water being shallow and clear. There was nothing to move the boat and he had an excellent opportunity to see the fish. The sunfish was uneasy, swimming around and around its bed, until suddenly it sped into shallow water, where part of its body was out of the water, and at that instant a black bass came into view in pursuit of the sunfish. Several times the bass darted for the sunfish, each time driving it almost out of the water on to the shore, and after each attack, when the bass had retired a little, the sunfish would return to its bed and swim around and over it until the next assault.

For about fifteen minutes Mr. Hitchcock watched the contest, neither fish appearing to notice him or his boat, and all the time the bass was under his eye, and he says it is his best judgment that the bass would weigh over 12lbs. How much over he did not care to say, as he "wished to be safe in his guess when the fish is produced to be weighed on scales."

He had no fishing tackle in his boat, and later in the day he returned home. The same fish, or one like it, was seen in the same place the morning before Mr. Hitchcock observed it, by Mr. Cole, Superintendent of the Poor in South Glens Falls, and he, too, places the weight of the fish at considerably over 12lbs. When Mr. Cole saw the bass it was trying to capture the same sunfish, or its mate, that it was in pursuit of when seen by Mr. Hitchcock. Only the small-mouthed species of black bass are found in Glen Lake.

A. N. CHENEY.

## CANADIAN ANGLING NOTES.

*Editor Forest and Stream:*

Excellent reports have recently been received of the ouananiche fishing in the Grande Discharge, especially in the vicinity of Isle Maligne, where the scenery, too, is of the wildest character. But most anglers now who understand the habits of this fish and are anxious to encounter the largest specimens are at this time of the year pushing their way up the Peribonca, the Ashuapmouchouan or the Mistassini rivers. A favorite spot in the Ashuapmouchouan is at the Salmon River Falls. Those who ascend the Peribonca, if time permits, should go as far as Lake Tschotagama. Lac à Jim offers splendid fishing in August and September for both trout and ouananiche. Mr. Davis, of New York, and a friend from Texas, who have been fishing the Adirondacks for some weeks past with very little success, have just gone up at my recommendation to the Fifth Falls of the Mistassini, where I expect to hear of very large catches of fresh-water salmon during the present month.

Fine fly-fishing for trout has been had during the past few weeks on the Triton Tract and on Rat River, one of the feeders of Lake Edward. From about Aug. 15 it is certain to be good in all the streams and lakes north of Quebec.

Space would fail us both were I to attempt to give you the names of all the American anglers who fished this part of the country during the past few weeks, but the number increases every year.

Mr. Eugene McCarthy of Syracuse, N. Y., writes me that he expects to be here about the end of August with Messrs. Curtis and Dean, his fishing companions of the last two years. Quite a number of Syracuseans, he says, will also go to Lake St. John this month.

Mr. Archibald Stuart has returned from his trip to Lake Mistassini, and an exciting and interesting trip it was. He left Lake St. John on June 27, remained part of three days at Mistassini, and returned to Lake St. John on July 29. Besides the four Indians who accompanied him throughout, he engaged others to assist them part of the way. He reports much good land and good timber where little of either was believed to exist, and any number of ducks, bears, beavers, etc., on and around several of the large lakes which he crossed. He found ouananiche as far up the Ashuapmouchouan as the foot of the Grosse Chaudiere Falls, six days' journey from Lake St. John, and lots of large pike, doré or pickerel, and chub or ouitouche everywhere. Whitefish are also plentiful on the other side of the height of land.

Mr. Stuart is a successful amateur photographer and has taken a number of most interesting views of the country traversed by him, and which country but very few white men indeed have ever seen.

E. T. D. CHAMBERS.

QUEBEC CITY, Aug. 4.

### Weakfish in New Jersey Waters.

PERTH AMBOY, N. J., July 31.—For the past month bluefish of 3 to 5lbs. have been abundant in Raritan Bay, and for ten days the river has been full of weakfish, biting freely. No empty baskets to carry home. "R-dst-rs" all happy. Baitsters ditto. K.

NEWARK, N. J., July 31.—On July 28 and 29 we caught 197 weakfish, average 2lbs., in Barnegat Bay. We have stopped at the Lafayette House, Forked River, and went out with Capt. Ed. Parker. We used very light tackle and they were good fighters. We could have doubled the above score with heavier tackle. There are plenty of fish in the bay. M.

## NOTES FROM THE ANGLING WATERS.

TROUT LAKE, Wis., Aug. 2.—To the fisherman who has of recent years depended upon the more frequented waters, it is quite a relief to find such sport as these lakes of Wisconsin present. The writer one day of this week took thirty bass from a virgin lake—which had never before been fished, unless by an Indian—and as at least five minutes was devoted to the landing of each bass, the aggregate of sport was something of moment. In five days' moderate work the writer has taken 65 pike, bass and mascalonge; largest pike 8lbs., bass 3½lbs, and mascalonge 16lbs., all on a 7ft. steel rod. Equal success has been experienced by all the guests. Camp Franklin is within easy range by way of Woodruff station on the Chicago & Northwestern R. R. J. M. S.

CENTRAL LAKE, Mich., July 31.—The past month has been very warm and dry, and therefore unfavorable as to most waters for trout fishing. I may state that of the trout which I have taken during this month, rather more than two-fifths contained spawn. KELPIE.

### The Mohican Club Rewards.

THE Mohican Rod and Gun Club of Glens Falls, N. Y., has posted the vicinity with placards offering $25 reward for information that will result in the conviction of any person catching brook trout under 6in. long in violation of the game laws; $25 reward for information that will result in the conviction of any person using a net in any trout stream; $25 reward for information that will result in the conviction of any person catching salmon under 18in. in length.

### Sunapee Black Bass.

CLAREMONT, N. H., July 28.—Messrs. R. Spencer and A. A. Martin caught 97 black bass in Sunapee Lake, July 7, from ½ to 3½lbs. Mr. Martin has a cottage at the lake and Mr. Spencer visits him three or four times during the bass season, and both are expert fishermen and generally make things lively for the bass. COLUMBIA.

### Not in Their Class.

THEY were two fishermen of the truly sportsmanlike type. As they were making their way to the scene of their hopes they met a boy, a small boy, with a carelessly trimmed branch from a tree thrown over his shoulder. In one hand he had a tin can and about the branch was festooned a fishing line.

"Hello, my boy," exclaimed one of the visitors; "going fishing?"

The lad surveyed with envious eyes their neat costumes, the handsome poles furnished with shining reels and all the rest of their equipment, and replied with a sigh:

"Nope. I ain't goin' fishin'. I'm jes goin' down ter ketch some fish."—*Washington Star.*

## Fisheulture and Fish Protection.

### St. Lawrence Anglers.

ALEXANDRA BAY, N. Y., Aug. 5.—*Editor Forest and Stream:* The annual meeting of the Anglers' Association of the St. Lawrence River, was held at Clayton, N. Y., Aug. 1. Protector Northrup reported that since the last meeting he had taken 87 nets, valued at $731; 32 set lines, value $115; and had collected in fines $360. Reports from officers and members showed a growing respect for the fishery laws. The Association is prosperous, and is accomplishing much for the special interests it has undertaken to protect. The new officers are:

President, W. C. Browning, New York; First Vice-President, H. R. Heath, Brooklyn; Second Vice-President, C. M. Skinner, Clayton; Secretary, W. H. Thompson, Alexandria Bay; Treasurer, R. P. Grant, Clayton, N. Y; Executive Committee, A. C. Cornwall, Alexandria Bay; George H. Strough, Clayton; R. H. Pullman, Baltimore, Md.; W. T. Bascom, Alexandria Bay; G. T. Rafferty, Pittsburgh, Pa.; F. J. Amsden, Rochester; R. E. Waterman, Ogdensburg; G. M. Skinn, Clayton; C. G. Emory, New York; O. T. Mackey, New York; John Foley, Clayton; Walter Fox, Alexandria Bay.

There were present at the meeting Messrs. Geo. Taylor, member of Parliament from Gananoque, C. W. Britton of Gananoque and Wm. Daily of Rockport, and the Canadian license fee was discussed. The Canadians expressed a willingness to make an effort to have the $5 license for rods repealed, and offered to go with a delegation from the association to Ottawa and confer with their Minister of Marine and Fisheries and try and get a mutual agreement as to fish on the St. Lawrence. President W. C. Browning is chairman of this committee. Hon. Geo. Taylor was to wire the Minister, and as soon as a conference could be held he was to notify the committee and a like committee was to go to Ottawa; but at this writing nothing has been reported. As soon as we get any result we will advise you of same.

W. H. THOMPSON, Sec'y.

### The Baldwinsville Fishway.

THE Fish Commissioners of New York have arranged for putting a Rogers fishway in the State dam in the Seneca River at Baldwinsville. The work will be begun at once.

## The Kennel.

### FIXTURES.

DOG SHOWS.

Sept. 4 to 7.—Des Moines Kennel Club, at Des Moines, Iowa. M. Bruce, Sec'y.

Sept. 10 to 14.—Toronto Industrial Exhibition Association, at Toronto. C. A. Stone, Sec'y.

Sept. 18 to 21.—Rhode Island State Fair Association, at Cranston, R. I. W. W. Dexter, Sec'y.

Sept. 19 to 22.—Orange County Fair, at Newburgh, N. Y.

Sept. 19 to 22.—Stockton Kennel Club, at Stockton, Cal. John Hefferman, Sec'y.

Nov. 27 to 30.—New Jersey Kennel League, at Newark, N. J. E. H. Morris, Sec'y.

FIELD TRIALS.

Sept. 5.—Manitoba Field Trials Club, at Morris, Man. R. J. Gallaugher, Winnipeg, Sec'y.

Nov. 5.—United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 6.—International Field Trials, at Chatham, Ont. W. B. Wells. Sec'y.

Nov. 23.—Eastern Field Trials Club, at Newton, N. C. W. A. Coster, Saratoga, N. Y., Sec'y.

### Sarcastic.

*Editor Forest and Stream:*

On looking over the premium list of the Danbury show I find a class for "wire-haired cocker spaniels." I have read the letters in the late spaniel controversy, with great benefit to myself and increased knowledge of the breed, as they pointed out so clearly just what the winning type of cocker should be. Will one of these writers, so well posted on the subject, give me the additional information I ask? What is a "wire-haired cocker spaniel?" A NOVICE.

### The Bell—Martin Case.

*Editor Forest and Stream:*

I have no intention of replying to Mr. George Bell's self-condemnatory letter in your last issue. A reply to such an acknowledgment of wrongdoing is unnecessary, but there are certain perversions of the truth which call for some counter-statement.

The facts regarding the Consequence sale are very few. They are as follows: Mr. Bell advertised a number of dogs "to be sent on approval," buyer to pay carriage both ways if not accepted. Mr. Martin got one of the circulars and bought Consequence with the additional proviso of a guarantee in whelp. The dog arrived in San Francisco within a week or so of being due to whelp, showed no signs of being in pup, was at once submitted to veterinary examination to prove whether or not she had slipped her puppies or was yet in whelp. The veterinary said no and the consignor was notified that the goods were not as represented nor as per contract, whereupon he declined to accept a return of Consequence and repudiated his published conditions to send on approval. In that state it was presented to the A. K. C. last September, Mr. Martin's charge being that of dishonorable conduct.

In consequence of absence from the city and country of several members of the advisory committee, the case was not tried until May last with the result that the accused was suspended for one year

In the letter published last week Geo. Bell says, "The A. K. C. decided that the charge was not sustained and it was dismissed, and I was then held to be justified in the course I had taken."

That is a wilful perversion of the truth; the sentence was imposed for the reason I have stated. It has been sought by some of Bell's misguided friends to have the public believe he was punished for the substitution of Rejoice for Consequence and thereby brought to the bar to face charges, copies of which he had not been presented with. There is not the slightest foundation for any such statement. The fact of the change of dogs was brought out in the taking of the testimony and Mr. Bell was asked why he had not offered to correct the error. He had nothing to say, but left the question unanswered. The idea of putting forward "my solicitors" had not occurred to him then. Mr. Bell was advised of the substitution or mixing of the two terriers by Mr. Hopkins during the Toronto show. But it was not for long afterward that he asked Mr. Mortimer at Hempstead to write and advise Mr. Martin, pleading as his reason for asking Mr. Mortimer that he was in a great hurry and had not time to write. This request was probably the outcome of a well known fox-terrier breeder declining curtly to have any dealings with Bell or sell him a single dog. Facts are all that are necessary in this case to demonstrate very clearly that the only mistake the advisory committee made was that of not making the penalty one of three years at least.

JAMES WATSON.

NEW YORK, Aug. 3.

### The Big and Little Kennels and Field Trials.

*Editor Forest and Stream:*

There are important facts not touched upon by the champions of the big and little kennels in this controversy. I will try and make it plain to both sides. One is an assistance to the other.

The small kennel owners start out with the assertion that they cannot compete with the large kennels at the field trials. This is a mistake. We will first take Mr. Lorillard's kennel. He has been a large purchaser from the small kennels, purchasing all or nearly all his winners, Count Anteo, Lora, Miss Ruby, Dot Rogers, Rod's Sue, Ightfield Rosalie and others from the small kennels.

I think I am not far wrong when I state the Blue Ridge Kennel also purchased all their winners, paying big prices to the small breeders for Fannie M., Hope's Mint, and the Derby winners Bessie Shoupe and Allene, besides paying $2,000 for Antonio, and long prices for their stud dogs and brood bitches, and all to the small kennels.

Mr. J. Shelley Hudson paid $1,000 for the Bohemian Girl, $750 for Gladstone's Boy, when the latter was nine years old, and big prices for others in his kennel, and all to the small breeders. Mr. Damon, to add pointers to his select stock of setters, paid $1,000 for Strideaway in his puppy form, and good prices for bitches to mate with him—these coming from the small breeders. Mr. Dexter also makes purchases from the small breeders. Mr. Avent, who has been longer in the business than any other large breeder, had to resort to purchase to obtain Novelist, Topsy's Rod, Count Gladstone and others—all from small kennels.

It will be seen, therefore, the large kennels are the best patrons the small kennels have. After selling the pick of their dogs, some of the small kennel owners cry out they cannot compete against the larger kennels. If I were a breeder, instead of crying out against the large kennels, I would want a dozen where there is one, as the demand from the large kennels has made possible prices that dogs would not have sold at unless the large kennels wanted them. Even after the small kennels have sold their best dogs to the large kennels, if any one will take the percentage of entries in the field trials made by the large and small kennels, it will be seen the small kennels have the greater percentage of winnings to their credit. I am satisfied the trainers and the small kennels get more out of the big kennels than their owners do. This fact is so apparent that some of the large kennels tell me it is cheaper to purchase a dog with a reputation from the small kennels than it is to make one, and do not run dogs in consequence. There are other causes which I will briefly state that have caused the diminution of entries to the field trials this year.

The general depression of the times has affected every species of property, dogs being no exception, though I think they are better property than some that is considered "staple." We find Jersey cattle will not sell for one-half they did two years ago. Trotting and road horses not for half. The "staple" farm horses, that sold in this market two years ago for $75, will not now command over $35. The man that raises them out West does not get over $10 for them. I see there is contemplated, the price of this class of horses being so low, the establishment of an abattoir in a Western State for the purpose of getting rid of the 1,000,000 surplus horses in three Western States that will not bring $10, the horses to be slaughtered, their hides used for leather, their manes and tails for hair mattresses, their hoofs for glue, their flesh and bones as fertilizers, the latter to be used by the farmers to assist them in growing more wheat, that sold for double two years ago what it commands to-day. Every breeder of dogs has an abattoir of his own connected with his kennel, the larger the kennel the greater the slaughter, the executioners being distemper, worms and other kindred dog diseases, these dog-destroying angels are so severe on dog life. I know of a breeder that has not raised a single setter puppy to be a year old in three years, though he had dozens whelped, and a friend writes me for my advice about importing a setter whose get will not all die with worms and distemper. Another friend owning hounds tells me he lost this year by distemper twenty of about one year old, and all the young dogs he had. Were it not for this abattoir that is connected with all kennels, dogs would be thicker than leaves in Vallambrosa, notwithstanding owners resort to all the safeguards known to raise their youg dogs.

There is another cause that I have thought would come, and the depressed times has caused its operation to be felt sooner than otherwise if times were good. The average trainer charges $100 to train and run a dog in the trials, and the dog's winnings. A man wishing to run a dog in the Derby, pays $50 for a puppy, and $10 more to some one to raise the puppy old enough to be sent to the trainer. As one pup in three lives to be old enough to start in a Derby, the puppies started will average $150. The owner pays entrance in three field trials, $90, and his part of the trainers' expenses to and from the trials, $10, thus the owner will have paid out $250 to $350 for starting a dog in these Derbys. This is a losing game, even if the dog proved to be a winner; if a loser, and only one entry in twenty wins, he would be still a greater loser, as a dog unplaced would not sell for as much as a winner. The owner of a winner has only the reputation and the dog. Many such winners have not proven successful sires, and may never bring what an owner knows he has to pay out. With the hope of winning out, many more entries would be made. This winning may be a diversion, but many court Dame Fortune, hence this goddess has many votaries, and has ruined many men, but for every one ruined, a dozen stand ready to take his place. I do not know of any trainer who is a bondholder.

There may be some who claim the trainers assisted in killing the goose that laid the golden egg. I have no censure for the trainers; they are like the rest of us, they wanted all they could make out of it. The price for training is like all other business, the supply and demand will, in time, regulate that. If the small kennels still think they cannot compete with the large kennels at the trials, the field trial clubs can do as the racing associations do, allow any man to make as many nominations in any Derby or stake as they wish, but restrict the starters to two from any man or stable in one stake. Some small kennel owners may say the large kennels would make several nominations in a Derby, and pick two of their best dogs to compete. Let us look back and see how the owners and handlers succeeded in picking the winners previous to the trials.

The Memphis and Avent kennels were as much surprised as the public, who had a tip of the workings of the dogs Roderigo and Rebel Windem before the trials, when Roderigo won first, Rebel unplaced. Mr. Tucker was surprised when Paul Gladstone beat Gladstone's Boy. He did not think Count Anteo classed with Lora and Miss Ruby. He beat both in the Derby. He did not think Miss Ruby would win first over Antevolo last year in the East, but she did it. Mr. Rose did not expect Wun Lung to beat Hope's Mark at the Southern, but he did. Mr. Avent was as much surprised as I, when Chevalier beat Count Gladstone at Bicknell last year. The Manchester Kennel owners were surprised when Gleam's Pink beat Gleam's Sport at the Southern last year. I could go on and cite many more instances where owners and handlers failed to pick the winners of their teams in advance.

This year the stakes have been necessarily reduced by the field trial clubs, the Southern reducing the starting fee in proportion to the reduction in the stakes. With the return of better times many are predicting the adjustment of interest to the new order of things. With more perfect understanding between the large and small kennel owners, I see no reason why field trials cannot be run successfully and the value of dogs enhanced, but no one need expect the high prices dogs have sold formerly for, neither need we expect any other kind of property to bring the higher prices that have prevailed.

P. H. BRYSON.

MEMPHIS, Tenn., July 20.

### Curious Psychic Manifestations.

*Editor Forest and Stream:*

Some months since a correspondent related in your columns the peculiar behavior of his bitch, the animal acting as if she had whelped and guarding a spot in the kennel as if she had a litter there. He wished to know if others had witnessed any such extraordinary behavior in dogs.

I presume he had read the announcement that sometimes appears just under "Kennel" in your paper: "All those who love a dog because it is a dog * * * are invited by the editor," etc. I noticed that no reply appeared to this inquiry which I thought strange, as it is difficult for me to believe that among the many readers of FOREST AND STREAM similar observations have not been made.

At the time and until recently I have been too much occupied to give any of my own observations; but as it seems to me such matters are really among those of greatest interest to those who "love a dog because it is a dog," I submit the following facts: A great Dane bitch of mine, though unserved by any dog, about the very day when she would be due to whelp, calculating from the date when she should litter if she had been served, made a nest of the ordinary straw litter at one end of the bench on which she in common with several other dogs slept; and for two or three days kept possession of this and acted much as if she had a litter of puppies there. She had considerable milk in her teats, but there was no enlargement of the belly or other signs of pregnancy.

One of my English setter bitches that was so fond of maternal duties that she was almost always ready to adopt puppies and try to care for them, on one occasion, though unserved by a dog, enlarged very considerably, and at about the correct date from being in season acted as if she had whelped—indeed there was escape of fluid as in actual parturition, etc., etc. She had also abundance of milk and seemed much disgusted at the absence of puppies. Spurious or false pregnancy is not unknown, even in the human subject, but such a case so closely imitating true parturition is, I am inclined to think, extremely rare in any animal.

The following case has been communicated to me by a good observer of several kinds of animals. A doe rabbit that had never been near a buck, that had moreover never been hutched with one of her own sex (imitation therefore impossible) was observed to carry about bits of bedding in her mouth after the manner of pregnant does about to litter, and even to line the nest with down from her own body. The nest was soon torn to pieces, as there was no tangible result of course. Later this doe was bred to a buck of her own variety and duly littered, but on that occasion took much less pains to form a nest.

These things, though wonderful, are not wholly inexplicable. The better the course of affairs in the universe is understood the more clearly is the law of periodicity or rhythm seen to operate in all things. The phenomena referred to seem to me to fall under this law.

WESLEY MILLS, M.D.

MCGILL UNIVERSITY, Montreal, Can.

### The Kent Elgin Entry in S. F. T. Club.

*Editor Forest and Stream:*

In FOREST AND STREAM of July 28, appears an article from B. Waters in "Points and Flushes" on "Clubs and Entries." In this article Mr. Waters uses a letter from T. T. Ashford, of Birmingham, Ala., in order to attack "The Southern Field Trial Club." It is to Mr. Ashford's letter that I shall reply, and in doing so, I beg the indulgence of the readers of your paper, as I despise controversies of this kind.

In 1891 the Southern Field Trial Club abandoned the running of a pointer stake with a guaranteed prize, as the clnb had lost money on every one they had run. At the same meeting the club agreed to run a pointer stake on the "sweepstake" plan, provided six pointers filled. They also passed this resolution: "When an owner shall have entered his dog in the Pointer Stake, and had him prepared to run, and brought to the trials, he shall have the right to start said dog in the All-Age stake, on payment of last forfeit, if he so desires."

Mr. Avent sent me the entry of Kent-Elgin in 1893 on the same entry blanks on which he entered his other dogs, Kent to be entered in the Pointer Stake. It being on the same entry blank with his setters, I did not notice it when the list of entries was sent to the papers, nor, in fact, until Mr. Avent called my attention to the matter. Mr. Avent sent in payment of the entrance money on Kent-Elgin, a note for $25, drawn by A. W. Bealer, and made payable to T. T. Ashford, due some time after the entries closed. This note was paid through the banks. Mr. Avent asked as a favor that I accept this note in payment of the entrance money, as Mr. Ashford was a friend of his, and said if the note was not paid he would pay me.

Mr. Avent wrote me in January and asked me if I thought the Pointer Stake would fill; I wrote him I could not tell and also wrote him that the dog could go into the regular All-Age Stake. When I reached New Albany he asked me about the matter and I told him the rules of the club; he put the dog into the stake. When Mr. Ashford wrote me about the matter he did so in a very abrupt way, and demanded the return of the $30 and threatened to expose the club if his demand was not complied with. I gave him the above facts, declined to refund the $30 and told him that if he desired to take the matter before the public I felt sure that I could take care of myself. Without consultation with Mr. Avent, I am certain that he will corroborate the above statement. Mr. Ashford wrote me in regard to this matter some time in the spring or early summer; I asked him to carry out his threat if he desired. He well knew that the statement made him could be proven and to make the charges which he threatened to make would do him no good if he made them at that time, so he waits until the last issue of the paper before the entries to the Derby closed and then through the help of Mr. Waters jumps on the club, giving them no chance to prove his assertion false before the entries would close.

The above is a plain statement of the facts. He says he has an abundance of proof in black and white. I want to say that I have the record for all that is written.

T. M. BRUMBY, Sec'y-Treas. of S. F. T. C.

MARIETTA, Ga., July 31.

### Toronto Dog Show.

THE premium lists of the Toronto Industrial Exhibition Association dog show, to be held at Toronto, Sept. 10 to 14, are now ready for distribution, and can be obtained by addressing the secretary, C. A. Stone, 82 King st., E. Toronto.

The list is very complete, over $3,000 being offered in prizes and 172 classes being provided with a promise that should five of any other recognized breed be entered, additional classes will be made; also classes made for dogs and bitches will be divided if five or more are entered.

Mastiffs and St. Bernards are given $15 in challenge classes and $15, $10 and $5 in open classes; also novice and puppy classes for St. Bernards and novice class for mastiffs with prizes of $10, $5 and diploma. Pointers, all setters and collies get $15 and diploma in challenge classes and $15, $7, $3 and diploma in open, with novice classes having $10 and $5. Those breeds receiving $10 and diploma in challenge and $10, $5 and diploma in open are Great Danes, wolfhounds, deerhounds, greyhounds, foxhounds, bull-terriers, bulldogs, beagles, Irish, Dandie, Scottish, black and tan and Yorkshire terriers, pugs, toy spaniels, Italian greyhounds and poodles. Spaniels have classification No. 1. Field and cocker spaniels get the lion's share of the money with $10 and diploma in challenge and $10, $7 and $2 and diploma for the former and $10, $7, $3 and diploma for the latter in the open division. Fox-terriers get $10 and diploma in challenge and $10, $5 and $3 and diploma in open classes, and in addition, puppy and novice classes with $7, $3 and diploma and $10, $5 and diploma, respectively. Other breeds not mentioned above get $10, $5 and diploma in open classes.

The fox-terriers and spaniels are well looked after in the way of specials, the Canadian Fox-Terrier Club repeating their generosity of last year. The collie specials are also well worthy of notice.

Kennel prizes of $20 are offered for mastiffs and rough and smooth St. Bernards and $15 kennel prizes for bloodhounds, great Danes, pointers, English, Irish and Gordon setters, collies, bulldogs and bull-terriers; $10 kennel prizes for Russian wolfhounds, Scotch staghounds, greyhounds, foxhounds, black and tan terriers, poodles, cockers, spaniels, beagles, fox-terriers and pugs. The very handsome bronze medal of the Association, valued at $10, is offered as a kennel prize for Irish, Dandie Dinmont, Bedlington, Scottish and Skye terriers, red cockers and dachshunds; also for Canadian kennels' and best dog and bitch, Canadian bred, when offered. Handlers' prizes of $40 to first, $20 to second are given.

The Association offer their silver medal, value $20, for the largest entry made by one exhibitor; also a bronze medal is offered for the exhibitor making the highest winning average.

The entry fee is $3 and the entries close Wednesday, Aug. 29. As this will be the only show in Canada this fall, it should be well supported for various reasons. The public are reminded that wins will count both with the A. K. C. and the C. K. C. Atttention is also drawn to the passenger rates and to the railway [and express companies' arrange ments, which we have already published.

### Moral Sense in Dogs.

Prof. Lloyd Morgan recently published an essay on the limits of the intelligence of animals, and he asserted that much of their intelligence is gained from experience, but denies them reason on the ground that they are incapable of moral judgment. It is difficult to imagine how any student of animal nature could have arrived at such a conclusion. To deny a moral sense in dogs or horses, dogs particularly, is almost to deny the same quality in man. Who that is familiar with dogs will venture to say that they do not know right from wrong?

As a familiar instance of one phase of their moral sense, one that will appeal to most people who admit their dogs to familiar companionship, take the case of a dog who has been corrected for some misdoing, such as lying upon a certain chair or lounge. In the absence of the master or mistress the dog will make himself comfortable in the forbidden quarters, and directly he hears his mistress's footstep will jump down and try to appear innocent of the guilty act. He knows he has done wrong.

What higher evidence of this moral sense need we have than a sacrifice of his own convenience to the good of his kind or to some individual to whom he is attached? There have been many authenticated instances where dogs have sacrificed their lives in an endeavor to save human beings. If the dog did not feel it his duty to exert that influence, and thus show his moral sense in the highest degree, he would be content to seek his own safety.

The dog is not endowed with the foolish pride that instigates many men to do acts of bravery unnecessarily; a dog will often flee from danger in which he alone is concerned, but which he will face to the last extremity for some one to whom he is attached. Dogs have often shown that they have this capacity for self-sacrifice as a governing motive where men have often failed. Such sacrifice surely proves that they have a moral sense in the highest degree. Dogs have been known to meet death in the flames of a burning house in their endeavor to save life, or call the attention of those dear to them to their danger. The instinct of self-preservation would naturally impel them to seek their own safety, but the possession of a high moral sense forbids such an act. Children and others have been saved from drowning, times without number, by dogs; and while swimming, perhaps far from known aid, what prevented them from leaving their charge

to look out for itself and seeking their own safety by swimming to shore?—a high moral sense of duty. And the dog has been known to die rather than shirk that duty. To say that such noble actions, as sublime as any man is capable of, are merely mechanical, is stupid and ignorant, and one is forced to agree with the writer who said, "Our theories of natural history need revision. We need a broader and higher view of the lives of other animals. We need to learn that though no other animal can at all compare in intellect with man, there are many animals in some one mental and moral quality which are the equals or even the superiors of the average man."

There are cowards among dogs as there are cowards among men, but if we can only show one instance where a dog has proved himself possessed of this moral sense it is sufficient to prove that such a quality does exist in dogs. Those who own dogs should stop and think now and then that their four-footed friends are worthy of more than to toss them a bone and allow them the sky for a shelter.

### Answers to Correspondents.

*Y. Doodle, Boston.*—Ans. I am always glad to decide on any question you may ask, however much it may bring me in the class of extra hazardous risks of the insurance companies. As to who owns the best great Dane it has not yet been definitely settled, although I expect it soon will be, as it is now in the hands of a volunteer committee for arbitration.

*Lumber Head, Hartford.*—Is my dog registered? Ans. If you registered him, he is registered. If you or some one else did not register him, he is not registered. Buy a primer on the elements of common sense.

*Adept, Covington, Ky.*—I have a black, white and tan setter puppy, six months old. When taken into the fields for the first time and he comes across a gang of quail, will he point or not point? Ans. Yes.

*Inquirer, Pinos Wells, N. M.*—Which is considered the best breed of dogs for saving children from drowning—the St. Bernard or Newfoundland dog? There is no water near my ranch, but I have six children. Ans. It will be necessary to dig a lake close by your house, or move your abode to the banks of a lake or river, if you buy a dog to save your children from a watery grave. Either breed is good for the purpose, though the St. Bernard is better at saving people from very deep snow. If you buy the latter it would be better, if you are in earnest in giving the dog a chance, to move your habitation near deep snow.

*Sureshot, Harrisburg, Pa.*—Is straw a good bedding for hunting dogs? Ans. Generally speaking, it is not. The reason is that it is in the wrong place. If it is put where the dog can sleep on it, it serves the purpose very well. It seems that there is a prevalent belief that if the owner sleeps comfortably his dog should be happy and satisfied for that reason. Most dogs furnish their own beds or go without.

*Troubled Jim.*—My dog, for which I paid $2, kills sheep in my neighbor's flock, but my neighbor hasn't found it out yet. What will cure him (the dog)? Ans. If you were to kill the rest of the sheep yourself it would probably stop the dog. Or a high, close fence built around the pasture might keep the dog out. Or if each sheep were wrapped in tin, the dog thereby might be balked. Or the owner might be induced to shut them up in his barn. Or anything else to give the dog a free and happy life. If you bought the sheep he would then not kill his neighbor's sheep.

*Admirer, Detroit.*—My St. Bernard is six months old and healthy, with correct markings. How high should he be and what should be his weight? Ans. Not less than 12 nor more than 39in. as to height; and as to weight not less than 10 nor more than 250lbs. All dogs grow precisely alike, hence there is no trouble in giving exact information.

*Main Chance, Chicago.*—I have the offer of two stud dogs, both well bred, one is black and white, the other a foxhound; one at $20, the other at $25. I love a dog, and believing you have a sympathetic spirit in such love, I make bold to write you. Which dog had I better breed to? Ans. The black and white dog is the prettiest, I fancy, and I am disposed to advise you to hasten to secure his services; but from your description the foxhound is the best workman, and therefore on the score of utility I would advise you to engage him. Utility is always of more lasting benefit than beauty. What you say about sympathetic spirits is indeed too true. A touch of spirits makes the whole world akin.

*Anxious, Philadelphia.*—Can you inform me who owned a setter called Jack twenty years ago by a man out West that was orange and white and had a double nose? He ran in a race with some other dog and won. Ans. There are plenty of white orangemen in the West, but none with double noses. I regret I don't know.

*Charlie, Memphis.*—I notice that my dog eats greedily of persimmons when out in the fields. What will break him of the habit? Ans. Feed him liberally with good beef or mutton. Or better yet, feed him all he will eat. A dog eats persimmons to fill a long-felt want. He simply takes advantage to eat abroad which is not available at home—all to satisfy his hunger.

*G. L. Z., Springfield, Conn.*—In a contemporary I notice the following: "Melac, the great Dane, has again changed hands." Do great Danes have hands? Ans. It was probably a typographical error. THE CYNIC.

## DOG CHAT.

Mr. J. B. Martin of San Francisco, Cal., writes us that he has turned the fox-terrier Rejoice over to Mr. Fores of Alameda, Cal., on Mr. Bell's behalf, and has received from Mr. Bell through the same gentleman the bitch Blemton Consequence. Mr. Martin adds: "Of course this exchange was not satisfactory to me, but I was compelled to accept it or begin a suit. I bought Consequence one year ago guaranteed in whelp to Dusky Trap. I am now receiving her not in whelp. Rejoice came out one year ago and was not in whelp, and she has only one pup alive here of the one litter she had by Blemton Reefer, while Mr. Bell has received two litters from Consequence, admittedly a much better bitch." Mr. Martin seems to have had the thin end of the stick all through.

Mr. J. Taylor Williams, of Dayton, Ky., is a great admirer of the Druid, Count Noble and Gladstone strains, and has bred his Ben Hill bitch, that took vhc. at Louisville, to his Noble Lit, aud from this union, the bitch being so deep in Druid blood and the dog strong in Count Noble and Gladstone blood, it would seem, according to Mr. Bryson, as if some good field trialers would result.

"Bob" Armstrong, manager of Mr. Pierpont Morgan's kennel of collies, sails for England, Aug. 11, on the Aurania. He will take in some of the principal shows just to see whether the collies they have been getting over are the right sort, and returns in about a month. The Cragstone Kennels will, therefore, not show at Toronto or Providence next month, so that Rufford Ormonde will probably not be benched till the W. K. C. show next year.

Mr. M. Bruce, secretary of the Des Moines Kennel Club, informs us that they have added the following classes to their premium list: Class 68½, Russian corded poodles, open dogs and bitches, prizes $8 and $5; Class 92½, pugs, novice class and open dogs and bitches, prizes $5 and $3; Class 100, Bedlington terriers, open dogs and bitches, prizes $5 and $3. Classes 65, 66, 67 and 68 are for French curly-coated poodles. Since the publication of the premium list the following specials have been secured: $5 each for best Irish water spaniel dog, bull-terrier bitch, collie bitch and Irish setter dog puppy, and the prospects are that they will get other cash specials.

Mr. James Watson has an article in the *Kennel Gazette* for July on the duties of specialty club secretaries. FOREST AND STREAM was the first to draw attention to this subject some time since, and pointed out the advantages to be gained by clubs which give some publicity to their doings, and we quite agree with Mr. Watson when he writes, "That there is a large unworked field for nearly all of them cannot be denied, and to reap the waiting harvest is what they should set themselves about doing. They all seem to be afraid of newspaper prominence, at least we are fully entitled to assume such to be the case when month follows month and not a line in a single paper regarding any one of them. Printer's ink pays, and men in business expend countless thousands for just such publicity as is only too freely placed at the disposal of specialty clubs. It costs the clubs nothing and would call for but a few minutes' labor on the part of the secretary to keep the public as well as club members advised of what the committee is doing. Some people do not value a thing they get for nothing, and perhaps if the kennel press charged five cents a line for club notices they might cause the officials to believe it was worth while giving occasional evidences of their existence." This is on all fours with what we said on this subject, but there has been little improvement. The specialty club whose secretary keeps its doings well before the public will surely reap a benefit in increased membership and the heightened interest in the club's affairs of those who are already members. Secretaries should further divest themselves of the idea that it is a favor to the papers to send such matter in. The papers derive little benefit, and if of sufficient importance to them would devise some means to obtain it anyhow.

Mr. F. S. Webster, secretary of the Pointer Club, seems to have a just appreciation of his position when in sending in his report and asking for its insertion, he adds: "It will serve to keep up interest and show that we intend to keep the pot boiling." Mr. Watson mentions the Bulldog and Spaniel clubs as being more progressive in this respect than the other specialty clubs, but he has evidently made a slip in not including the several beagle clubs, whose secretaries are ever alive to the advantage of making their club's doings public. We don't know whether the English Setter Club, Collie, Fox-Terrier, St. Bernard, Mastiff, Irish Setter, Gordon Setter or other clubs ever hold meetings outside of the annual ones at W. K. C. shows because one never reads about them, and their members never seem to know what is going on. Specialty clubs should realize their position and their importance to the breeds they represent and are organized to foster.

### Rhode Island State Fair Show.

The following changes and additions have been made in the Rhode Island show's premium list: Class 22, bull-terriers—Premium No. 357, puppies, dogs, prizes $3 and $1.50. No. 357A, puppies, bitches, prizes $3 and 2. Class 23, smooth fox-terriers—Premium No. 361A, puppies, dogs, prizes $3 and $1.50; No. 361B, puppies, bitches, prizes $3 and $1.50. Class 24, wire-haired fox-terriers—Premium No. 366, puppies, dogs, prizes $3 and $1.50; No. 366A, puppies, bitches, prizes $3 and $1 50. Class 26, Boston terriers—Premium No. 371, open, dogs, 25 to 35lbs., prizes $10 and $5; No. 371A, open. bitches, 25 to 35lbs., prizes $10 and $5; No. 372, open, bitches, 15 to 25lbs., prizes $10 and $5; No 372A, open, dogs, 15 to 25lbs., prizes $10 and $5; No 372B, open, puppies, diploma. Class 15, Gordon setters—Premium No. 335, puppies, dogs, prizes $4 and $; No. 325A, puppies, bitches, prizes $4 and $2. Class 17, cocker spaniels—Premiun No. 341A, open, black dogs, prizes $10 and $5; No. 345A, open, black bitches, prizes $10 and $5; No. 343, puppies, field or cocker, dogs, prizes $3 and $1.50; No. 343A, puppies, field or cocker, bitches, prizes $3 and $1.50, Class 21, bulldogs—Premium No. 350A, challenge bitches, prize $10; No. 351, open, dogs, 45lbs. and over, prizes $10 and $5; No. 351A, open, dogs, under 45lbs., prizes $10 and $5; No. 352, open, bitches, 40lbs. and over, prizes $10 and $5; No. 352A, open, bitches, under 40lbs., prizes $10 and $5. Additional classification: Class 11, beagles—Premium No. 314, puppies, dogs, prizes $3 and $1.50; No. 314A, puppies, bitches, prizes $3 and $1.50. Class 12, pointers—Premium No. 321, puppies, dogs, prizes $4 and $2; No. 321A, puppies, bitches, prizes $4 and $2. Class 13, English setters—Premium No. 326, puppies, dogs, prizes $4 and $2; No. 326A, puppies, bitches, prizes $4 and $2. Class 14, Irish setters—Premium No. 331, puppies, dogs, prizes $4 and $2; No. 33A, puppies, bitches, prizes $4 and $2.

The prospects for a good show at Cranston, R. I., next month are bright, and now that the additional classification has been made Mr. Roberts feels a little more confidence in appealing to exhibitors for a good entry. The principal changes in classification are for bull-terriers, spaniels and Boston terriers. Intending exhibitors should bear in mind when making their entries, which close Sept. 3, that the class numbers merely refer to the breed and that these are in turn divided and numbered by premiums, and in making entries in the various classes these premium numbers must be used. If there are five challenge entries in any breed the sexes will be divided.

The Toronto show management have made a good move in deciding to have greyhound races, which will take place in front of the grand stand on the afternoons of Tuesday, Wednesday and Thursday of the show. First prize will be $15, second $7, third $3; distance about 250yds. in heats, best two in three. No entrance fee is required, but all wishing to compete must have their dogs entered in their regular classes in the dog show, entries for the race to be made with C. A. Stone, secretary of dog show, 82 King street, east, Toronto, not later than 12 o'clock on Tuesday, Sept. 11. Entries for the dog show close Wednesday, Aug. 29. There is a slight mistake in the special prize for the highest average; it is for all breeds and is not confined to the beagle classes alone.

The death of Mr. J. J. Steward, a noted collie breeder on the other side, is announced. He was the owner of the collie Cremorne and also of the collie Caractacus that made such a sensational sale at Liverpool some years back. Mr. Steward entered him at $500 and the dog was claimed by several exhibitors, and finally put up at auction, bringing $1,750, but like many another promising young collie he went off, and little has been heard of him since. Mr. Steward was also the former owner of Clifton Hero and Clifton Maid, the former coming to this country. Mr. Steward was a good judge and had donned the ermine at Birmingham for many years.

Mr. K. E. Hopf, who was so well known in St. Bernard circles a few years back, is now at Arangee, Fremont county, Idaho, where he is managing the Bellevue, a summer resort and sportsmen's headquarters. Arangee is the night station of the U. P. stage line which runs from Beaver Canyon to the Yellowstone Park, and is about 55 miles from the Fountain Hotel, Yellowstone Park. Mr. Hopf is in the midst of a great game country, and any dogmen, St. Bernard cranks especially, would be sure of a hearty welcome from old Otho's owner.

Mr. A. B. Truman, of San Francisco, Cal., has suffered a severe loss in the death of his noted Irish setter bitch Elcho T. According to *Field Sports*, she died two weeks since, during the whelping of a litter to Dick Swiveller, imported some time since by Mr. Truman from Oak Grove Kennels. Elcho T. made a great name for herself both on the bench and as a matron. She won firsts at San Francisco and Los Angeles shows since 1886, her last win being in the challenge class at Oakland last May. She has raised 129 puppies, 20 of which have been exhibited and won honors. Elcho T. was by champion Elcho out of champion Noreen, therefore a full sister to the renowned champions Elcho, Jr., Bruce, Glencho, Fawn, etc. She is the last but one of the famous mating, Elcho—Noreen, and her loss both to Mr. Truman and to the Irish setter fancy on the coast is one not easily remedied.

The White Star steamer Bovic, which arrived on Monday last, brought over fifteen foxhounds for Mr. Wadsworth, master of the Genesee Valley Hunt. Three dogs also came over consigned to Mr. James Mortimer and two for F. B. Vandegrift of New York.

Mr. Mortimer is expected back to-day or to-morrow. While on the other side he has, we understand, purchased a number of curly poodles for Mr. H. G. Trevor, whose intention to import some we spoke of a few weeks since. We are told that Mr. Mortimer took a run over to gay "Paree" for these.

We are sorry to hear that old Black Prince, the well-known field spaniel owned by Mr. Wilmerding, has about run his race. He is over 13 years old and is rapidly failing, though he still manages to get up when he sees a gun.

Mr. Rathbone, owner of the Beverwyck Kennels of fox-terriers, pursues the even tenor of his way, as usual, keeping quiet until he is ready to show a good puppy and win a few sweepstakes. His Royalist is coming on well, and has already sired some promising puppies, but as his owner says, "You know how hard it is to be sure of a youngster; they change so astonishingly that I dare not at present say much about any of them."

There are a number of new "Kennel Specials" this week offering bargains in dogflesh that are sure to take. E. C. Dodd offers Gordon setter pups; C. F. Waterhouse, pointer bitch; Sandy River Kennels, Irish setter pups and will also train dogs for New England hunting; J. A. Thomas, well bred English setter pups; Exchange Kennels, all kinds of dogs; Handsome Brook Kennels, working cockers; A. Laidlaw, trained spaniels and entire kennel of celebrated cockers; E. Booth, two St. Bernard bitches. A. Corbet Elliott desires a situation as manager of a kennel.

At the Strabane (Ireland) show recently held, a class was provided for the old-fashioned Irish setter—red and white.

Mr. Tom Stretch seems ever willing to sell his best collies, confident that he can breed some more. He has just brought out two good ones. Spinaway, at Bristol, made her maiden effort to the tune of five firsts and three specials and then the week after, at Langollen, her sister Actress, "debuted" four firsts and two specials. They are both by Ormskirk Chriss out of Prima Donna and the only two of that litter Mr. Stretch succeeded in rearing. Mr. Stretch has taken a fancy to smooths and it is expected that the merles will come into more prominent notice very soon.

The new rules of the English Kennel Club make the attainment of champion honors subject to the whim or will of the Kennel Club, which selects such breeds as it thinks proper at shows held under its rules to count for championship, and even this distinction is subject to cancellation of classes in the event of a poor entry. Some of the breeds have not yet had a chance to score a championship and the new rule is evidently far from popular.

## KENNEL NOTES.

### NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

*Sir Arthur.* By W. A. Wheatley, Memphis, Tenn., for black and white English setter dog, whelped May 16, 1894, by Thiers (Dan Gladstone—Queen Novice) out of Lily B. (Marshal Ney—Miss Lou Ellen).

### BRED.

☞ **Prepared Blanks sent free on application.**

*Roderigo's Queen—Count Monk of Furness.* J. McAleer's (Emsworth, Pa.) English setter bitch Roderigo's Queen (champion Roderigo—Count Howard's Bride) to Klee & Dean's Count Monk of Furness, June 24.

*Lady Dinah—Streatham Monarch.* J. C. Mahler's (Avalon, Pa.) bull-terrier bitch Lady Dinah (Bendigo—Flirt II.) to J. Moorehead, Jr.'s Streatham Monarch (Streatham Flyer—Trentham Baroness), June 27.

*Cashier's Daughter—Happy Toby.* Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Cashier's Daughter to their Happy Toby, July 19.

*Fanny Noble—Breeze Gladstone.* J. Schroth's (Philadelphia, Pa.) English setter bitch Fanny Noble to F. G. Taylor's champion Breeze Gladstone.

### WHELPS.

☞ **Prepared Blanks sent free on application.**

*Jessica Dortch.* G. W. Amory's (Boston, Mass.) pointer bitch Jessica Dortch (Beppo III.—Sal), June 23, six (two dogs), by his Mainstay (Mainspring—Barmaid).

*Bells of Shandon.* F. K. Pidgeon's (Saugerties, N. Y.) pointer bitch Bells of Shandon (Spot Dash—Naso's Bell), June 14, seven (three dogs), by his Graphic VI. (champion Graphic—Daisy II.).

*Prairie Belle.* J. McAleer's (Emsworth, Pa.) pointer bitch Prairie Belle, June 11, twelve (seven dogs), by his Rip Rap, Jr. (champion Rip Rap—Fannie Bijou).

*Lucy Blade.* J. McAleer's (Emsworth, Pa.) English setter bitch Lucy Blade (Toledo Blade—Rod's Bessie), May 14, six (four dogs), by Dr. Hartman's Sig. Gladstone (Gladstone's Boy—Demon).

*Revelation.* T. A. Holcombe's (Salt Lake City, Utah) bull-terrier bitch Revelation (Little Prince—Edgewood Fly), June 8, six (four dogs), by C. F. West's Bob Acres (Croyden Dutch—Burston Kit).

*Edgewood Fly.* T. A. Holcombe's (Salt Lake City, Utah) bull-terrier bitch Edgewood Fly (Duke—Alice), June 16, seven (four dogs), by his Little Prince (Bendigo—Kit).

*Clara Belle.* Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Clara Belle (Happy Toby—La Belle Senora), June 22, eight (six dogs), by their Happy Toby (Spokane—Nelly T.).

*Seacroft Otillia.* S. J. Rogers's (Avondale, N. J.) fox-terrier bitch Seacroft Otillia (champion Dominie—Brockenhurst Queenie), Aug. 1, four (two dogs), by Seacroft Kennels' Seacroft Bourbon (champion D'Orsay—Damson).

*Fay.* O. B. Hark's (Bethlehem, Pa.) cocker spaniel bitch Fay (champion Cherry Boy—Flash B.), July 7, four (two dogs), by his High Rock Lad (Black Duck—Sis F.).

### SALES.

☞ **Prepared Blanks sent free on application.**

*Ozark.* White bull-terrier dog, whelped May 14, 1894, by Yankee Dan out of Floss, by J. C. Mahler, Avalon, Pa., to Clarence Lake, Sewickly, Pa.

*Ruby Parker.* White bull-terrier bitch, whelped July 21, 1891, by Nelson out of Lady Dinah, by J. C. Mahler, Avalon, Pa., to L. Fabor, Allegheny, Pa.

*Otego.* White bull-terrier dog, whelped March 10, 1894, by Barney B out of Ruby Parker, by J. C. Mahler, Avalon, Pa., to G. Frieze, Pittsburgh, Pa.

*Aralon Boy.* White bull-terrier dog, whelped March 19, 1894, by Boaz out of Pittsburgh Carmencita, by J. C. Mahler, Avalon, Pa., to J. Werner, Clifton, Pa.

*Danichef.* Russian wolfhound, by Eberhard Pug Kennels, Cincinnati, O., to R. D. Williams, Lexington, Ky.

*Kaluga.* Russian wolfhound, by Eberhart Pug Kennels, Cincinnati, O., to R. D. Williams, Lexington, Ky.

*Jessie.* French curly poodle, whelped June 4, 1894, by Moughlow out of Queen Zip, by Eberhart Pug Kennels, Cincinnati, O., to J. W. Fletcher, same place.

*Little Dorrit.* St. Bernard bitch, whelped March 28, 1894, by Earl Douglass out of Fernwood Urania, by Belle Isle Kennls, Detroit, Mich., to J. M. Butler, Youngstown, O.

*Captain Jack.* Cocker spaniel dog, whelped March 21, 1894, by champion Bendigo out of Lady Gay, by Belle Isle Kennels, Detroit, Mich., to Mrs. H. M. Duffield, same place.

*Snowdrop.* St. Bernard bitch, whelped Jan. 2, 1894, by Earl Douglass out of Lady Martin, by Belle Isle Kennels, Detroit, Mich., to Wm. Livingston, Jr., same place.

*Cæsar Don II.* St. Bernard dog, whelped March 27, 1894, by Earl Douglass out of Lady Martin, by Belle Isle Kennels, Detroit, Mich., to Wm. Livingston, Jr., same place.

*Belle Isle Guard.* St. Bernard dog, whelped March 28, 1894, by Earl Douglass out of Fernwood Urania, by Belle Isle Kennels, Detroit, Mich., to A. Armstrong, same place.

*Swiss.* St. Bernard bitch, whelped April 20, 1894, by Sancho out of Russet, by Belle Isle Kennels, Detroit, Mich., to B. L. Short, Argo, Col.

*General.* St. Bernard dog, whelped Oct. 20, 1893, by Lidgerwood Bute out of Princess Nina, by Belle Isle Kennels, Detroit, Mich, to H. G. Sherrard, Grosse Point, Mich.

*Kent III.—Countess Addie whelps.* White and black ticked English setters, whelped March 26, 1894, by A. D. Fiske, Worcester, Mass., two dogs to F. E. Hall, Brunswick, Me., and a dog and bitch to O. England, Worcester, Mass.

*Earl Douglass—Lady Martin whelp.* St. Bernard dog, whelped March 27, 1894, by Belle Isle Kennels, Detroit, Mich., to P. C. Heald, Midland, Mich.

*King Vero.* St. Bernard dog, whelped March 4, 1894, by Earl Douglass out of Artilla, by Belle Isle Kennels, Detroit, Mich., to F. A. Rose, Waterbury, Conn.

*Tyrass.* Same litter, to B. Stroh, Detroit, Mich.

*Dog Puppy.* Same litter, to Rufli & Kehl, Sutton's Bay, Mich.

*Bruce of Orange.* Same litter, to O. E. Hinz, Detroit, Mich.

*Lord Clive.* St. Bernard dog, whelped Jan. 1, 1894, by Earl Douglass out of Dudley Juno, by Belle Isle Kennels, Detroit, Mich., to A. Robinson, Detroit, Mich.

*Lady Bet.* Same litter, to L. Saur, Detroit, Mich.

*Lady Clive.* Same litter, to J Taylor, Detroit, Mich.

*Don Carlos.* Same litter, to T. Pitts, Detroit, Mich.

*Blaz.* Same litter, to Miss Mary Gorman, Detroit, Mich.

*Don Cæsar II.* Same litter, to Wm. Livingstone, Jr., Detroit, Mich.

## ANSWERS TO CORRESPONDENTS.

*There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.*

J. G., Newark, N. J.—Yes, the prescription is good; of course, you can reduce the quantities, but keep the same ratio.

P. A. H., West Medford, Mass.—We cannot give you the pedigree of Sancho. There is a black cocker bitch called Topsey S., owned by Swiss Mountain Kennels.

N. S. P., New Brunswick, N. J.—You will find reliable cocker kennels advertised in our kennel business columns. Why not state your requirements in a "Kennel Special?"

Tim, Petralia, Ont.—You should certainly cure your setter of the chicken killing habit. If whipping will not cure him, after he has killed a chicken, tie the whole or what is left to the dog's collar under his jaws in such manner that it is impossible for him to get rid of it. Allow it to stay there as long as possible, and the setter will probably have such a surfeit of chicken that he will be unwilling to try another.

F. W., Yankton, S. D.—The black on your Irish setter would indicate a Gordon setter cross, and is a disqualification for show purposes. An Irish setter should be of a uniform rich red mahogany color; a little white will often appear on the chest and muzzle, but this is no sign of impurity, simply a throw back to original color, most of the original breed being red and white. Richardson, who wrote on the breed fifty years ago, said the Irish setter was "the genuine descendant of the original land spaniel." The origin of the Irish setter is so uncertain that we can give you no definite explanation further than it is considered by many to be the purest and oldest of the setter family. You will find much interesting information on this breed in Lee's "Modern Dogs," (Sporting) for sale at this office. Price, $6.

J. C. McP., Sunshine, Washington.—My seven-months-old Irish setter bitch appears to be always lively when playing with another dog and appears to be in good health to a casual observer, but her coat is harsh and staring, and looks ragged; the hair came off under her lower jaw, also a patch came off of one of her forelegs and another patch about four inches square from her side. I am house-breaking her, but she does not appear to take any interest in the proceedings, and appears listless and seems timid, although I know that she is not the least bit backward. Ans. Treat for worms. Wash once a week in a solution of creolin (1 to 100). Give the following powders:

Mag. sulph.....
Sulph. precip.....
Pot. bitart.....ää ʒi

Mix and divide in twelve powders. Give one morning and evening mixed with the food.

# Hunting and Coursing.

## FIXTURES.

FIELD TRIALS.

Oct. 23.—New England Beagle Club, at Oxford, Mass. W. S. Clark, Linden, Mass., Sec'y. Nominations close Oct. 1.

Oct. 29.—National Beagle Club. Geo. Laick, Tarrytown, N.Y., Sec'y.

Nov. 5.—Brunswick Fur Club. Bradford S. Turpin, Dorchester, Mass., Sec'y.

Nov. 7.—Northwestern Beagle Club. Louis Steffen, Milwaukee, Wis., Sec'y.

### The American Coursing Board.

*Editor Forest and Stream:*

There were some who contended that the American Coursing Board, when organized last fall, would founder. They contended that certain members would "run the thing" to suit themselves. Were they right? At the present writing I should be compelled to say that they were. Certain it is that matters are not conducted in an open-handed, fair way. For example, to illustrate how the certain members are trying to suit things to their own convenience I would cite the following and go back a little.

Shortly after the organization of the board, the rules governing coursing were changed to some extent, the principal change being that made to Rule 18. No provision was made for the holding of meetings of the board. Several other matters were acted upon, such as the election of officers, etc. All voting had been done by mail.

On May 9 T. W. Bartels, one of the members from the Altcar Club, made a motion in writing, which was duly seconded by J. Herbert Watson, and sent on to the president, Mr. Lowe. This motion instead of being submitted to the members for action or for their votes, was pigeon-holed until some method could be devised by the members who persist in "running the board" to counteract it. The method finally decided upon was then made known, after two months of study. It came in the form of an amendment offered by Dr. Q. Van Hummell of Indianapolis, which has just been submitted to the members for their decision. The amendment bears date July 10, two months after the original motion was made by Mr. Bartels. Strange to say, the original motion was also submitted to the members with the amendment. Now, why was the original motion withheld for over two months? Why was Dr. Van Hummell allowed to make an amendment to the original motion before the original motion had been submitted or put? Is it not contrary to all parliamentary proceedings? Why offer the amendment at all, when a negative vote on the original will leave the question of rules, constitution, etc., just as they were adopted last fall, and just as the amendment would leave them if carried. It is apparent to any one that the motion was amended without any right, simply for the purpose of securing a "delay." They know the change in Rule 18 (and this seems to be Mr. Lowe's pet rule), will come sooner or later. They want to stave it off as long as possible, until after the fall meets, at least, and longer if possible. This is their whole purpose.

By what right does the president withhold a motion properly made and seconded for more than two months, and when he finally puts it, by what right does he put an amendment with it, which has not been properly offered?

As to whether or not any change is desirable, is not the question. The members can decide that by voting on the motion. The questions before us are: "Is the American Coursing Board being conducted in a proper way," and "Are the members of the Board possessed of any rights which the president of the board respects?"

If the board is to be "run" in the future as it has been in the past, you can depend upon it that its usefulness will never be made apparent. Clubs that are now represented on the board will decline to be governed thereby, and will withdraw their allegiance. Let the matters coming before the board be treated in a straightforward and prompt manner and every courser east of the Rockies will lend his support to the board; otherwise not. L. F. Bartels.

Denver, Col., Aug. 3.

### Northwestern Beagle Club's Trials.

Milwaukee, Wis., Aug. 3.—*Editor Forest and Stream:* The Northwestern Beagle Club's field trials promise to be the greatest event of its kind ever held in America. Last year's entries will be more than doubled, and about $200 in cash and about the same amount in other valuables will be distributed among the winners. Louis Steffen, Sec'y.

## HUNTING AND COURSING NOTES.

The argument as to whether our beagle men are breeding dogs that are good both for bench and field, is an interesting one, and the defenders of the pure article have come to the aid of their "merrie houndes" in gallant order. But many men make many experiences, and the beagle men should not rest here, for the "rabbit dog" hunters have fenced themselves round with some pretty strong opinions, the outgrowth of practical experiments. A personal letter from a prominent field trial judge probably discloses a widely spread feeling when he says: "I amused myself yesterday by writing a reply to Messrs. Ellis and Robinson, who have been attacking the beagles, and amused myself this morning by tearing it up. What is the use of defending the beagle against an attack from a man who owned *one* and who condemns the whole breed because he frightened the pup in its youth and made it gun-shy; or against a man who appears to hunt only for count? If he gets a lot of rabbits the dog is good, few rabbits the dog is bad. He ought to get a ferret and a net and give up hunting with dogs altogether. The trouble is neither Ellis nor Robinson have seen any good beagles. 'Agamak's' letter was right to the point, and makes an excellent reply to Mr. Ellis."

It is for the very purpose of overcoming this feeling of "what is the use" that Forest and Stream affords space for discussion on this subject. Beagle breeders should use every endeaver to overcome this feeling that the pure bred or show beagle is worthless in the field, a sentiment that evidently largely obtains in some localities, and especially among those hunters who can only keep one or two hounds.

* * * *

It is unfortunate, in a sense, that the three beagle trials this year follow each other so closely, as we know of some kennel owners in the East who had an idea of running at the Northwestern Club's trials, but the home trials will probably afford them all the running they can spare time for this year. There are, however, lots of good beagles in the South and West and beagles, too, owned by hunters who are not affected by a striving for fancy stock, therefore we can quite sympathize with Mr. Steffen in his rosy anticipations.

* * * *

Messrs. Appleton and Schellhass went down to Hempstead last week, and with Mr. A. D. Lewis, who lives in that neighborhood, looked over the country where it is expected the N. B. C. trials will be held. The committee is reported to be satisfied with the outlook, especially as they had scarcely walked off Mr. Lewis's lawn when they spied a hare in its form, and as Mr. Lewis earnestly denies having "salted" the ground, we must take it for granted that there will be no lack of game; and from what we know of the country, no better place could be chosen round New York. The meeting on Aug. 9 will settle the question.

# Yachting.

## FIXTURES.

AUGUST.

9. Rochester, Club Sail, Charlotte, Lake Ontario.
9. Interlake Y. A., Cruise, Lake Erie.
10. Manchester, Ch. Pen., Mass. B.

25. Cor. Phila., Sweeps, Del. River.
25-26. San Francisco Cor., Cruise, California City.
27. Schoodic, 3d Cup, St. Andrews.
30. Rochester, Club Sail, Charlotte, Lake Ontario.

As the contests become closer each year, the interest in international yacht racing becomes keener and more widespread, and even the tremendous enthusiasm that followed the victories of Puritan, Mayflower and Volunteer is exceeded by the intense interest with which the races of Vigilant and Britannia are followed on both sides of the water. We quote this week a number of extracts from American journals, which, we fear, are fairly true expressions of current American opinion. A few of them echo something of the manly tone of the letter which we print elsewhere; but the great majority continue to deny a fair meed of praise to the British yacht, and seek comfort in more or less flimsy excuses, or in abuse of all connected with the American craft; the Goulds are called snobs, Mr. Herreshoff is an ignorant meddler, Captain Haff is too old and the crew are lubbers. We publish these excuses and complaints (and we might easily treble their number), not because they are true or pleasant to read; but because, we are sorry to say, they show very clearly the spirit of the American press, large and small, in all parts of the country. It is these same journals which were responsible for the extravagant claims of universal supremacy for the various Cup defenders; which have dilated at length on victories won over the inside course on New York Bay, and which have ridiculed the excuses then made by the vanquished on the score of light winds, tides, local conditions, climatic influence and strange surroundings. Now that the odds are reversed and defeat has come, they are so blinded by it that they not only deny that it is a defeat, in withholding from Britannia all credit for her victories, but they have fallen upon their old idols, the designer of Gloriana and Vigilant, and the skipper of Volunteer and Titania, and most illogically blame them for being beaten.

The tone of the British papers, on the other hand, is not only more dignified but more generous, the good points of Vigilant's work being freely conceded. We have not space to quote from the many Scotch and English papers which are now following all the races closely, but the whole spirit of the British press is eminently fair to the American yacht and to all connected with her.

We are heartily in sympathy with the letter of our correspondent Mr. Connolly, as a fair, manly and American view of the whole matter. An American who undertakes such a task as that assumed by Mr. Carroll last year and Mr. Gould this season, who does it in good faith and at his personal expense, is certainly entitled to the sympathy and good will of Americans, whether he win or lose. Had the owners of the old America acted according to modern ideas in staying safely at home awaiting a challenge in which all the odds should be on their side, what has become famous as the America's Cup would have been forgotten years ago among the other shapeless pots of some old-time British racing man.

We do not wish to depreciate the spirit shown in the many successful races in defense of the Cup, but we would not for a moment place it beside the spirit of Mr. Carroll and Mr. Gould in taking Navahoe and Vigilant across to-day as America was taken nearly fifty years ago.

There is no denying that, being able, through the possession of the *premier* yachting trophy of the world, to have all races at their own doors and with the odds on their side, American yachtsmen have developed a disposition to make the most of these advantages, to let others do the challenging and ocean voyaging, and after claiming the championship of the world on each occasion on the strength of two or three victories in home waters, to lock up the champion in as much security as that which attends the Cup itself.

The whole trouble with Mr. Gould is not that he is the son of his father, that he has too much or too little money, or that he has or covets this or that social position, but that he alone, of American yachtsmen, has dared to take the latest "world's champion" out of the glass case and cotton wool in which she was practically packed after defeating Valkyrie, and has put her to a test which will show whether she is really the champion of the world, or merely of New York.

It may be urged that American yachtsmen were, by right of many successive victories, in a position where they might with propriety rest on the defensive alone, and this we are willing to admit for the sake of argument; but when a man of more than common spirit comes forward and is willing to assume the great expense, responsibility and risk of failure that accompany an offensive expedition, the least that he can expect from his countrymen is fair play.

The opening race of the New York Y. C. cruise, for the semi-centennial cups, on Monday, off Glen Cove, was marred by a sad mishap. Unmindful of all that has lately been said in its praise, that strong American breeze which makes yacht races so decisive and exciting in our waters, was absent on Sunday and Monday, and those yachts which reached the rendezvous, either by good luck or a friendly tow, laid all day motionless. The committee could not muster up such a paltry 6 or 8-knot breeze as plays about the Clyde, and not until 4:15 P. M. was a start attempted; just before the club steamer was obliged to leave for New York. The race was a drift, finished late at night. On Tuesday the fleet started in a light air for Morris Cove.

### Vigilant.

The following report, from the London *Times*, gives in detail one of the most interesting races sailed between Vigilant and Britannia, in which the American yacht acquitted herself well, though in hard luck at the last. The performances and maneuvers of the yachts are noted more fully than in the first cable dispatches, and the story gives a far better idea of the relative merits of each. The race is that of the Royal Munster, on July 23:

The Britannia and Vigilant, as well as the Carina, had to be towed from Kingstown to Queenstown by Mr. Gould's steam yacht Atalanta in order to be in time for the Royal Munster match yesterday. The two big cutters had really their first deep water match yesterday, as the course, except in coming home to finish, was outside Roche's Point and quite open to the North Atlantic. The wind was strong in the morning, but off shore, and the water was smooth. Vigilant started with a jib-headed topsail, but Britannia was hardy enough to set a jackyardtopsail. There was a piping breeze and a very fast display of sailing on the two first rounds, and Vigilant gave an unmistakable display of her quality. The race, in fact, looked like a very decisive win for the American, but the wind fell light when she was holding a lead of about 8m., and she was passed and beaten, as shown in the appended detailed account of the race. In an exceptionally heavy squall Britannia tore away from her opponent, and those who have seen the vessels in all their races were hardly prepared for this display. It was another exciting race, and Vigilant's traditional illfortune stuck to her. Britannia had good luck, but did some grand sailing after getting the lead. The Royal Munster Club organized what proved to be one of the finest matches that the two vessels have sailed, and everything was managed in a thoroughly practical way.

Match, open to all yachts over 40-rating. First prize, cup, value £60 guineas; second, £26. Course from off Roche's Point, round flagboat off Poor Head, Daunt's Rock Lightship, and flagboat off Roche's Point; three times round. Y. R. A. allowance for 50-mile course:

| Yacht. | Rig. | Rating. | Owner. |
|---|---|---|---|
| Vigilant | Cutter | 165 | Mr. G. J. Gould. |
| Britannia | Cutter | 152 | The Prince of Wales. |

A fine smooth-water breeze from the north-northeast was blowing off the land when the match began at 11 o'clock, with a broad reach to the Poor Head flagboat (5½ miles), and at gun fire the Prince of Wales's cutter was reaching along on the weather bow of Vigilant and crossed the line with a lead of 16s. Vigilant was carrying a larger flying jib than Britannia, and off Lord Fermoy's mansion she had closed up. Vigilant showed the higher speed as the wind came harder by drawing clear through to leeward when two miles from the eastern limit of their course, and with a staggering breeze, she went roaring on, the breeze at last laying on too stiffly for the big jibtopsail. Britannia carried hers, but was being outfooted, and the times at which they gybed round at Poor Head mark were: Vigilant 11:29:50, Britannia 11:30:30. Sheets were well flowing when they set on their course for Daunts Rock Lightship, which bore west half south (5½miles). Vigilant going thus free reset her big topsail, but Britannia kept hers unaltered. It was a plain sail and a fast one in the hard wind and fair stream and tide, and the lightship was luffed round thus: Vigilant 11:55:12, Britannia 11:56:39. The wind was straight on end going in for the flagboat off Roche's Point, and Vigilant cast round to the port tack, while Britannia held on toward Cork Head on the starboard. This was perhaps the wrong way, but she was compelled to cross tack with her adversary. It was evident that Vigilant had made a little when she tacked ahead of her rival, and Britannia took another trip in shore, but was yet further astern when she came off. Vigilant kept making something on every board, as she always went further to the eastward and had the ebb each time helping her under the lee bow, Britannia in all her shore casts having the stream setting on the weather beam. Both made a nice clean fetch for weathering distance, and bore away round the flagboat with jibtopsails going up. The timing of the first round was:

Vigilant.....12 35 40 Britannia.....12 39 28

They went ploughing away again for the Poor Head markboat fair along the wind. The water kept smooth, but a neutral tint showed an increase of wind, and Vigilant's big jibtopsail had to be handed when she was two miles from the eastern mark. The 2½ miles were covered in 25m., the timing when they gybed round the flagboat being: Vigilant 1:00:38, Britannia 1:04. The wind was fair on the starboard quarter and not so fresh as on the first round, and Britannia prepared for its following further aft by dropping her spinnaker boom. The running sail was not wanted, however, and when they hauled up and came on a wind at Daunt's Rock Lightship the timing was: Vigilant

1:28:28, Britannia 1:33:08. It was a dead beat in again to the flagboat anchored off the harbor mouth, but the tide had eased. Vigilant stayed to the port tack, while Britannia did not break from the starboard, on which she winded round the mark. They again worked opposite ways, and Vigilant each time got a luffing streak on the starboard, while Britannia seemed to be headed off. As they came out of Ringabella Bay the breeze got a little lighter, and Vigilant set a small jibtopsail, but Britannia did not want any flying canvas. The leader tacked close round the Roches Point flagboat, but Britannia stood further to get round. There was weight on some of the off-shore puffs, and the yachts were fairly roaring along in the heaviest of them. Vigilant sailed the faster and held a lead of 7m. 8s. when she gybed round the mark, the timing being:

Vigilant.....2 35 38 Britannia.....2 42 44

Sheets were well off, and as the breeze continued to follow spinakers were set. The wind kept falling and, after running about two miles, Vigilant got into a calm. Britannia brought up the expiring puff of the easterly breeze, and with main boom to starboard and spinaker full she ran past her adversary into first place a great lift and a fine piece of good fortune. Vigilant, which had just before gybed for a southerly puff, got her boom back again and hauled across Britannia's wake, getting the same wind and running up level. Britannia then got a taste of the southerly wind to leeward before Vigilant started off in a magical manner, and got on clear ahead before Vigilant was thoroughly awake. The wind came with weight at last, and Vigilant luffed round Daunt's Lightship full of life. The timing there was:

Britannia.....3 25 15 Vigilant.....3 26 00

The wind gatherod strength so quickly that sheets were not trimmed in when a tearing squall was on them. Britannia had never before shown so much weather bilge, and it was perhaps well for Vigilant that her jib-headed topsail had not been shifted with the light wind for the jackyarder. The vessels were a little eased by sheets being off, but they were practically struck down on their beam ends, Vigilant having broken water washing on deck up to the skylights. It was a long drawn-out squall, and for the first time in a really hard wind Britannia sailed faster than her adversary. Both were fearlessly sailed and what they could not carry they had to drag. It was astounding that Britannia with jackyarder aloft came scathless out of the squall. After the blow the breeze steadied easterly and gave a clean reach in to Roches Point and up the harbor home, and Britannia was now quite equal to keeping Vigilant in her wake. They had lulls and puffs all the way, but the breezes, if unsteady in strength, kept true in direction, and the home line was sailed without starting tack or sheet, jibtopsails having been got on after the squall had passed by. After passing under the foot of Fort Carlisle, Britannia got away and sailed the line a fortunate winner with a lead of about ten lengths and a difference in her favor of 45s. in time. The finish was:

Britannia (winner).....4 36 15 Vigilant.....4 37 00

The accompanying table shows in convenient form the exact work of each yacht up to the fifteenth race, of Aug. 6, the score standing 10 wins for Britannia and 5 for Vigilant. The particulars are compiled from a number of different reports, and are essentially correct; the nature of the weather, wind and sea are indicated as closely as possible.

---

The best summing up of the earlier races which we have thus far seen is the following by W. E. Robinson in the Boston *Globe*, a partisan of Vigilant, but withal fair and judicial in his estimate. We may note as a matter of interest in this connection, that the Glasgow correspondent of the *Globe*, "Spinaker," who is now so energetically "rooting" for Vigilant and America, even going so far as to insinuate that Britannia's mishap in the race of July 17 was but an excuse for withdrawing from the race after she was beaten, is the same gentleman who achieved fame in this country on the occasion of Thistle's defeat, by decrying a windward and leeward course and calling for a "fair" trial over four-sided courses. Evidently he has seen the grievous error of his way since then. The *Globe's* summary is as follows. We have omitted the *Globe's* table, our own being later and more complete:

Whether or not the Britannia is winning her races over the Vigilant on "flukes," or whether or not she is really a superior boat, are the questions which American yachtsmen are most frequently asking in these days. "Britannia won by a fluke," is so common a characterization of a loss for Vigilant that it seems well to look into the matter, with a view to ascertaining the real facts in the case. A review of the Vigilant's races until she sailed from Ireland for Penzance may help in this respect.

And in making this review the accompanying table may be of assistance, premising that the courses are of about 50 miles in length, and that in order to cover that distance they must be sailed two, three or four times around. Though some of these courses are partly in fairly open waters, the triangular course at Queenstown, for instance, it should be remembered that they are far from being the big triangular or windward or leeward and return courses in the open ocean which could be obtained off Sandy Hook, Newport or Marblehead, and are correspondingly to the disadvantage of a boat built for open courses and long rather than short legs, as well as plenty of room to maneuver.

The wind at the start of the first race off Hunter's Quay in the Clyde was fresh from the south-southwest. The first leg was a beat to windward, and although the Vigilant was to leeward and astern of the Britannia in crossing the line, she steadily pulled out from under the Britisher's lee, footing faster and pointing higher. Britannia could not hold her weather position, and at the first mark the Vigilant had a lead of a good minute and a half. It was this splendid work which upheld the hopes of her friends under subsequent defeat, and gave them reason for predicting great things of her in a good and steady breeze.

Vigilant's gain was not so marked in the other legs, but at the end of the first round she was almost her allowance of three minutes ahead. The wind was growing lighter, though, and clubtopsails were set in place of the working topsails previously carried. Vigilant again gained in the windward work and was considered a safe winner until on the last leg she ran into a calm, while Britannia, taking a course nearer the middle of the Clyde, caught the best of a shift of wind, pulled up on and passed the American and crossed the finish line a bare 30 seconds ahead.

"Spinnaker" says the Vigilant was badly piloted, but whether it was Britannia's luck or better local knowledge of winds which gave her the advantage, the fact remains that she was beaten while the wind held true, and that all well posted yachtsmen at once admitted the Vigilant's superiority in windward work in a fresh breeze. Against this race the charge of "fluke" can justly be laid.

In the second race over the same course the wind was light at the start. Britannia secured the weather berth in crossing the line, and the Vigilant could not pull out from under her lee in the light air. Later, in the work off the wind, she could not be held back, and in a freshening breeze cut in ahead of the Britannia at the last mark. The windward leg to the finish was only a short one, but the Vigilant, with her wind clear, pulled out a lead of a minute to the finish line.

No charge of "fluke" can be laid here. The race was fairly sailed, and the Britannia for the first time showed those light weather qualities which were so unexpected to Americans, and which were destined to win her more victories. She had the advantage at the start and held it until in the freshening breeze the Vigilant proved the speedier.

And in this connection, and in view of the fact that much fault has been found because of the good starts generally obtained by Britannia, it may be well to note that quickness of the Britannia in stays or in whirling in any desired direction is a great advantage to her in the maneuvering for a start. Vigilant was balked more than once in the Cup races on this side by a quick turn of Valkyrie on her heel, and doubtless the same thing has occurred with Britannia.

---

The third race was what in America would be known as a "drifting match," and was decided in a way different from any known in America, but very common abroad. The course was the same as in the other races, twice around, and the yachts were stopped at the end of the first round. The race would have been declared off on this side of the water, where a time limit is the rule in order to insure something more than a mere drift, and in no race under similar weather conditions, save that for the Goelet cup, where no time limit is placed, would the Britannia have been declared a winner.

Something of the speed of the boats may be judged from the fact that it took the Britannia within five minutes of seven hours to cover the 25 miles. "Fluke" cannot be charged, but it can be truly said that drifting matches are no tests of a boat's ability, and that the British practice of calling a race finished when half the course has been covered, does not commend itself to American racing yachtsmen. The Britannia proved the best "drifter," and besides being helped by knowledge of winds and tide. The Vigilant was nearly 10 minutes behind, but times tell little of the story in such a contest.

---

The fourth race appears to have been fairly won by Britannia on her merits as a light weather boat. That the race was a slow one is shown by the time taken to cover the 50-mile course, nearly eight hours. The wind was light and "streaky," but Vigilant had her fair share of what was going.

The fifth race was much a repetition of the fourth, though over a different course. It took the Britannia 8h. 10m. to cover 50 miles. Vigilant showed speed when an occasional freshening of the breeze gave her a chance, but she again proved no "drifter" and was fairly beaten under such weather conditions as were afforded.

The sixth race was in light weather until well toward the finish, when, in a freshening breeze, Vigilant showed the speed of her first race, and reduced a lead of nearly 7m. to one of 1m. 40s. British yachtsmen were again confirmed in their opinion of her abilities when a good wind was stirring, while Americans who still had faith in the boat in spite of discouraging defeats, found much to encourage them in the showing she had made.

This race closed the Clyde circuit and the Vigilant crossed to Ireland after having spars and sail reduced so that her allowance to Britannia was only 1m. 10s instead of 3m. The Clyde racing was unsatisfactory so far as winning was concerned, but it was valuable experience for the men in charge, and the racing which followed shows that boat was in much better trim as a result of it.

The writer has not been one of those who offered constant excuses for defeat, but he knew that the Vigilant was not in her best trim in the Clyde races and so predicted a better showing for her later on; a prediction which seems to have been justified by the course of events.

---

In much better trim than when on the Clyde, the Vigilant met the Britannia on Belfast Lough, July 16, in their seventh race. Capt Haff, by reducing his headsail, had got rid of the lee helm, which must have bothered him some, and the improvement in windward work which resulted from it was noted by all the correspondents. The race was three times over a kite-shaped course to make the 50 miles.

In a piping southwesterly breeze the Vigilant led on the first round by a minute and a half, having done her best work on the windward legs. She lost something on the second round by tacking short of a mark, but put an additional three-quarters of a minute to her lead in spite of it. Barring accidents she looked a winner even if she had to give her old allowance.

But now came the "fluke" with which the race may justly be charged. The wind shifted to northwest and flattened to almost a calm. Britannia caught a streak of air and passed Vigilant. Only once again did the latter have a chance, and that was in a three-mile beat to the finish in a lee rail breeze that came piping in after the calm. In this she reduced a lead of 2m. 10s. to one of 1m. 33s., and again did she show her superiority at windward work in that sort of weather.

---

For the eighth race on the following day, over the same course, there was a spanking westerly breeze and a choppy sea. Vigilant, as was expected, took kindly to the weather on all points of sailing, and romped away from Britannia to a lead of 2m. 46s. on the first round and 5m. 30s. on the second. In the first leg of the second round the lead was increased to nearly 7m., but here the Britannia broke the jaws of her gaff and withdrew. Vigilant housed her topmast and took things easy on the way home, but as the wind held true and steady the value of her victory over Britannia was conceded, and none but cavilers called it a "hollow" one. It was the American's first win, and no one begrudged it to her. It put confidence into the hearts of her supporters, and doubtless into those of her owners, skipper and crew. Her run of ill luck seemed to be broken, and America was justly happy.

But the happiness was but brief. Calms, a thunder shower, a squall, rain, drizzle, fog, streaks of sunshine and at last a breeze, was the weather for the race at Kingstown, the ninth meeting of the boats. Britannia's light weather qualities came into play, but in the freshening breeze at the finish Vigilant reduced a lead of 4m. 15s. to one of 1m. 15s.

---

The tenth race, sailed July 21, over the Kingstown course, also a kite-shaped one, three times around, was in much such weather as encountered in the Clyde racing, but Vigilant had the luck and came out ahead in just such a slow and inconclusive race as she had before been more than once beaten in. The only redeeming feature of the race was the usual spurt of the Vigilant in a slightly better breeze at the finish. The time was slow, the Vigilant taking nearly eight hours over the course.

---

To Queenstown and a fairly open course now went the cutters, and in the eleventh race over a triangular course, three times around, the Vigilant lost by a "fluke." At the finish of the second round, in a good clubtopsail breeze, she was six minutes to the good. A shift of wind and a calm deprived her of it, and although she picked up on the last leg of the triangle, she was forty-five seconds to the bad.

Consolation came, however, in the race on the following day, when in light to moderate airs the centerboarder fairly beat the keel at the latter's own light-weather game. Getting away in the lead, she held her advantage throughout and finished 4m. 35s. ahead. No special favor of the wind was hers, and her victory was most handsomely won in spite of the handicap of broken jaws of the gaff in the latter part of the race. A hasty lashing enabled a finish, but it was a close call.

Repairs to the gaff could not be made in time for the next day's racing, so Britannia took a cup by default, sailing half the course, and then both boats left for Penzance in tow of the Atalanta. Honors had been easy between them in the races in Irish waters, for each had a record of three races and three defeats.

---

Looking at the races in the view of this careful summary, the conclusions are almost inevitable that "flukes" were in favor of Britannia every time; that she is the best light-weather boat; that the Vigilant has been improved in trim for both hard and soft winds; that in anything from a good clubtopsail to a working clubtopsail breeze the American is the better, and that in windward work in almost anything above a zephyr, so far as she has been tried, the successful Cup defender is Britannia's superior. British opinion confirms this, and in the face of its disparagement of Vigilant, or doubts as to her ability to win the majority of her races, seem decidedly uncalled for. Later developments may change the complexion of things, but there is little indication of it so far as Britannia is concerned.

---

### A Famous Racing Skipper.

THE statement has lately been going the rounds of American papers, that Messrs. Gould have secured the services of the celebrated pilot Draper, for Vigilant in her British races. The Draper mentioned is not a pilot, nor is his name Draper; he is, in fact, Thomas Diaper, a well known yacht skipper of Itchen Ferry; who was in this country for a time in 1885, coming over to take charge of the cutter Ileen for Mr. Arthur Padelford. Diaper is best known by the nicknames of "Dutch" Diaper or "Tommy Dutch." He was engaged by Mr. Carroll last year to pilot Navahoe in her races, being thoroughly at home in the waters about Cowes, as in fact on all British courses, and after Capt. Barr left the vessel, he sailed her for a time. He also sailed the first Valkyrie for Lord Dunraven in 1889. The following history of his racing career, from an exchange, is interesting reading:

Diaper was originally christened Tom, but few in England know him other than as "Dutch" Diaper. His yacht "education" was acquired as general knockabout on some of the early crack yachts that were commanded by Itchen Ferry men. He was not the first sailor of the family by any means. He used to say himself that there were more sailors arose from his family nursery than there did gentlemen. Diaper sailed for five years as mate aboard the principal yachts that were under the control of Itchen Ferry men, and it was not until 1872 that he secured his first pennant as he puts it. This was his command of the 40-ton cutter Norman, a vessel he afterward made famous. She was built in 1872 for Major Ewing by Dan Hatcher. Ewing was then recognized as the most enthusiastic yachtsman of Great Britain, just the same as the Prince of Wales or Lord Dunraven is to-day. Ewing had the racing schooner Gwendolin, but the Norman polished off that reputation for devotion to aquatic sport that the Gwendolin began.

The popular class at that time was the 40-ton class. The yachtsmen abroad had had about seven years of that class then, and it had developed and improved with time, beginning with Niobe, the first queen of the class, so that when the Norman came out there were the Alcyone, Muriel, Kilmeny, Foxhound and Glance to beat.

The Norman's maiden race was in June of that year, off Dover. There was a fierce wind and an ugly sea for that season, and the Norman, under Diaper's handling, showed up wonderfully well. She was beaten, of course, but she defeated some of the cracks in the matter of both elapsed and corrected time. One of these was the Fiona, the crack yacht of the day; the Kriemhilda, a new 100-tonner just turned out by Ratsey, and the giant Oimara, 165-tons. The weather was so bad that all the boats save the Oimara and the Norman gave it up, and the 60-footer pressed the big boat quite hard at the finish. Two months later Diaper's splendid handling of the little beauty brought her within fourteen minutes of the then famous Arrow and close on top of the Vanguard and the Garrison in the R. Y. S. regatta. She saved her time in this race and received first prize, the day being one of those provoking ones when strong breezes are interrupted by inexplicable lulls and calms and a man needs patience and wisdom to sail his boat to advantage.

Diaper and his Norman made their biggest impression in 1871, however. The class was then perfect, Norman, Britannia, Bloodhound and Myostis were in thorough shape, and all four so evenly matched that good handling alone or a big piece of luck decided the prize.

Superior speed, coupled with admirable handling, soon settled the matter in favor of the Norman, and she led her class with ease that year. She had to fight hard to do it, though. At the R. C. P. Y. C. regatta off Dover, in a double reef breeze she squandered her fleet.

The sea was so heavy that the whole of her starboard bulwarks were washed away. In July, at Kingstown, the Norman, Britannia and Myostis raced into the harbor on the first round so close together that the one mainsail would have covered them, but Diaper's skill took his craft ahead and he beat the Bloodhound five minutes.

The following year, Charles and Dan Diaper, his brothers, assumed command of the Myostis and Britannia respectively, but that fact did not frighten "Dutch" any, and the first day of the season at the Royal Clyde, he screwed the Norman up to windward at the finish and won by six seconds.

At the Royal Victoria he repeated and improved upon this. Diaper's "indomitable perseverance" came out strong in the R. Albert in 1876, when six forties came to the line. They were Bloodhound, Britannia, Myostis, Coralie, Daphne and Christina, the latter a long, lean racer that was more properly known by the name of "the Main Spinnaker Boom," and which reached tremendously fast. Myostis was then in the hands of O'Neill, whose name has since been identified with Cuckoo, Samona and Irex. All the rivals were doing well, the Myostis and Norman leading close together at the Lepe buoy, when the Olga, a 265-ton schooner, and the Gertrude, a 68-ton yawl, got mixed up with them, each sailing a different race.

The Myostis bore up under the yawl's stern and just took the work from the Norman, which was ahead of both, but which the Gertrude was at that moment engaged in running, and so successfully that she ran her bowsprit clean through the Norman's mainsail, tearing it badly

Diaper's grit told. He cleared his boat, losing a lot of time of course, hung on to the race, and worked wind, tide and yacht so well that he won the race, finishing three minutes twenty seconds ahead of the Myostis. Later on he beat the Neva, Coralie, Thane and Glance.

In 1884 he took command of Foster Conner's new sixty, the Marguerite, which was built to lower the colors of Watson's Marjorie. The Marguerite did not repay him for the trouble he took on her, however, any more than did the Ileen on this side, both lacking speed. Diaper came to this country with the Ileen in 1885.

Of nine years' racing in the Norman, from 1872 to 1881, she not being fitted out in 1879, Diaper started her 174 times and won 94 prizes. His recent experience with the Valkyrie and Navahoe is fresh in the minds of yachtsmen.

## Vigilant—Britannia.

PRIVATE MATCH.

*Saturday, Aug. 4.*

The race at Penzance on July 28 ended the first part of Vigilant's foreign racing, and though she has been unsuccessful a very liberal allowance must be made for the fact that in this preliminary racing she was undergoing that working up which is necessary in new waters and after a long sea voyage. As the result of the four weeks sailing and racing the yacht is apparently, as she should be, in good condition and her crew are more familiar with the work of racing in British waters. With the race on Saturday she begins a new series of sharp and decisive racing, and if she be successful from this time out she may wipe away entirely the unfortunate record of the Clyde and the Irish coast. The great advantage which Britannia held a month ago, of perfect preparation, as opposed to a yacht just fresh from a long sea trip, has largely disappeared, as Vigilant has been worked up to racing form, and a fairer test of their true merits is now possible. From this time on Satanita becomes a factor, but she is likely to have little effect on the final total of prizes, except in very rough water, and in making a third boat at the line in starting, as well as in picking up flukes when the other two combatants are luffing each other, or similarly occupied. Valkyrie, after all reports of refitting, etc., was sold at auction on Aug. 2 at Glasgow, the hull bringing but £670, or less than the value of her lead ballast.

There was much disappointment at Falmouth and Plymouth over the departure of Vigilant without entering the races at these ports, but under the circumstances there was nothing else to do, as some little time was absolutely required for preparation before the beginning of the Cowes races. Vigilant left Falmouth under sail on July 30, and reached Southampton at noon next day, where she was at once docked. The bottom was cleaned and polished and some further alterations made to the sails, and on Aug. 2 she sailed for Cowes, without yet having been measured, but was recalled by a message from Mr. George Gould, ordering that she should be measured at Southampton, in the dock. This was done, with the result that her rating was 168.5, calling for an allowance to Britannia of 2m. 4s. in a 50-mile race, instead of 1m. 10s. as estimated. The official figures of Vigilant, Valkyrie and Britannia as measured this year by the Y. R. A. rule, are as follows:

| | L.W.L. Ft. | S. A. Sq. ft. | Rating. |
|---|---|---|---|
| Vigilant | 87.25 | 11,588 | 168.5 |
| Britannia | 88.24 | 10,395 | 152.87 |
| Valkyrie | 86.80 | 10,628 | 153.75 |

Vigilant's l.w.l. in the Cup races last fall was but 86 19, Valkyrie's being 85.50. Vigilant was measured with a crew of 45 men, while Britannia was measured with 36 men. Britannia took in two to three tons of ballast after the Penzance race, setting her by the stern and increasing her l.w.l.

The race of Saturday was a private match made by Mr. George Gould and the Prince of Wales, for a cup costing $500, to be paid for by the loser. The course was from off the R. Y. S. house, Cowes, around the Lepe Buoy, then around the Warner, and back to Cowes, sailed twice. From the starting line off the Prince Consort Buoy to the Lepe Buoy is just over 2½ miles; from the Lepe Buoy to the Warner is full 12 miles, and from the latter mark to the line is just over 9½ miles, the allowances being for a 48-mile course. On board of Vigilant were Mr. George Gould, Col. Paget, representing Britannia, Lord Lonsdale and Mr. C. Oliver Iselin. Com. Morgan sailed on Britannia as the representative of Vigilant. With Capt. Haff and Capt. Jaffrey was Capt. Tommy Diaper, the pilot.

The day turned out rainy and cloudy, with a strong S.W. wind shifting toward the south at times. An immense fleet of yachts was in attendance in Cowes Roads, and the town was full of visitors, including many Americans. The start was made at 10:30, the yachts carrying working topsails, both tacked on the line after coming up from the westward, Vigilant crossing first, with Britannia some distance off her weather quarter. They started on port tack, holding on for some time until well up with the Hampshire shore, Britannia tacking first and Vigilant immediately following. On the next leg they stood clear across the Solent to the Gurnets, Britannia again tacking first. A short leg out to mid-channel brought them to the buoy, Vigilant weathering it easily, while Britannia overstood a little. The times at the Lepe Buoy were: Vigilant 10:55:07, Britannia 10:56:00. Vigilant had gained a little since the start.

The booms swung over to port and sheets were slacked off, spinaker booms being lowered and jibtopsails set, but after passing Cowes and hauling up a little for the course to clear the Noman Fort and the many buoys, the spinaker booms were swung in. In passing Cowes the two were timed as 1m. 10s. apart, and off Ryde Pier this distance had increased to 4m. 40s.

With the wind a little more to the south sheets came in as they neared the Noman Fort, and on the last mile to the turn, after passing that point, the yachts hauled up to suit the new course. The times at the Warner Lightship were: Vigilant 11:50:46, Britannia 11:53:33.

The course from the Lepe Buoy had been a reach, with the wind first abaft the beam, then square abeam, and finally heading as the yachts sailed along a segment of a circle. The wind was strong, coming in puffs at times, and both heeled well down, Vigilant taking the greater angle. Under these conditions she had gained some 2½m.

They started back with booms well off to starboard, but soon trimmed in as the course drew to the westward. The rain fell heavily and the wind still held as they went up by Ryde and Cowes. On the last stretch to the Lepe Buoy the wind freed and sheets were slacked, in place of the dead beat over the same water at the start. The times at the Lepe Buoy were: Vigilant 12:49:49, Britannia 12:53:53.

On the way back to the Warner the rain continued to fall, but the wind fell light for a short time after passing Cowes, soon piping up again They were timed at the Warner on the second round: Vigilant 1:54:23, Britannia 2:00:17. Vigilant had thus gained over 2m. on the reach of 12 miles.

The sail back to Cowes made no difference in the positions, the finish being timed: Vigilant 2:36:45, Britannia 2:43:18.

Vigilant thus wins by 6m. 33s. elapsed and 4m. 29s. corrected.

The only windward work was the first 2½ miles, the rest being all reaching. The speed of the yachts was exceptional, the average being 12 knots, showing a still higher speed at times. Lord Dunraven acted as referee.

## Royal London Y. C. Regatta.

COWES.

*Monday, Aug. 6.*

The selection of Aug. 4 by the owners of Britannia and Vigilant for their private match completely spoiled the first fixture of the Cowes meeting, the regatta of the Royal Southampton Y. C., originally set for that day. Britannia, Vigilant and Satanita were expected, and the absence of the first two made it necessary to postpone the race. The first regular event of the meeting was consequently the Royal London Y. C. regatta on Monday, the course being around the Isle of Wight, starting to the eastward from off Cowes and finishing at the same point.

The day was clear with a fresh N.N.W. wind which held until the course was half completed when it shifted to S.W. and fell light, the yachts at one time all being becalmed. The first part of the race was a hard battle between Vigilant and Britannia for second, and later for third place, as Satanita dropped astern, but after Vigilant worked into first place in the middle of the course she gained continually to the finish, winning by some 6m. Vigilant's allowance to Britannia for the course of 50 miles was 2m. 9s. The course is the same sailed by America in 1851, when she won the Royal Yacht Squadron cup which now bears her name.

The start was given at 10 A. M., the times of crossing being:

Satanita .....10 00 05 Britannia.....10 00 23 Vigilant.....10 00 50

With a good clubtopsail breeze on the quarter, Satanita took a clear lead, while Britannia and Vigilant were bothering each other, the former to windward.

Vigilant ran through Britannia's lee, and when they were off Ryde, 6 miles from the start, the times stood:

Satanita .....10 29 55 Vigilant.....10 31 35 Britannia.....10 32 25

Spinaker booms were dropped to starboard, and the three ran free as far as Bainbridge Point, where they were timed:

Satanita .....10 47 20 Vigilant.....10 47 30 Britannia.. ...10 48 15

The next half-dozen miles, to Ventnor, was a reach, with booms over the port quarter, the wind falling a little. Britannia passed both Vigilant and Satanita, the latter falling astern to third place. The times at Ventnor were:

Britannia.....12 25 15 Vigilant.....12 25 52 Satanita.....12 26 31

Between Ventnor and St. Catherine's, Vigilant and Britannia worked the shore very closely, dodging the tide, both yachts striking the rocks, Britannia hanging for a short time. The wind shifted to S.E., and spinakers were set for the Needles, where they were timed:

Vigilant.....2 34 00 Britannia.....2 36 42 Satanita .....2 45 20

When in Totland Bay, with a foul tide, the wind fell to a flat calm, but finally freshened from southwest, and spinakers were set to starboard. They were timed off Yarmouth:

Vigilant.....3 34 21 Britannia .....3 37 36 Satanita.....3 52 55

The finish was slow, with a light wind and ebb tide, the times being:

| | Finish. | Elapsed. | Corrected. |
|---|---|---|---|
| Vigilant | 5 04 54 | 7 04 54 | 7 04 54 |
| Britannia | 5 13 07 | 7 13 07 | 7 10 58 |
| Satanita | 5 53 38 | 7 53 38 | *7 53 38 |

*Estimated.

COWES AND THE SOLENT.

Vigilant wins from Britannia by 6m. 4s. The prize is £130.

Vigilant went on the dock on Tuesday, not being elegible to the race for the Queen's Cup. The starters were Britannia, Meteor, L. Esperance, Cariora, Mohawk and Cartanet. Britannia started before the gun and did not notice the recall, so was disqualified. She and Vigilant will sail on Wednesday.

The fixtures for the remainder of the season are as follows:

Aug. 8—Royal Yacht Squadron regatta, Cowes.
Aug. 9—Royal Yacht Squadron regatta, Cowes.
Aug. 10—Royal Yacht Squadron regatta, Cowes.
Aug. 11—Royal Southampton regatta, in the Solent.
Aug. 14—Royal Victoria regatta, Ryde.
Aug. 15—Royal Victoria regatta, Ryde.
Aug. 16—Royal Victoria regatta, Ryde.
Aug. 17—Royal Victoria regatta, Ryde.
Aug. 20—Royal Albert regatta, Southsea.
Aug. 21—Royal Albert regatta, Southsea.
Aug. 24—Royal Dorset, Spithead to Weymouth.
Aug. 25—Royal Dorset regatta, Weymouth.
Aug. 27—Torbay Royal regatta, Torquay.
Aug. 28—Royal Torbay regatta, Torquay.
Aug. 31—Royal Dart regatta, Dartmouth.
Sept. 4—Royal Western of England regatta, Plymouth.
Sept. 5—Royal Western of England regatta, Plymonth.

## Valkyrie—Satanita.

Our recent exchanges bring fuller accounts of a collision which is certain to be a historic one, giving many details which were lacking in the cabled accounts. We reprint the following diagram and letters from the *Field*.

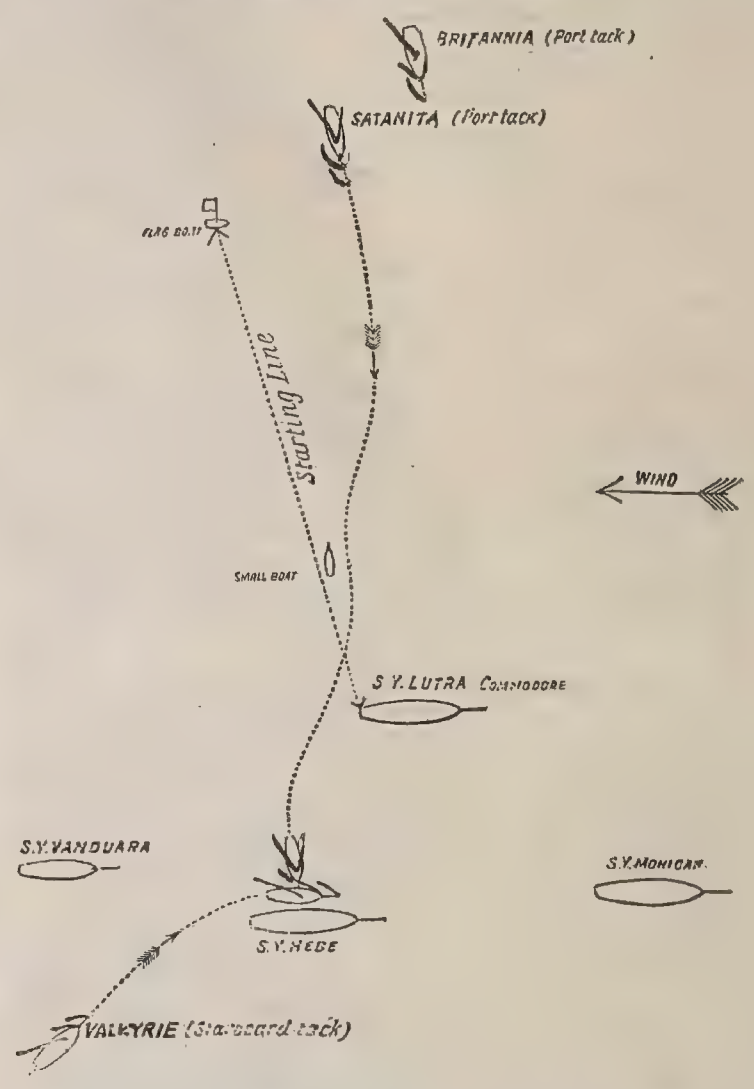
A very interesting controversy has arisen in England over the bearing of the collision on the new type of yacht and the rating rule, one party contending that the modern bow of Satanita acted as a buffer, and from its shape inflicted less damage than the old plumb stem would have caused. On the other hand it is held that the very long bowsprit and heavy bobstay of the old cutters would have made a still more effectual buffer, and probably have saved Valkyrie.

*From the Field, July 14.*

Sir: I send you, with this letter, a sketch showing the position of the several yachts, etc., at the start of the first race of the Mudhook Y. C. regatta, on the 5th inst., when the above unfortunate event took place.

The steam yacht Lutra (Col. Malcolm, C. B.) was acting as commodore for the day, moored, as usual, off the pier at Hunter's Quay, and the markboat was anchored at a good distance in the direction of Gourock. The starting line was amply wide enough. The direction of wind is shown by the arrow—blowing at right angles to the line, or nearly so.

After the five minutes preparatory gun was fired, Satanita and Britannia were standing toward the commodore on port tack on the wrong side of the starting line. The former had been luffing Britannia, while the Vigilant was further off, and to leeward of the markboat. Valkyrie was inshore, coming out on starboard tack.



The Satanita, as she got near the starting gun, reached across toward the commodore and was bearing away so as to get on the right side of the line. It is asserted (as reported by your correspondent last week) that her idea was to bear away and then luff up round the stern of Valkyrie and get on her weather—if so it seemed to all on board Lutra that she was too soon—and would have had to make a wide sweep; indeed, our notion was that she would gybe round after crossing to the right side of the line and come out on starboard tack, but to leeward of Valkyrie, this being the maneuver which Britannia actually did carry out, though, being further to windward, she had to gybe before getting to leeward of the starting line. At this moment a small fishing boat suddenly appeared around Lutra's counter, heading apparently for Gourock. She was at once hailed by the writer and others on board to get out of the way, but paid no attention and held on her course. It was seen that she would be right in the track of the Satanita; but that vessel shifted her helm and luffed up a little to avoid running her down. So close a shave was it that we all thought she was done for, and when she came in sight past the Satanita's counter it was seen that her mast was broken and a man overboard, hanging on to her stern.

The Satanita, after luffing, had reached across nearly to the commodore, and swept past her counter at a great speed, and it was then clear that she would have great difficulty in avoiding a smash of some sort. She attempted to bear away between steam yacht Hebe and steam yacht Vanduara (see plan), but did not do so, the reason being, as we now know, that she simply would not answer her helm. All this time the Valkyrie was coming out on starboard tack, and seeing Satanita bearing down on her, she, when near the stern of Hebe, luffed up. The Satanita, at the last moment, as it seemed to those on board Lutra, tried to luff also; at all events, just as Valkyrie was at the counter of the Hebe she ran right into her, between the mast and runner, with a crash which will long linger in the memory of those who heard it. By great good fortune her bowsprit ran under the Valkyrie's boom and clear of her rigging. Had it struck the shrouds, or gone through the mainsail, the two vessels would have almost certainly been locked together, and their sticks would have come rattling down in a way that would in all probability have caused serious damage to life and limb. As it was, they swung clear and their spars stood, though Satanita's topmast was bending like a fishing rod and the Valkyrie's mainsheet getting loose, the boom took a wild jibe which threatened to carry away the runner. Finally the Valkyrie fetched up alongside of the port counter of the Vanduara and sank exactly 7m. 43s. after the collision, which had taken place 3s. before the starting gun. By good luck, she listed slightly to port when going down, so that her topmast (which snapped off as she sank) fell away from the Vanduara. The times quoted above are accurate, being taken from stop-watches on board Lutra and Valkyrie.

Britannia meantime had jibed, and having got on to the right side of the line, crossed it ahead and on the weather of Vigilant. The small sailing boat above referred to had a second narrow escape, Britannia passing her so close that one of those on board actually touched her.

As to the cause of the accident, while several things (which I do not think it necessary to specify) no doubt contributed to it, there can be doubt that the proximate cause was the folly of those in the small sailing boat in attempting to sail right across the course a few minutes before the start. It had nearly proved suicidal, and resulted in the collision between the yachts, and the sad death of one of the hands of the Valkyrie.

In conclusion, I would say, with reference to the plan, that the relative distances of the markboat and the sailing boat from the commodore, and of the commodore from the Hebe and Vandura are estimated and not measured distances.

I think, however, that they are fairly accurate, and trust that the sketch and the foregoing description of the greatest yachting disaster that has occurred for many years will enable those not present to understand how it took place. If they will, in addition, lead to greater caution on the part of small sailing boats and a little more thoughtfulness on the part of large steam yachts as to where they anchor at regattas, my object will be more than served. An Eye Witness.

Glasgow, July 10.

P. S.—Valkyrie sank 12m. 43s. after the first gun. The collision was 3s. before the second gun. Time afloat after the second gun, 7m. 40s.

*From the Field, July 21.*

Sir: I have read with care the graphic account by "An Eye Witness" of the unfortunate collision between Satanita any Valkyrie at Hunter's Quay. It is evidently the work of one who saw the sad affair in its entirety, and who has written the article with much judgment and no little consideration.

I trust you will believe I write in no controversial spirit when I say that, from my point of view, it is just a little misleading; and I think nothing bears me out in this more than the deduction you yourself, sir, draw from it in your leader on the subject.

I think that it must be apparent to all that an event of this kind, which happened so very unexpectedly and so very swiftly, cannot be definitely reproduced in the form of an accurate diagram. The imminent peril in which every one was placed, whether in the Lutra, Vanduara, Hebe, Valkyrie, or Satanita, must have made this, under the circumstances, especially impossible. I submit that only those on the Satanita could have any idea which was the possible way to avoid crashing over the small craft. The position of those on the other vessels must have been one of terrible uncertainty as to where the subsequent danger must lie. I am in a position to state that I have conversed with many of our most respected Clyde yachtsmen, who saw the accident from the Mohican, Lutra, Katoomba, Valkyrie, and many other points of view, and I have heard but the one opinion expressed, that the accident was wholly owing to the righteous desire on the part of the skipper of the Satanita to save the lives of the miserable occupants of the little boat in the first place, and after that no mortal man could have avoided the calamity.

From my position on the lee side of the Satanita I saw the utter impossibility of bearing away on our course on account of the direction that the little boat was taking. I also saw that when we bore up to avoid her, she, with the suicidal impulse of absolute ignorance, bore up also, and I certainly never expected to see her come out from under our bows. From my place in the wash of the scuppers she disappeared from view, and must only have been saved by the bow wave throwing her out bodily to leeward. After that the helm was put hard up to avoid Lutra, Valkyrie or other vessels; but the speed at which we were going, the great length of the vessel, and the well-known sluggishness every vesel shows in bearing away quickly at that point of sailing, made what was looked upon as a last resort an absolute impossibility. To come about was quite out of the question on account of our proximity to the steamers to the weather. The Satanita's course was more to leeward than the chart shows. She passed extremely close to the markboat from my personal observation.

But, as I said before, it is not a matter for controversy. There has been none here, and I trust there will be none. The whole subject is of such extreme painfulness to all concerned that I hope the matter may be allowed to drop. The verdict everywhere here that I know of is complete exoneration of those in charge of both Satanita and Valkyrie, and I trust that yachtsmen generally and all interested will accept it. I trust that "An Eye Witness" will take no exception to these remarks. He casts no aspersions whatever upon any one, and knowing that his desires must be precisely the same as my own in the matter, I only venture to write this in case any one might be further misled.

One Who Was on the Satanita.

## Bay Head Y. C. Corinthian Race.

BAY HEAD—BARNEGAT BAY.

*Saturday, July 28.*

Distance ten miles, weather showery, S.E wind. Started with a full three-reef breeze, but after turning first flag shook out reefs and finished the race with more than a full-sail breeze.

## ABUSE AND EXCUSES.

*From Annapolis Capital.*

If the Vigilant belonged to anybody else than the tricky Goulds, we should think the Britannia the fastest boat.

*From New York Recorder.*

The London *Times* thundered too soon about George Gould giving an order to the Herreshoffs to build a boat to beat the Britannia.

George ought to have thought of beating the Britannia before he elected to join the Prince of Wales's set and race the Vigilant in inland waters.

There is little doubt the Vigilant could maintain her splendid prestige in out-of-door races, but if she had declined to enter the bathtub contests George's social position in England would not be what it is to-day.

The British nation all admire George Gould as a *soi-disant* sportsman who hobnobs with the heir to the throne and gets beaten with friendly regularity.

The sailing of Nat Herreshoff for this country will not imperil the future chances of the Vigilant, whatever they may be, for it has been well known among those interested in the fate of the American boat that she was suffering from an overdose of skippers.

Hank Haff alone is better than Hank Haff with Herreshoff, because the two do not pull extra well together; but even Hank alone is not the best, because the man is getting old and crotchety and has lost the vim and vigor of former days.

*From New York World.*

Once again Vigilant has fallen a victim to the uncertainty of English weather. Once again she has romped away from the English Britannia while a fair wind was blowing, and once again she has been left behind at the finish through becoming becalmed in the last leg of a race. Yesterday's race was at Queenstown, for the Royal Munster Yacht Club's cup, and the story is told in a few words—"Everywhere it is admitted that Vigilant showed herself far away the superior of Britannia in this day's racing," but "a fluke gave Britannia the victory."

The English seem to build their boats for drifting, and then by leaving the racing time unlimited make sure of creeping in ahead some time or another and so winning a race.

*From Lynn Item.*

On the whole the Vigilant may as well come home. To-day she was over six minutes behind on a 50-mile race in the open sea, the conditions being just what she has been longing for, and the wind—well, there was enough for Britannia and considerable to spare. Herreshoff has returned to the United States and Gould can follow as soon as he likes. Vigilant is a disappointment. Somehow we have the feeling that things might have been different if the Jubilee instead of Vigilant were now flying the American flag off the Isle of Wight.

*From Columbia (Pa.) News.*

Vigilant is a sporting boat and has been outsailed by its English competitor. Minneapolis is a business boat, and if ever a British ship built for similar purposes tries to pull a feather from the tail of the American Eagle it will be caught in the act and will be laid up in a museum, a richer trophy than any cup won in a sporting race. Never mind, Johnny, we are more than up with you when it comes to real business.

*From Elizabeth (N. J.) Herald.*

George Gould bought Vigilant for a purpose. He wanted to get into what is called (probably erroneously) "good society." He thought that the purchase of Vigilant and a free use of his plethoric pocketbook in noble sporting circles in Europe might be the key which would unlock the door he desired to open. It was immaterial to him, if this theory is accepted, whether the Stars and Stripes floated on the seas triumphantly or in disgrace, so long as a member of the selfish Gould family profited thereby. We all know the inside social history of the Prince of Wales. These were the two owners of the rival yachts, Vigilant and Britannia. The baccarat scandal shows where the heir to the British throne stands and the course of the whole Gould family has been in a direction that will do no honor to America. Were the late yacht races primarily a thought-out design between Gould and the Prince of Wales—one to pay his gambling debts, which his royal mother has persistently refused to honor, and the other to lose money liberally in order to establish, in a far off land, a reputation for generosity and prodigality that not one of his not illustrious ancestors could acquire in America? Viewed from either of the above standpoints the recent repeated defeats of Vigilant may, in one sense, not be as wonderful as people imagine.

*From Boston Traveller.*

The recent victories of the Britannia have been, without exception, due to flukes of the wind, and the Britisher has simply been inspired in finding the spots where the fickle air was located. This is not yacht racing. Contrast the great work of our boat when the breezes whistled and piped and the white caps flecked the blue. We are still "on deck" in racing weather, and don't forget it, John Bull.

*From Brooklyn Citizen.*

The Vigilant was disabled yesterday and the Britannia went over the course alone and took the prize. When the Vigilant is laid up the Britannia is the best boat afloat.

*From New York News.*

American lovers of yachting, whose pride centered in the Vigilant, should not be utterly discouraged The boat has been beaten, but her owner seems to be pulling through satisfactorily. Mr. Gould has been honored with a reception by the Royal Yacht Club and has been officially dubbed a good fellow. He has also made a speech tendering thanks for the splendid hospitality with which he has been received. Competent judges have not changed their minds as to the superiority of the Vigilant over the Britannia as a sailer. If the Vigilant fails to "get there" her owner probably will not.

*From New York Tribune.*

It is the common belief on this side of the Atlantic that a yacht is built to sail, not to drift, and there isn't the least doubt that this was the idea in the minds of the men who constructed the Vigilant. If the contrary notion prevails in Great Britain, it is no wonder that her yachtsmen have been unable to carry back the America's Cup with them, when they have come over with that purpose in view.

*From New York Journal of Finance.*

An ancient mariner who was asked for an opinion on the successive defeats of the yacht Vigilant on the other side said he thought it was suspicious. To him it appeared that the crew of the American yacht had an eye to the future rather than the present. They are under contract at high wages abroad and this series of defeats means another international yacht race on this side of the ocean next year. The crew will be re-engaged for another fat season. The ancient mariner was asked why his reasoning would not apply just as well if the Britannia had been beaten and replied that it made all the difference in the world. Our yachtsmen will never be contented until they defeat the Englishmen and every inducement will be offered by them for a race here next year. The ancient mariner said he did not believe the yacht owners are open to suspicion, but the crews are human beings and they love the almighty dollar like other men. There isn't much patriotism about the average bread-winner in this age.

*From Boston Home Journal.*

When the Vigilant's designer returns to this country he will be excellently prepared to write an article entitled, "What I Know about the Britannia's Sternpost." Mr. Gould is doubtless prompted to race the Vigilant more through a desire to hobnob with royalty and make an entry into New York society via London than he has by any great love for yachting or burning ambition to uphold the supremacy of America on the wave. New York's social gates are heavy, but they can be turned by a lever sufficiently long. Mr. Gould's lever is his pocketbook and that is long enough, one would think, for all practical purposes. It was Archimedes who said, "Give me but a lever long enough, a place to rest it on, and a place to stand, and I will move the world." Mr. Gould's lever is resting upon London society, but whether he has a place to stand or not will be shown by the success he has in finally prying open the portals which lead to the land of the 400.

*From Auburn (N. Y.) Bulletin.*

As usual the Vigilant turned up in yesterday's regatta just where there was no wind and was duly beaten. The skill with which the present commander of the Vigilant contrives to get himself becalmed at the most exciting junctures of the race is something phenomenal in the history of yachting. He should be given a regatta to sail on the principle of the donkey race, in which the prize is awaded to him who comes in last.

*From Lawrence (Mass.) Sun.*

In English, Scottish or Irish waters it doesn't seem to make any difference. The Vigilant is no good and her owner should either realize it or fly some flag other than that of Yankeeland.

*From Commercial Advertiser.*

New Yorkers have no particular reason to rejoice when the Vigilant wins a race. The Goulds, it must not be forgotten, have exiled themselves to New Jersey rather than pay their taxes to New York. As between these two foreign ships, Wales' Britannia and the Goulds' Vigilant, the average New Yorker will root for the Colonia and Jubilee, better boats, both.

We are glad to hear that Mr. George Gould has ordered another yacht to be built, and that he is going regularly into the business of racing the royal family of England. He doubtless finds the sport agreeable, healthful and exhilarating, and as for sociability—well, the Goulds are in it on certain sides of the Atlantic.

*From Philadelphia Item.*

Once again, after having an apparently safe lead, the Vigilant is beaten near the finish by the Britannia.

The frequency with which this occurs is calculated, to say the least, to breed surprise. It is well known that in English society it is not considered good form to win any event in which the Prince of Wales is a participant, and there is a suspicion that Mr. Gould, caring nothing for American opinion, is anxious to make an impression in English society.

On the other hand it can be truthfully said that the Goulds have never been open to the charge of toadyism. Whatever may have been the shortcomings, this unmanly quality was not among them. Neither the father nor any of his children have, at any time, exhibited the smallest anxiety to force themselves into society. That they could have done so no one will deny.

But the head of the Gould family has gone. The money-maker is dead. It may be that his spirit controlled the younger generation. George Gould, as the millionaire, may be different in tastes and inclinations from those shown by his father. The younger Astors are different from the wealth-producer of that family. One of the Astors has turned his back upon America and settled down to enjoy British society.

Can it be that the Goulds have determined to follow his example? If so the possession of a yacht famous as the representative of American skill, but which by peculiar flukes is not swift enough to defeat a boat owned by the Prince of Wales, will place him in the front of trans-Atlantic swelldom.

*From New York World.*

Vigilant won yesterday handsomely in "Britannia weather." This serves to show that there is, after all, an element of chance in these contests where the boats are very evenly matched. It proves, furthermore—to American minds, at least—that there is real sportsmanlike sense in our rule requiring the course to be sailed on a time limit that requires sailing, not drifting, in order to make a race.

*From New York Sun.*

We cordially offer to British yachtsmen, without distinction of class, our own American waters for yacht racing. Their own seem to be too ridiculously becalmed and cranky for use. Off New York, Newport or Marblehead, we have waters fit for any sailorman's boat other than a catboat, and we can safely guarantee a wind that will give a fair race about three times as often as seems possible on the coasts of Great Britain and Ireland. If they prefer to test their boats by their respective crews' abilities in sail setting and general box-hauling, we will provide them with rigging set up ashore or sow mark buoys in the ocean so close that they will have two rounds to the mile, or enough to wear out their rudder heads. Hurrah for sport!

*From Boston Post.*

The Vigilant is teaching the Englishmen as much by her continued defeats as she would have taught by uninterrupted victories. And this lesson is that the Yankee model wins by seaworthy qualities and fails only in drifting matches.

This fact is rubbed in, so to speak, by each race in which the Vigilant meets Britannia. Yesterday's race was only another demonstration of the same peculiarity. Whenever the wind freshened the Vigilant gained rapidly on Britannia. When it came to fog and calm Britannia went ahead.

In fact, the qualities which the American centerboard displays in British waters, as contrasted with those found in the British cutter, are such as sportsmen prize and such as make for the development of good seamanship.

*From New London Telegraph.*

If the Vigilant in its races with the Prince of Wales' yacht and hereafter the Emperor of Germany's was representative of the typical American, there would be a great deal of sorrow if it were beaten. But there is a consolation in thinking that the son of Jay Gould, a gentleman who will not pay the taxes lawfully due the city in which his father piled up wealth, is not a type of the citizen who manfully shoulders all the obligations coming to him as a citizen. The Goulds could not expect to be chosen as the vindicators of American sports.

*From Worcester (Mass.) Telegraph.*

The Vigilant has proven her superiority to the Britannia in what Americans consider a yacht race, just as American yachtsmen have claimed that she would. In a free and fair race under her present rig, she can sail all around the Britannia. In a drifting match or in sailing around a wash basin, or in a brook the Britannia is superior to the Vigilant. In Tuesday's match the Britannia was out of the race before her sails split, the stiff breeze just suiting the American boat. The latter has changed her sails for the old racing rig of last year with which she defeated the Valkyrie, and under the present conditions her time allowance to the Britannia has been reduced from three to one minute. The Vigilant is now showing up in her old form, and in anything but drifting matches she will make it interesting for the British boats.

*From New York Recorder.*

Much of the bright, bubbling sporting blood which coursed through George J. Gould's veins when he first became the possessor of the Vigilant seems to have turned to sparkling society blood since he has been in England. He appears to have become so ecstatic over his social reception as to have almost forgotten what he went to England for, anyway. He speaks of wanting to win a race with the Vigilant in an off-hand way, which suggests that the race he was really out for, the Social Stakes, was already won, and that a few cups would be of no use to him, anyway.

*From Brooklyn Citizen.*

The Vigilant can beat the Britannia, and the latter is the best boat the British have put afloat, every day, if the wind holds, and the harder it blows the more minutes she will have to spare at the end of the race. The "fair weather yachtsman," like the "feather bed soldier," is not a modern American product.

*From New York Tribune.*

Were Americans not acquainted with the magnificent sailing qualities of the winner of the America's Cup, they would be inclined to accord the palm of superiority to the Prince of Wales's Britannia, which has shown her heels to the Vigilant in nearly every race thus far sailed between the two boats. In view, however, of the splendid record of the Yankee boat on this side of the Atlantic, we continue to adhere to the belief that the nine discouraging defeats sustained by the Vigilant in British waters—she was beaten again yesterday afternoon at Penzance—are attributable more to defective handling of the boat and ignorance of the peculiarities of the courses sailed over than to any radical inferiority of our champion.

## THE OTHER SIDE.

*Editor Forest and Stream:*

The tone of the editorials in the recent issues of the representative yachting journals of England reveal the fact that the English yachtsman have accepted the impression that we are a cowardly set.

That impression has been but too strongly conveyed by an insane and certainly misrepresentative press. The yachting editorials in our leading papers have been of a tone that could have carried no other impression than one of pure cowardice. The interviews of so-called yachtsmen have been bright auxiliaries to the degrading work of the seedy editorialist. There has been enough of this kind of work and all true lovers of yachting must rejoice at the condemnation of the policy pursued in the daily press by the Forest and Stream. Has American manhood degenerated? Has the day passed when we could accept a licking in good grace?

England deserves her supremacy. The rich men of England support yachting most generously. They do not form syndicates to run a boat, but on the contrary, have a racer in each representative class. This support encourages the designers and gives every theory a thorough test. Indeed the Englishman of wealth seems anxious to come forward with his time and purse in the defense of that supremacy on the seas which he and his ancestors have always fondly cherished. It is pure love of sport and country that inspires them. If we wish to see the American yacht the queen of the sea we must look to our millionaires. They must come out generously and in a true sportsmanlike manner. Ten or twelve millionaires to a boat will never do the work. I say all honor to Gould and Carroll, though they have been licked. They did what no other Americans had the sporting blood to do. To question the sportsmanship of George Gould is to cast a reflection on the one man out of a club of 1,500 members who had the spunk to put his hand in his pocket in order to test a yachting question.

The ugly old mug that is in this country, and which is supposed to represent the yachting supremacy of the world, is here because a gentleman from Boston came to the rescue at a time when the millionaires of New York were asleep.

If those who can afford to, and whose duty it is to guard our yachting laurels are too close to defend their trust then let the old cup go back. Let it go over to the Britons, and may it stay in England an everlasting monument to the parsimonious policy and the unpatriotic and unsportsmanlike behavior of our men of millions.

As matters stand to-day, the silver mug in Tiffany's vault represents past victories. That it can be held up in justification of our claims to supremacy is a delusion. If it is the "true blue ribbon of the seas" Brother Jonathan is holding it under false pretences.

The crown is Britannia's, the lesson is ours. Let us profit by it, and let no man who can afford it be backward when the British glove is flung at our feet.

Charles M. Connolly.

New York, Aug. 1.

*From New York Times.*

There is one point about Vigilant's racing on the other side that it is good and useful to bear in mind, because it illustrates one of the most creditable of British traits. The Vigilant has been beaten frequently, and yet nobody on the other side who speaks with any authority on these matters ventures to say that the races have proved that Britannia is very much the better boat. Indeed the spirit in which the races have been recounted and discussed on the other side is extremely creditable and sportsmanlike. It may be doubted whether it would have been exhibited in the same proportion on this side if the conditions had been reversed. If a British yacht had come over to sail the American champion, and had been beaten so many times, there would no doubt have been in some quarters the same discriminating and candid discussion that the English yachting authorities have been carrying on. But it is to be feared that the prevailing sentiment would have been expressed merely by what the late Walt Whitman called a "barbaric yawp."

On the other side there has been no barbaric yawp at all, but a conscientious endeavor to estimate the Vigilant fairly, and to extract from her performances whatever there might be in them for British yachting. The "craven scruple" of "judging too precisely by the event" has not taken any hold upon the people who have been talking and writing about the yacht races on the other side, as there is reason to believe that it might have taken hold upon the disputants upon this side if the contest had been carried on here. Probably nobody who saw the races sailed here last year for the America's Cup had any doubt that the winner would beat the loser twice out of three times in our ordinary yachting weather. As the Valkyrie had already, upon the whole, shown her superiority to the Britannia, the conclusion seemed to be fair enough that if the Vigilant could beat the Valkyrie, *a fortiori* she could beat the Britannia. But the logic does not seem to work. What is admirable in the talk about the races on the other side, however, is the evident effort to be fair on the part of everybody concerned. This spirit is not only sportsmanlike, but it is wise. In no other way can international yacht races be made to serve the purpose of improving yachting on both sides. While the Vigilant last year showed herself upon the whole a faster boat than the Valkyrie, the Valkyrie had several very evident points of superiority. She was very much quicker in stays and consequently more tractable, and in a stiff breeze and moderate sea she was clearly the better boat at working to windward on short boards. What is very pleasant, exemplary, and admirable in the discussions on the other side is the fairness with which the two rival types are contrasted. Brethren, let us consider these things. It may do us good.

*From New York Post.*

Six successive defeats of Vigilant make it difficult for American yachtsmen to find an adequate supply of satisfactory explanations. It was easy to account for two or even three failures, but to account for six in succession is quite another task. We were so sure of our ability to beat the world in constructing racing yachts that we did not take into account the full effect of foreign conditions as to water and racing regulations. When the English yachts have come over here in search of the America's Cup, we have had the arranging of the regulations, and have had the benefit of familiarity with the water and the winds. Now the Englishmen are enjoying the same favoring conditions, and the result as to the American yacht is strikingly like that which in so many successive international contests in our waters befell the English yacht. The moral seems to be that there is really very little difference in the sailing capacities of English and American yachts, and that if they could meet on neutral waters, under impartial conditions and regulations, the chances of victory would be very evenly balanced.

*From Boston Globe.*

It is said that some members of the New York Yacht Club are so much provoked at the Vigilant's defeats as to blame Mr. Gould for racing her over any but open courses. It is hard to see what cause these members have for complaint. Mr. Gould's action in deciding to cover the racing circuit in Great Britain, having at the same time fully in view the disadvantage at which his boat would be over some of the courses, savors much more of the sportsman than the cool calculator for first prizes only. He deserves more of praise than of criticism, and his sportsmanlike way of courting whatever comes rather than of making only match races under conditions most favorable to his boat, will do much to promote good feeling between the yachtsmen of the two countries, and will help make international racing the exchange of courtesies which it should be.

New York yacht club members had their chance to keep the Vigilant at home by forming a syndicate to purchase or charter her, and give Lord Dunraven the races for which he was asking in the spring. They did not improve it, and now must make the best of what may come.

*From Town Topics.*

We Americans talk too much. We talked for weeks about the Yale athletes beating the Oxford men, and were positive that Vigilant would sail away from every British yacht opposed to her. Now that we are licked all round it is a good time to study our little habit of exercising our conversational powers too energetically. I am immensely disappointed that we came out second best in our contests this summer against the English, but I think the greatest humiliation of all is in the thought that we claimed so much in such loud tones. The English do not do this, and it shows very bad breeding in us to do it. The English quietly observed that probably Vigilant was better than any boat they had, and that the Yale athletic team ought to win the majority of the events in its meeting with Oxford. Then they went in and thrashed us. Their victories were doubly effective because they had been modest enough not to count on them beforehand. We are apt to be blowers. We are a smart people, but we are afraid other nations will not find it out unless we toot our horns. So we fill the air with our tooting and often become ridiculous thereby. It would be a good scheme if the newspaper press of this country would teach a little modesty to the people. At present the press is the most brazen blower of the whole show.

*From Boston Post.*

The boot is on the other foot as regards yachting trophies this year. It is seen to be one thing to defend a prize in home waters against a challenger from the other side of the world, and quite another thing to go to the other side of the world and sail the successful defender in unaccustomed waters against rivals who are at home there.

The fact that the Vigilant has been beaten in four consecutive races by the Britannia gives food for thought as to what would happen if by any chance the America's cup were to be won and carried back to England. The chances are that it would stay there, perhaps for as long a sojourn as that emblem of yachting supremacy has remained in the hands of its Yankee captors.

Another lesson to be learned from this series of races is that of modesty in the claims put forward for American yachts. Everything that the Englishmen have sent over here has been easily and thoroughly beaten in American waters. Now the best that American skill has produced is beaten by a boat which is confessedly not so fast as the Valkyrie, which succumbed to the Vigilant last year.

There evidently is a nearer approach to equality in the merits of English and American yachts than we in our pride have heretofore been willing to acknowledge.

*From Philadelphia Telegram.*

The old, old story is brought by this morning's dispatches: "The Vigilant is beaten again." For the sixth time the Britannia has decisively demonstrated her ability to outsail the Yankee sloop in inland waters and in a light breeze. Explanation after explanation has been made by American yachtsmen on both sides of the Atlantic, in their efforts to prove the Vigilant the better boat. "The captain is not used to her," "Her crew are not well trained," "She raced too soon after her arrival in English seas," "She will do better when she gets on the ocean"—these are but a hint of the excuses offered. The cruel, cold fact remains, however, that she has been beaten, and in every race the Britannia has clearly proven her superiority to our American yacht, under English racing conditions and in English waters. Meanwhile all we can do is to accept the defeats gracefully, and hope for coming victories in stiff breezes on the open sea.

*From Chicago Herald.*

When the Vigilant defeated the Valkyrie we had no words to express our contempt for the Britishers who sought to explain away the defeat by excuses more or less plausible. Now the Britannia has beaten the Vigilant, and it is unpleasant to find that the American sporting experts are trying just as hard to prove that the Vigilant was not fairly outsailed. This is childish and unsportsmanlike. If the Britannia has beaten the Vigilant, it is because she is the better boat and better sailed. Let us not begrudge the Englishmen their triumph. They haven't enjoyed a similar one in a good many years.

### Lake Geneva Y. C.

The Lake Geneva Y. C. sailed a race on July 28 over a 12-mile stationary course. Weather fair. Wind blowing a gale:

| | Length. | Start. | Finish. | Elapsed. |
|---|---|---|---|---|
| Maybe, H. H. Porter, Jr. | 20.11 | 11 17 55 | 2 26 57 | 3 09 02 |
| Rival, Benj. Carpenter | 21,00 | 11 17 00 | Capsized. | |

## Cohasset Y. C. First Championship Regatta.

*July 21.*

Weather overcast, wind N., light to fresh:

FIRST CLASS.

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Duster, Cape cat, Mapes Bros. | 22.02 | 0 34 30 | 0 23 53 |
| Madge, Cape cat, C. H. Cousens | 24.03 | 0 34 45 | 0 24 43 |
| Grimalkin, Burgess, G. R. Howe | 22.10 | 0 37 30 | 0 27 08 |
| Khedive, yawl, Harold Weston | 27.03 | 0 37 15 | 0 28 20 |
| Wapan, cat, W. C. Appleton | 20.09 | 0 41 40 | 0 30 28 |
| SECOND CLASS. | | | |
| In It, cat, R. B. Williams | 18.04 | 0 41 12 | 0 28 54 |
| Edith, sloop, F. W. Clarke | 18.07 | 0 48 20 | 0 36 10 |
| THIRD CLASS. | | | |
| Escort, cat, John Richardson | 14.05 | 0 37 33 | 0 25 54 |
| Alma, cat, Gammons & Wheelwright | 15.07 | 0 39 20 | 0 28 17 |
| Elsie E., sprit, F. C. Higgins | 14.04 | 0 41 12 | 0 29 30 |
| Nameless, sprit, I. L. Blossom | 13.04 | 0 42 05 | 0 29 48 |
| Hazard, cat, F. R. Pegram | 15.05 | 0 41 08 | 0 30 00 |

There is a handsome silver cup for each class to be raced for on consecutive Saturdays, July 21 to Sept. 1, inclusive. The yacht with best credit at end takes cup. Wind N., light over first and second legs, fresh to finish. The triangle was 6 miles, but a heavy squall while placing marks so disturbed things that the course was not much over 3 miles for first and second classes; third class course, 2¾ miles triangle. The club votes on the question of ⅛ allowance to yawls at next meeting, which will alter time of Khedive.

The steam yachts Senator, Lucille, Athlete and Daring were in attendance. The schooner yacht Daylight was club boat.

Second championship regatta, July 28, 4 P. M. Weather fine and clear; wind S.W., strong and puffy:

FIRST CLASS.

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Duster, cat, Mapes Bros. | 22.02 | 1 19 05 | 0 57 50 |
| Madge, cat, C. R. Cousens | 24.03 | 1 18 15 | 0 58 30 |
| Zig Zag, cat, Gammons & Wheelwright | 20.02 | 1 22 12 | 0 59 18 |
| Khedive, yawl, Harold Weston | 27.03 | 1 17 31 | 0 59 40 |
| Grimalkin, cat, G. R. Howe | 22.10 | 1 21 34 | 1 00 46 |
| Winona, Hammond Braman | Dismasted. | | |
| SECOND CLASS. | | | |
| Edith, sloop, F. W. Clarke | 18.07 | 1 37 00 | 1 12 29 |
| Jack Daw, cat, Ellery Clark | not m's'd. | 1 33 47 | ..... |
| THIRD CLASS | | | |
| Escort, cat, John Richardson | 14.05 | 0 31 29 | 0 19 50 |
| Nameless, sprit, J. L. Blossom | 13.04 | 0 35 13 | 0 32 56 |
| Elsie E., cat, F. C. Higgins | 14.04 | 0 34 35 | 0 23 13 |
| Watermelon, cat, H. M. Knowles | not m's'd. | 0 33 46 | ..... |
| Hazard, cat, F. R. Pegram | Disabled. | | |

The course has been logged off: first leg 2 miles; second 2½; third 1½—6 miles. Khedive turned first mark ahead, followed closely by Duster and Madge; Madge turned second mark ahead, Khedive second, Madge third. Khedive got the gun and if allowed the ⅛ for yawl rig as she is sure to, at next meeting of club, she takes the leg for the cup. It was a closely contested race, under the best of conditions. The yacht Daylight with club ladies, the steam yacht Daring, sloop Shadow and others were present. Chas. H. Cousens.

## Vigilant's Pilot.

*Editor Forest and Stream:*

We have had some controversy at our house upon the pilot question on Vigilant while racing in British waters. 1. Do the pilots have control of the yachts while in a race? 2. Are they in supreme command of the yacht while they are aboard during a race? 3. Do the captains give up the wheel to them? 4. Do the captains have to take orders from them?

The pilot has no control of the yacht, he is not in command, he does not handle the wheel or tiller, and the captain gives all orders. The duties of a pilot on a racing yacht are purely advisory; he gives information to the captain as to courses, tides, wind, weather, etc., being chosen for his local knowledge of such matters. The exact relations between the pilot and the captain depend on circumstances.

## YACHT NEWS NOTES.

Columbia, steam yacht, has been chartered by Mr. Ladew to C. Oliver Iselin, who will shortly return from Europe. Mr. Iselin has the steam yacht Guinevere under charter at Cowes at present.

The Herreshoff Mfg. Co. has completed a fin-keel for Walter Langdon, of Hyde Park, N. Y., for use at Shelter Island. She will be named Trust Me.

On July 28 one-half of Sayre's Wharf, at Newport, on which the New York Y. C. house is located, was sold at auction, being purchased for $7,000 by Robert Goelet, presumably for the use of the club.

The handsome thousand-dollar silver trophy that the late Commodore Colt had made last year for a race between the Cup defenders will be made a perpetual challenge cup by the Larchmont Y. C. It will be raced for every Fourth of July by the class of the season, and will be held by the winning boat until the opening of the next yachting season. The records will be engraved on the pedestal of the silver piece each year, and the winner will receive a $250 cup to be called a Colt cup.

## A. C. A. Membership.

Northern Division: W. D. Parker, Peterboro; F. C. Johnston, Fred S. Howard, Leslie McEwen, Montreal. Atlantic Division: Omar Shallcross, Chas. H. Zimmerling, R. G. Fleischmann, Philadelphia; Edwin S. Ives, Long Island; Henry Parsell, W. B. Bynner, Louis M. Brock, H. B. Lawrence, Arlington, N. J.

# Rifle Range and Gallery.

## Revolver Shooting in England.

London, July 26.—*Editor Forest and Stream:* The Bisley meeting is just over, with the wettest meeting on record. The wind was very bad and strong most of the time also. On the opening day, July 10, there was a good light and hardly any wind, and Mr. Walter Winans took advantage of it to pile up scores in the revolver shooting, which, if he had not fired any more during the rest of the meeting, would have given him six first prizes and two divided first prizes. The next few days were very windy and he hardly shot; on the 13th he had a little better opportunity although the wind came in gusts, and made the two 41 scores at 50yds. already reported in Forest and Stream. At the limited entry competition for military revolvers at 20yds (restricted to two entries) he lost his chance by a bad cartridge, the only one he has had out of the thousands he has fired this year in practice and competition, and it lost him his opportunity and made him come second. In the grand aggregate he was more than 30 points ahead of the next best man. On one of the very windy days he shot a few shots at the running man and the running deer, in competitions which are open all the meeting and in which he was therefore handicapped by shooting on a bad day, but he only shot for something to do when it was too bad to shoot a revolver. To his great surprise he has won fourth prize at each of them.

As Mr. Winans was the only American at Bisley this year who shot, he has done pretty well for the stars and stripes by carrying off eleven first prizes, dividing two first prizes and winning two fourth prizes out of fifteen he shot for. Below are details of the scores:

Any revolver, first series, 20yds., moving target, highest possible score 42.—Walter Winans and Capt. Heath divided first prize on score of 41.

Any revolver, second series, 20yds., disappearing target, highest possible score 42.—Messrs. Winans and Joynt divide first prize on score of 40.

Any revolver, third series, 20yds., rapid firing, highest possible score 42.—First, Walter Winans, 39 (best on record score); second, Dr. Britton, 36.

Any revolver, fourth series, 20yds., stationary target, only two entries allowed, highest possible score 42.—First, Muirhead, 40; second, Walter Winans, 39.

Any revolver, fifth series, 50yds., stationary target, highest possible score 42.—First, Walter Winans, 41 (best on record score); second, Joynt and Ellicott, 38 (divide).

Aggregate for any revolver, highest possible score 210.—First, Walter Widans, 200; second, Joynt, 186.

Military revolvers, first series, 20yds., moving target, highest possible score 42.—First, Walter Winans, 41 (best on record score); second, Dr. Britton, 38.

Military revolvers, second series, 20yds., moving target, highest possible score 42.—First, Walter Winans, 39; second, Joynt and Ellicott, 37.

Military revolvers, third series, 20yds., rapid firing, highest possible score 42.—First, Walter Winans, 38; second, Dr. Britton, 37.

Military revolvers, fourth series, 20yds., stationary target, only two entries allowed, highest possible score 42.—First, Rand, 40; second, Walter Winans, 39.

Military revolvers, fifth series, 50yds., stationary target, highest possible score 42.—First, Walter Winans, 41 (best on record score); second, Joynt, 39.

Military revolvers, aggregate, highest possible score 210.—First, Walter Winans, 198; second, Joynt, 179.

Grand aggregate, highest possible score 420.—First, Walter Winans, 398; second, Joynt, 365.

## Zettler Rifle Club.

The Zettler Club held its practice shoot at Wissel's Cypress Hills Park, on Aug. 5. The weather was fine, and as a consequence high scores were in order. M. Dorrler surprised his brother members by walking into the shooting house in the early hours of the shoot with his outfit in working order. His subsequent shooting showed that the old veteran had a little form left in him yet. His total in a series of 50 consecutive shots was 1,105.

Ross was in his usual form and put up a fine score, his scores were as follows: 232 228 216 228 223—1127.

The man target was to-day, as in the past, the center of interest. It being open to visiting shooters, generally brings the visitors into the competition. On this occasion Thos. Lloyd, one of the visitors, borrowing Barney Zettler's rifle, on his second effort put up the good score of 57; to beat this score was the aim of all the others in the competition. None succeeded, however. M. Dorrler only could tie him, making 57. Holges and Hansen tied with 56. Busse was last with 55. Those who got no share in to-days's division will be found in the next competition with expectation oozing from every pore.

On the bullseye target, 4in. center, 3 shots only: Holges 2, Ross 2, Krauss 1. Scores:

| | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| M Dorrler | 24 | 20 | 23 | 23 | 24 | 24 | 24 | 23 | 23 | 25 | —233 |

| A Guenther | 6 | 5 | 9 | 9 | 9 | 4 | 7 | 4 | 7 | 9 | —63 |

## High Score for Mr. Wilder.

Walnut Hill, Mass., Aug. 4.—At the weekly shoot of the Massachusetts Rifle Association to-day Mr. Salem Wilder, the world-famed rifle expert and experimentalist, performed the remarkable feat of scoring 117 out of a possible 120 in a rest match at 200yds. It is true that his shooting was done by the aid of a telescope and with his rifle controlled in part by a slide rest, but these facts have but little weight when it is considered that Mr. Wilder is nearly 72 years of age.

Other scores made to-day were, 200yds., standard American target:

State Champion Military match, 20 shots to each man:

| | | | | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| G H Nason | 4 | 4 | 5 | 5 | 4 | 4 | 5 | 4 | 4 | 5 | 5 | 5 | 5 | 5 | 4 | 5 | 4 | 5 | 5 | —91 |
| W D Huddleson | 4 | 5 | 5 | 4 | 5 | 5 | 4 | 5 | 4 | 5 | 4 | 4 | 4 | 4 | 5 | 4 | 5 | 4 | 4 | 5 | —89 |
| J L Fowle | 4 | 5 | 4 | 5 | 5 | 4 | 4 | 4 | 4 | 5 | 4 | 4 | 4 | 4 | 5 | 4 | 5 | 5 | 4 | 4 | —88 |
| W J DeLoriea | 5 | 4 | 4 | 4 | 4 | 4 | 5 | 4 | 5 | 4 | 4 | 4 | 5 | 4 | 4 | 5 | 4 | 5 | 4 | 5 | —87 |
| G Durward | 5 | 4 | 3 | 5 | 5 | 4 | 4 | 4 | 4 | 5 | 4 | 5 | 4 | 4 | 5 | 4 | 3 | 5 | 4 | —86 | |
| C Nutter | 5 | 4 | 4 | 4 | 4 | 4 | 3 | 4 | 5 | 4 | 4 | 4 | 5 | 5 | 4 | 4 | 4 | 4 | 5 | 4 | —84 |

All-comers' rest match: Salem Wilder 117, J. F. Hill 104.

Eagle badge rest match: *John French 115.

Victory medal match: *H. L. Willard 111.

* Telescope sights.

All-comers' off-hand match: S. D. Sydney 88, O. Moore 77, M. T. Day 76, A. W. Hill 76, W. A. Maynard 72.

Military medal match: G. H. Nason 46, M. T. Day 44, A. S. Hunt 41.

Eagle badge pistol match, 50yds.: F. Williams 87, A. W. Hill 85, S. D. Martin 82.

## New York Central Corps.

The New York Central Schuetzen Corps, Capt. D. Meersse, held its annual festival and prize shoot at the Union Hill Park on Wednesday and Thursday of last week. The weather on both days was fine. There was a large attendance of riflemen, and the competition for the prizes on the ring, man and bullseye targets brought out many fine scores.

Louis Flach, of the Zettler Club, was present on Wednesday and distinguished himself by making the fine score of 74 out of a possible 75 on the ring target. There was a great attendance of visiting societies on Thursday afternoon. The New York Corps, Capt. Henry Offerman, came into the park nearly 150 strong. There were also large delegations from the New York Independent Corps, New York City Corps, Hoboken Independent Corps and others. Among the prominent riflemen present were F. C. Ross, M. Dorrler, L. P. Hansen, R. Busse, H. D. Muller, E. Berkman, Philip Schmidt, Jas. Eisenhardt, R. Buzzeni, Fred Schmidt

The Zettler Brothers furnished the rifles, and many of the winning marksmen owe their success to the good qualities of these rifles and ammunition.

On the ring target Louis Flach was first with the score referred to (74), M. Dorrler was second with 72 (24, 24, 24), L. P. Hansen third with 72 (25, 25, 22).

The best score on the man target was made by F. C. Ross with 58, Louis Flach was second with 56. F. C. Ross also carried off the honors on the bullseye target.

Bruno Eisner won the king prize and was crowned king of the festival at the close of the shoot. Scores:

Ring target, 3 shots, possible 75: L. Flach 74, M. Dorrler 72, L. P. Hansen 72, S. Eisenhardt 71, F. Ross 10, Ph. Feigel 70, L. Vogel 70, R. Busse 70, Ph. Schmidt 68, Geo. Schlicht 68, G. W. Plaisted 68, E. Berckman 77, C. G. Zettler 66, F. Schmidt 65, F. Schraeder 65, B. Zettler 64, M. Ficken 64, W. Roos 64, H. S. Muller 63, R. Flierdl 62, E. Richards 60, D. Meerse 59, Buzzeni 58, W. Koch 57, J. Dux 56.

Man target, 3 shots, possible 60: F. C. Ross 58, L. Flach 56, G. Schlicht 55, Ph. Schmidt 55, L. P. Hansen 54, R. Busse 54, W. Roos 54, R. Flierdl 54, M. Dorrler 53, G. W. Plaisted 53 F. Schraeder 53, L. Vogel 52, F. Schmidt 52, H. D. Muller 51, B. Zettler 51, C. F. Gennerich 51, E. Berckman 51, M. Ficken 50.

Bulleyes: F. Ross 21, G. Schlicht 16, F. Schmidt 16, E. Berkman 12, L. Flach 11, Ph. Schmidt 10, L. P. Hansen 7, R. Busse 6, J. Eisenhardt 4, F. Schraeder 4.

King: Bruno Eisner.

## Gold Coin, Corsets and Egg-Beaters.

Bridgeport, Conn., Aug. 4.—The Bridgeport Schuetzen Verein are so satisfied with the success of their tournament which came to an end last evening, that they will hold an annual tournament hereafter. Yesterday's scores for the general prizes, the first three in doubles, were as follows: Mr. Pope, Hartford, 74, 69, first prize $25 in gold; Mr. Ross, New York, 70, 69, second prize, $20 in gold; W. Wheeler, 69, 65, third prize, $15. In the singles, Charles Rohrbach, Jr., 70, took the fourth prize, oak parlor table.

The other prizes were won in the order given: A. H. Merriman, Meriden 68, Winchester repeating rifle; W. Lieberum 68, case brandy; A. Wheeler 67, silver pitcher; J. Wilkinson 65, violin; R. H. Barton 62, set carving cutlery; Charles Rohrbach, Sr., 62, rug; L. Kutscher 61, rifle; P. Bartell 61, rug; J. Porzenheim 69, order for 500 cartridges; J. Saar 60, case wine; G. Utz 59, order for corset; C. Keller 59, one ton coal; H. Beutelspacher 59, one ton coal; F. Schussler 58, set loading tools; W. N. Beardsley 57, silver urn; J. Greenwood 56, order for pair of trousers; F. Egge 54, silver cup; S. C. Kingman 53, bamboo fishing rod; F. Drouve 53, keg powder; G. Drouve 53, rubber coat; C. Held 50, live lamb; A. C. Taylor 49, gold cuff buttons; L. Schwerdtle 48, umbrella; L. Kutcher 48, order for fish; J. Beers 48, order for photographs; O. Lehmann 44, order for roast beef; E. Horkheimer 45, order for three shirts; P. M. Beers 43, whip; G. Phillips 42, J. Pfalzgraf 36, gold medal; M. A. Beers 35, shooting vest; P. Strassberger 31, amber cigar holder; G. Schreyer 30, A. Ide 27, shaving set; Miss V. M. Rohrbach 26, gold mounted revolver; H. L. Eames 24, jardinier; R. Ruessel 23, paper rack; H. Kretz 18, aluminum cigar case; A. Schaff 11, one half-barrel ale; F. Erhsam whip, L. Schneider oil stove, B. Lill order for hat; H. Spoering order for hat; H. Carston lamp, Mrs. Eckhart egg-beater, W. Behrens box cigars, G. Bender hunting bag; C. Stohr album, W. Kustcher box cigars, F. Eckert pocket knife, H. Lieberum table cutlery. All are our members excepting M. H. Pope, C. F. Ross and A. H. Merriman.

## New York Independent Corps.

The New York Independent Schuetzen Corps, Capt. Wm. V. Weber, held its monthly practice in the Glendale Schuetzen Park, on Friday of last week. While the weather was fine for outdoor sports the attendance was below the average. The shooting of some of the individual members was good. Wm. Hayes was first on the ring man and point targets. Ignatz Martin was a close second. B. Walther made a hard struggle to get to the front, but the luck was against him.

Ring target, 5 shots, possible 125: Hayes 117, Martin 112, Walther 111, Fisher 105, Greiner 104, Krauss 103, Steurnagel 96, Herman 95, Beittschier 93, Soell 93, Grenier 67, Schellhaus 58, Kable 44, Schumacher 69, Dr. Pankertins 42, Schmidt 64, Bauer 90, Hayes 117.

Man target, 3 shots, possible 60: Hayes 58, Walther 57, Martin 56, Stein 54, Bittschier 51, Herman 50, Krauss 50, Greiner 47, Bauer 46, Fisher 45, Soell 45.

Point target, 5 shots, possible 20: Hayes 19, Martin 18, Begerow 17, Greiner 16, Soell 16, Fisher 16, Walther 16, G. Krauss 16, Bittschier 16, Hoffman 15, Bauer 14, Sternkopf 14, Schmidt 13, Herman 12, Stoehr 12, Baab 12, Kutzer 12, Henke 6.

## Blumenthaler Company No. 6.

New York, Aug 6.—The Blumenthaler Company No. 6 held their weekly shoot July 31, with ten members present. Following are the scores:

| | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| Hicks | 239 | 236 | 235 | 224 | —934 | Gross | 229 | 226 | 225 | —680 |
| Muller | 239 | 230 | 229 | 227 | —925 | Koerner | 219 | 182 | ... | —401 |
| Nicais | 204 | 202 | 177 | 174 | —757 | Norwicki | 224 | ... | ... | —224 |

Henry D. Muller.

## Schlicht Rifle Club.

West New York, July 30.—The weekly shoot of the Schlicht Rifle Club was held at headquarters this evening. Geo. Schlicht won the champion medal, Jacob Diehl the first class, Geo. Lautenberger the second class, C. Meyer the third class. Scores: Lautenberger 193, Geo. Dorr 231, C. Meyer 228, Geo. Schlicht 239, Jacob Schlicht 227, Wm Schlicht 227, Geo. Reichert 231, Jacob Diehl 229, Fred Lambrix 219, A. Meyer 226.

## Greenville Rifle Club.

Greenville, N. J., Aug. 3.—The weekly gallery shoot of the Greenville Club at headquarters this evening did not have its usual attendance. Only nine members participated. The scores are appended: M. Dorrler 244, C. Boag 240, Collins 237, Scheeline 223, Gotthardt 238, Agneau 237, Rinker 211, Graff 225, Holzapfel 226.

## Excelsior Rifle Club.

Jersey City, July 31.—At the weekly gallery shoot of the Excelsior Club held at headquarters this evening, the following appended scores were made: Jas. Hughes 238, J. Speecher 228, R. H. Duff 234, J. Burns 226, A. Walter 240, Thompson 231, G. Williams 229, D. Kastendick 222, C. L. Pinney 225.

## Rifle Notes.

The Plattedeutsche Volksfest Verein will open its annual festival in Union Hill Park to-morrow (Aug. 19). The shooting programme is liberal, and the fact that all surplus receipts of the fair are divided among our local hospitals should stimulate a large attendance

Harry M. Pope, of Hartford, Conn., and F. C. Ross, of Brooklyn, met at the shoot of the Bridgeport Schuetzen Verein last week at Bridgeport. Pope took first prize on the ring target, making 69 and 74. Ross was second with 69 and 70. Jos. Banzer accompanied Ross as mascot.

The Zettler Rifle Club is out with its programme for its twenty-first annual festival and prize shoot, to be held in Wissel's Cypress Hills Park, Aug. 26 and 27. We append a synopsis of that part of the programme which is open to the public: Ring Target—Distance 200yds., ¾in. (25) German ring target, any rifle, open to all comers. first ticket $2, each following $1, two best tickets to count for the first five prizes, the best single ticket to count for the following prizes, tickets unlimited, only one prize obtainable by any shooter, 21 prizes, ranging from $50 to $1. Premiums: Best five tickets on ring target $10, second best five tickets $8, third best five tickets $4, fourth best five tickets $2. Bullseye Target—Open to all comers, 10 shots for $1, the best bullseye to count by measurement, 18 prizes, ranging from $20 to $1. Premiums—For the most bullseyes shot by one shooter during the festival: First premium $12, second $8, third $6, fourth $4, fifth $2. First bullseye on Sunday $1, last bullseye on Sunday $1, first bullseye on Monday $1, last bullseye on Monday at noon $1, first bullseye on Monday in the afternoon $1, last bullseye on Monday in the evening $1. Judges' Target—Three shots, open to judges only; prizes, two fine gold lockets presented by the club.

# Trap-Shooting.

**All ties divided unless otherwise reported.**

**If you want your shoot to be announced here send in notice like the following:**

## FIXTURES.

Aug. 7-9.—Memphis (Tenn.) Gun Club tournament.

Aug. 8.—W. H. Kearfott's semi-annual bluerock target tournament at Kearneysville, Jefferson county, W. Va.

Aug. 8-10.—Missouri State Amateur Association, at Richmond, Mo.; $300 added.

Aug. 9-10.—Sherburne, N. Y., Gun Club tournament. L. D. Brainard, Sec'y.

Aug. 10.—Worcester, Mass.—New England Shooting Association championship tournament under auspices of Worcester Gun Club.

Aug. 13-18.—John Parker's fourth international tournament, blue rock targets and live birds, at Des-chree-shos-ka Island, near Detroit, Mich.

Aug. 15-16.—Richmond (Me.) State shoot. C. O. Rowe, Sec'y.

Aug. 21-22.—Sturgis, Mich., Rod and Gun Club's annual tournament, Hotel Thornton's guaranteed stake $50. W. E. Pearson, Sec'y.

Aug. 21-23.—Hot Springs (S. D.) Gun Club's tournament; $250 added.

Aug. 21-24.—Pennsylvania State Sportsmen's Association annual tournament, under auspices of Altoona Rod and Gun Club, at Wopsononock Park, Altoona.

Aug. 22-24.—Central Illinois Sportsmen's Association annual tournament, at Bunker Hill, Ill.

Aug. 23.—New England Shooting Association championship tournament, under the auspices of the Atlantic Trap Shooting Association at Lynn, Mass.

Aug. 29.—Central New York Trap-Shooters' League, fifth tournament, at Auburn.

Aug. 29.—Staunton, Va., Gun Club tournament. J. M. Kinney, Sec'y

Sept. 3.—Endeavor Gun Club's annual shoot, Marion, N. J. E. Hollister, Sec'y, Jersey City Heights, N. J.

Sept. 3.—Putney, Vt.—New England Shooting Association championship tournament, under auspices of Putney Gun Club.

Sept. 4-7.—New London, Conn.—Standard Keystone Co.'s seventh annual tournament. James W. Clinton, Sec'y.

Sept. 11-13.—Indianapolis, Ind., second annual tournament, on the grounds of the North End Shooting Club.

Sept. 19 20.—Interstate Manufacturers' and Dealers' Association's tournament, under the auspices of the Chattanooga Gun Club, at Chattanooga, Tenn.

Sept. 20.—Penacook, N. H.—New England Shooting Association championship tournament, under auspices of Penacook Gun Club.

Sept. 25-27.—Rochester (N. Y.) Rod and Gun Club tournament, with Central New York League team shoot, at Rochester. J. B. Mullan, Sec'y.

Sept. 26.—Central New York Trap-Shooters' League, sixth tournament, at Rochester.

## DRIVERS AND TWISTERS.

*Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.*

We have received a copy of the programme for "Jack" Parker's fourth annual international shooting tournament to be held at Deschree-chos-ka Island, Aug. 14, 15, 16 and 17, and a remarkably well-arranged and well-printed affair it is, being on fine paper and embellished with fine half-tone engravings of such well-known sportsmen as "Jack" Parker, Paul North, Harvey McMurchy, Rollo Heikes, "Sam" Glover, "Milton" Lindsley, "Ed." Taylor, W. R. Hobart, W. K. Park, Ferd. Van Dyke and T. H. Keller. On the first day there will be five 10 target events, $1.50 entry; three 15 target events, $2.50 entry; one 20 target event, $3 60 entry with $100 guaranteed, and the two men team championship race at 25 targets each, for the championship of the United States and Canada. The winners will each receive a diamond button emblematic of the championship and there will be other merchandise prizes. Wednesday will be live bird day, the events in order to be 5 birds, $5; 7 birds, $7; 10 birds, $10; 25 birds for international gold medal costing $150; this is also an optional $25 sweep. Third day, five 10 target events, $1.50 entry; three 15 target events, $25 entry (two of these have each a $100 purse guaranteed); two 20 target events, $3.60 entry. Friday, fourth day, five 10 target events, $1.50 entry; three 15 target events, $2 50 entry; one 20 target event, $3.60 entry with $100 guaranteed; and the contest at 50 targets for the individual international target championship, the first prize of which is a diamond trophy. There are also eleven other prizes of merchandise. All the guaranteed purses shall be shot at 16yds. rise; one barrel, known traps and angles (except known experts shall shoot from known traps, unknown angles). In the team and individual races all will shoot from known traps and angles. Blue targets will be thrown from two sets of expert traps. All 10 and 15 target events will be shot from 21yds. rise, use of both barrels allowed, unknown traps and angles. Instead of making the usual per centum divisions of the purse, the "Only Jack" will pay out cash as follows: Ten target events, scores of 10 will receive $5 each; 9s, $3 each; 8s, $2 each; 7s, $1 each; 6s, $1 each; 15 target events, scores of 15 receive $10 each; 14s, $7 each; 13s, $5 each; 12s, $3 each; 11s, $2 each; 10s, $1.50 each. This does away with all necessity of a handicap, as the shooting of the expert does affect the interest of the amateur. In fact it wipes out all pooling for places, combinations, etc., and instead of shooting against one another all are shooting against the management. In these events there will be four men in a squad. No. 1, 2 and 3 men standing in the center, 6ft. apart; No. 4 man backing No. 1 man.

Macon, Ga., July 31.—The members of the Macon Gun Club had an interesting series of shoots at live pigeons on their grounds yesterday. There were three events at 5, 15 and 5 live birds respectively, the scores being as appended:

| | No. 1. | No. 2. | No. 3. |

In the whole of Essex county, N. J., there is no more enterprising club than the Brighton Gun Club, of East Orange, which comprises on its roll many members of the former East Orange, Roseville and Amateur gun clubs. The members turn out well for practice and are always ready to arrange a team contest with neighboring clubs. On Saturday, Aug. 4, its team met and signally defeated the second team of the Maplewood Gun Club, the match being shot on the Brighton grounds. Each team comprised seven men who shot at 20 bluerock targets each, 18yds. rise. The scores: Brighton G. C.—S. Badgeley 17, G. Huff 17, E. Canfield 16, E. J. George 15, J. Moore 14, J. Gower 14, J. O'Meally 11; total 104. Maplewood G. C.—C. Dean 16, W. Van Iderstine 14, Wick. Smith 14, D. W. Tillou 14, M. R. Quad 12, G. Smith 11, S. B. Tillou 10; total 91. Sweepstake at 20 singles: J. W. Smith 18, G. Huff 18, S. Drake 18, S. Badgely 16, E. J. George 16, E. Jackson 16, E. Canfield 15, M. R. Quad 14, J. O'Meally 14, W. Van Iderstine 10, D. W. Tillou 10, G. Kutcher 9. No. 2, same: Badgely 16, J. W. Smith 16, Huff 15, Canfield 17, George 12. No. 3, 10 singles: Drake 9, O'Meally 9, Dean 8, Van Iderstine 8, Kutcher 7, Quad 7, S. Jackson 6, M. Potter 6.

Next Thursday's contest for the diamond medals of the Onondaga County Sportsmen's Club, of Syracuse, will be of unusual interest, as the final possession of the medals may then be decided. If A. G. Courtney scores another victory he will become owner of the Class A trinket, having already won it four times. Again, if Charles Wagner or C. F. Ayling win the next competition it will put the winner in a tie with the genial "Court," as each have three wins to their credit, and enhance the interest in the September contest. Other winners have been C. Dugard once, A. C. Ginty once, Geo. Mann once, D. M Lefever once, and Harvey McMurchy once. The B Class medal has been won four times by Harry Jones, and three times each by A. S. White and M. Williams; so here is a chance for another combination.

The sportsmen of Memphis, Tenn., had an opportunity to witness an interesting trap match on July 30, when a team of twelve lawyers tried their skill and nerve against a like number of city merchants. The conditions called for 15 single targets per man. The scores: Merchants—W. D. Mallory 7, A. D. Gibson 5, J. M. Rainey 6, John Poston 6, A. C. Treadwell 2, W. B. Mallory 5, W. T. Bowdre 9, Ben. Mallory 11, J. W. Bailey 4, T. A. Divine 11, J. A. Austin 5, Le Clerc 7; total, 76. Lawyers—S. P. Walker 9, W. L. Clapp 5, J. M. Greer 5, J. H. Watson 10, George Gillham 1, Lee Thornton 4, F. B. Poston 10, W. A. Wheatley 2, E. F. Adams 3, W. B. Edrington 7, McFarland 8, D. M. Scales 5; total, 69. The same teams afterward shot at 10 singles each, the lawyers winning.

Some months ago a number of the members of the old East Side-Mutual Gun Club, of Newark, who formerly shot on the Weidenmeyer Park grounds, Hamburg place, decided to organize a new club and one comprised of active shooters. The new club was formed and christened the Walsrode Gun Club, having shooting grounds at the foot of Chestnut street. A shoot was held here on July 24, the main event being at 25 singles in which Perment broke 20, Lenthaeusser 16, Roth 15, Alexander 14, Reinhardt 13, Schaefer 12, Fraenzel 9 and Farley 9. There were also a number of sweeps on the programme. In event No. 2 at 5 pairs the scores were Perment 8, Reinhardt 7, Lenthaeusser 7, Schaefer 6, Roth 5. No. 2, same: Perment 7, Schaefer 7, Roth 6, Lenthaeusser 5. No. 3, same: Lenthaeusser 7, Roth 7, Perment 8, Schaefer 7. The club will shoot every Saturday hereafter.

The Business Men's Gun Club will hold a shoot at Weir City, Kas., on Aug. 22, with $50 added money. The progamme comprises eight events at 20 targets each, $2 entry. In event No. 3 there will be $10 added, in No. 6, $15, and in No. 8 a citizen's purse of $25. The shoot will be open to all. The new North handicap will be used as follows: All known 85 per cent. men cannot compete for any but first and second moneys in any event; these shooters will be named as experts when they enter the first event and cannot win any part of third or fourth moneys during the day. Any other shooter who may fall in first and second money in any event cannot get a place in third or fourth money in the next event or until he falls below first and second money.

The Chillicothe (O.) Gun Club has been reorganized, and the officers and members have outlined a plan of active work that should keep them busy. In the near future they will erect a club house, the committee on this matter being W. Clark, A. Robinson, T. Murphy, W. Dufeu and A. B. Dickey. At present the club shoots at the Children's Home Park, its use having been generously donated by Mr. Reutinger. The club shoots will be held on Tuesday and Friday of each week, the members shooting at 25 targets each. The officers elected are Walter Story, President; R. R. Freeman, Vice-President; J. H. Blacker, Treasurer; Warren Chapman, Captain.

Robert Welch was in great form on Aug. 2 when he shot at 100 birds against James Wolstencroft for the Riverton plate. The day was a fine one for the sport and the birds very good for the season. Welch killed 98 birds and thus beat Hoey's record made on the Westminster Club's grounds. The rise was 30yds. and the boundary 50yds. The scores were as below:

Welch.....1222111112222211121122222122222222222222222222221—49
2222121222121211222012112212222112111212121212122—49—98

0211222111121020101112111221221112211102012102221—43—89

Welch has now won the plate twice, Work twice and Hoey once.

A match at 100 live birds each for $100 a side between Albert Ivens of Red Bank, and James Van Brackle of Matawan, was billed to be shot at Tinton Falls, N. J., on July 31, but owing to a heavy thunderstorm the match was postponed. Previous to the shower a 25-bird match for $50 a side took place between Eugen Magee of Tinton Falls, and William Perrine of Feneau, 20yds rise, 80yds. boundary, one barrel only allowed. Magee was shot out on the sixteenth round when the score was, Perrine 11, Magee 6.

The first of the series of matches between the Wilmington Rod and Gun Club and the Claymont Gun Club took place at Claymont on July 28, 8 men to a team, 25 singles per man. The scores: Claymont G. C.—Hooper 20, S. Casey 17, Williams 14, Habbart 7, G. Casey 13 Bird 18, Cloud 11, Whartonby 14; total 114. Wilmington R. and G. C'—Brown 16, McConnell 15, Palmer 10, Grubb 12, Wagner 14, Bilderbach 20, Hartlove 17, Clark 3; total 107.

Rollo Heikes is showing better form than ever and it is getting to be a common occurrence to run straight scores of from 50 to 100 singles, under any conditions. On July 28, previous to the Buckeye-Sherman match he broke 20 singles in a sweep, 50 in the match and 30 more in practice afterward, making a clean run of 100 breaks from known traps, unknown angles. This is record for the Sherman grounds.

The monthly shoot of the Myrtle Gun Club took place at Dexter Park on Aug. 2, the attendance being light. In the club medal contest at 7 live birds, club handicap, the scores were: Henry Knebel, Jr. (28) 7, Chas. Gottfleish (25) 7, Herman Halstead (21) 4, John Luderman (25) 4, Edward Wohlke (25) 3, Ernest Roberts (21) 2.

Every sportsman who has read Mr. F. G. Moore's charges anent unfair treatment of American pigeon shooters by members of English clubs should read Capt. A. W. Money's communication in reference to the same, in another column. Capt. Money is an undoubted authority on matters pertaining to shooting in England and his opinions are conclusive.

The Sherman Gun Club will not wait long before trying to wrest back the *Review* cup won from them by the Buckeyes. The Shermans have received the *Shooting and Fishing* cup, emblematic of the championship of Ohio, and are ready to defend it against any State teams.

The officers of the Louisiana Gun Club of New Orleans are: President, W. H. Moore; Vice-President, L. P. Chaudet; Secretary, L. C. Thornhill; Captain, Harry C. Ludlow; First Lieutenant, R E. Soucier; Second Lieutenant, P. N. Nott.

Don't forget to send for a programme of the Pennsylvania State Shoot, and don't fail to go to Altoona on Aug. 21 to 24, and secure a view from Lookout Point, the highest point of the Wopsononock Mt., 2,900ft. above sea level.

The Highland, West End and Forester Gun Clubs will shoot the final of their series of six matches on the Forester's grounds at Davenport, Ia., on Aug. 17. If the West Ends win they will have to shoot off with the Foresters.

Carver vs. Brewer, Carver vs. Budd, Carver vs. Fulford. All these great series of great shooting matches yet to come. And they should be truly great exhibitions if shot on their merits and the principals hold their form.

"Jack" Parker writes us that if any surplus accumulates from entrance fees in 10 and 15-target events at the Des-chree-shos-ka tournament, said surplus will be put up and shot for, entrance free, at close of the shoot.

Mr. Edward Banks desires us to state that all packages of shells, etc., addressed to his care by those intending to be at the Pennsylvania State shoot, will be found at Wopsononock during the days of the shoot.

Whoop'er up, Uncle Al Heritage and get that new organization in working order so that Jersey can have a State tournament this fall. Call a meeting, "Uncle Al," call a meeting!

At the monthly medal contest of the London (Ont.) Gun Club, on Aug. 3, J. L. Paine won the medal on a score of 20 out of a possible 27.

Des-chree-shos-ka Island and "Jack" Parker's international tournament will catch all the boys next week, Tuesday to Friday, inclusive.

Some of the sharpers will be shut out from their usual plan of dropping from places during "Jack" Parker's shoot.

Next Thursday will be Essex day on Al. Heritage's Marion grounds. The shoots of this club are open to members only.

The North End Shooting Club will hold its second annual tournament at Indianapolis, Ind., on Sept. 11, 12 and 13.

Thos. S. Dando, L. R. Finletter and Geo. Work have all challenged "Bob" Welch to shoot for the Riverton Cup.

The Gilbert Rod and Gun Club of Brooklyn is building a two-story 30×40 club house at Amityville Cove.

The Sherburne Gun Club tournament will be held Aug. 9 and 10, at Sherburne N. Y.

C. H. Townsend.

## The American Shooters in England.

Oakland, N. J., Aug. 6.—*Editor Forest and Stream:* I reached New York on Wednesday last and have since seen the paragraph in your paper containing statements said to have been made by Mr. F. G. Moore, and published in the New York *Sun* of July 28. I cannot allow these statements to pass unchallenged and in the name of fair play I ask you to publish this letter.

I accompanied my friend Mr. Moore and others to England, and was present with them, shooting myself, at all the shooting in which they took part.

Mr. Moore complained to me both at Hurlingham and the Gun Club that he, as well as myself and the rest of the party, were not getting fair play in the matter of handicapping. I tried to show him that the handicapping was carried out in accordance with rules laid down at both clubs and which could not be departed from. These rules were not specially made for our benefit, but applied equally to the regular members of the club and all the other foreigners present.

Mr. Moore would, however, listen to no explanation and continued to feel very sore on the subject, the more so that, except by fits and starts, he, like all the rest of us, was shooting very poorly.

The handicapping at both Hurlingham and the Gun Club is in the hands of gentlemen elected by the members of the club and who are perfectly above any possibility of suspicion as to their showing any favor or partiality.

I myself, as well as all other foreigners present, men who have shot at these clubs as guests for years past, were subject to the same rules of handicapping, but no one but Mr. Moore found fault with them.

Mr. Moore is quoted as having further said that at Hurlingham the traps were found to be 2yds. further from the shooters than the indicated distance showed, so that a shooter supposed to be standing at 30yds. would really be standing at 32yds., and so on at each distance.

This was true, but it affected each man shooting in exactly the same way, and not, as Mr. Moore would seem to imply, the American visitors only.

I think from the above it will clearly appear that, as far as these two points in Mr. Moore's statement are concerned, he had no special grievance, but was treated exactly as any other member or guest of these two famous clubs was treated.

I now come to another point, viz., his accusation against the men who pull the traps and those who put the pigeons into the traps, and his further statement, that certain members of both clubs were cognizant of and benefited by such malpractices.

Mr. Moore here states as facts what he can only have a suspicion of, and if he can point out any way for proving his suspicions and making all chance of such cheating an impossibility in the future, he will earn the grateful thanks of all true sportsmen.

Whether it was good taste on Mr. Moore's part to make public such statements as he has done, when half of them were untrue in fact and the rest based on merest suspicion, and when he had been shooting as a guest at these clubs for money prizes and cups of great value presented gratis by them, I leave brother sportsmen to judge.

He complains that he did not meet with courtesy. It seems strange that no complaint of that sort has ever been made by such sportsmen as Macalester, Gale, Dolan, Seaver Page, L S. Thompson, Oakleigh Thorne, Edgar Murphy and many other Americans who have shot there year after year. Albert W. Money.

P. S. Since writing the above I have received a letter from Mr. Robt. Welch of Philadelphia, who wishes to join me in publishing it, and indorses all I have stated. A. W. M.

## Boston Shooting Association.

Wellington, Mass., Aug. 1.—The Boston Shooting Association held an all-day shoot on their grounds. The principal event was for the individual championship of New England, a purse of $100 in gold, which was won by H. G. Wheeler of Marlboro, Mass. The match consisted of 150 birds, divided into nine events, as follows: 20 birds Keystone system, 20 birds Keystone revised, 10 pair, 20 birds from five unknown traps, 10 birds three known traps, 20 birds Keystone, 10 birds three traps unknown, 20 birds Keystone revised and 5 pair. The following scores were completed: Wheeler 136, Dickey 133, Bartlett 132, Conn 129, Rule 128, Burbridge 123, Leroy 123, Sanborn 123, Allison 122, Davis 120, Forehand 112, Richardson 104.

Other events were: First event, 10 Keystones, 32 entries: Wheeler, Hoyle, Bartlett, Alexander, Farrar, Bucklin and Dickey, first; Forehand, Hakes, Rule and Hyde, second; Tucker, third; Merrill, Herbert and Jones, fourth.

Second event, 10 targets, 30 entries: Forehand and Swiveller, first; Adams, Davis, Climax, Huntington, Burbridge and Wheeler, second; Hyde, Alexander, Rule, LeRoy, Waldo and Bucklin, third; Herbert, Allison, Bartlett, Jones and Tucker, fourth.

Third event, 5 pair, 28 entries: Burbridge, Allison, Jones, Waldo and LeRoy, first; Herbert, Hakes, Hyde and Hoyle, second; Tucker, Bucklin, White, Sanborn, Huntington, Buck and Forehand, third; Merrill, Snow, Wheeler, Bartlett, Rowe, Alexander, Bowker and Mascroft, fourth.

Fourth event, 10 birds, 38 entries: Climax and Dickey, first; Davis, Snow, Wheeler, Sanborn, LeRoy, Waldo, Tucker, Perr and Conn, second; Rule and Wadsworth, third; Forehand, Buck, Hyde, Hoyle, Bartlett, Rowe and Huntington, fourth.

Fifth event, 5 pair, 21 entries: Perry, first; Climax, Walls, Daniels, Rowe and Allison, second; Herbert, LeRoy, White and Gore, third; Forehand, Snow, Jones, Stine and Davis, fourth.

Sixth event, 10 targets, 28 entries: Herbert, Wheeler and Bartlett, first; Rule, Stone, Sanborn, LeRoy, Tucker, Yarp, Perry, Conn and Richardson, second; Waldo, Forehand, Snow, Swiveller, Wadsworth, Climax, Rowe, Alexander and Mascroft, third; Gore and Allison, fourth.

Seventh event, 5 pair, 16 entries: Forehand and Rowe, first; LeRoy and Walls, second; Martin, Allison and Perry, third; Mascroft and Herbert, fourth.

Eighth event, 5 pair: LeRoy, first; Allison and Snow, second; Rowe and Forehand, third.

Ninth event, 10 birds: Conn, first; Swiveller Rule and Herbert, second; French and Rowe, third; Richardson and Forehand, fourth.

Tenth event, 10 targets: Forehand, Rowe, Allison and Rule, first, Snow, Herbert, LeRoy, Winn and Daniels, second; Conn, third; Martin, fourth.

## Vernon Rod and Gun Club.

Match for club prizes, July 30, at 15 single and 3 pairs double bluerocks:

Class A.

| | | |
|---|---|---|
| G M Cooke | 101001010111101 | 10 01 00—11 |
| G W Gales | 011111101110010 | 11 01 11—15 |
| L G Hawkins | 110100001011101 | 11 11 01—13 |
| J S Massie | 101011110111011 | 11 11 11—17 |
| J G Matthews | 011000110001010 | 11 11 01—11 |
| A L Tschiffely | 010110111000100 | 01 00 10— 9 |

Class B.

| | | |
|---|---|---|
| D M Alexander | 011001001100010 | 10 11 01—10 |
| J M Batchelor | 101110000001000 | 11 00 00— 7 |
| A M Hiatt | 001100011100000 | 00 10 00—11 |
| D P Henry | 000100000011101 | 10 00 10— 6 |
| Tom Pope | 001111101100010 | 00 11 11—12 |
| L P Lorance | 111111110010111 | 10 01 11—16 |
| S P Sadler | 010001000011110 | 01 11 11—11 |
| T J Youngblood | 011101001110101 | 11 01 11—13 |
| J T Allison | 000011000001001 | 00 10 10— 6 |

Winners—Class A, $5 for 3 pairs doubles, J. S. Massie. Class B, $3.50 for 5 straight birds, L. P. Lorance. According to the rule Lorance is now transferred to Class A.

## Yankton Gun Club.

Yankton, S. D., July 27.—The Yankton Gun Club has come to stay Its members have entered into the spirit of the organization with commendable zest and zeal, and the ensuing months will be fraught with many interesting contests with the shotgun and much pleasure for the lovers of sport who comprise it. Twenty business men have enrolled their names uncer the articles of organization, and every man of them loves to shoot.

This club will soon develop its plans concerning the preservation of game and the enforcement of the game laws of the State in this county. Every person who violates those laws will find the club hot on his trail, and he will be prosecuted to the fullest extent, if apprehended. This particular matter the club will make its business, and with the determination of seeing the law strictly adhered to.

Yesterday the contract for the erection of the club house at a point just south of the old Yankton county fair grounds was awarded. The house will be 25×15ft. in dimensions and one story high. It will be used by the club for storage and recreative purposes.

Wilson & Cobb have hung up a trophy to be presented to the marksman whose average shooting is best, at the end of a year. It is a coin silver badge comprising a bar and pendant. The bar is engraved 'Champion" while the pendant is marked "Yankton Gun Club" on its face and "1894" on the reverse side. The badge is the handsome work of L. A. Cobb, and is worthy the efforts of any shooter to win.

## Princeton Prize Shooting.

Princeton, N. J., Aug. 4.—The first two of the series of five contests for choice of gun or rifle have awakened a great interest among local trap-shooters. The handicap governing places all shooters on so even a basis that there is a delightfully exciting uncertainty almost until the last shot of each match is fired. In the first match, last Monday, Mr. Robert Schellinger won first place with the excellent score of 21 out of 31, Messrs Phillips and Hoff winning second and third places respectively. In the Thursday match, Master George Rule won by 21 breaks for 32 shots. Up to June 30 Master Rule had never fired a shot at a moving target with a shotgun, though he was already known locally as an expert with the rifle. If any other gun club in New Jersey has a 16-year-old that can equal his record we should like to see a match between the lads. Complete scores of the two matches are as follows:

Monday—Shoot No. 1: Phillips shot at 25, broke 15, Rule (32) 15, Clark (25) 3, Schellinger (31) 21, Tiffany (25) 13, Hoff (28) 17, Zazzalli (35) 6, Stout (29) 15, Seger (25) 6, Wesley (40) 9, Applegate (25) 15

Thursday—Shoot No. 2: Schellinger shot at 31, broke 15, Wesley (40) 13, Rule (32) 21, Margerum (28) 10, Hoff (28) 19, Skirm (25) 15, Phillips (25) 14, Stryker (30) 11, Tiffany (35) 19.

Hoff and Tiffany tie for second place, Skirm and Schellinger for third.

## "Trap-Shooter's Ready Reckoner."

There has just come from the Forest and Stream press an extremely useful pocket reference book for trap-shooters. Its full title reads: "Trap-Shooter's Ready Reckoner. A series of tables showing at a glance the division of purses under all conditions, simple and complex, with entries from one to fifty. For use by individuals, clubs, and tournaments. Compiled by J. C. Clark, Secretary Kansas State Sportsmen's Association." Price 25 cents, postpaid, by Forest and Stream Pub. Co.

## A Close Contest at Saratoga.

In my letter to FOREST AND STREAM of Aug. 4, which gave an account of the pigeon shooting match wherein Harry R. Sweny, of Albany, defeated Walter Hansen, of Saratoga, I stated in the concluding paragraph that Sweny had been backed by David S. Johnson—a New York sporting man who is spending the summer at the Springs—to shoot a 50-bird race with Ned Garrison, of New York. As far as the backing was concerned I was in error; Johnson made the match, but Sweny was his own backer. The terms of the match were 50 birds per man, $50 a side, American Shooting Association rules to govern, except that the boundary should be a 30yds. circle. The date of the event was set down for Thursday, July 31, and a large gathering of spectators, which included many shooters of the Eastern League and a big representation of the *habitués* of the race track, were on hand at the grounds of the Saratoga Gun Club to witness the shooting. The hour for the match to open—10 A. M.—arrived, and two hours more dragged their slow length along when the gun club manager, Mr. Levengston, announced that the birds had not arrived, and that the principals had agreed to postpone the match until the following morning. A groan of disappointment went up from the crowd, among which the Albanians were the sorest at coming away from the slowest town on earth for nothing.

The next day was Aug. 1, and that soft summer month was ushered in with its most ideal conditions. The morning sky was flecked by light fleeces of cloud, and the sun's rays shining through the soft, vapory folds, were tempered by a thin haze that hung for hours after sunrise in the motionless air of a dead calm. FOREST AND STREAM'S correspondent was again to the front with a few of his fellow-Albanians, and at the gun club grounds we made a small part of a crowd that was very much larger than that which had somewhat sulkily dispersed at the fiasco of the previous day. Among the crowd I noticed the burly figure of Herr Walbaum, the "Napoleon of the turf," but of all the sportsmen and "sports" there assembled, there was no one that drew more attention than a slender fellow in an outing shirt and trousers, and crowned with a big sand-colored sombrero. He was flying about everywhere when he was not shooting targets with Sweny and others—and he was a good shot, too. He rather fought shy of personal inquiry, but when your correspondent mentioned the great paper he was gathering news for, the supposed cow puncher was only too eager to tell that he was Arthur Schleman, guide for the Tampa Bay Hotel, at the resort of the same name in Florida. There were very many sportsmen present whom I personally knew, but among them all there was no one that gave me more pleasure to meet than my old friend, Washington A. Coster of Saratoga. "Wash" was bronzed up to his standard summer color, notwithstanding that it is not yet the season to go afield with dog and gun—looked the picture of health, and even at this early date was making some modest calculations on the success of the great State meet at Saratoga in June, '95. Mr. Coster was not to be allowed to hide his light on the present occasion, for, at the suggestion of the writer, he was chosen referee by the principals in the match, who had come to the scoring point prepared to open the ball.

Sweny appeared fresh as a daisy, his clear eyes and agile motions showing the results of the care that this young athlete habitually bestowed upon himself. Garrison on the other hand looked jaded, and it was with an accompanying yawn that he answered the greeting of the writer; but he quickly braced up on the natural supply of strength and the fund of spirits which the "dead game" man always seems to have in reserve, as his excellent shooting pace showed later on.

The pigeons were a fine lot, clean and in good feather for summer birds, being selected from 500 sent on from Philadelphia in anticipation of other matches or of scrub sweep. In color the birds were greatly varied, and the whites, blues, browns, grays, etc., more as far as possible, crated by themselves, so that the shooters had first a run of whites, then the dark colors. The traps were King's, five in number, the old-fashioned cord pulls being employed.

Garrison won the toss for choice of position and decided to go to the score. He opened the match in good form, and though the luck of birds ran with his opponent he made it a close and exciting race—first one ahead and then the other—of the see saw type. Both men shot even until the seventh round when Garrison missed. Sweny tied the score in the next round by his bird falling dead over the boundary. Garrison missed again in the ninth round, which placed him one behind his adversary. Both men then raced along at a clipping gait until the twenty-second when the score was again tied by Sweny's bird escaping over the boundary, and the same ill-luck happening again in the twenty-seventh round placed the Albanian one behind, and the race track heelers, who were looking blue over their pony bets, lifted up their voices in an exultant roar.

This state of things didn't prevail but for a short time, for Garrison overshot an incomer in the thirtieth round, and it was again neck and neck. In the next ten birds Garrison struck a very stumbling gait, missing his thirty-second, thirty-seventh and thirty-eighth birds, and Sweny, who scored the entire ten, was then in the lead. Sweny's unfaltering pace made the case look hopeless for the New York boy, but he was game to the last, shooting out the race and killing his last twelve birds straight. Sweny's lead of three was reduced to two in the forty-seventh round when a smart right-quartering driver carried its death wound over the boundary. The last three birds were "dead easy" for the Albanian and he came out a close winner, 45 to 43. All this is vouched for in the detailed score:

| | |
|---|---|
| Sweny | 1211111●●2121111111111●111—22 |
| | 1●111111111111122121●111—23—45 |
| Garrison | 2212220202022112112212222—22 |
| | 2121020121100112212111222—21—43 |

Pigeon shooting is being fairly boomed into popularity in this quarter, and the notoriety obtained by the contestants at Saratoga has made them known over the entire league circuit. Ex-champion Warren F. Lord of Troy is again in the field, boldly declaring that he will shoot any eastern New York man a 100-bird match for from $100 to $1,000 a side. The air is fairly heavy with the talk of prospective bouts, and some exciting events may be certainly looked for in the early fall.

HORACE B. DERBY.

## Knoxville's New Handicap.

*Editor Forest and Stream:*

The devoting of space in your valuable columns for the discussion of the perplexing problem of the correct handicap for club tournaments, will prove of lasting benefit to the sportsmen of the country, who are deeply interested in all that pertains to this great question.

Numerous handicaps have been presented for friendly criticism, and all so far have proved at fault, as attested by public trial. Some of them favor the expert and others the amateur. Others "ball up" the smooth working of a shoot largely attended by getting squads mixed up for position. Some make the per centum of the purse so small that the "expert amateur" and amateur cannot pay hotel bills. Others by giving so much for broken targets, that the possible win is so small that no one wants to attend the shoot and take chance to borrow money to return home. And so on until at the present time no club has yet adopted a correct handicap. What is meant by a correct handicap? It must be one that is simple, not complex, in all its working; practical and not theoretical; that places all contestants on the same basis without advantage to any one above any other. Such must be the future handicap of clubs desiring a successful meet.

The amateur has "a tired feeling" to donate any longer, while the expert, who has spent time and money "to learn how to do it," is equally tired having to go to shoots and being put to such disadvantages as some of the handicaps impose.

Having given the subject considerable thought, I desire to present some new views that I claim give all a fair chance for the purses contested

The Knoxville Gun Club has demonstrated the fact by experience that to run smoothly and successfully a meet must be "open to all," and all on the same basis; but how to get an 80 per cent. man to come and contest against 90 and 95 men is the question. Now, I will submit my new method for the very careful consideration of the shooters for their public or private opinions, believing I have started in the right direction at least (if this system will not work) for some other enthusiast to fully develop it.

THE CORRECT HANDICAP

Rapid fire, five moneys, 30, 25, 20, 12½, 12½%.

High daily and three days' average money for best scores.

Events to be 20 single targets, known traps, unknown angles for all. Each contestant must equal or better his score made in each preceding event to be in for money in each following event, except any contestant may win at any time first or second purse or money, *i. e.*, if A makes 20 or 19 in event No. 1 he may make either 19 or 20 in event No. 2; but making 18, 17, 16 in event No. 1 he must equal or better 18, 17, 16 in event No. 2 to be in for money in event No. 2. Isn't that simple? Don't condemn it until you have fully digested it, as it were, and you will find the more you think about it the better you grasp it. I claim these advantages for the system:

1. All contestants shoot on same basis, viz., kind or style of shooting, and all shoot the same event on same set of traps if two or more are used, by simply shooting through on set No. 1 four full squads in event No. 1. Then take these same squads over on set No. 2 and let them commence to shoot event No. 1, and so on. Thus they will chase one another in a circle all day and no confusion can arise, as will when you have the so called classes—amateur and expert shooting in different classes.

2. Each contestant classifies himself by his own merit. Thus if A can shoot 90% he, by his own merit (to be in for money), and shows 18, 19, 20 in the following event, the club is relieved from that embarrassing position of saying to the paid or otherwise expert, "You must shoot 1, 2, 3 moneys or you are out." It is obvious that to class a shooter on the basis of being paid instead of merit is wrong, as by his own merit the shooter classes himself and he can only blame himself.

3. Prevents pooling to drop for place, as if A by entering last squad sees that 16 is "a good hole," and he made 17 in the preceding event, he can't drop in for he is out if he does. This protects the 16 or 80% shooter from the avaricious shooter.

4. Compels the paid (or otherwise) expert to shoot high scores for 19 or 20 all the time, as the high daily average and paid reputation will not allow him to drop down to 16 when he is out for a place, failing to make his score.

5. Favors the amateur by an increased percentage in 3, 4, 5 moneys. As the 18, 19, 20 men drop out they can't drop into those purses and divide them up until a shooter does not get his entrance when all ties divide.

6. Each shooter knows at once by his all day entry score card where and when he shoots, and his score made shows him at once what he has got to do in each following event, whether he wins a place or loses, and thus he need not bother the office with questions, "What class am I in?" "Where do I shoot?" "How much did I win?" etc.

These are the salient features of the new method and I submit them to the shooters for their views as to wherein the system will not work. You may say it will "ball up" the office. I submit my office plan or pay roll and I think it is very simple and explains itself as follows:

Have a public squad score board; also a squad tab score or scorer who takes the duplicate scores for papers and one original that goes to the entry clerk in the office. All totals on it are checked with public score board, hence no corrections can be made after the tab score comes into the office. The entry clerk then looks at the extended total and sees Mr. A. makes 20, writes his name in the 20 column; Mr. C. makes 19, writes his name in the 19 column, etc.

See Table 1 as follows: Represents all who are in for money and shows at a glance A made 20 straight, purse $30, wins $15; C made 19, purse $25, wins $5. To be in for money in event No. 2, A must make 20 or 19, C must make 19 or 20, T must make 18, 19 or 20, K must make 17, 18, 19 or 20:

Event No. 1:

| Targets..... | 20 | 19 | 18 | 17 | 16 | 15 |
|---|---|---|---|---|---|---|
| | $30 | $25 | $20 | $12.50 | $12.50 | .. |
| | A | C | T | J | N | .. |
| | B | D | F | K | O | .. |
| | .. | E | G | L | P | .. |
| | .. | U | H | M | S | .. |
| | .. | V | Z | .. | .. | .. |
| | — | — | — | — | — | .. |
| | $15 | $5 | $4 | $3 | $3 | .. |

We then go to shoot event No. 2 as follows:

Event No. 2:

| Targets..... | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|
| | $50 | $40 | $30 | $20 | $20 |
| | B | A | H | C | X |
| | G | E | I | N | Y |
| | .. | P | J | M | L |
| | .. | .. | D | O | S |
| | .. | .. | V | T | .. |
| | — | — | — | — | — |
| | $25 | $13.25 | $6 | $4 | $5 |

Table 2 shows at once the possible winners to be revised for money in Event No. 2 as entered in same way by the entry clerk from tab squad scores as they are handed into the office. Now he revises and finds that B scores 20 and puts him down 20 and wins; G scores 20 also and wins place; P scores 19, made 16, and wins place; H scores 18, made 18, and wins place. So take each man in No. 2 and look back to No. 1 and revise him in columns as indicated to compare what they would have won by old system we find H I, etc., won $6, by new won $10; C, N, etc., won $4, by new $6.50; X, Y, etc., won $5, by new $6.50.

| Targets..... | 20 | 19 | 18 | 17 | 16 |
|---|---|---|---|---|---|
| | $25 | $13.25 | $10 | $6.50 | $6.50 |
| | B | A | H | N | X |
| | G | E | I | M | Y |
| | .. | P | J | O | S |

Thus showing the increased wins to individual purse in 18, 17, 16 between old and new system; 19 and 20 are the same in both systems.

Now I will state that I took the second day's shoot of the Knoxville Gun Club's last meeting and revised by this system all the eight regular events, and find that it reduces the percentage of the top winner and increased the percentage of some of those shooting low, although they were out of money in some events. Not wishing to be personal, but to show by actual trial in a meeting the resut—of what was won—I give the winners as follows, of all eight events, and the high percentage of shooting on this day cut out 93 per cent. on all days for fifth daily average:

| | Regular system, No. 1 table. | | New system, No. 2 table. |
|---|---|---|---|
| Heikes | $52 25 | reduced to | $46 50 |
| Pike | 67 25 | " | 64 00 |
| Fulford | 48 75 | " | 46 50 |
| Gay | 43 50 | " | 33 00 |
| Parmelee | 49 00 | " | 43 50 |
| Hunter | 51 95 | " | 49 95 |
| Bartlett | 40 50 | " | 31 25 |
| Van Dyke | 33 75 | " | 24 50 |
| Keller | 27 25 | " | 26 85 |
| David | 21 75 | " | 18 20 |
| Elliott | 12 00 | " | 11 50 |

These are samples of representative average shots, and this decrease was added to the amateur class or those not shooting so high an average, as follows:

| | Regular. | | New system. |
|---|---|---|---|
| Grim | $36 25 | increased to | $43 20 |
| Wagner | 41 00 | " | 47 10 |
| Anthony | 27 00 | " | 28 00 |
| McMurchy | 19 50 | " | 24 50 |
| Fonda | 7 00 | " | 9 50 |
| W T Mitchell | 20 50 | " | 20 50 |
| Hoffman | 20 00 | " | 24 50 |
| North | 22 50 | " | 34 00 |
| Shorty | 24 75 | " | 32 00 |
| F S Mead | 13 50 | " | 14 60 |

So on down the list. This gives a fair average and shows by the score as follows:

Second and eighth events regular and revised by new system; 19 and 20 always has the same in both:

| | | Number men in. | Old paid. | Number men in. | New paid. |
|---|---|---|---|---|---|
| Event No. 2 | 18 | 9 | $4.25 | 5 | $7.50 |
| | 17 | 14 | 1.75 | 8 | 3.00 |
| | 16 | 9 | 2.50 | 1 | 28 70 |
| Event No. 3 | 18 | 12 | 3.00 | 8 | 4 50 |
| | 17 | 5 | 4 75 | 1 | 24.00 |
| | 16 | 10 | 2.40 | 2 | 12.00 |
| Event No. 4 | 18 | 18 | 3.00 | 8 | 4.75 |
| | 17 | 13 | 1.75 | 7 | 3 50 |
| | 16 | 12 | 2.00 | 7 | 3 50 |
| Event No. 5 | 18 | 11 | 3.25 | 6 | 6 50 |
| | 17 | 11 | 2 00 | 6 | 4 00 |
| | 16 | 10 | 2.25 | 4 | 6 00 |
| Event No. 6 | 18 | 9 | 5.75 | 6 | 8 50 |
| | 17 | 14 | 2 25 | 6 | 5 25 |
| | 16 | 8 | 4 00 | 2 | 16.00 |
| Event No. 7 | 18 | 14 | 2.50 | 10 | 3.70 |
| | 17 | 13 | 1 75 | 12 | 2.00 |
| | 16 | 10 | 2.25 | 8 | 3 00 |
| Event No. 8 | 18 | 9 | 3.75 | 7 | 5.00 |
| | 17 | 11 | 2 00 | 4 | 5 25 |
| | 16 | 16 | 1 25 | 6 | 3.50 |

This shows conclusively that the amateur purses percentage is increased by practical demonstration at the second day's shoot of our big meeting, and in place of from 9 to 16 men tieing, it reduces the number for an amateur to get "a living, breathing place."

Now boys, jump on this theoretical and practical demonstration of the Knoxville new handicap, or "The Correct (?) System," and let's have some opinions as to the whys and wherefores it will not work, and perhaps we can yet get something better than at present in vogue and give all a fair chance at a tournament.

R. VAN GILDER

## Mr. Arno Won.

SYRACUSE, N. Y., July 31.—*Editor Forest and Stream:* In your issue of July 28 I notice an article dated at Syracuse, N. Y., headed, "Col. Courtney Wins Again," followed by an extended "inflation" upon the rare and incomparable skill of the "portly Col. A. G. Courtney," and also the suggestion that the "stuff of a champion" is deeply imbedded in the Colonel's bones. The article, in its preface, tells how Col. Courtney won the Class A medal shoot, held by the Onondaga County Sportsman's Club, July 20, defeating Charles Arno in shooting off the tie of 46. The article is signed "Falstaff," and perhaps was the result of a "heat-oppressed brain," for the printed score, following the preface, shows clearly that Mr. Arno defeated the Colonel in shooting off the tie.

Believing that the FOREST AND STREAM desires ever to defend its reputation for correctness and reliability, I desire, over my own signature, to enter a protest against such misrepresentations of facts by "Falstaff."

CHAS ARNO.

## The Eastern Tournament.

*Editor Forest and Stream:*

THE second annual tournament of the Eastern Gun Club was held August 1 and 2. The attendance was fully up to our expectations, considering the Circleville, Ohio, shoot being held on the same dates.

The grounds are located on highly elevated land, just west of our village, in sight of Old Fort St. Clair, and a most pleasing and delightful view to the eye almost surrounds the grounds.

Good weather prevailed during the entire shoot, and although extremely warm, yet owing to the elevation of the grounds a strong breeze made it comfortable for the shooters, but at no time interfered with the flight of the targets.

The management did everything possible for the comfort of the shooters in the way of erecting tents, &c., and no kicking was heard except occasionally by parties who were outclassed.

The traps, five in number, worked well, and the targets were first class.

Below is the score of the winners of the several events:

*First Day's Scores.*

No. 1, 10 bluerocks, 17 entries, entrance $1: Shorty 10, Proctor 10, W. R. Deem 9, Tippy, 9, Fosdick 9, W. Dick 9, Churchilll 8, Moses 8.

No. 2, 15 bluerocks, 16 entries, entrance $1: Shorty 15, Dr. Bucke 13, Proctor 12, Churchill 12, W. Dick 12, Fosdick 12.

## Trophy Scores of Garfield Gun Club.

THE Garfield Gun Club, of Chicago, made the following scores in its regular weekly trophy contests during July:

| | | | | | Three best scores. |
|---|---|---|---|---|---|
| **Class A.** | | | | | |
| O'Brien | 24 | 20 | 19 | 22 | 66 |
| W Palmer | 25 | 21 | 17 | 18 | 64 |
| Tefft | 20 | 20 | 18 | 22 | 62 |
| Hicks | 20 | 17 | 19 | 23 | 62 |
| S Palmer | 16 | 21 | 18 | 20 | 59 |
| Drake | 22 | .. | 17 | 17 | 56 |
| Von Lengerke | .. | .. | 20 | 22 | |
| Coppernoll | .. | .. | 20 | 16 | |
| Brown | 19 | 17 | .. | .. | |
| Adams | .. | .. | .. | 20 | |
| A Kleinman | .. | .. | .. | 19 | |
| **Class B** | | | | | |
| Mott | 20 | 18 | 24 | 23 | 67 |
| Bowers | 22 | .. | 20 | 23 | 65 |
| Dr Meek | 22 | 18 | 11 | 19 | 59 |
| Paterson | .. | 21 | 16 | 21 | 58 |
| Young | 16 | 14 | 19 | 22 | 57 |
| Lauterbach | 21 | 13 | 12 | .. | 46 |
| Bortree | .. | .. | .. | 16 | |
| Fleming | .. | .. | .. | 16 | |
| Pilz | .. | .. | 12 | .. | |
| **Class C.** | | | | | |
| Hodson | 16 | 18 | 8 | 17 | 51 |
| Bogle | 8 | .. | 7 | 6 | 21 |
| Ackerman | .. | .. | 10 | 13 | |
| Jones | .. | .. | .. | 12 | |
| S M Meek | .. | .. | .. | 9 | |
| Smith | .. | .. | .. | 6 | |

Our trophies are awarded in each class each month to that member making highest total in his three best scores. The winner is barred from competition for the two succeeding months, thus more evenly distributing the prizes. The July trophies were enamel-laid silver match boxes, and were won by O'Brien in Class A, Bowers in Class B (Mott barred), and by Bogle in Class C (Hodson barred).

The hard times and hot weather have interfered greatly with trapshooting in this vicinity, and many former enthusiasts now appear only semi-occasionally. The Garfield aroused some interest last month among its members by two team contests with the Eureka Club, an account of which appeared in last week's FOREST AND STREAM, and its success in both events may lead to further contests with other clubs. We are waiting to hear from our neighbors, and can promise to make it interesting for any of them in a team race, ten men and upward to each side.

On the 11th inst Messrs. Hicks, O'Brien, Tefft, Coppernoll and Mott, of the Garfield Club, expect to contest with Messrs Bingham, C. E. Willard, Stannard, Von Lengerke and Dr. Frothingham, of the Eureka Club, for the possession of the *Shooting and Fishing* cup, emblematic of the team championship at targets of the State of Illinois The Garfields expect to win if four or five of the Eureka shooters "go to pieces," but will be satisfied if only their nerves are shattered.

R. S. M., Sec'y.

## Lynchburg Gun Club.

LYNCHBURG, Va., July 31.—The Lynchburg members scored as follows in the weekly shoot:

No. 1, 25 targets, known traps, unknown angles, American Association rules:

| | |
|---|---|
| Nelson | 1101111110011101101111111—20 |
| Terry | 1111111111111101111111111—24 |
| Dornin | 0011110110110101111111111—19 |
| Moorman | 0011111101111011101101100—17 |
| Cleland | 1111010110011001110111111—18 |
| Durphey | 1110111011001111000011000—14 |

No. 2, known traps and angles:

| | |
|---|---|
| Manson | 1001001100001010001001100— 9 |
| Owen | 1010100011010011101011001—12 |

| Moorman | 100111110 | 10 11 10—10 | | Owen | 011111111 | 01 11 11—13 | |

## The Traps at Wellington.

WELLINGTON, Mass., Aug. 6.—Saturday witneseed a successful opening of the merchandise match for eight cash prizes. The contest will coatinue till the last Saturday in Octobet, at 30 targets each day, 10 Keystone, 10 Keystone reversed, and 10 from three unknown traps: The scores completed Saturday were as follows:

Dickey, 30; White, 28; Richardson and Sanborn, 25 each; Snow, 24; Herbert, 22; Wadsworth, 21; Warren, 17.

There were 940 targets thrown from the traps to-day, and 14 clean scores made, divided as follows;

Dickey, 5; White. 4; Sanborn and Herbert, 2 each; Cowee, 1.

The winners of the sweepstakes were:

Ten targets, Keystone system—White, 10; Sanborn and Dickey, 9; Snow, Moore and Richardson 8.

Ten targets, reversed Keystone system—Herbert, 9; Moore, Sanborn and White, 8; Richardson and Dickey, 7.

Ten targets—Sanborn and Dickey, 10; White and Herbert, 9; Richardson, 8.

Five pair targets—Moore, 9; Herbert and Dickey, 8; Sanborn, 7.

Ten targets—Herbert and White 10: Sanborn, 9: Wadsworth, Moore and Cowee, 8.

Ten targets, Keystone system—Dickey and Sanborn, 10; White. 9; Richardson, Herbert and Wadsworth, 8.

Ten targets, Keystone reversed—Dickey, 10; Snow and White, 9; Richardson, 8; Herbert and Sanborn, 6.

Ten targets, unknown traps—Dickey, White and Cowee, 10; Herbert, Sanborn and Richardson, 9; Snow and Wadsworth, 8; Warren, 7.

Ten targets, Keystone system—Herbert and Dickey, 10; White, Richardson and Wadsworth, 9; Moore and Sanborn, 8; Snow, 7.

Ten targets, Keystone system reversed—White, 10; Wadsworth, 9; Snow and Cowee, 8.

## Shooting for Diamond Medals.

SYRACUSE, N. Y., Aug. 2.—The monthly shoot of the Onondaga County Sportsmen's Club for the class medals took place to-day, at Maple Bay, C. F. Ayling winning A class medal on the fine total of 48 breaks, H. Jones and J. Cool tied on 43 each for B class medal, Jones winning on the shoot off by 9 breaks to Cool's 8. The scores follow:

FALLSTAFF.

## The Buckeyes Defeat the Shermans.

FOR two years the Sherman Gun Club, of Columbus, Ohio, have been holders of the *Sportsmen's Review* challenge cup, none of the other teams being able to wrest the honors from them. A short time ago, however, they received a challenge from the Buckeye Gun Club, of Dayton, the place that turns out such shooters as Rollo Heikes, Ed. Rike, etc., and where every "dark horse" you run against develops into a record breaker. The challenge was accepted and the Sherman boys at once concluded that they had taken a very large and not easily to be disposed of contract, but they had been in many a hard-fought battle, and the fact of having to shoot against record breakers had no effect on them.

The match took place at Columbus on July 28, the teams comprising four men each, and each man shooting at 50 singles, known traps, unknown angles. J. C. Porterfield was referee, L. Fink and J. F. Freene judges, and Louis Ballinger official scorer. The duties of all these officials were performed satisfactorily, no disputes arising.

The contest was one of the most exciting ever shot in Ohio, and it was only by the running of a clean score by Rollo Heikes that the match was won by the Buckeyes. Alkire of the Shermans dusting but not scoring his forty-ninth target. Over 200 spectators were present, many ladies being included, and they were extremely enthusiastic whenever an extra good shot was made. The scores follow:

Buckeye Gun Club.

Cain.....11111111111111111111101111111110111111101011110—44
Rike.....11010110001111111111101111111111010111011111111011—40
Raymond.....11111111111111111111011111111111010111011111111011—47
Heikes.....11111111111111111111111111111111111111111111111111—50—181

Sherman Gun Club.

Mill.....10110111011111111110111111111111011101111111111111—44
Walt.....01111111111111111111111111111111011111101111111010—45
Ward.....11011111111111111111101111101111111111111111011111—46
Alkire.....11111011111111111111100111111101111111111101—45—180

These scores show an average of 90% for the Shermans, and 90 50% for the Buckeyes, a team average for eight men of 90.25. Remarkable as these scores were they were made under almost perfect conditions, there being no wind, the day being only comfortably warm and the traps and targets going through their part without a balk.

## Professor Budd.

DES MOINES, Ia., Aug. 1.—*Editor Forest and Stream:* I inclose poster of the Iowa State Fair, on which appears the announcement that the Fair trap shooting contests will be "under supervision of Prof. C. W. Budd." The intelligence that Charley Budd has won the title will be a surprise to his many friends. M. B.

## Three Texas Shoots.

VERNON, Texas.—The Vernon (Texas) Gun Club have challenged the the Wichita Falls Club for three team shoots, for $50 a shoot. First shoot at Vernon, second at Wichita Falls, and third at an intermediate point. To shoot bluerocks, unknown traps and angles. Shoot to take place early in August. G. M. COOKE, President.

## Trap at Watson's Park.

BURNSIDE, Ill., July 25.—Scores made here to-day by R. S. Mott and Bob White, 50 live birds, $50 a side, Illinois State rules:

# Answers to Correspondents.

**No notice taken of anonymous communications**

H. W. V., Cincinnati.—Please answer through FOREST AND STREAM about what will a small-mouth black bass weigh of 21in. length from tip of mouth to tip of tail in a direct line and 13in. girth. Ans. Between 5 and 6lbs.

WANTS A NAME FOR A COUNTRY PLACE.—We are anxious to find a name for our country place on the coast of Maine. As we have often seen very good suggestions in your paper, we thought you might aid us in finding one.

J. A. E., M.D., Manhattan avenue, New York.—Will you kindly inform me during what month moose and caribou shed their horns in New Brunswick, Can.? Ans. A few moose, it is said, drop their horns in December, but the majority retain theirs into January and a few into February; the old bull caribou shed theirs in November, while the cows, when they have horns, retain them until the spring. As a rule, old animals shed their horns a little earlier than young ones.

A 2oz. trial package sent post-paid for 25 cents.
— MARBURG — BROS.—
THE AMERICAN TOBACCO CO. Successor.
BALTIMORE. Md,

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

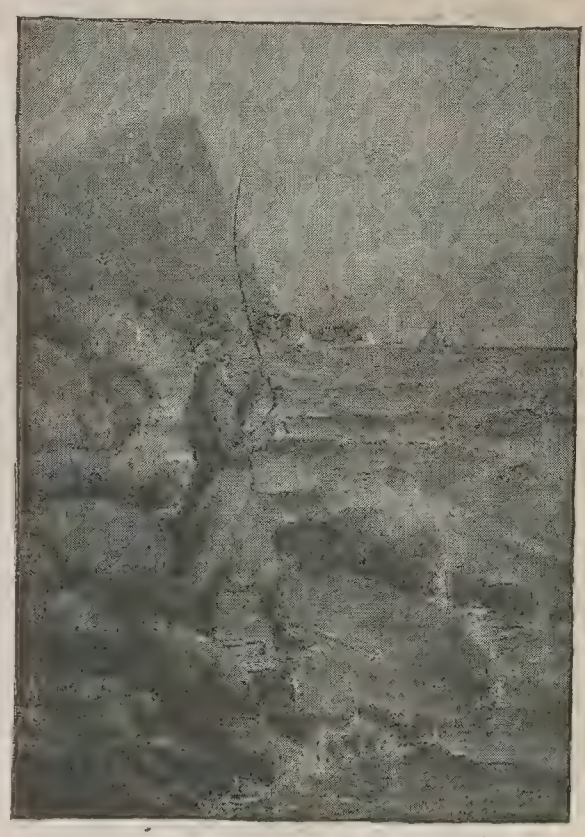
# Forest and Stream's Outdoor Scenes.

FROM ORIGINALS IN WATER COLOR AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

HE'S GOT THEM.

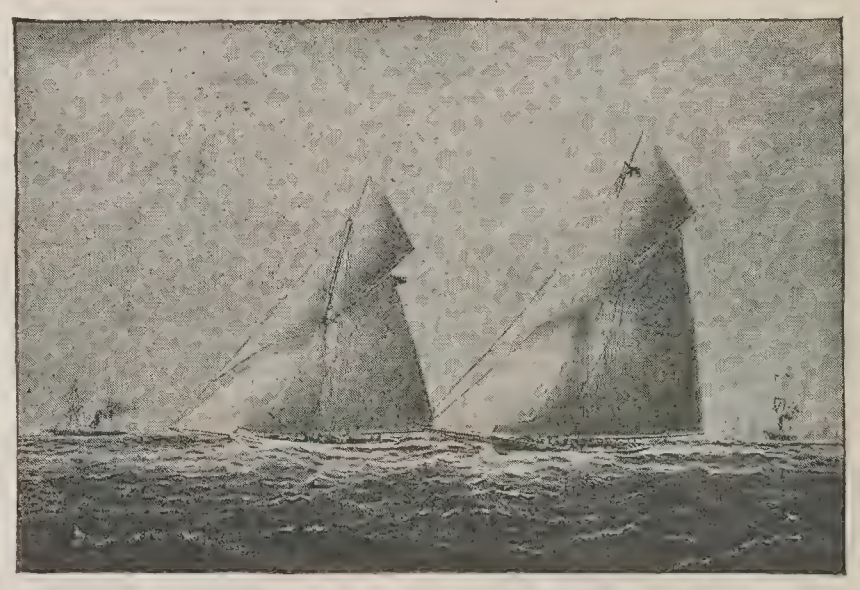
JACKSNIPE COMING IN.

### AS PREMIUMS.



We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

**Forest and Stream** *one year and the four pictures*, **$5.**
**Forest and Stream** 6 *months and any two pictures*, **$3.**



If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.

Copies of them may be seen at this office, and inspection is invited.

BASS FISHING AT BLOCK ISLAND.

VIGILANT AND VALKYRIE.

# FISHERMEN, ATTENTION!

# $225 in Gold Given Away!

## THE NATCHAUG SILK CO.

**will give nine big cash prizes for the following catches of fish taken during the season 1894, viz.: From the 1st day of April to the 1st day of November inclusive, with the NATCHAUG SILK FISHING LINE:**

FIRST PRIZE— $25 in Gold for the heaviest Muskallonge.
SECOND PRIZE— $25 in Gold for the heaviest small-mouth Bass.
THIRD PRIZE— $25 in Gold for the heaviest large-mouth Bass.
FOURTH PRIZE— $25 in Gold for the heaviest Lake Trout.
FIFTH PRIZE— $25 in Gold for the heaviest Brook or Mountain Trout caught in other waters than in the State of Maine.
SIXTH PRIZE— $25 in Gold for the greatest variety and largest number of fresh water fish caught in one day by one person.
SEVENTH PRIZE—$25 in Gold for the greatest weight of any kind of fresh water fish caught in one day by one person.
EIGHTH PRIZE— $25 in Gold for the heaviest fish of any kind caught with the Natchaug Silk Line in fresh or salt water.
NINTH PRIZE— (SPECIAL) $25 in Gold for the heaviest Brook Trout caught in the State of Maine.

As the Trout caught in the lakes of Maine are acknowledged to be genuine Brook Trout, on account of the size of these fish we bar them from our Fifth Prize, and offer this as a special prize for these waters.

A sample card of our Lines sent free on application.

## CONDITIONS:

All these fish must be caught with the Natchaug Silk Fishing Line in fresh water (except Prize 8) and by fair angling.

Competitors must forward to us their full name, P. O. address, together with the description and weight of fish caught, and name of dealer from whom line was purchased, together with the name of one reputable witness affixed. On November 7th, 1894, the award will be made, and the list of successful competitors announced in the FOREST AND STREAM and the *American Field*.

All successful competitors before receiving their prizes will be required to send an affidavit as to their statement of fish caught.

If your dealer does not keep the Natchaug Silk Fishing Lines, order direct from

**THE NATCHAUG SILK CO., Willimantic, Conn.,**
**Or 213--215 Fifth Avenue Chicago.**

## Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

**Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.**

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

**Forest and Stream** *one year and the set of four pictures*, **$5.**
**Forest and Stream** *6 months and any two of the pictures*, **$3.**

Remit by express money order, postal money order, or postal note. Make orders payable to

**FOREST AND STREAM PUB. CO., New York.**

### *MR. MESSITER IS NOT TO BLAME.*

HOW UNREASONABLE some people can be. There has raged a pother over the New York deer season; and on the part of those who thought they saw their Adirondack plans taking the forms of cocked hats, a disposition has been manifested to fix the blame upon Mr. Uriah S. Messiter, the honorable member from Sullivan, and father of the legislation that caused all the trouble. He should have been more considerate of the deer-hunting public, say they, and ought not deliberately to have opposed its interests. But Mr. Messiter, bless him, had no intention of inconveniencing the public, not a shade of a shadow of it. Indeed, and we say this for him with the utmost confidence, he had never a thought of the public, good, bad or indifferent. As the Assemblyman from Sullivan he was not at Albany to represent the public. He was there as the member from Sullivan to look out for Sullivan; and as the proprietor of the Wawayanda Hotel to look out for himself. His prospective guests would want deer hunting, and he proposed to give it to them. As a promoter of game legislation, Mr. Messiter was for Sullivan, Messiter and deer meat, first, last and all the time. That was his plank. It was as far as he could see; beyond this his thoughts did not travel. To accuse him of interfering wantonly with the interests of the public would be to do him a grave injustice. For such an intention at least the Hon. Uriah S. Messiter is not to blame.

But responsibility for this perpetration of an injury to the public does rest somewhere, and it is worth while to fix the blame where it belongs. For just consider what this Sullivan county deer law means; what a piece of game protection falsely so-called it is; what a shameful instance it affords of greed and dunderheadedness; what a fruit it is of local, narrow, individual selfishness; what a mercenary, look-after-my-own-purse spirit marks it; what a raid on the public funds it amounts to; what a fraud it is on the people of the State.

New York has been engaged for some years in the enterprise of restocking the Catskill Mountain region with deer; something more than $20,000 has been expended for the purpose out of the State treasury. A deer park has been established and for several seasons live deer have been caught in the Adirondacks and taken to the Catskill park, thence to be released to the wild range. The territory thus to be restocked comprises Delaware, Ulster, Greene and Sullivan counties. To turn loose deer and to turn loose hunters and hounds with them would be on a par with stocking a range with cattle and corraling a lot of wolves and grizzly bears with the herd. The Legislature made a law that the Catskill deer should not be hunted for a period of five years from 1892. Money will not restock a country; it requires time too; this law was made to afford the time. The limitation was approved by the public at large, whose taxes had been devoted to the enterprise; but it did not please Mr. Messiter, whose prospective guests hankered after deer meat. The proprietor of the Wawayanda could not wait. Naturally enough he asked his fellow members at Albany to let down the bars for him; and they foolishly yielded to his selfish request. Upon them rests the responsibility; to them the blame attaches.

If we may employ a homely illustration—for homely illustrations are sometimes pat—if a hog invades your garden and roots up the flower beds, you do not blame the hog; you do blame the careless person who left the gate open, whose business it was to keep the hog out of the garden. When the Sullivan county hotel proprietor sought to invade the rights of the public, it was the duty of the Legislature to keep him out. That they failed in their plain duty, and let him and his kind in to raid the protected deer woods of Sullivan, should be counted to them as a gross and inexcusable neglect of public interests and a betrayal of trust. We cannot blame the Messiters; we do blame those who should call the Messiters to order and vote them down, and stand between them and the public; that is to say, should keep the garden gates shut against them.

### *HOWELL IN THE TOILS.*

WHEN Captain Anderson, Superintendent of the Yellowstone National Park, set free the buffalo butcher, Howell, he warned him never, under any circumstances, to appear again within the Park. The warning was regarded until July 28 last, when Howell coolly walked into the post and went to the hotel. Captain Anderson at once learned of his presence and had him arrested.

On Wednesday, the 8th inst, the United States attorney reached the Park, and on the same evening Commissioner Meldrum heard the case, found Howell guilty, and sentenced him to one month in the guard house, $50 fine and the costs of the proceedings.

It is not likely that Howell would have done so foolish a thing as to put himself in jeopardy of arrest but for the fact that his friends had persuaded him that Capt. Anderson's order not to revisit the Park was of no effect. He and others have now learned a lesson, and whether Howell takes an appeal from the decision of the commissioner or not, this conviction is certainly "first blood" for good order, and will open the eyes of the poachers very wide.

### *THE MINNESOTA LAW.*

THE game case which has just been determined in the Supreme Court of Minnesota is of unusual interest, since it involves certain basic principles of the utmost importance in upholding the game law. Minnesota enjoys the distinction of standing in the very front rank of States which have adopted what may be described as radical measures for the conservation of their game and fish. The statute is in itself extremely simple, sensible, complete and efficient for its purpose. An outline of its framework will repay study.

In the first place, as a sure groundwork for the structure full control of the game and the fish is assumed and they are declared to be the property of Minnesota:

> No person shall at any time or in any manner acquire any property in or subject to his dominion or control any of the birds, animals or fish within this State, of the kinds herein mentioned, but they shall always and under all circumstances and conditions be and remain the sole property of this State.

This proprietorship and control are not surrendered, even after the game has been captured; the statute yields to the citizen only the privilege of using the game in certain clearly defined ways, but no other:

> By killing, catching or taking the same, however, in the manner and for the purposes herein authorized, and during the periods when their killing is not herein prohibited, the same may be used at the time, in the manner and for the purposes herein expressly authorized, but not otherwise.

The law then prescribes certain seasons in which and methods by which the game may be taken and may be had in possession; limits the amount one person may take; and specifies particularly that it may be taken only for use within the State. The right acquired by the individual, it is thus seen, is of limited nature; he may never have an absolute, unrestricted property in venison or grouse or trout, even after he may have killed them. His right to the captured game is like the child's right to the cake, when its mother says to it, "You may eat a piece of the cake here in the room; you may not stuff your pockets with cake and walk off."

This assumption of sole right, title and control in the fish and game is the basis of the Minnesota law. The defense having set up the proposition that "the State had no proprietary right to animals *ferœ naturœ* and can acquire none by legislation," Judge Collins shows the fallacy of the contention by the beautifully illuminative declaration: "It is the doctrine in this State that the ownership of wild animals is in the State, not as proprietor, but in its sovereign capacity as the representative for the benefit of all its people in common."

For the benefit of all the people in common the State may limit the privileges granted to the individual citizen as to the use of the game. It may limit the time and manner of taking, the disposition of it after it is taken, theperiod during which it may be possessed. If the State forbids exportation, that provision does not wrongfully interfere with any right of the citizen to export, for he has never acquired any such right; under the law he cannot acquire it.

This declaration contained in the Minnesota law, of absolute control over the fish and game as its property, is contained also in the Arkansas statute, and there it has stood the test of the courts. It is an admirable provision; it goes to the root of the matter; it combats and overcomes and destroys the twaddle so often heard, of the citizen's "natural right" to take "his" game and fish, how and when he will; it is founded on the fundamental principle of the brotherhood of man, for it provides that in the enjoyment of his own share of the bounties of nature every one is bound to respect his brothers' rights to their shares.

### *THE NATIONAL PARK ROADS.*

A SATISFACTORY item of legislation for the Yellowstone Park, reported from Washington as having recently passed, and having to do with the granting of leases in the National Park, is said to contain a provision that the appropriation for building and keeping in repair the roads and bridges there shall henceforth be expended under the direction of the Superintendent of the Park.

The change is one that we have urged for many years on the ground of the greater economy and efficiency of such a system. Heretofore the appropriation has been expended under the direction of the chief engineer of the department in which the Yellowstone Park lies, an engineer officer being detailed to spend the summer in the Park. As might be supposed, the work has been well done, but it has always been undertaken at more or less disadvantage on account of delays consequent upon the distance from headquarters.

The damage to roads and bridges takes place for the most part in early spring, and it is then that the repairs are needed. Often half a day's work by a couple of men at that time will repair a break which two months later would tax the resources of a large gang of workmen laboring continuously for weeks. Moreover, since travel begins as soon as the snow disappears it is important that the work of repairing the roads should be done as early as possible, so that the first visitors to the Park may have decent roads to pass over. Too often we have had complaints from these early tourists about the villainous character of these roads, and descriptions of the sufferings that they have endured during their stage ride from this cause.

It is evident that the Superintendent of the Park, who resides there continuously and whose men are constantly passing back and forth over the roads, will learn of the need of repairs earlier than any one else can, and if he holds the necessary authority and has the money to expend, he can at once attack the breaks on the roads and arrest the damage before it becomes great. In this way much less time, and so much less money, will have to be expended on any given piece of road, the appropriation will go much further, and the roads will be mended and improved more quickly at relatively less cost than by the old system.

### *THE "PLANK" AND THE SUPREME COURTS.*

FOR another instance of common sense and sound reasoning, read the game law decision of Mr. Justice Van Fleet, of the Supreme Court of California, reported in our game columns.

The California statute relating to venison is a practical application of the principle of the FOREST AND STREAM'S Platform Plank—"the sale of game should be forbidden at all times." In California venison may not be sold at all. In the test case just decided, the Supreme Court declares that the principle is reasonable and is in accord with public policy. Here, as in Minnesota, it is pointed out that the State, representing "the people in their collective sovereign capacity," controls the game; that no other rights in it may be acquired by an individual than the State may grant; and that the right to make merchandise of game is one of the rights which may be withheld from the individual by the State. This is to say that the Platform Plank rests on a firm constitutional support

# The Sportsman Tomist.

## AN ENCOUNTER IN THE CANYON.

Shasta Mountains, Cal., June.—*Editor Forest and Stream:* During my explorations in the world, I frequently meet with problems and other things that I do not understand. When I meet with things which I think I do understand, I am very often prone to form opinions, to which I adhere with more or less tenacity and satisfaction. However, after close investigation and consideration, I believe that there are more things in the world beyond ordinary human comprehension than some people freely admit. I have known persons who seemed to know all about nearly everything, and who would readily and fluently explain things that had eluded my understanding; but sometimes, even then, I could not grasp and retain their knowledge or their philosophy. Sometimes, after I have had things very fully explained to me, I have gone on my way rejoicing until I encountered some new and unexpected phase of the subject under contemplation, which upset both the explanation of my friends and the satisfactory conclusions I was about to reach in my own mind. You will perceive that, to one laboring under such obstacles, the acquisition of knowledge is a slow and difficult process, and will not wonder when I admit that I think there are many things which I never will understand. When one is away back in the mountain and woods, where not only books but people are scarce, there is a great deal of knowledge absolutely beyond his command.

---

In many of my excursions I am alone, and it is at such times that I most frequently collide with things beyond my comprehension—even in the wilderness. At one time I was with people a great deal, and was familiar with the admonition of the poet Pope—

> Know then thyself, presume not God to scan;
> The proper study of mankind is man.

But to me, however proper the study of man may be, it was evidently too complicate and I never progressed; so I took to the woods. And now I find the woods full of subjects almost as difficult to comprehend as is humanity. If Mr. Pope could be interviewed in our time I would apply for advice as to the proper method to study man—without going further—and getting into unfathomed deeps. When I undertook the study of man, about the first problem which obstructed my investigations was the brief query, What is man? which arose in my mind. I never surmounted that problem, and others crowded upon me until I became bewildered. I decided then to investigate the alleged animal by degrees, and that I would segregate portions of him and thus master my subject little by little. I decided to leave the physical part of man to the surgeons and devote myself to his other attributes, and, after much hesitation as to where to begin, I concluded to first analyze his five senses, one at a time.

As man usually sees more than he hears, touches, tastes or smells, I thought sight the most important of his senses, and I began with the sense of vision. After very hard study I arrived at the conclusion that the sense of seeing is a certain faculty common to most men and other creatures, by which they seem to see. I never got any further with the subject, sight. Taking up the next sense, that of hearing, I summed up that it was the faculty of seeming to distinguish what we call sounds, a sense also common to most creatures. I could make nothing more of the sense of touch, of taste or of smell, and I was about to give up the effort of obtaining knowledge as a very unsatisfactory and laborious thing, when a friend assured me that there were books containing full and complete information about all these things. I was thereupon much relieved, but I had lost some of my ambition and I never prosecuted these investigations further.

Having thus abandoned the opportunity of knowing all about so many things, I have felt many times since that it is a very important thing to have an uncultivated understanding. It is a continual source of trouble to meet with puzzles and mysteries everywhere, and yet, if one devotes himself to books and studies, a great deal of information in the woods gets away from him.

Thus, as you may readily gather from foregoing acknowledgments, I frequently realize that I am abroad in a world of mystery, and a great deal of the time I am not within reach of any persons or books, to whom or to which I may apply for explanation.

---

There are times when I find myself prowling about in the mountains and woods with a rifle or a fish-pole, and I frequently forget that I have either one or the other, as I become so deeply absorbed in conjectures or speculations. I have thus passed many days without securing game or fish. My bad luck is not owing to the fact that game is scarce in my field of operation or to lack of skill with either rifle or rod; for, years ago, I could decapitate a squirrel at 50 or 60yds., and always carried home the most conclusive evidence to submit with my fishing accounts.

The trouble I am now inclined to attribute to the almost morbid habit of thinking. Queries and theories are constantly being flushed where I expected deer, or bobbing up and rising from pools or riffles where I always, in former times, anticipated trout. So, it seems to me now, that woods and waters formerly well-stocked with game and fish, yield chiefly food for conjecture or contemplation; and, as I have to constantly contend with a circumscribed understanding, I often find my larder composed chiefly of store goods and groceries.

---

The other morning before daybreak I was out in a very rough section of mountains, and picking my way down a canyon to a trout stream. I had got partly down to the water when I reached a bench which overhung the slope so that I could see down a long, winding avenue of immense pines and firs, ledges of time-stained rock and huge granite boulders, great logs and piles of drifted debris from mountains piled above, through which the roaring, foaming stream tumbled eastward. It was a good point from which to see the sun rise, as I guessed it would come up in a line with the canyon, and as it was yet early and cold for fishing, I decided to wait awhile. The sun was coloring the horizon in a fashion often described, but forever varying in combination, and I was prepared to make a mental snap shot view of its first beam, when a polecat attracted my notice. The animal was either a polecat or a skunk. There may be a Latin name for him more genteel and less suggestive, but I cannot command it; in any case he was one of a large sized species, beautifully marked in his coat of bright, shiny black, with stripes of white that looked like snowy white harness. He was actively engaged in the erratic and to me inexplicable business of trotting about, some yards below me, peeking into all the cracks and crevices of the rocks, stopping, turning this way and that; and I wondered what he was after.

While I watched I suppose the animal started away in every direction that radiated from his constant changes of base. Whatever he was looking for, he did not seem to find it and I began to hope, after a while he would give up his quest and go home; but when he did begin to move away from where he was, he began to come in my direction. Of course he kept up his tactics of shifting this way and that, but he was coming, as it seemed, inevitably. He was a very nice-looking, able-bodied polecat, corpulent and prosperous in appearance, and I presumed, with reasonable judgment, that he was in possession of all his faculties and that he had them with him. I coughed—a sort of a forced cough frequently practiced to attract attention—and he stopped, spread his tail aloft like a feathery canopy, jumped sidewise once, like a wild hog, and then forgot everything and kept coming in his erratic but inevitable manner. The bench I was on—that we were both on—was narrow, at either side it was precipitous. I wanted to go down, the polecat was coming up and had the only path. I now scraped my shoes, struck my fish-pole on the rock, and exclaimed, Scat! He stopped again, stood on his hands for a moment, then on his all-fours, seemed to think a while, then forgot everything and continued, in various attitudes to advance.

I have complete control over my admiration of skunks or polecats, whichever they are, and I never forget our relative positions in society. I had hitherto maintained a formal and proper barrier of distance to separate and distinguish our different social standing. I have invariably met their advances beyond a certain point with cold austerity, or I always retired and refused them an interview. Upon this occasion, however, it would appear that I had, without intending it, made the first advances into his circle and he intended to make the most of his opportunity. Before I could find any loose fragments of rock with which I now proposed to bombard him if he did not retire, I was aware that it would be impolitic to begin actual hostilities as he had approached quite near me and seemed not only prepared to resent insult, but rather anxious for me to strike the first blow so he would have the law on his side. It appeared that he would rather enjoy a conflict from the way he smiled.

I never could throw a missile with assurance of producing instant fatality and I now hesitated. I did not want to maim or offend him or cause him to suffer any torture—I only wanted to kill him suddenly. In the meantime he swiveled round like a weather vane, stood on his hands, fanned himself with his tail, and pretended that he liked me.

After considerable active thinking I concluded that if I could withdraw gracefully, I had better climb back up the hill, although it was a steep, rough climb and the sun was now shining warmly upon the dry rocks, pouring its beams upon the exposed position in which I stood. The polecat seemed to enjoy the sun and as he warmed himself, he wanted to be more and more friendly. I exclaimed hist! and s-scat! and threatened to throw rocks at him—but he only stood on his hands, then on his elbows, fanned himself gently with his tail and smiled assuringly.

I admire activity, and even labor conservatively, but I abhor a useless expenditure of strength and force, and I sighed and perspired as I re-ascended that hill cautiously as the sun grew hotter. If I stumbled the polecat was inclined to become emotional and if a loose rock rolled down to him he manifested excitement—but he came right along up with me. There were many nice holes in the rocks where he could have gone and stayed but he only peeked into them, and about the time I thought he would branch off, and give me a chance to throw a rock from a good safe range, he would suddenly "corduroy," (as Mr. Hough says they do on *skis* in the snow) and become so adjacent to me that I had not the heart to hurt him.

Sometime after I had become impatient and weary and warm in the broiling sun, the polecat and me reached the top of the hill where there was better ground and some trees. As soon as I reached a big tree I dodged behind it and went away abruptly. I succeeded in reaching a log at a seemly distance from the eccentric animal and now thought he must be satisfied, having got up the hill, and that he would withdraw and permit me to retrace my steps down the cliff and regain my fish-pole.

He missed me all at once and seemed quite forlorn and sorrowful. He shied around anxiously for many moments, sat down and communed with himself, scratched his northwest ear with his southwest paw, wandered aimlessly here and there, and then gradually shifted back down to where we had met—where my fish-pole was. Probably he conjectured that I would go back there and he would renew his operations and overtures. At last I was in a commanding position. I would disappoint him. If he is still waiting there for me he must be weary, if not nearly starved. I have not yet gone down that way and I will allow him vainly to await my coming. If he wants to he may take my fish-pole and fish with it—he may fish on and fish ever and fan himself and smile, but if he waits for me to return his mind's diseased.

---

The log I had found was in the shade, there seemed to be no ants upon it and no polecats now within limits, and I found a comfortable location. As a consequence I got to thinking and began to speculate upon polecats, an unprofitable theme. Then I wondered why a man liked to fish, go fishing or even start out to fish. It seemed a queer thing, to examine it closely, why a man should fix up a rod and string, clamber over rocks, tread on snakes, fight mosquitoes, gnats and other tyrannical pests, get tired, hungry and wet and then go home generally out of humor, with a few fish about the size of sardines and a repertory of anecdotes about the size of whales.

When I had thought about these things and a great many others I realized that another day was about to be filed away with the past, and I made tracks tending homeward. On my way I made a mental resolution that I wasted a great deal of time and energy in thinking, but I have adopted the only remedy as you will see. There is an old rhyme which goes,

> They never taste who always drink,
> They always talk who never think.

There is no one within reach to talk to and so I have had to write to give my intellect rest. I will revert to some of my incomplete philosophy some other time. I have no animosity toward the Forest and Stream or its readers, but sincere regard, believe me. Ransacker.

## NEAR TO NATURE'S HEART.

> To him who in the love of nature holds
> Communion with her visible forms, she speaks
> A various language; for his gayer hours
> She hath a voice of gladness, and a smile
> And eloquence of beauty. —*Thanatopsis.*

There are probably none more responsive to the varied language in which nature converses, or who are more willing and apt scholars in her school, than those who from boyhood go afield with dog and gun to roam the woodland paths, or with the zeal and patience of devoted anglers to fish the streams on mountain or in meadow and cast the seductive fly on lake or pool. How expert do such become in woodcraft, and the interpreting of all those delicate signs in forest, field and flood, which reveal themselves on every side to the discerning eye and ear. How readily they learn the name, nature and habits of all wild things, and can read to you chapter after chapter out of nature's mysteries, which are as a sealed book to the uninitiated and to those who have not learned to live "near to nature's heart."

The cry or song of every bird becomes as well known and as easily identified as the voice of human friends, and even the differing characteristics of flight come to be as readily distinguished as the notes. The myriad creaking, chirping insect voices that fill the summer night are but so many different tones in nature's grand, unceasing anthem; and to know just where those little musicians may be found and how they make their music detracts in no wise from the joy of him who listens. The songs of the cicada, the cricket and the katydid are of old friends quickly recognized and gladly welcomed as the circling years go round.

All animated nature from the common earth worm or grub which the sportsman digs for his bait, to the highest order of organism, is spread out like a book for the interested and willing student to read; and there are the trees, the rocks, the flowers and the grasses, each and all with their language ready to converse with him who learns to love them and the story they can tell. The water, too, is full of instruction and information. It has its fish, beautiful spotted trout and dusky pickerel and pike, its shining silvery perch and dace, its sturdy bass and bream and all the endless varieties of fish and plant life which dwell in the depths, and the flowers and grasses which float upon its surface. O, there is life and beauty and instruction everywhere, and who picks up more of it than the sportsman.

Time and space are all too short to tell a tithe—yea, a hundredth part—of the wonderful, interesting and intensely instructive things that are all about us and which need only the observing eye and patient study to become as familiar as the books we read.

What man who has learned to live a sportsman's life—in its rational and best form, I mean—what man, I say, is there, as life draws on and he begins to count most of his allotted years as past, who would forego the pleasure he daily and hourly derives from his knowledge of nature, her children and her ways, which he has acquired in his thousand tramps with rod and gun? How memory of those happy days descends like a benediction or rises and floats about him like grateful incense. And as we sit beside the winter fire, our heads white with the frost of years, and sip the cider or the more generous wine, how the dreams of other years gather about us, how the faces of old companions come thronging out of the mist of thought and we hear the whistle of the woodcock's wings as of yore we heard it in the alder swale. The ruffed grouse booms from his cover and darts across the woodland path, while the echoes wake with the sharp report of a gun and a familiar voice calls out, "Did you get him?" How the birds sing and the insects hum; how the partridge drums on his old log by the shady brook and the trout leaps out at sunset; how the water falls and falls over the old moss-covered dam in the distance till at last we fall asleep. A. Huntington, M.D.

Islip, Long Island.

### Fishing and Camping on Lake Cayuga.

From Cayuga, at the north or lower end of the lake, some forty odd miles, scarcely five miles intervene between the villages. At this end of the lake the shores are low, with a long stretch of marsh on the western side, and the lake itself is shallow across its three miles of width. It is here that the fish and ducks resort for the abundant food found in the mossy bottom. It was here, too, that the poachers of the marshes had many a struggle with the law, using a seine that would drag half a ton of fish from the lake in a night, to be found in the markets of New York the next day. So successful was their struggle that only recently has the law secured its sway, and its benefits are shown by the capital sport to be had now with rod for bass and pickerel.

About six miles from Cayuga at the head of a deep cove setting into the eastern shore is Union Springs, the largest village on the lake. From here to Ithaca the shore slopes more sharply up as one proceeds southward. For some miles below Ithaca the view along the eastern side has a strong similarity to the Hudson along the palisades, except that the cliffs are not so high. Almost every desirable point on the lake has its summer cottage or "camp." A trip through these lakes reveals numerous white tents scattered along the shores amid the trees. Among them hundreds are idling away their vacations, charmingly and inexpensively. A mere nominal rent, or more often a simple request, will secure a site for the tents. At hand are firewood and fish, and ice, vegetables, milk, and fruits are to be had at the nearby farmhouses. Ladies are at many of the camps, and these are made entirely comfortable with floors and spring cots. Stop and a welcome will be given you of the best the camp affords, and usually they are well supplied with what is considered essential to camp life.—*Correspondence New York Evening Post.*

No. 12.

## GAME IN THE SEGREGATION STRIP.

### The Winter Home of the Elk.

On Saturday, March 31, the first day after our arrival at Yancey's, we found ourselves tired enough to spend the day in loafing and resting up. Billy fished out a bandage from a hidden pocket, and showed the ability to bandage an ankle as well as a surgeon. I learned then that he had taken the precaution to carry along a bandage or so, and also a few screws, which latter, however, he explained were intended for use in case of a broken *ski*, and not of a broken bone.

The next day was Sunday by the calendar. It was observed by a general cleaning up. After that we concluded not to wait longer, but to go on out after the elk. Woody kindly acted as guide, and took us to a point about a mile and a half northwest of Yancey's, to a high butte, or rather a high rock wall overhanging the Yellowstone Valley. From this vantage ground we saw a spectacle truly remarkable and magnificent, one hardly to be duplicated in America or in the world to-day.

Below us lay the Yellowstone, even at that depth of distance clearly visible. Its color was a brilliant green, and its re ular foaming on the rock ridges which crossed its path as it came out of the sharp defile at our right had all the apparent substance and rigidity of solid substance. Down to the Yellowstone ran a sheer drop of white, and all the forest for miles to right and left of us was clad in white, this being the north slope of the mountain. Acro-s the Yellowstone, between the Cottonwood and the Roaring Fork and beyond them, there stretched a vast and rugged picture of wild mountain scenery, broken by cañon and crag and defile, by long gentle slope and by wooded depths at whose profundity we could only guess. All the colors of winter were there, the intense white of the snow, the varying blackness of the forests, but added to these were a hundred of the reds and browns of mother earth uncovered. This was the south slope of the range at which we were now looking, and sun and winds combined to strip many of the slopes of snow. Apparently half the surface was bare or nearly bare of snow, one could see great streaks of bare brown ground running away up on many of the ridges, without apparent cause. The character of the ground was very rough and broken, and how the Yellowstone was to find its way through the wilderness of mountains that crowded in on the left was matter of vague conjecture to us as we stood and looked across the great peaks beyond the stream and to the westward. A tremendous and impressive scene it was of wild nature at rest. One can remember few spots in the Park where he would more keenly feel that he had intruded where he did not belong. This feeling was the more heightened by the way we came upon the spot, the forest being dense up to the very edge of the great wall on which we stood.

ELK IN THE SNOW——YELLOWSTONE PARK.

Photo by Haynes.

### The Elk were in Hundreds.

But not alone the physical characteristics of the country entitled it to our wondering admiration. The picture was not a picture alone. It was replete with life.

Below us we saw some dark figures outlined against the snow. They moved and we looked more closely. A dozen elk came out from behind the point of timber in which they stood, and looked curiously up at us on our lofty perch, but they did not take alarm. Then beyond the river, on the bare ground, we saw another group, and another, and another, and then dozens of others. In singles, in pairs, in groups, in small bands, the elk were feeding in hundreds and hundreds, scattered all over a strip of country five miles across. The whole further bank of the Yellowstone, here laid open before us as though by special plan, was alive with elk. In all my life I had never seen so much game at one sight. For the first time in the Park I felt an absolute thrill of amazement and delight at seeing the great animals in such numbers, in such content, in such apparent security and freedom from suspicion. There are few hunters who have seen enough of the more fertile game countries of the now barren West to remember any such sight as this. There is no other part of America where such a sight will ever be seen again. Here, protected by the Park, these noble animals had chosen out a ground where nature had provided opportunity to feed throughout the winter, and had gathered in by hundreds and hundreds, as if purposely to go on show for those who wished to see them. The FOREST AND STREAM luck held. We had found the elk just where we thought to find them, and in numbers which set at rest all theorizing as to where or what was the winter range of the elk of these mountains of the Park. Here was their range, below us, before us, around, on every side of us, and the elk were there, there not only in hundreds, but absolutely in thousands.

Woody said nothing, but sat down with his back against a tree, and with the long and powerful telescope we had along began to sweep the opposite hillsides over carefully and slowly. Once in a while a low exclamation escaped him, and he would say, "There are four hundred in that band," or "there they are again, over by the bare peak," or "just take a look at this bunch." We took turns in taking looks, both with the telescope and the field glasses, and before we got through we were all more or less excited. Billy pointed out a big bunch he had located before we came out on the point of rocks, and with the glass we studied these long and carefully. They were lying down, feeding, moving about, quite at home and unconscious of our being within three miles of them, and cognizant of their every movement as well as though the distance were not more than a quarter of a mile. In these might be 250 elk at least. How many there really were we could not tell with any exactness, for they were continually coming into and going out of view on the strip of bare brown ground over which they were feeding. How many elk lay unseen on those miles of brown hills and valleys no one can tell. How many were on the opposite sides of the ridges from us or in cañons and valleys into which we could not see, no one of course could tell. "You can only see one-half of this country at one time," said Woody, "that is, the side of the hill to you." We located one great band of 500 to 800 elk, as nearly as we could estimate the number, and guessed roughly that we must have in view 1,500 elk in scattered bunches at distances from half a mile to three miles. In all, seeing only "half the country," we concluded that there must be 2,000 elk at least within reaching distance of the eye at one time before us on the north bank of the Yellowstone alone. Doubtless there were 3,000 or 4,000 on that ground, could we have seen them all. In stating these figures I am taking the estimate of Woody and Billy, both used to seeing large numbers of game, and not given to emotional estimates.

### It was on the Segregation Strip.

It was the purpose of the FOREST AND STREAM expedition in coming into this part of the Park to look into the game supply fairly, not bringing to the task any preconceived ideas whatever, and not seeking to uphold any theory, although there was not the slightest occasion to doubt the report of the Park superintendent, Capt. Anderson, which assigned large bodies of elk to this very section of the Park, and which was accordingly reviled by the local Montana press, or rather the Livingston press, as being untrue and unreliable. The Livingston press would have it appear that there is no game in that part of the Park which they want cut off. I purposely do not have Capt. Anderson's report before me as I write this, but I can state very briefly what we actually found over here in the segregation strip (*i. e.*, that part which it is sought to cut off from the Park). We found a rough country, not a smooth one, one of the wildest and most broken character. We found a country only half covered with snow. In some parts, especially the upper flats, the snow was 5, 8, perhaps 10ft. deep, though many of the ridges were nearly bare. On the lower levels, on the south slopes, in the creek and river valleys, on the tops of the ridges and often over great patches and wide areas of the mountain sides, the snow did not lie so deep, but could be easily pawed through by the game. For miles, I will say, there were hills and stretches of broken ground which were entirely brown and bare where the sun struck them or where the wind had sweep. In the valley of the Yellowstone, on the north slopes of the hills, in all the cañons and the deep rock country, of course, the snow was deep and heavy.

We found, in our first morning out from Yancey's, taking the estimate of experienced mountaineers, than whom there are no better in America, 2,000 elk in sight at once, and probably 4 000 or 5,000 in all within reach of the eye had all been visible by reason of the lay of the ground. *We saw every one of those 2.000 elk on the north side of the Yellowstone, wholly on ground that would be cut off from the Park under the proposed segregation act.* We found as many more elk that same day, partly on the south side of the Yellowstone and along the East Fork, partly on and partly off the segregation strip. On the second day following we saw probably 800 to 1,000 elk, the majority of which were on the proposed segregation strip. In two days we actually saw somewhere between 5,000 and 10,000 elk. We can not claim that we saw half of all that were on the country. We do not claim to have examined all of the line of the proposed railway. Had we done so I think we should have seen more than twice as many elk as we did see. If you draw a circle about Yancey's, with 10 miles radius, you will take in 10,000 to 15,000 elk this winter certainly, perhaps twice that number. If you make the radius five miles I will guarantee you take in over 5,000, probably 8,000. If you make it four miles you will take in over 3,000 elk certainly. I do not consider these figures guess work, but accurate so far as accuracy is obtainable by actual investigation in the winter time, and by unbiased and skillful estimate. I do not offer the estimate as mine alone, but I saw all the game that the others saw, and I will testify on honor or on oath that these statements are accurate and fair to the best of my knowledge and belief.

### These Are Facts.

Now, gentlemen wish to build a railroad through exactly this portion of the Park. Has this story up till now spoken of seeing any such numbers of game in any other part of the Park? No, for the game winters nowhere else in such numbers. Gentlemen ask us to believe that building this road (if it could be built) through exactly this part of the Park, through exactly this winter range, through exactly these great bands of game, "will not destroy or disturb the wild game of the Park." Shall we believe them? Not until the American public is made up altogether of idiots and fools. We went into this country in the winter, and studied it, and I know what I am talking about absolutely, and I am glad that for this paper I can say these things out publicly and unhesitatingly, and in such way as does not admit of any successful or trustworthy denial. These are not assumptions, but facts. They are not surmises, but facts. They are not one-sided assertions, but facts. On these substantiated facts let the public make up its opinion as to the harmlessness of a railway through the heart of the greatest game preserve on earth. Let the public ask the friends of segregation for their facts, and not for their assertions, or their hopes, or their guesses about the facts. Then they can turn to FOREST AND STREAM, which says that the elk are there now, but would be there no longer if this road were built. Build the road, and then there would be for boundary not the wild wall of mountains which we saw to the north of the Yellowstone—so desolate and forbidding that even now it is thought there may be a few head of bison left over beyond the Bison Peak—but a narrow public path of accessible grades, of no barriers insurmountable to the traveler by foot, of no obstacles to prevent digression on either hand. The hunter now is fenced out of the winter range. The railroad would lead him direct to the heart of it. The first year the road went through, 10,000 elk would be butchered. The next year, 1,000. The next year, there would be no elk in this part of the Yellowstone, or the bare ground north of the Yellowstone, or the open valley of the East Fork. Driven back into the big snow country, they would have escaped the skin hunters only to starve and perish by hundreds, as even now they every year starve and perish by hundreds in the less favored and more inclement parts of the Park.

Let the elk alone, they can take care of themselves. Let the Park alone, it can take care of itself. In the name of humanity, of decency, in the name of the honor of the American people, let the Park and its inestimable treasures, animate and inanimate, alone forever, a heritage of growing value to this people and to the world.

### A Vivid Panorama.

Our morning with the elk made up an experience unique and vivid in every particular. In the great mental panorama which will during my life remain the greatest treasure resultant upon this winter journey, there will, I fancy, long continue bright and sharp this picture of the white and brown hills sloping down to the Yellowstone, dotted with their thousand heads of game. I shall long see, I hope, the keen green of the Yellowstone, its transverse ribs of white, and the fathomless depths of the snow in the black-sided cañons. Not less impressive was the reverse of this picture, for as we turned to descend the great hills up which we had laboriously climbed, there burst upon us the full glory of the mountain scene which we had had at our backs as we came up, eager only to find the elk ahead. We were perhaps at a third of the

full height of the rise to the upper plateau, and hence at an elevation quite sufficient to see unfolded much of the glories of the inner Park, whose peaks and cañons now seemed grouped and composed for our special benefit. In the center stood the great gleaming peak of Mt. Washburn, which from the opposite side of the Park we had seen before, always central and commanding. It was as if this mother mountain stretched out her hands to bless the heads of small mountains, who crowded up about her knees. To oblige us, the sun came out gloriously, and lit up the whole majestic landscape with a light more brilliant than ever yet fell on any artist's studio, or than ever yet had reflection on any human canvas. The artist who could paint this compelling brilliance would be derided as gone wild. If he should paint the purples of the mountain sunrise and sunset as deep as they really are, he would be denied credence and called a cheap pretender at effect. Thousands of artists have been drawn to the mountains and have tried to show them in their more friendly moods. I do not know of any artist who has ever attempted to depict the great range in the depth of winter. He who tries it will try in vain. He cannot catch this serene fatefulness, this terrible calm, this supreme indifference to Life and Time. The mountains are infinite. Study the differential calculus, and when you get to the end of the indeterminate equation, you may know the meaning of the mountains and so be able to portray their thought. I could imagine an artist going insane should he sit day after day trying to fathom the meaning of the mountains, always different, always the same, always beckoning indifferent, fascinating, terrible, immutable, calm. The mountains are at peace. They have outgrown change. The bestowing upon them of human names is indignity. Mt. Washburn, we say! Who was Mr. Washburn, and who will he be? But if we should call this enduring monumen; the Mount of Supreme Calm or the Mount of the Ultimate Rest, we might at least please the Indians, who have better taste and more delicacy than we in many ways—less compliment to us.

### More and More Elk.

It took us only a short time to slide down to Yancey's, and pausing there only for lunch we set on further east toward Junction Butte, that high mesa-topped elevation which masks the union of the main Yellowstone and the East Fork. Woody did not go with us in the afternoon, but he told us we would see plenty of elk all through that section. We certainly did so. I counted twenty-one bands of elk to the left of our trail to the Butte. The whole country was full of elk. There were elk on Specimen Ridge. There were elk on top of Junction Butte. The East Fork valley was full of elk. The main valley of the Yellowstone showed band after band. They were so common that they almost ceased to interest us. They were in greater numbers than I ever saw cattle on any range. There were hundreds and hundreds and hundreds of them, how many in all I shall not say, because accurate count was an impossibility. The snow was now breaking up sufficiently to allow the elk to get about with comparative ease, and there was even a considerable amount of ground almost bare, though not so much over here as we had seen on the north side of the river in the morning. We found that the elk could easily get feed all through this section, and also discovered that they could easily keep out of our way so that we could not get a good shot with the camera. The slopes were too long and open to give much chance for stalking. We were rarely closer than a quarter of a mile to the game.

### The Center of the Winter Range.

We found the Yellowstone a grand, powerful stream at Baronette's Bridge, where we crossed it. From Yancey's the Junction Butte did not look to be across the Yellowstone, but we found it a comfortable climb on the other side. It was quite a sharp climb up the last escarpment, but for some reason the butte was barer at the top than lower down, and we got up, carrying our *skis*. A watchful old cow elk, which Billy anathematized cheerfully a dozen times as we were climbing up, stood on the edge of the mesa and spied upon us, so that we could get no stalk on the band which was feeding on the top; though we got up within 100yds. of a small bunch which were lying down on some bare ground, and which ambled off easily down the steep side of the butte as we came into view on top.

From the top of Junction Butte we had a view only short of that of the morning, so far as the quantity of game was concerned. We could with the glasses command a great range of country. A great many elk, startled by our coming, were running across the snowy valley below us, making for the timber beyond. Along the main river there were many large bands feeding without thought of danger and we had all the opportunity in the world to see the wild animals at home.

We discovered that the elk were breaking up into small bands of cows and spikes. The bull elk were beginning to shed their horns. We saw only two bulls with horns that afternoon. We found dropped elk horns on top of Junction Butte.

We were now fairly in the center of the main winter range of the elk. We make no claim to have covered all of it, nor half of it. We saw it was not necesary. We had learned all we wished and felt that our work was practically done. We could have duplicated these sights of game hour after hour on up the East Fork country toward Soda Butte, but knew that it was needless.

The shoeing was now growing soft. The snow was going fast at the bottom and settling. Uncle John Yancey thought the break-up would soon come if the snow was melting below.

We saw many horses wintering in this part of the Park. They cannot winter in the Upper Park, and neither can elk, except in certain portions. The horses were on the segregation strip.

### Five Thousand Elk North of the Segregation Line.

I asked Woody directly how many elk he thought there were wintering wholly on the country which would be cut of by the proposed railroad. He said, after thought, "At least 5,000." I offer the figures given, let me repeat, as to the head of game, not as my own, but as those of better authorities. I believe them to be correct.

### Caught in a Mountain Storm.

had taken such a fancy to Uncle John and Woody that I didn't want to go home at all, but had a notion to just quit my accustomed life and finish out the living business right here in this quiet and beautiful corner of the mountains—a spirit of rebellion which is sure to strike me every time I go into the mountains. But we all decided to pull out for the Post Monday morning, April 2. Billy set this date conditionally, as there were threats of a storm which might stop us. When the morning came, Billy did not want to start, for he could see by looking at the tops of the peaks about us that it was storming up above, even though in sheltered Pleasant Valley it all seemed quiet and peaceful. It looked like a bad snow, Billy said, and he advised holding up for the day. We would much better have taken this advice, as indeed most of Billy's advice on such matters, but I was getting uneasy about being so long in the Park, and besides was afraid Capt. Anderson would send out a team to the Gardiner hill to meet us, in which case I thought we ought to be there. I therefore insisted on a start, and that we did, though Billy was none too willing.

For some reasons I am glad we did start, because I got a chance at the one remaining mountain experience which we needed to complete the eventfulness of our journey. I had heard of the storms of this region, whose violence and intensity were such that the traveler was entirely bewildered and forced to stop where he was, unable to tell the points of the compass or to see any landmark. Of course, I had read all about Dakota blizzards and I had been in a blizzard on the Western plains hard enough to "drift" all the range cattle for fifty miles, but I could not say that I had ever seen a blizzard quite bad enough to warrant the timidity which all these mountain men seemed to feel about the storms up in the Park. Billy seemed to think that being caught in a storm was about the only real danger there was in this winter voyaging, but that one thing would always make him serious. He was serious as we said good-bye at Yancey's and started up the first hill. At that time there were a few flakes of snow falling.

When we topped the first pitch and reached the ledge, from which we could almost toss a stone down on the cabin roof below, our few flakes of snow had become a few thousand and we saw that the storm was coming. We pressed on for a quarter of a mile, perhaps, and the storm thickened so fast that we could hardly see.

"Have you got enough of it," Billy asked, "or do you want to go ahead?"

"Go on ahead," I said, "it can't snow this way very long." Billy grunted and went on. I could not see him 30ft. ahead of me. The trail of his *skis* filled almost as fast as he passed. We made the top of still another little hill. It seemed only to reach another level of the storm. Raising my head, I tried to look ahead, half-blinded, but all of which I could become conscious was an advancing wall of thick, smothering white. There was no landscape. I could not see a tree. The trail had no sides, no end. There was no distance, no direction. Everything was swallowed up in an eddying, whirling, impenetrable mask of snow. There was no atmosphere. It had all turned to snow.

"Have you got enough?" Billy asked again, calmly.

"No!" I said, idiotically proud and ashamed to go back. "Go ahead. We'll hole up over the next hill and wait till it blows over."

Billy was dead game, and once more turned forward. I suppose we went to the foot of the next hill. I lost him in the snow, and could only keep the trail by looking close down at my feet. The snow was damp, and came down in sheets rather than in flakes. I never knew before how snow could fall. We were all wet through in a few moments. We could see nothing and hear nothing. At every breath I was learning how a fellow could get lost in the mountains, how in a storm like this, which might last for days, he would lose all sense of direction and wander he knew not whither; how he would become wet through; how he would chill in the cold following the snow; how he would try to build a shelter and perhaps fail, perhaps succeed; how at last he would sit down by his little fire, perhaps, and give up, and be buried by the snow and perhaps never seen again, even though close to the trail. These things I thought of before we got to to the next hill. We never got over it. I met Billy coming back down the trail.

"We can't go on," he said, decisively. "It's simply awful up there. Hurry on back to Yancey's now, fast as you can, before the trail fills up."

At once we did what I ought to have been willing to do at first, and turned back down the trail. We were not much too soon. Our trail made coming up was blotted out entirely. The deeper ridges of the old trails were all that showed us the way, and these we could only follow by looking close down at our feet. Without this aid, Yancey's might as well have been a dozen miles away as half a mile. When we got to the ridge above the houses we could not see their roofs. The whole valley was full of blinding, driving, suffocating snow. The trail took us to the door.

We spent the rest of the day drying out. I had seen a mountain storm. I cannot describe the helplessness in which it leaves the traveler. The *ski* party caught in such a storm at night might have an awkward time of it. Even nerve and good woodsmanship might not get them through. The length of the storm would have everything to do with their safety. No one not familiar with these mountains can have any idea of the character of such a storm, or understand the great depth to which snow can fall in a single night. Words give no idea of such a situation as that of being caught by such a storm. When you go into the mountains you go into a region of large distances, large value, large impressions. But the mountains in summer do but dimly shadow forth the mountains of the winter.

### Tried it Again.

Tuesday morning we tried it again. Nature had whirled her weather wheel again. The wet snow was frozen into a solid crust. We did not use the *skis*, but walked more than half the distance of the climb up to the Devil's Gut. The morning was bright and clear and we had some glorious mountain views as we looked back on our climb near the summit. In the middle of the day the shoeing was not good, but Billy hit out an awful pace, and we made good time. At the Blacktail Creek we stopped for lunch and fixed up the *skis*. The snow here was very deep (the drift on the side of the creek was about 30ft. deep), but with his usual ingenuity Billy got a fire, this time on top of a fallen log, and we were happy over our lunch.

### Still Among the Elk.

All the way in, especially from Geode Creek to the top of the Gardiner Hill, we saw great numbers of elk. I counted twenty-six bands, numbering hundreds in all. There were few bulls. We had a good time with one solitary bull, a great fellow with a fine set of antlers, which kept along in sight of us for some time. We saw one little band of old bulls together. One grand band of elk crossed our trail not 100yds. ahead of us, giving us the prettiest and closest view of elk I had in the Park. There were about seventy-five head in the bunch and they joined another band of perhaps twice that number in a hollow not far to the right of the trail. We could see little scattered bunches of elk all over the hills to the right of us, there seeming to be more over toward the Yellowstone than on the south side of the trail, though we saw many there also. We saw no other game but elk, except one band of blacktail deer, which we trailed for some time along the road at the foot of the Gardiner Hill, and at length saw them leisurely making off up the side of Mt. Everts. There were fifteen of the deer, I believe. We saw these within three miles of the Post.

### Tierra Caliente.

The run of the Gardiner Hill was an affair more laughable than serious. Hunt, the sojer man, went down first, and as the hill is a sort of corkscrew affair, Billy and I had several good views of him sliding on his back. Some of the pitches were pretty steep, and Billy and I ingloriously sat down on our *skis* and slid that way. I suppose we slid over a mile in that manner. Then we came to a warmer climate, the *tierra caliente* of the level of the Mammoth Hot Springs, and the going became soft, then slushy, then muddy. We put the *skis* over our shoulders, and began the laborious climb of the Post Hill. Hardly had we begun it when we came upon the ambulance and mule team which Capt. Anderson had kindly sent out to meet us. The 20-mile journey, our last *ski* trip in the Park, was over. We learned that the storm of the day before had been so severe that Capt. Anderson had not sent out the team at all, rightly believing that we could not travel on such a day. Gauging our speed of travel to a nicety, he made a two minutes' connection with the ambulance and our party on this day. Of such is the accuracy of the military judgment and philosophy, which in matters of this sort is based primarily on the theory that a fellow isn't a fool, and that every fellow knows how to take care of himself.

### Would be a Soldier.

Once more we met Capt. Anderson's hearty greeting, and once more I sank into the pleasant life at the Post, Capt. Anderson explaining that there wouldn't be a train out from Cinnabar till the next Saturday, and no stage after the stage of Wednesday to which he didn't intend to send any ambulance anyhow, and to which I could, if I preferred, walk and carry my war bag. I concluded to take his reiterated and cheerful advice that I would just as well be calm and keep on my raiment. I think he had an eye out for recruits, for I found it so fascinating at the Post that I came near enlisting for a sojer. I would yet, if I could be sure the trumpets would always continue to make my shoulder-blades creep and that Capt. Anderson would always continue in immediate command.

## Natural History.

### A FLORIDA "HAPPY FAMILY."

Our happy family consists of one gopher, one pair of doves, one pair of quail, a group of five jays, and three cats.

The gopher comes out of his retirement in the scrub once a day only, about noon, for his frugal repast, which as a general rule consists of grass, and he often comes up to the verandah, as it grows more luxuriantly there than elsewhere. It is interesting to note how this awkward animal manages to satisfy his appetite, and then waddles away to his retreat. His habit is entirely regular, and the time of his appearance does not vary more than an hour each day.

The doves, known generally as mourning doves, from their melancholy note, are as familiar as chickens, as are also the quail, whose brood has probably fallen victims to a wildcat's raid.

The jays are among the most interesting members of the family. Except the days which, according to the tradition of the colored people, they spend in sheol, and so are necessarily absent, they take good care to be both seen and heard. A water dish is kept for them on the verandah, where they can drink and bathe to their heart's content, often with the cats lying but a few feet away. As they do everything with many expressions of what they wish, signified in most emphatic bird language, it seems strange that the cats should remain indifferent; but I take it that the cats, observing their entire familiarity with all the family, consider them as chickens and so not to be molested. They are ever ready to take pieces of cake or crackers out of one's hand, and are altogether the most naturally tame birds I have ever seen. They have the air of owning the earth, and are not at all chary of expressing their disapproval of matters that are not according to their notions.

Their intelligence is well illustrated by the following incident: A young lady living near us, who had been accustomed to feeding a number of jays from her hand, one day in a spirit of mischief suddenly closed her hand and held one of them a prisoner by his feet for a few moments before letting him go. After this, not only not the one caught but none of the rest of the flock could ever be induced to come near her again. As she said, "He must have told all the rest."

Their immunity from the cats is rather remarkable, for the family, consisting of the mother and two half-grown kittens, are all very lively, and the mother is one of the most successful hunters I have ever known, in fact keeping her kittens so well supplied with rats that they are never hungry. But she seems to have come to the conclusion that the birds frequenting the immediate vicinity of the house are not to be disturbed.

These cats in another way show very clearly the force

of heredity and the effects of environments. For many generations (of cats) they have lived where the scrub and the woods, while abounding in their favorite game, and furnishing abundant opportunity for the exercise of all a cat's sagacity in securing it, also abound in the larger animals, which in turn seek to prey on puss herself. At the head of this list stands the wildcat, which has long regarded puss as a choice morsel, and which generally leaves the tail of his victim so that the family may not be in doubt as to pussy's fate. Other animals also will catch the kittens, and consequently the lightest sound, if at all unusual, will frighten them, and any unusual appearance alarm. When for some reason I gave a long whistle, a few days since, I was astonished to see the whole family of cats scud for shelter, while any sound approaching a growl sends them at once to the house top.

---

I was witness not many days since to a migration of an immense army of the ordinary red ants. It was growing late in the afternoon when my attention was called to what looked like a red ribbon moving along. The column was perhaps a half inch in width and was made up of columns which came together from several directions, and on examination I found each smaller column starting from one of the numerous ant hills. When all these had united into one solid column it formed an army a half inch wide and sixteen feet long, a compact mass, along whose sides went those evidently directing the movements of the multitude. They passed over the sand of the garden and down the trail for more than forty feet, when the army again broke up into smaller bodies which disappeared in different directions in the scrub, each body in search of a new home. Was this movement because my work in the garden had so greatly disturbed them?

## MIGRATION OF THE BUFFALO.

*Editor Forest and Stream:*

The object I had in view when I wrote the article upon the "Migration of the Buffalo," which you published and noticed editorially in your issue of June 9, was to correct an impression which seems to be quite universal of late years, that in those early days before the era of their extermination had come, the buffalo could be found within a day or two by the hunter in any portion of that vast tract of country between the settlements of Kansas and the Rocky Mountains in one direction, and from Mexico to Saskatchewan in the other. Many writers have with flowery language inculcated this fallacy either from a limited personal knowledge of the subject or because it made a most fascinating picture for an easy flowing pen, and it was evidently also the views entertained, partially at least, by the writer, whose article elicited my own convictions created by several years of observation in inquiry made at that period—from 1862 forward—while I was traversing quite a portion of the country within those boundaries.

That this impression, however, is a fallacious one, will, I think, be the testimony of all those whose familiarity with that section at that period admits of their opinion upon the subject being regarded as of any great value. I do not hesitate to assert that no large herd then occupied permanently any portion of the region south of the Canadian, and believe that this limit might safely be extended to the Platte River, but at the same time I feel sure that small bands could be found at almost any season of the year, along the Smoky Hill.

North of these points the conditions appear to have been reversed, or to speak more correctly, far less noticeable. I mentioned in that letter their love for that great north land with its sweet grasses, limpid waters and bracing climate; spoke particularly of the reluctance with which they turned southward, and I fully agree with your editorial conclusions that many, possibly very many, seldom if ever left it.

That this was their favorite range can be demonstrated even at this date, for all through that country, along the Yellowstone and Missouri, clear to the northern limit of the vast plains of Winnipeg, their wallows and deeply trodden trails are more numerous and clearly defined today than they ever were in any portion of Texas.

No doubt many of your younger readers will feel inclined to ask how it was possible to keep any track of these nomadic animals, whose range covered so vast a territory; and I can think of no reply more concise and intelligible than to point at the appalling rapidity with which they were exterminated after their wholesale slaughter had fairly begun. Their gregarious habits, ponderous size, preference for the great treeless plains, the permanent character of their trails and their habitual sluggishness when not driven to action by outside influences, all militated against anything like concealment and blazed their pathway over the land like a prairie fire. It was generally an easy task to find the buffalo.

Forked Deer.

### The Sun and the Brooding Bird.

Chicago, Ill.—Some years since I was residing in a small town in Iowa. My house was in a large lot surrounded by shade and fruit trees. In a cherry tree in front of the house a pair of kingbirds made their nest. It was near the top and without shade from the foliage. I watched the birds from day to day as the nest was building. When it was finished and the eggs were laid I saw the mother bird patiently imparting the warmth of her body to develop and bring forth her young. Her companion would take her place on the nest when she went forth in search of food. During this time, it was early June, the weather was extremely hot. When the sun came up and the direct rays fell upon the nest and eggs the bird would leave the nest and sit upon a near branch and watch it for hours without moving. As the sun descended and its rays lost their intense heat the mother bird would return to the nest, cover the eggs and impart the temperature required.

When I discovered this I could hardly believe what I saw, for it seemed to be reason united with instinct. I watched to learn if this was uniform each day and my observation confirmed it, and so I was convinced that reason was guiding these little birds in the management of their domestic economies as surely as it governs the affairs of men.

It seems to me that this is a fact in natural history that is worth preserving, and so I have written it out and hope it may be assigned a place in Forest and Stream.

John C. Polley.

## HUMMINGBIRD PETS.

Hummingbirds are so closely watched by ornithologists that, apparently, the only important question still unsettled is in relation to the domestic character of the male. Audubon and Wilson could hardly find words to express their admiration for him as a dutiful and devoted husband, but lately their opinions have been challenged, and Mr. Torrey (I think) has even had relays of watchers at a nest for weeks, and asserts, positively, that he shows no affection for his mate after the termination of his courtship. Now, this question I must leave for others to decide, for although I am, probably, the only one in the country who tames hummingbirds regularly every summer, I have never been lucky enough to find a nest that I could watch, though I have always been inclined to agree with Audubon and Wilson.

A few years ago I had a large room in New York, and a florist in Astoria sent me in a paper box a female hummingbird that had been caught in one of his hothouses. He said a pair of them came in nearly every day, and I requested him to bring me her mate if possible. In two or three days—after the first one had become thoroughly tame—the male bird was brought to me. I took him out of the box and held him in my hand till his mate came down from her perch to feed. Then, when I opened my hand and let him go he seemed to be in a rapture of delight. He circled around her like a crazy lover, and as he was undoubtedly very hungry, as soon as she left the bottle he took his dinner without the slightest hesitation and then darted up to her, and renewed his demonstrations of affection for a long time. When I fed them, which was very often, he always waited for her to take the lead, then followed and hovered round her till she was satisfied, and then helped himself. I have never witnessed such gallantry and affection, and it is very difficult to change the opinion I then conceived of him as a husband.

I was very much interested in my little pets, though I did not like the idea of keeping them confined in a room;

A CONFIDING HUMMINGBIRD.

From a photograph sent us by "Didymus."

but the matter was soon settled, for the male bird, in his rapturous flights, dashed himself against the window. I spent nearly a day in trying to resuscitate him, but he had evidently injured himself internally. His mate was then turned out, and I have never since attempted to keep them in confinement. In fact it was only from necessity that I did it then, for I know that they cannot live more than two or three weeks without insect food. Here in my country home they can be tamed with little trouble, though I am suspected by some of employing magic.

Now, as you intimated that my first article was not satisfactory, inasmuch as I failed to give the details of my taming process, I will give it in this, though of all who have been instructed by me not one has been able to do anything with them.

In disposition they are as different as children, and while all of them are apparently very timid, that in most of them is easily overcome, and then they are very bold and fearless. The greater part of them go further north than Florida in summer, and the few that remain here to bring up families turn the young out of their nests about the middle of June. When they start on their emigrations in early summer no temptation is strong enough to keep them here, and I have given up all attempts at training them till the young birds appear. They usually become so fearless that they come to us anywhere about the grounds, and come in and hover round us while sitting at the table. Undoubtedly memory is not lacking in the little creatures, for on two occasions our pets have returned the following summer as tame as when they left.

The first I mentioned in my former communication. This summer we had the ill luck to tame a nervous, unsatisfactory little fellow, and were rather glad when he disappeared.

One day while my wife and I were sitting on the piazza a beautiful male bird lit on a twig close by, and I remarked that if we could only succeed in getting him under control we need have no fear of his being driven off by a stronger bird, as is often the case. I went in and got the bottle, and in a few minutes he was sitting on my finger, to our great surprise. It was undoubtedly the one we had photographed last summer, only now changed from a speckled to a ruby throat. But I was mistaken about his fighting qualities, for as soon as the other one found him poaching on his preserves he pounced upon him like a hawk and drove him off. He returned two or three times, but finding he could not stay without a fight he left us, very much to our regret. The other disappeared in a few days after that, but we took the loss complacently. In a day or two another young male, with an entirely different disposition, came and took his place, and in one day was tamer than his predecessor. He is now perfectly at home with us, though he only came a week ago.

The young male is easily known by having a speckled breast, which is changed in a few months to deep crimson. His tail is tipped with white the first year, which also changes to brown or black. This bird has one little spark of fire in the center of his throat, like a ruby breastpin—the first indication of a change. While I write this on the piazza he is either sitting near me on a twig or paying frequent visits to the little bottle of sugar and water standing by me on the table.

The process of taming them is very simple. When I find them at the flowers I hang a small bottle of sugar and water up near the flowers and then insert a bignonia (or other favorite); and when they find it I move it a few yards at a time till I get it near the piazza, where I can sit and hold it. Of course some patience is required, but by taking a book I can pass an hour or two very well. After coming a few times the flower may be dispensed with, and then there is no further trouble.

Didymus.

St. Augustine, Aug. 4.

## FLYING SQUIRRELS AS PETS.

In your issue of the 4th inst. "Mac" desires to know something about food for his flying squirrel pets. Three years ago, at Lake St. John, I was presented with a young flying squirrel by one of my Indian guides. I brought it home with me, and have kept in a large wire cage. With the peculiarity of its species, it sleeps all day and runs all night. When awakened during the day, it will partially emerge from its cotton-filled nest and stretch out its front feet and gape in a most natural manner. If we try to remove it from the nest after awakening it, it will make a peculiar chattering noise, and always seizes my finger with its teeth. It has never done this with sufficient strength to puncture the skin, although the length and sharpness of the teeth and strength of jaw would easily enable it to. It has never bitten me, has become perfectly tame, and runs about the house, doors and windows being closed. The squirrel is a female and shows a disposition to mate in the spring, at the same time losing a greater part of the hair from its beautiful flat tail. By midsummer the hair comes in again, fuller, handsomer, larger than ever.

When I first obtained this pet I fed it entirely upon bread and milk, but after a time began to put a few nuts in the cage. These soon had the preference and were always eaten, while the bread and milk were untouched, except that some of the milk was drunk. I feed any kind of nuts—English walnuts, filberts, almonds, pecans, hickory nuts and peanuts—always cracking them open. I always leave a small glass of water in the cage, and frequently feed a piece of apple, lettuce, celery or other fresh fruit or vegetable. A raisin, piece of candy or anything sweet it will devour greedily. In fact, I find that it will eat almost anything, and is ready to eat at almost any time, even when awakened from sleep. Good fresh acorns, when obtainable in the fall, it also seems to be fond of. Last year in some manner it broke off its two upper teeth short; within a month they grew out perfectly again. It is a great pet, clean, requiring little care, and I believe can eat almost anything without injury.

Eugene McCarthy.

Syracuse, N. Y.

---

On Aug. 30, 1892, while passing through a swamp with a friend in search of crows' eggs, we discovered a small nest about 20ft. from the ground in a hemlock tree. I started up the tree, and had climbed about half the distance, when Mr. T. told me that a flying squirrel had just left the nest, and pointed her out to me as she lay flattened against the trunk of a white birch a few feet away.

On reaching the nest I found young squirrels, and not stopping to examine, descended the tree. Mr. T. suggested that we catch the old squirrel alive, as she seemed to be quite tame, owing in part no doubt to the bright sun, the flying squirrel being strictly a night squirrel. We tried to catch her under our coats and hats, but to no purpose, so we decided to return to dinner, knowing that she would not attempt to remove the young until dark.

While at dinner Mr. T. devised a plan for catching the old squirrel. He armed me with a wooden box with a sliding cover, and taking some strong fishline we returned to the nest. Mr. T. then cut a long pole, at the end of which he fastened a running noose. I made a noise as if to climb the tree, at which the old squirrel stuck her head out of the nest. My friend was ready, and raising the pole, carefully slipped the noose over her head. She was apparently blinded by the strong light and only blinked drowsily when the loop dropped across her shoulders. The next instant she was dangling in the air, and I held up the box, into which she was quickly lowered; then shutting the cover I cut the line close to her neck, so that it dropped off in the box. Then I brought down the nest, which contained five young male squirrels, with their eyes just opening.

On reaching home the little prisoners were placed in a tin-lined box, with a glass front and a darkened apartment in one end. The mother squirrel cared for them but seldom came out during the day. I gave her milk, pumpkin and squash seeds, chestnuts and acorns, and pieces of apple. This family of squirrels feeds chiefly on buds, nuts, seeds and fruits, and they should have plenty of fresh water.

Moss.

### Catching Mink on a Hook.

Long Lake, N.Y., July 28.—*Editor Forest and Stream* A curious occurrence took place last Thursday evening, which is worth putting on record. While out fishing for bass with David Helm, proprietor of the Grove House, as guide, I noticed a mink hunting along the shore. After watching it for a little while, my guide chirruped and threw some dead fish to it, which the mink ate, and then came swimming out to the canoe and tried to climb in. While watching it the idea came to me to throw it a gang of hooks and see if the animal would bite. So I baited the hooks and tossed them overboard to the mink, which took them, and when I struck, was hooked. Talk about your 4lbs. bass! None ever fought any harder than that mink, but at last it was landed after a very exciting struggle. David said he never saw or heard before of a mink being caught on a fish-hook.

Benjamin Mann.

# Game Bag and Gun.

## RAMBLES IN NORTHERN MICHIGAN.

LANSING, Mich., June 1.—The "Saginaw Crowd," on their annual big-game hunt to the far West, for a downright good time, "takes the cake" always; but there are so many pleasant places and so much of real sport right at our own door that very few of those who annually spend a few days in the woods feel that it is necessary to go all the way to Montana for a really enjoyable outing.

I met Mr. A. H. Whitehead when he had just returned from his goose shooting trip to Dakota, and as he had been very successful with the ducks and geese he felt just a little mellow, and as I had not had a visit with him in a long while, I got him to tell me of his trip last fall down the Tittabawasse.

Mr. Whitehead and Mr. E. F. Cooley, president of the Michigan Supply Co., left Lansing the evening of the first day of November. At Bay City they were joined by Mr. Bob Birney, the drug man, and Mr. John O'Hare, the champion boot and shoe man of the great Saginaw Valley. In the morning the party started for Summit, a backwoods station on the M. C. R. R., about sixty miles north of Bay City. By a previous arrangement a team was in waiting for them, and the outfit, consisting of two boats, one 20×16 tent, guns, sporting implements, and the necessary grub and camp supplies was piled upon the big wagon, and the whole caravan started for the main branch of the Tittabawasse, about nine miles away. They arrived at the river about 3 o'clock, found the water very low, much lower than usual; and after loading the boats they found they had more than they had bargained for to get them down the river. The team was sent back and the journey down river began in earnest. The small boat went along quite well, but the big clinker-built one with the camp equipage and heavy luggage had to be pulled or pushed most of the way.

They trudged along as they supposed for about five miles, when it grew quite dark, and by good luck they landed upon a beautiful grassy point of land, with a nice spring of water not ten feet from the bank of the river, and a great plenty of good wood close at hand. They pushed the boat up to the bank, unloaded them, pitched the tents, built a fire, made some coffee, broiled the partridges that they shot on the way down, and with the canned goods managed to make out quite a supper. After supper they gathered a big lot of cedar boughs and made a bed about a foot thick by spreading the boughs upon the ground. They lit their pipes, lay down upon the boughs and spent the evening talking of the day's tramp and trying to find an easy spot for their lame backs, and doing a little something to ease their blistered hands. This, the first camp, they called Camp Birney.

The next morning the whole camp turned out bright and early, and before sun-up breakfast had been disposed of, the tents taken down and the camp equipage all packed. The day before had given them all quite a bit of experience in river boating, so they concluded to get a mossback to take the boats and luggage down the river about ten miles, for it did not take half an eye to see a big day's work and a dreadful hard tramp ahead of them. The first settler that they ran across was too busy to leave his work, the second for a like reason could not help them out, and there being no other team in that neighborhood he could not direct them to any one who wanted to earn ten dollars in solid coin, even in these hard times. The river was crooked, and they had walked a long distance, but they found that they were only about half a mile from their camp of the night before. They got together again, and as there was no other way out of the scrape, they had to try the old way, and push and pull the boats along as they had done the day before. The journey began, and the old sores and lame backs began to yell out in great shape, but by lifting up a collar, like the harness on a canal mule, so that the load might rest on a new spot, they all began to get limbered up, and after a while they could work together quite nicely, but they were an awfully lame lot of ducks. Down the river they found the water a little deeper. They shot several ruffed grouse on their way down, clubbed some stone rollers in the rapids, and about noon called a halt and had their lunch. By the river they had gone about five miles, but as the crow would fly, about two miles. Lunch over they resumed their journey, and after going about a mile they found a squatter, or mossback, as they are called in that section, and by hard talking and a liberal advance of coin, persuaded the old fellow to take the luggage and camp plunder on his cart, down the river for about five miles. The boats, lightened of the cargoes, floated along nicely, and after wading the river most of the way thus far, and having pulled the boats after them, you my judge that they greatly enjoyed the change. Two of them went down with the boats, and the others followed along behind the settler with the cart and luggage. When the boats reached the bend in the river where the cart was to stop they found the overland party at a beautiful camping place, with tents all up, supper cooked, and as the water was getting deeper, and the day had been one of a typical Indian summer, things began to look brighter.

At this camping place they were so comfortably situated that they concluded to remain for a few days. The deer season would not open till the fifth. The sandbars on the river and the runways on the banks of the river and in the bush back from the river, were well tracked by deer, and as the tracks all appeared to be fresh ones, the prospects for killing plenty of deer were way out of sight. The day was spent in grouse shooting. They found plenty in almost any direction from camp. Some thickets would contain twenty or thirty great big nice fellows, the largest that they had ever seen. Mr. Birney had brought along his two spaniels. They could tree more partridges than any two dogs in Michigan, but Mr. Birney had so neglected their education that when the birds came down the two dogs would break away and rushing upon the birds they would each grab hold, and by vigorous pulling and hauling would most generally divide the plunder between them before the shooter could get to them. The dogs got punished enough to kill a wolf, but it was no go; they just continued to pull all the birds apart they could get hold of during the trip.

The camp now located was near the east branch of the Tittabawasse, and what is known in that country as a tote road ran along the bank of the river, on the brow of the hill just back of the camp. During the day several teams with big wagons loaded with camps and camp supplies, and followed by men and dogs, passed along the tote road looking for a favorable location to make camp and be ready for the deer slaughter which would open the fifth.

They remained in camp for two days, spending the time in grouse shooting, healing the blisters on their hands and getting the sore spots out of their spines. The morning of the fifth day they broke camp and started for a great deer range well known to Mr. Birney about ten miles down the rivers, this being one of his old hunting grounds. They stowed the luggage on the boats and made the start. Mr. O'Hare, having his Irish setter dog with him, concluded that he would follow the tote road and get a few birds for dinner. He had been gone but a few moments when his 10-bore was heard to speak out with both barrels, as Cooley and Birney said, "with powder enough to kill a bear, as he had loads of No. 6 shot, to blow any birds in the woods clear out of Michigan." He soon put in his appearance, and when they shouted to him about missing his bird with such cannon-like loads, he replied that he had jumped a fine big doe near the river bank, that she had run past him at about three rods distance, and as she went he gave her both barrels of shot, and his setter had run up to her and chased her out of sight in the thick woods. Such small shot would not kill a deer at 40ft. and it would be all foolishness to spend any time looking after her. The party were hankering after fresh venison and looked at the matter differently, so Mr. Birney took them back to the place where he had shot at the doe. They took along the two partridge dogs, and when they reached the spot they started on the trail with a zip. They did not run ten rods from the place where O'Hare had lost sight of the setter and the doe, before they stopped and began to bark vigorously, and when the men reached them they found the doe stone dead. The charge of shot had struck her just back of the foreleg, and the shot had passed clean through her and lodged under the skin on the opposite side. She was literally torn all to pieces, and had several ribs broken and shattered by the shot. They dragged her to the river, and stowing her away under the poop deck, and taking a big drink of river water and giving three rousing cheers for O'Hare, they proceeded on their journey. They felt jolly good over their luck. They killed a great number of grouse that day, as the spaniels would jump them every few rods in the bush by the river side. They made a run of about fifteen miles, and went into camp near the west branch of the Tittabawasse. This camp was nicely located and called Camp Cooley. It was a lovely spot. With the deer hanging by the tent door, strings of partrides strung up in the white birch trees. tents up and boats pulled up on the grassy banks, it made a pretty picture indeed.

"The days were cool and crisp, both lovely and pleasand," said Mr. Whitehead, "and we could eat a dozen good meals a day and be hungry all the time and sleep all the night through without a skip. Every morning we were posted on the runways before the stars were gone, as deer are on the move all night such frosty nights." One morning Mr. Whitehead had just reached his runway, when he heard a buck jump in the brush and make for the middle of the river. Just then a rifle cracked and the buck went down, shot by a hunter, one of the party who had pitched camp just over the hill back of Camp Cooley. They had started the buck, and knowing right where he would take to water, the hunter had stole the march on Mr. Whitehead and got his buck at the first shot. Mr. Whitehead had on his hip boots, so he waded into the river and brought the buck to the shore. It was a big fellow, about 250lbs., short leg, long body and a handsome nice specimen, with a splendid pair of horns, the nicest that Mr. Whitehead had ever seen.

That day Mr. Cooley had been in his blind for a long while, and his legs getting tired he thought he would just stir around a little and get limbered up. He had gone but a few rods when he looked back, and there standing within 100ft of his blind stood a big buck looking right at him. The buck did not remain for Mr. Cooley to interview him. Mr. Cooley seldom speaks forcibly or hastily upon any subject without giving the matter a careful consideration, and on this particular occasion he was afraid that he could not do the subject justice, so he adjourned the meeting. The whole party sympathized with Mr. Cooley in his misfortune, but it was only one more evidence of the constant watchfulness and great and tireless patience which every deer hunter must have to match his hunting qualities successfully against the extreme watchfulness of the deer.

They all came in early for dinner, tired and hungry. All had drawn a blank, and all were heartily weary of broiled grouse, baked beans and bacon, so they skinned out the deer, hanging up the saddles to take home. The weather was so warm that the saddles had to be well sprinkled with pepper to keep the flies from blowing them. They had not seen a cloud for three days, and getting tired of watching runways, they all got out their shotguns for a round with the birds again.

Mr. John O'Hare is one of the grandest fellows. He is a typical Irishman, and thinks that he has the greatest Irish setter on earth. The whole camp had to watch him or he would have fed the setter about all the supplies, to say nothing of the venison he stuffed into him. He insisted upon taking the setter to bed with him, quite likely fearing that the dog would take cold. One day they all started out, O'Hare, dog and all, going down the old logging road. The entire party, excepting O'Hare, got in about dark, each with a big bag of birds. They were as hungry as bears and cooked about ten pounds of venison, the first that they had cooked. The supper was a great affair and how we did enjoy it. The hours went by but no O'Hare appeared; it was 9 o'clock and he did not come, so we began to fire the signal gun, and continued to fire every five minutes till about 1 o'clock, when he came in, the most unconcerned man of the lot, and was amazed to think that anybody would think that he would get lost in the woods. We took his story for it, and when he told us how he had come across a camp of hunters, where he had been so well entertained that he never once thought that anybody at camp would worry about him, we laughed outright, and charged him up with $2 for shells fired to guide him back to camp.

They remained at Camp Cooley for ten days, fishing, shooting lots of birds, watching the runways for deer and making several trips of three to five miles each into the surrounding country. There is a network of logging roads all through the woods. Plenty of deer signs are everywhere. They saw several bear tracks, and at one place found a big dead-fall trap and in the trap the skeleton of a bear. They gathered the claws and tusks and brought them home as relics of the hunt. Mr. Birney, who, of course, is expected to know everything of woods lore, explained why the bear had not been taken out of the trap. An old trapper had lived in that section for many years, and he had caught lots of bear and other fur-bearing animals. He had set his traps one fall a few years ago, but not finding game so plenty as in years past had gone off and left them, expecting to return soon, but he got into a row with some Frenchman and was laid out, so the traps were never looked after, and this trap and the bear in it had never been disturbed. Several other traps had been found in the woods in that section and all of the traps had skeletons of some kind in them.

"On one of these side trips," said Mr. Whitehead, "we ran across a party of bee-hunters and it was quite amusing to see them work. They had some honeycomb and some syrup. They would burn the comb to attract the bees and feed them the syrup, and when the bees were full of syrup they would start for their home, and the bee-hunters would line them and follow them usually to some big hollow tree. The party had been very successful and had great luck finding bee trees. The liners worked all one day burning comb, feeding the bees syrup and dusting the bees with flour, and changed positions many times before they could yet the line so that they could follow it. They gave us a liberal supply of excellent honey and afforded us an endless amount of pleasure watching them in their work. This party were all from Flint. At their camp they had a nice big buck hung up in a tree; he had a glorious pair of antlers. They had jumped the buck the day before our party found their camp and a good rifle shot brought him down. At the camp they also had several coon skins, and a fox or two had been run down.

"A few years ago all this section of country was thickly covered with huge cork pine, but it is all gone now, with nothing but a thick growth of young trees and underbrush all about us—very few settlers and nothing but a great wilderness on every hand. There is but one 80-acre lot of timber now standing, and this lot looms up above its neighbors like a huge mountain peak. The lot is owned by Mr. Hall of Detroit, who seems to keep it as a monument of the past. The life at Camp Cooley was delightful. Our surroundings just suited us, our camp comrades were jolly, jovial men, and we enjoyed every hour of our stay there."

The vacation of Mr. Cooley and Mr. Whitehead had ended, but Mr. O'Hare, the good-natured man of the party, and Mr. Birney had not got enough of it yet, and who could blame them?

"The weather had been pleasant, the shooting fine. There had been seven deer killed almost in sight of our camp by a lot of hunters who came in the second day after we made camp on the river. When we left the river there were lots of camps all along the banks. Many had been in camp long before the season opened. It was a good place for a game warden, but none were there. I am afraid that deer shooting in that section will be poor for some years to come. The morning we came away we got up long before daylight, had a breakfast of broiled venison, broiled partridge, with other good things, and one of Cooley's cups of strong coffee. We packed the canvas boat and loaded in all of the birds that we could find room for, and taking a saddle of venison for the friends at home, we bade good-bye to our good friends of Camp Cooley, pushing out into the river, and started for Haws Bridge, 15 miles below.

"On our way down the river we ran into a log jam of over a mile long, and were obliged to back all of our camp equipage and boats and other luggage around the jam, making the hardest job we had struck in many long years. We got around the jam after nearly half a day's work, and when in sight of the village where we were to take the train, we had the pleasure of seeing the train pull out of the station and cross the river, and we were left over till the next day. The carry at the big jam took so much of our time that we missed our reckoning at all points. We got a good night's rest at the hotel, and the next night reached home greatly delighted with our two weeks' outing on the Tittabawasse. JULIAN.

## PROMPTED BY THE PIGEON STORY.

*Editor Forest and Stream:*

It did me real good to read the burning and indignant words of "Didymus" in the FOREST AND STREAM of Aug. 4, in condemnation of the shameful slaughter of the American wild pigeon, and other acts of atrocity as they have appeared from time to time; and it is to be hoped that none of your numerous readers will fail to read the article.

How "F. E. S.," as in two previous numbers of the FOREST AND STREAM, could in cold blood write the sickening story of his pursuit, from year to year, of the fast-disappearing American pigeon, with nets and guns, as they were seeking a secluded retreat where they might build their nests, lay their eggs and rear their young, is past comprehension. He would appear much better on his knees begging pardon for the grievous wrong he has done to the starving young birds, and also to the sportsmen of the present and of the future.

As a matter of history—as to why the pigeon has become almost extinct—it was perhaps well enough; but for one who while confessing himself guilty of the offense, to speak almost boastingly of his share in the wrong done, is past endurance.

I well remember seeing flocks of pigeons miles in extent and so compact as to darken the sun, as they passed like a cloud over portions of Duchess county, N. Y.—and I have to confess that, while a boy, I had some little share in netting some of them; but those were days of ignorance, for which there is some excuse.

I am thoroughly in sympathy with your "non-market-shooting plank," and hope you will stick to it, as you have for the preservation of the National Park, and trust success will crown your efforts in each case.

But market-shooting, pot-hunting, etc., etc., are trifles when compared with spring hunting! If the latter is not adopted, the former will soon run out, for want of game to hunt.

Another sickening thing is to read that Mr. So and So caught so many hundred trout or bagged so many birds

in a single day. Shame on such sport!! There is no manliness nor true sport connected with it. I hope another article of the kind may never appear in "our paper," except to condemn it, as it should be.

This screed is not written because the writer is, or expects to be a sufferer from the greed of the "trout hog," "netter," market-shooter" or "pot-hunter;" for his shooting days are back numbers. Although he has done a fair amount of tramping and shooting—in the past sixty-five years—he is consoled with the fact that never but once has he been guilty of spring shooting, and that more than twenty years ago—when but three ducks fell before his gun, and one of them was carried off by an eagle before he could retrieve it.

With the killing of game of all kinds strictly prohibited, and stopped during the mating, rearing and close season, in a few years there will be enough for all, of fur, fin and feather. Let the good begun work go on! J. H. D.

Poughkeepsie, August, 1894.

## MOOSE HUNTING AND MOOSE HUNTERS

As the open season for large game draws near, sportsmen are looking forward to hunting trips. Many of them have tried unsuccessfully season after season to kill a bull moose. Some of them hesitate on account of the prospective hard work such a trip entails. Others in the present financial condition of business are deterred on account of the expense.

My two first hunting trips after moose were most decided failures. I worked hard and hunted faithfully, over large tracts of unbroken wilderness, which had been represented to me as being the home of the moose. When I had hunted for six weeks, most of the time on good tracking snow, and failed even to see a single track of the game I wanted, I thought it time to try a different locality. For three seasons in succession I was successful, killing a moose each year, and having chances to kill more.

It is well sometimes not to believe all you hear about the abundance of moose in certain regions. Interested parties are apt to exaggerate. During the rutting season in October a bull moose will travel a great deal, and his tracks will remain. Where fresh tracks at this season are seen on a bog in a region where a moose is seldom seen or killed, it is hardly a proof that it is a good place to hunt for such game. The tracks are positive evidence that he has been there, but when you see them he is very likely to be ten miles or more away, and still traveling. On a certain trail between two lakes, which is traveled over by numerous parties, the tracks of a large moose are seen every season. In fact, they are there with such unfailing regularity that it suggests they were purposely made. Almost any one could take the foot of a moose and in a few moments make a good many tracks.

I am not interested in any hunting camp or guide in any pecuniary sense, but I know that in certain localities and with certain guides the chances of finding the desired game are pretty good. I do not expect to kill another moose. I do not want one enough to pay for the time, trouble and expense of going where I should expect to find one. To the sportsman who has never killed the moose he longs for, the satisfaction of seeing his game fall, perhaps at the first shot, should fully compensate him for the previous hard work and disappointments. A friend who had worked hard for a number of seasons to kill a large bull, and who finally shot a fine one, wrote me, saying, "I cannot describe the feeling of satisfaction I experienced when my moose went down. It fully repaid me for all my former disappointments. Should I kill half a dozen more even larger than this one, I could not feel the same." Often when looking at quite a large moose head I have, I say, "Well, I worked hard to get you, but you are worth it."

Now, if I wanted to kill a moose I should try and do it as soon as possible and not put it off from year to year. Notwithstanding the protection of the game laws I hardly think moose are increasing, unless in some very remote place, which is hard to reach. The army of sportsmen is surely not growing less each year. Grounds which heretofore have been little hunted are becoming better known and the moose will grow scarcer each year. We often read accounts (usually taken from local papers) of how moose are increasing, two or three having been recently seen in localities where there have been none for years. In my opinion the moose seen in such places are some which have been driven out of regions further back in the woods. A guide cruising about far back in the woods may find moose signs numerous, and either by hunting them himself or taking parties of sportsmen there, starts a good many of them, and as the moose have to go somewhere and have the reputation of traveling long distances when started, it is not unlikely that some of them should stray into a region which for some years had been practically without moose. I think that this will account for their presence in such places fully as well as the theory that they are increasing so fast that the woods are getting full of them.

I have heard sportsmen say, "It is too expensive to go after moose; the guides charge too much; and very often we do not get anything except hard work for the money we spend." Now, there are guides and guides. I know of some I would not go with if I could hire them for fifty cents a day. Not that they are lacking in woodcraft, but because they have deliberately charged very high prices, with no intention whatever of trying to find game. Nearly all guides (good or otherwise) are poor men; and as there are sportsmen who go to the woods who are wealthy men and willing to spend money freely, it is only human nature that the guides love such parties. I have been with quite a number of guides, both white men and Indians, and never had trouble but once. This was on my first trip to the Adirondack Woods. After being out some three weeks, our three guides tried to play it on us, and refused to do what they had promised to do before starting. It took about five minutes to settle it; and their little game was a complete failure.

I know of an instance where a first-rate guide in every way had a man calling himself a sportsman, who kept saying, "I haven't much time, and want to do it all in a few days." He worked his guide for three days about as follows: He made him carry a very heavy pack from camp to camp, often many miles apart. Reaching a camp late in the afternoon, he would say, "Now I am tired and will take a nap. You cut some wood and get something for me to eat, and when it is ready wake me up. We will then take the boat and try the trout, and also take a jacklight and after dark try and get a deer." Then they would be out the greater part of the night. The guide, telling me about it afterward, said, "Any one who knows me knows I am willing to work, and do all I can for a man. I never worked as hard in my life; and on the afternoon of the third day I said to my man, 'Mr. ——, we will pack up your things and to-morrow I will take you down the river.' 'I don't want to go,' was the reply. But as it was either go or stay alone in camp, he went."

I always use my guides well and pay them well; and those I have been with always wanted me to go again with them.

It is often asked: Why should a guide get so much per day for guiding hunting parties, when he will perhaps work in a lumber camp or chop cord wood for about half of what he charges for guiding? Often a guide will hear from several parties who all want his services at the same time, and as he can only go with one party at a time the others do not go at all or engage some one else. Again, as it happened last year, parties will engage a guide many months in advance for the best part of the hunting season; and perhaps a few weeks before it is time to start, something unforeseen will happen and they cannot make the trip. In the meantime the guide engaged has declined to engage with other parties who are able to go; and the result is that he gets nothing to do during the best part of the season.

A guide I know got six moose, all bulls, last season, and spent only five days hunting them. The first bull he killed himself. Starting in the morning from where he lives, he reached his camp at night, hunted and killed the moose on the second day and on the third brought out the head and part of the meat. I saw the head and it was a fine one, the horns spreading 56in. with (as I remember) 26 points. Now, had he taken a sportsman on such a trip, his wages would have amounted to $7.50 for the three days; yet he sold the head unmounted for $50. The guides also do a good deal of hard work, which is not considered by parties who engage them, fitting up camps, packing in grub and blankets, etc.; and often preparations are made taking two or three days of hard work for a party who fail to come.

I often hear a man say, "I would like to kill a moose very much, and were I sure of getting one I would go almost anywhere and pay well for it." I know a guide who will, I think, guarantee you a chance; he has done so, and successfully, too. That is, he will warrant you a fair shot at a bull, if you will agree to pay him a certain sum and go where he wants you to and hunt for a reasonable length of time. Should he fail to give you the chance he will charge nothing for his services. Of couse he will not warrant that you will kill a moose, even if you get a very easy shot. He will give you the chance and you must do the rest. Some men would get so rattled at the sight of a bull that they could not hit a barn, much less a moose at 50yds. I stood once on the exact spot where a certain sportsman shot three times at a large bull standing broadside less than 40yds. away, and missed every shot. When any one gets such a chance as this and fails he might as well give it up; his case is hopeless.

Dunbarton, N. H. C. M. Stark.

## THE MINNESOTA LAW UPHELD.

*From the St. Paul Pioneer-Press.*

Judge Collins yesterday handed down several decisions, among which were those in the celebrated game cases of the State against C. W. Rodman and R. E. Cobb, the commission men, and against the Northern Pacific Express Company. The decision affirms the orders of the lower court and remands the cases for judgment. He affirms also the constitutionality of the amended game laws.

The defendants, Rodman and Cobb, were indicted for having in their possession more than five days after the end of the open season venison contrary to the provisions of G. L. 1891, Chapter 9, Sec. 11 as amended, G. L. 1893, Chapter 124, Sec. 9. Under the law the season for deer is only open from Nov. 1 to Nov. 20. The penalty for having deer meat in possession after the lapse of five days after the beginning of the closed season is not less than $50 nor more than $100, or not less than sixty days or more than ninety days' imprisonment for every animal had in possession. Upon the argument of demurrers to the indictments before Judge Willis in the District Court, it was admitted by the prosecution that the deer had been killed in the open season. The court having overruled the demurrers, certified to the Supreme Court the following questions of law as having been raised on the argument and decided in favor of the State:

"1. That Chapter 124 of the General Laws of 1893 is unconstitutional and void;

"2. That the Legislature had not the power to make it an offense to have in possession birds, animals or fish during the closed season, which had been killed and reduced to possession during the open season;

"3. That if the Legislature has this power it has not exercised it, and that this act does not make it an offense to have in possession during the closed season, birds animals or fish which have been killed and reduced to possession during the open season;

"4. That the act is void by reason of the excessive fine imposed by it;

"5. That the indictment does not state a public offense."

In the opinion Judge Collins points out that the same question is practically raised by the third and fifth propositions, which go merely to the construction of the act.

The contention of the defendant was that the act should be construed as prohibiting only the possession during the closed season of game unlawfully caught or killed. On this point Judge Collins holds that the language of the act is so clear as to leave no room for any such construction.

He then points out that in the other three propositions the validity of the act is raised. The points made against the validity of the act by the defense were (1) that the Legislature has no power to make it an offense to have in possession during the closed season game lawfully killed and reduced to possession during the open season, especially for the reason that it deprives a person of his property without due process of law. (2) The act violates the constitutional requirement that no law shall contain more than one subject which shall be expressed in its title. (3) That so far as it relates to punishment for having game in possession, the act is in violation of the Bill of Rights (State constitution Act 1, Sec. 5.), declaring that excessive fines shall not be imposed.

The defense also declared that the act proceeds upon the plan of declaring all game and fish within the boundaries to be its absolute property and providing, upon that basis, under what limitations persons may acquire a qualified right of property in it from the State. The defense contended that the State had no proprietary right in animals *ferœ naturœ* and can acquire none by legislation.

Judge Collins holds that point raised is immaterial, as it is not necessary to resort to any such doctrine. He points out that it is the doctrine in this State that the ownership of wild animals is in the State not as proprietor, but in its sovereign capacity as the representative for the benefit of all its people in common. The preservation of such animals as are adapted to food purposes or other useful ends is a matter of public interest and is within the police power of the State, and to that end it may adopt any reasonable regulations, not only as to time and manner in which such game may be taken or killed, but also imposing limitations upon the right of property in such game after it has been reduced to possession. Such limitations deprive no person of his property except under the limitations imposed. The object of the act is to preserve the game from extinction, and the Legislature can pass reasonable laws to effect that end.

All game laws proceed upon this principle, and their constitutionality has never been successfully assailed.

Judge Collins also maintains that no court would be justified in declaring unreasonable the provisions limiting the time to five days after the commencement of the closed season, during which a person may lawfully retain possession of game lawfully obtained, and points out that if no limitation was imposed, frequent violations, without any probability of discovery, would be the result.

The court also fails to discover any merit in the point that the subject of the amendatory act is not expressed in its title.

In regard to the question of the imposition of excessive punishments the court points out the constitutional provision was directed not so much against the amount or duration of the punishment as against the character of them. Moreover, our game law is not more severe in its penalties than those of other States, and their validity has rarely, if ever, been questioned.

In the case against the Northern Pacific Express Company the only point raised not covered in the other two cases was that the Legislature has not the power to prohibit, during the open season, the receiving by a common carrier for the purpose of transportation of fish which have been legally caught within the State. In other words, the claim is made that the act unlawfully interferes with interstate commerce. Judge Collins points out that the complete answer is that the fish had never become articles of commerce within the meaning contended for by the defense. Under the laws of the State they had, it is true, become private property, but of a limited character, one limitation being that they should not be shipped out of the State—*i. e.*, should not become subject to interstate commerce. The purpose is to prevent the depletion of game.

The syllabi in the cases are as follows:

### Syllabi of the Cases.

State of Minnesota, plaintiff, vs. C. W. Rodman, defendant, and State of Minnesota, plaintiff, vs. R. E. Cobb, defendant (two cases). Syllabus:

1. General Laws 1891, Chap. 9, Sec. 11, as amended by General Laws 1893, Chap. 124, Sec. 9, construed as prohibiting the having in possession more than five days after the commencement of the closed season certain kinds of game, although lawfully taken or killed during the open season.

2. Held, that this statute is a proper exercise of the police power of the State to protect and preserve wild game, because reasonably tending to prevent the unlawfu killing of such game during the closed season.

3. It is within the police power of the State to enact such laws as will preserve from extermination or undue depletion wild game adapted to consumption as food or to other useful purpose, and to that end may adopt any reasonable regulations, not only as to time or manner of taking or killing such game, but also imposing such limitations or restrictions upon its use or the right of property in it, after it is taken or killed, as will tend to prevent such extermination or depletion.

4. Held, that the subject of the amendatory act of 1893 is sufficiently expressed in its title.

5. The provisions of Sec. 11 of the act as amended are not obnoxious to that part of the constitution which prohibits the imposition of excessive fines. Collins, J.

### Against the Express Company.

State of Minnesota, plaintiff, vs. Northern Pacific Express Company, defendant. Syllabus:

1. State vs. Rodman and State vs. Cobb followed, holding that certain provisions of General Laws 1891, Chapter 9, as amended by General Laws 1893, Chapter 124, entitled "An act for the preservation * * * of the game and fish of the State of Minnesota," are valid.

2. The provision of the act prohibiting the shipmen out of the State of certain kinds of fish caught within the State is not an unlawful interference with interstate commerce.

3. State vs. Byrud, 23 Minn., 30, followed to the effect that when a criminal case is certified to this court we wil only consider such questions as appear from the certification to have been raised and passed on in the cour below. Orders affirmed and causes remanded. Collins, J.

### A Sportsmen's Exposition.

The following firms have united in a call for a meeting to consider the practicability of a sportsmen's exhibition, and, if desirable, to arrange such matters as are necessary to provide for its success: Hartley & Graham, Union Metallic Cartridge Co., Winchester Repeating Arms Co., Laflin & Rand Powder Co., E. I. Du Pont de Nemour & Co., Schoverling, Daly & Gales, Marlin Fire Arms Co. Von Lengerke & Detmold, Charles J. Godfrey, A. G. Spalding & Bros., United States Net and Twine Co., Tatham Bros., Fred Sauter, the W. Fred Quimby Co., Empire Target Co., Hunter Arms Co. The meeting will be held Aug. 27, at 2 o'clock P. M., in the rooms of the Hardware Club, Postal Telegraph Building, Broadway and Murray street, New York, and all houses in the trade are earnestly requested to have a representative present.

## THE NEW HAMPSHIRE WILDERNESS.

Second Connecticut Lake, N. H., Aug. 4.—*Editor Forest and Stream:* New Hampshire has long been known as a famous summer resort. Its White Mountain region forming the Switzerland of American, is the summer home of thousands. It is only within a few years, however, that it has become known that the Granite State offers as great attractions to the sportsman as to the summer tourist. The extension of the Maine Central Railroad from North Stratford to Cookshire six years ago opened up a country full of deer, moose, caribou and streams and lakes swarming with trout. The local fisherman, from the small boy with a twig to the gray-haired trapper and guide, had long been a frequenter of these secluded game reserves. Before the extension of this railroad the nearest fishing resort was reached only by a twenty-five mile stage drive, and the furthest by a journey into the woods of over sixty miles.

Having just returned from an extended trip through this region of northern New Hampshire, let me tell you just a little af what I saw in this land of the rod and gun. I had visited the region ten years ago, and the first surprise was the easy accessibility of the region and the abundance of game and fish. During this time the fish and game laws have been more rigidly enforced than in any other section. As a result, all kinds of game have multiplied very rapidly till now the woods are literally filled.

The real sporting region begins at the village of Colebrook, which lies on the Connecticut River 250 miles from Boston. This is the starting point for several popular fishing and shooting trips. The nearest resorts are the camps at Diamond Ponds, kept by the genial Mart Noyes, the veteran sportsman. The two Diamond Ponds are but eight miles from Colebrook through a charming country and are the most easily reached of any of the game resorts. The ponds are two and three miles long respectively and form a natural breeding place for the finest kind of trout. They are fed by large rivers, so that if one prefers brook to lake fishing he may indulge his fancy. The camps at the ponds are made up of two large boarded cabins and fourteen well-built tents, accommodating in all 50 persons. The camps are 3,000ft. above the sea and in the midst of an unbroken forest that extends into Canada.

The camps are filled throughout the fishing and hunting seasons, and many prominent sportsmen of New York and Philadelphia spend their summers here often with their families. The ponds furnish trout as large as 5½lbs.; pounders and under are caught every day. The writer saw a loaded 10-pound basket brought in from a three-hours' fish by two New York men. A fleet of 25 boats furnishes an ample supply for all fishing and hunting parties.

The field for deer and moose hunting around the ponds is one of the finest in the State. Deer are seen every day and Mart Noyes has a fine drove of deerhounds in excellent condition for the opening of the running season, Sept. 15. A large company of sportsmen have arranged to come to Diamond Ponds to open the season.

Returning to Colebrook we will lay in a new supply and start for the famous region of the Magalloway River and Parmachenee Lake. This lake is situated at the head of the Magalloway River, just west of the Rangeley Lakes. It is reached by taking the stage through Dixville Notch to Errol Dam. Then up the river to Wilson's Location, where there is a small house called the "Aziscohos," which accommodates 50 persons. Beyond Wilson's Mills is a carry of two miles around the falls, and then a paddle of 30 miles up the Magalloway River to Parmachenee Lake.

The lake and all the surrounding country are controlled by the wealthy Parmachenee Club of New York city, which has camps here and spends the entire season hunting and fishing. The Dead Diamond River, which flows into the Magalloway, is a still more unfrequented region, and if one wants to get right into the heart of the wilderness and does not mind tramping, this is the place to go. No one ever came away from the Dead Diamond or Magalloway region without a big catch of trout and a royal time. There are many private camps on the Magalloway. The largest is that of Mr. Jason Dudley of Colebrook, and W. S. Shurtleff of Lancaster.

The most famous of all these shooting resorts and the most game-abundant is the region around the Connecticut Lakes. This series of four lakes form the headwaters of the river of that name. Going by train from Colebrook to West Stewartstown, we start over again for First Lake. It is a fine drive of sixteen miles from West Stewartstown to First Lake, and eight more to Second Lake. There is a fine hotel at First Lake accommodating seventy-five people, and many sportsmen bring their families here for the summer. Every comfort and convenience is supplied at the Lake House. A large fleet of boats is ready on the lake in front of the hotel, and lake fishing is much indulged in in the season. Deer are seen almost every day in the field in front of the house. The wilderness begins in earnest, however, when you strike for Second Lake. The road is fearfully rough the last two miles and lies through a heavy forest.

I had the pleasure of making the trip from First to Second Lake alone and on a not too bright night. In an old Concord wagon, with baggage strapped in, I bowled over the stones and sink holes at 9 o'clock at night. At Second Lake I found a typical hunter's camp, with every modern convenience. I was greeted royally by the crowd of sportsmen and guides who were gathered about the huge stone fireplace in the office. A party were playing cards and the remainder talking over the results of their day's work and planning for the morrow. After a handshake all round, I fell to chatting with the veteran guide and hunter, Ned Norton, as he sat by the fireplace. As this was my first visit to the lakes, I was a little skeptical in regard to the stories of deer seen every day. We had been talking but a few minutes before Norton discovered my suspicion, and offered to take me out where I could probably hear and possibly see a deer that night.

It was after 11 o'clock but we went down to the landing and got into a light 60lbs. canoe. With neither gun nor jack light Norton paddled silently to the east side of the lake. We had not paddled ten rods along the shore before we saw a deer standing in the water's edge hardly 25ft. away. After watching it five minutes Norton flashed his paddle and the deer bounded away with a grunt. Within half an hour I had counted seven deer on the shore and been within 25ft. of two. I was satisfied and told Norton to return. But one of the deer had known that we had been near it, as Norton had backed off gently.

The Idlewild Camp at Second Lake is a large boarded camp with accommodations for fifty guests. The Lake House at First Lake, the Idlewild Camp at Second Lake and the log cabin at Third Lake are all in charge of A. C. Bumford, who, being a sportsman, knows how to treat disciples of the rod and gun. Many prominent New York and Philadelphia men were stopping at the Second Lake. The fishing has been unusually fine in the region of Second Lake all summer and Idlewild camps have been filled with fishermen. Ned Norton, who has explored over a hundred of the Adirondack lakes, is positive that these Connecticut lakes offer greater inducements and as good accommodations as the Adirondack region.

The prospect for the hunting season is the brightest ever known. Deer and moose are more plentiful than ever before, and Mr. Bumford has a fine pack of nine deerhounds ready for the season, Sept. 15. A drove of fourteen deer was seen a few days before my arrival, and moose are very frequent. Many prominent sportsmen have arranged to be at Second Lake and open the still-hunting season Sept. 1. The guides say that they will guarantee any man a deer if he will spend two nights at the lake. Their guarantee has never been known to fail.

The scenery around Second Lake is unsurpassed in wildness. As far as the eye can see there is no sign of a clearing or dwelling. The unbroken forest stretches away into Canada.

The Third and Fourth lakes have only log cabins and are used for camping parties who wish to rough it. The Third Lake is a veritable trout reserve, almost unfished. It is very thickly stocked with speckled trout which are exceedingly gamy. Ten years ago this entire region was unbroken save to the local angler and huntsman, but it has already become recorded among the wildest and most game-abundant localities in America. If you want the finest trout fishing with unexcelled deer and moose shooting in season, make a visit to the Connecticut Lakes, Sept. 1.

Another summer and sporting resort that should not be overlooked in visiting this country is Dixville Notch, through which one has to go to reach the Magalloway River and Parmachenee Lake. This notch is situated ten miles east of Colebrook and is three miles long. Its alpine peaks are a worthy rival of Franconia and Crawford notches and wild though not as extensive. The Dix House situated just west of the notch, is one of the best kept hotels in the State, with every luxury and convenience at the disposal of the large number of guests who make this their summer resort.

Fine fishing is to be had in every neighboring mountain stream. The views are charming and grand, and the location unsurpassed.

While I was allowed to see nearly every hunting resort in the region, it only stirred up my determination to taste the pleasures to be found in this game land. If possible I shall sample the flavor of the venison of one of those seven deer that tempted me on my first night at the Second Lake. Beware the first of September.

Edward O. Grover.

## THE CALIFORNIA DEER LAW UPHELD.

Simon Maier was arrested in Los Angeles for selling a pound of meat cut from a deer that had been brought from Texas. The deer was lawfully killed in Texas, and Maier asked for his discharge on habeas corpus on the ground that the complaint did not state a public offense. The Supreme Court has decided that the complaint does state a cause of action and remanded the prisoner. The law passed by the last Legislature for the protection and preservation of game was reviewed by the court.

One paragraph in it reads: "Every person in the State of California who shall at any time sell or offer for sale the hides or meat of any deer, elk, antelope or mountain sheep, shall be guilty of a misdemeanor." The court, in its opinion, said:

Petitioner contends that this provision of the statute properly construed does not prohibit the sale of deer meat lawfully taken without the State, but has reference solely to deer killed within this State; that the law is intended to protect game within the State, not to prohibit the importation and sale of game from other States. With this contention we are unable to agree. It is true that the law is intended for the protection of game within the State, but it by no means follows from that fact that it is not the intention as a means to accomplish that very end to prohibit the sale of the meat of the animals procured elsewhere. The statute is perfectly plain and unambiguous in its terms and is sufficiently broad and comprehensive to include the inhibited article, wheresoever taken or procured.

The facility and ease with which the statutes for the protection of game have been evaded in the past is a matter of common knowledge. Deer and other game have been slaughtered during the close season and foisted upon the market as game procured without the State, and owing to the practical impossibility in the great majority of cases of proving with certainty the source from which it was procured, the attempted enforcement of the statutes for its protection has largely proved abortive. These and like considerations no doubt actuated the Legislature in the premises and induced the enactment of the statute in its present stringent form. And we know of no good reason why it should not be held to mean what it says.

Nor do we think that in giving the act this effect it contravenes the Constitution of this State as being in excess of the police power of the State. The wild game within a State belongs to the people in their collective sovereign capacity. It is not the subject of private ownership except in so far as the people may elect to make it so, and they may if they see fit absolutely prohibit the taking of it, or any traffic or commerce with it, if deemed necessary for its protection or preservation, or for the public good. To this extent it is conceded that the State may go. But it is contended that to go further and prohibit the sale of game lawfully killed elsewhere and brought here as private property is in effect to destroy private property, and that this is going beyond a proper exertion of the police power. While it is true that the power to regulate is not the power to destroy, in its absolute sense, it is nevertheless true that the right to regulate frequently and as a necessary sequence carries with it the right to so control and limit the use or enjoyment of private property as to amount to its destruction. Private interest must yield to the public advantage.

There can be no serious injury to any one under such a regulation. If any person imports the meat of the deer into the State he does it with his eyes open. Under such circumstances he cannot complain if he is prevented from making a use of the article which the Legislature has declared to be detrimental to the well being of the State.

It is furthermore strenuously urged that the act violates the Constitution of the United States in that it is an attempt to regulate interstate commerce—a subject wholly committed to Congress. But after a very careful consideration of the numerous authorities cited we do not think the statute open to this objection.

The opinion was written by Justice Van Fleet and concurred in by all the justices, with the exception of De Haven, who was absent.

### Massachusetts Shore Birds.

Mr. Wm. Thorne reports having found a pleasurable point for shore birds, at Capt. Gould's Chatham Beach Hotel, Chatham, Mass. Bettle-heads, turnstones, plover, peeps and others were extremely abundant there in the last week of July.

## STOP THE SALE OF GAME.

A Platform Plank.—*The sale of game should be forbidden at all times.*—Forest and Stream, *Feb. 10.*

The annual meeting of the State Game Association was held Wednesday night and officers were elected for the year. The meeting was fairly well attended but the interest was not manifested that should be in such a community. This is to be regretted, for the Association has a most worthy object in view, and it is only through the interest displayed by the members and sportsmen of the State that any good can be obtained. It would seem that after the expenditure of such a large amount of money by the local sportsmen, in their efforts to restock the depleted covers, that they would at least exhibit enough interest in the Association as would afford protection to these birds. The fact is every one is willing to assist, but will not give the time and personal help that is desired. It takes time to ferret out the mauraders who kill game unlawfully, and some one must attend to it. It takes money, also, and some one must contribute it. The Association has men who will give the time and they want contributors who will furnish the money. This work has been carried on for the last few years by a very small number of sportsmen, and they have been taxed somewhat heavily by their efforts to suppress illegal hunting. If it is worth the time and money to restock the covers, it is surely worth the time and money to protect the birds after they have survived the long journey, have been liberated, enjoyed a successful breeding season and are awaiting for the open season to arrive in order to offer themselves up as willing sacrifices for the trouble the sportsmen have gone to. There will be few birds if illegal shooting and snaring is allowed to continue. The New York and Boston markets are handy for the trappers, and early woodcock and partridge bring good prices. "Stop the Sale of Game" is the motto that Forest and Stream has nailed at the masthead. It is a radical and apparently impossible measure. It must, however, come sooner of later, and the sooner the better, for if it comes later there will be no game to sell in many places. If it is too soon for the adoption of such a stringent law, do the next best thing. Offer every possible protection to the game under the present laws. To accomplish the best results, let every sportsman become affiliated with the State Association. It costs $1. It will save many birds.—*Providence Journal.*

### Illinois Game Seasons.

The *Game Laws in Brief* contains a standing offer from the editor as follows:

The *Game Laws in Brief* is believed to be correct and complete within the conditions printed on page 2. I will reward any person first advising me of an error that may be discovered, as follows:

For the first notice of an instance where the law quoted in the *Brief*, prescribing game and fish seasons of any State or Territory, is not the general law in force at the time of this revision, I will give $5.

For first notice of an erroneous statement of a game or fish season in any State or Territory, or of an omission of a prescribed season, I will give $1.

These offers relate to general, not local, laws, and to recognized game and fish (not, for example, to the Connecticut bobolink, rice bird and robin season).

A Chicago correspondent writes under date of Aug. 3: "*Editor Forest and Stream:* I have just received from you your *Game Laws in Brief*, and note on third page that you offer $5 to who ever first gives you notice that law in any State as set out by you is not correct. I find on the Index page at the back of the book that the laws of Illinois are claimed to be revised up to the present time. However, a well-informed sportsman tells me that the present practice in this State (viz., that the season opens for the shooting of grouse, quail, partridge, etc., on Aug. 15 instead of Sept. 15, as you have it) has been legalized by act of the Legislature. I am confident that this is true; and if I am the first to give you notice of it I presume I have the pleasure of hearing from you as per your offer. "J. L. F. B."

[The *Brief* does not give Sept. 15 as the date on ruffed grouse, quail, pheasant, partridge, but it does give Oct. 1, and this is correct. If it is the practice of Illinois sportsmen to shoot these birds from Aug. 15, where are the game wardens?]

### Powder.

*Editor Forest and Stream:*

That I am getting to be an "old timer" there is very little doubt, for I began tramping the fields with another lad when I was only nine years old, and when Martin Van Buren occupied the White House. It is astonishing how the love of field sports will cling to a person, even to very old age. A few years since I was in the "line" off Stony Creek, Conn., coot shooting with a man ninety-four years old, and I can assure you that there were few in the party who enjoyed the sport more than he.

This nitro powder that is so extensively used now, does not seem to "get there" with me like my old Hazard's Electric or No. 4 Duck Shooting. I have tried three different kinds with very unsatisfactory success, although they are all very pleasant to shoot as compared to black powder. I have best success with 2¾drs. Schultze primed with ½dr. fine black powder in my 12-bore 7¼lbs. 28in. cylinder barrel gun that I use for brush shooting, although thus far I have not done as well as with 3drs. No. 3, Hazard's Electric, with 1oz. of No. 7 shot driven by the last named load, if the bird was not more than 50yds. distant at the discharge of the gun. I presume some of the "later arrivals" will say I am an old fogy who wants to stick to old-fashioned things. All I have to say to that is, if some of them will take a tramp with me next November, I am inclined to think they will find me somewhat progressive, if in my usual health. Simple Simon.

Hartford, Conn.

### Mississippi Quail and Rambling Dogs.

Blue Mountain, Miss.—Not seeing anything in the best paper on earth about the quail crop in this section I thought I would write you about it. We have had a very favorable season for their laying and hatching, and no heavy rains nor overflowing to wash away or drown them, consequently they have done exceedingly well. Plenty of large bevies about grown can now be seen. The same abundance of quail can be said of several adjacent counties, which information I get from reliable sources. Some friends report more than they ever saw before. I am proud to say that one reason the birds are

more plentiful is that the game laws have been more respected this season than I ever knew them before.

I have made another discovery that I think would be well for you to publish. That some people all through this country keep scrub bird dogs and allow them to run at large during laying and hatching season, and they destroy all, or about all, the eggs and young for a mile or two around. A good many negroes and white people have the dogs here and there through the country, and, of course, they are worse about this than the ordidary dog. I have fully satisfied myself on this point by close observation for the last few years, and I think it would be well to call the people's attention to it, with a view to have a law passed to prohibit dogs rambling about in the nesting season. S. N. A.

### A New .25cal. Straight.

THE J. Stevens Arms & Tool Co. have had a great many inquiries for a .25cal. straight shell. They saw a cut of one in the FOREST AND STREAM designed by Capt. Carpenpenter, of the U. S. Army, Sackett's Harbor, N. Y., which contained 25 grains of powder and 86 grains of lead. The company conferred with the U. M. Cartridge Co. on this subject, and the result is the .25-25 is now on the market. They are now ready to furnish rifles for this cartridge,

which are rifled on a 12in. twist, and will send a 100-grain bullet without keyholing. The U. M. C. Co. are prepared to furnish the ammunition and the Ideal Mfg. Co. the loading tools.

Mr. J. B. Fellows writes the J. Stevens Arms & Tool Co.: "I have one of your rifles, .25-25; inclosed find target of 20 shots at 50yds., without cleaning. It is the best ever done at Walnut Hill with any rifle of .25cal." They have made one of these rifles for L. W. Pow, Salem, O., who says: "I have one of your late rifles, .25-25, which is a dandy to shoot."

### New York Deer Season.

THE second opinion of Attorney-General Hancock, noted in our last issue, but received too late for publication, reverses the former opinion as to the interpretation of Section 56. The Attorney-General says:

"The phraseology of Section 56 of the amendment to the game laws passed in 1894 is in some respects general in its terms; but after a careful examination of the statute I am so clearly of the opinion that it was intended to apply only to the county of Sullivan, that I assume the responsibility of saying that it does not affect the general game law in other counties of the State."

It is held, however, that Section 56 opens Sullivan county for deer hunting from Oct. 1 to Nov. 1, and for deer hounding during the same period. We have already stated the grounds upon which the law might be construed as still protecting Sullivan county deer for the remainder of the original five-years term, dating from 1892; and it were to be hoped that the Attorney-General might be converted to our view, and while there is yet time give out a reversal of the reversed opinion, so far as it has to do with Sullivan county.

### Adirondack Deer.

OLD FORGE, Herkimer County, Aug. 10.—Deer are plenty here and in good condition. Illegal killing is already going on I understand. C. L. B.

## Sea and River Fishing.

### WHITE MOUNTAIN TROUT STREAMS.

PIKE STATION, N. H., Aug. 8.—This section which is practically in the White Mountain region, abounds in trout streams, which afford excellent fishing early in the season.

The latter part of June I dropped business for a couple of days, and in company with two friends and a former White Mountain guide and fisherman, went back into the woods between Warren and North Woodstock, on a small trout brook not much fished on account of its inaccessibility. We left our conveyance at a point where the brook crosses the main road, about half way between the well known Moosilauke House at Breezy Point, and the equally famous Deer Park Hotel at North Woodstock, at 11 A. M. We fished down the stream steadily until about 5 in the afternoon, being interrupted for an hour by a heavy thunder storm, which shattered many of the large spruce and hemlocks in the primeval forest through which the brook winds its way. About 5 P. M. we reached camp where our guide, John Boynton, well known throughout the White Mountain region, had prepared a cozy birch camp and had a rousing fire ready for the drying of our drenched clothes, and for the cooking of as appetizing a meal as ever awaited a hungry fisherman.

The next morning we fished up the brook again to the main road, and then struck across the mountain toward the head of Baker's River, which we fished down to East Warren; here we found a farmer who succeeded in scaring up a couple of "rigs," which took us back to Warren in time for a late supper, the proud possessors of trout, weighing when dressed full 40lbs.; one of the best catches of the season on these streams.

I regret to say that the fish and game laws are not at all carefully observed in this section. Hundreds of thousands of fingerling trout are taken from our mountain streams every year by the "small boy" (and some that are not so small), without receiving any notice from the local fish and game wardens. The large number of summer guests who spend some weeks and considerable money here every season, consider it their especial prerogative to take everything from the water that can be induced to take the hook, and the ever ruling passion to beat some one else, leads many of these guests to kill quantities of these fish for the sake of the count, which ordinarily they would be ashamed to take away from the water.

Deer are becoming more plentiful in this section every year, and they are often seen in the cornfields and pastures not far from the villages. Many of these are killed every winter by the lumbermen, and are run down by hounds in the back part of the towns. The game wardens, however, are more zealous in the preservation of the deer than of the trout.

The only way in which good fishing in our mountain stream can be preserved is by the forming of local fish and game leagues or clubs throughout this entire section for the purpose of stocking these streams and maintaining the strict execution of the game laws. There are in each village a few genuine sportsmen who are eager to see the game laws observed and will do all in their power for the furtherance of rightful game protection. By several towns combining in such a league it would soon be possible to have our streams and ponds alive with good game fish. E. BERTRAM PIKE.

### CANADIAN ANGLING NOTES.

*Editor Forest and Stream:*

Lieut.-Gov. Chapleau of this city, accompanied by a distinguished party of politicians and others, including Hon. Mr. Ouimet, Minister of Public Works for Canada, has just returned from a visit to Lake St. John, where they enjoyed magnificent sport fishing for the ouananiche in the Grande Discharge, and where it is still reported exceedingly good and likely to remain so for a long time to come in consequence of the height of the water. Speaking of this Grande Discharge fishing, I am in receipt of a letter from John B. Lawrence, Jr., of New York, who says: "I have been intending to write to you for some time, and tell you how much I enjoyed my trip to Lake St. John, and what good sport I had with the ouananiche. Mr. Fox and I spent two half-days and one whole day fishing at the Grande Discharge, and had as good sport as any reasonable man could ask for. We did not take any over 3½lbs., but took several of 2½ to 3lbs. * * * I found the B. A. Scott (almost identical with the General-Hooker) one of the best flies for the ouananiche, and am much obliged to you for telling me about it."

Some of your readers may like to have more details of Mr. Archibald's trip to Mistassini, and I will consequently make a few extracts from the note book or diary which he kept *en route*, and which is now in my possession. He has brought back with him an immense amount of the legendary lore and tribal superstitions of the peculiar aborigines inhabiting the interior of this far northern country, and some of his photographs illustrate their strange habits and beliefs. The first quarter of the journey consists of the ascent of the lower portion of the Ashuapmouchouan, one of Lake St. John's immense tributaries, for about a hundred miles, parts of which are only navigated with the greatest difficulty, on account of the wild rapids. Only three days up from Lake St. John Stuart met two Indian hunters, bringing down no less than thirteen bear skins to sell. Bears are exceedingly plentiful here, and in fact throughout the whole of this northern country. Their tracks are seen in abundance upon all the portages. The Pemonka Rapids are the most dangerous of the Ashuapmouchouan series, and must be faced in canoes, the high cliffs upon either side of them forbidding the possibility of portaging around them. Sometimes in poling up them it is impossible to find the bottom, and then the canoes are violently swept down stream at imminent risk of destruction.

The Ashuapmouchouan River was left at the mouth of the Shigobiche, one of its tributaries, which was ascended as far as Lake Shigobiche, a fine body of water thirty miles long. Fine trout fishing was had in the Shigobiche River and along its banks and in good part of the country surrounding the lake the richest of soil was found, yielding wild grass waist high. Any number of fresh bear tracks were seen, showing this country to be a perfect hunter's paradise. The scenery about Lake Shibobish is most beautiful. The water is studded with islands, and Mount Shigobish, upon the borders of the lake, rises abruptly to a height of 600ft. On an island in one of the lake's picturesque bays was discovered an old Indian cemetry, marked by many mounds beautifully located in a birch grove. Mr. Stuart wanted to camp there, but the guides refused, being afraid to disturb the spirits of the dead. A portage of two miles from the lake brought them into the Riviere de la Cote Croche, which descended to Lake Ashuapmouchouan—the headwaters of the river of that name—which is also a large lake and surrounded by splendid soil, as is also the Nicaubau River, which they reached by a short portage, and ascended its frightful rapids, where they were very nearly swamped, reaching first Little and then Great Lake Nicaubau. All through this section of the country large numbers of ducks were seen, and splendid sport can be had here in the fall of the year.

On a point of land at the entrance of the lake they found some twenty bears' heads stuck upon poles and smaller numbers of them had been seen similarly treated at various other localities during the journey. Beaver skulls were often, also, so found, and as in the case of the bears, a piece of tobacco was usually found in their mouths. The honor thus shown the animals of their chase is supposed by the Indians to gratify their spirits. Thus when the spirit of the bear revisits the scene of his former exploits and sees the respect which has been shown his head, he is expected to say to himself, "Hallo! they have treated me well here," or something of the kind, and in the shape of the living of his species to continue to frequent the locality. Mr. Stuart pulled out the teeth of one of the skulls to bring home with him, much to the horror of the Indians, who said that such indignity to the bear could not fail to have an injurious effect upon the fortunes of those who hunted over these grounds.

Various small portages and short canoe routes, known only to the Indians, brought the party to the height of land, in the neighborhood of which beaver were so exceedingly plentiful that the paddling of the canoe was constantly interrupted by their villages and dams. Considerable swampy ground was found here and immense quantities of partridges.

Lovers of the gun will be able to enjoy magnificent sport here in the shooting season. On July 14 they reached Lake Obatagooman, where ducks were plentiful as well as partridges, and so were beaver, otter and bear. Whitefish were plentiful in most of the waters beyond the height of land, trout were found in most of the smaller streams *en route*, and pike and doré abound everywhere.

Obatagooman is a very large lake, but nobody knows its size, for it has never been explored. Some of the lakes intervening between it and Lake Mistassini appear on none of the maps. One of them is at least thirty-five miles long, and to all of them resort very large quantities of ducks.

Mistassini was reached on July 19—a great inland sea over a hundred miles in length. Near its southern point is a post of the Hudson's Bay Company, consisting of three or four small log buildings, the only human habitation on or near the great lake. The residents of the post draw all their supplies from James Bay, and the factor, Mr. Miller, had gone for them when Mr. Stuart visited the post. They had gone so short of provisions there that flour had not not been seen at the post since spring, the only food supply there being carp and suckers. Mr. Stuart gave them some flour and canned meats, which they gratefully accepted. Splendid-looking potatoes and other vegetables were growing in a garden at the post, but could not be used till September. The soil is excellent. Some of the residents of the post, including Miss Miller, daughter of the agent, a very bright young woman, have never visited civilization and never even seen a cow.

The trip from Lake St. John to Mistassini had occupied over three weeks. The return was made within a week. Often nearly a hundred miles a day were made in running down the heavy rapids which had been poled up with such difficulty. But the high rate of speed at which the rapid current carried down the canoes added materially to the perils of the descent. Several narrow escapes were experienced on the way, and one canoe was swamped and sunk, and with it was lost a quantity of provisions. So short of supplies did the party become that for a day or two before regaining the limits of civilization, they had to depend upon the ducks and partridge which they were compelled to kill out of season, and upon the ouananiche and other fish which they caught in great profusion.

The return, too, for the first two-thirds of the way after leaving Mistassini, was by a different and more direct route than they were able to take in ascending, and they early entered the river Chef, a large, long and rapid tributary of the Ashuapmouchouan. On this route they portaged a number of very beautiful falls, found numerous signs of beaver and bear, passed large quantities of excellent soil upon both sides of the height of land, and saw innumerable quantities of ducks upon all the waters through which they passed. Mr. Stuart has brought back with him a splendid collection of pictures illustrative of what he has seen upon his trip, which possesses special interest from the risk which attended it, the large amount of splendid land found upon it, and the immense facilities of the country traveled as a resort for sportsmen ready to undergo some difficulties and run some risks, to obtain successful hunting and fishing where scarcely any white man has had it before. E. T. D. CHAMBERS.

QUEBEC, Aug. 11.

### OREGON NOTES.

PORTLAND, Ore., Aug. 2.—FOREST AND STREAM just at hand is a "rattler." All it needed was another chapter of brother Hough's "Yellowstone Park Game Exploration" and a growl from "Podgers" to make it the best number ever issued. By the way, I want to add my voice to the spontaneous outburst of gratitude that is going up from all over the world in recognition of FOREST AND STREAM'S great service in securing proper protection for the game of the Park. Hurrah for FOREST AND STREAM! Hurrah for Hough! and too, hurrah for Burgess! The story of the capture of the miscreant Howell by Burgess with his frozen foot in the remote and almost impenetrable fastnesses of the Park is most touching. Burgess is a hero and the sportsmen of the world should manifest their appreciation of his heroic deed by something more tangible than words.

I almost regret that "O. O. S." has become a convert to the "tickling" method of capturing trout. He is too slick a man to be given tips of that kind. While we mourn for the rapid depletion of our trout streams and weep for the days that will never return, it seems to me that such men as Mr. Mather, "Kelpie" and numerous other well known sportsmen are just a bit inconsistent, not to say imprudent, in educating the gentleman down in the Ozarks in these unusual and seductive methods for the circumvention of Mr. Starbuck's spotted denizens. Compunctions of conscience and poignant remorse are surely in store for these gentlemen.

"E. W. R." puts it pretty strong about our indoor trout and salmon fishing during the recent great flood. It is true that we had a great flood. In fact there was seven feet of water on the sidewalk under my office window. And it is also true that some fish were taken in our wholesale houses. But thirty trout averaging 1½lbs. in weight from one house where notices had been posted excluding the public, knocks the Ananias of our local fishing club silly and he gladly surrenders his leather medal to our friend "E. W. R." Most of the fish that paid us a visit during that interesting period were carp; and they were too busy playing foot ball with the floating cabbages and turnips to be of much practical utility to our anglers. However, in justice to my friend Mead I will say that he secured several very fine ones from his office window with that best of all bait for carp, secured from a Chinaman's pig-sty.

"El Comancho's" very interesting article "Feeding Habits of Trout" calls for an expression of my observations. I see that the editor of FOREST AND STREAM has answered the most important questions propounded. In addition I might say that from the best information I am able to obtain on the subject none of our trout will refuse to enter salt water when opportunity offers. As to their fastidious tastes regarding flies and bait, taking this or that readily at one time and absolutely rejecting it at other times, we all recognize the fact, but I for one cannot attempt an explanation. Some of the best fishing I have ever had has been at just such unexpected times and under just such really surprising conditions as those mentioned by "El Comancho," and with lures the like of which could not be found in heaven or on earth.

Well-filled creels are reported from every quarter now. My wife has become disgusted with what she sees fit to term my natural indolence and procrastinating disposition, or words to that effect, and struck out this morning for the mountains with old Mike, her rod and gun, to be gone a month or more. That looks a little like a case of fish or cut bait for me, and I guess that I'll fish.

S. H. GREENE.

## BOSTON RODS AND GUNS.

Many of the trout fishermen are at home, though they will soon be out again for the September campaign. Mr. G. N. Smalley had good sport at Big Island Pond, one of the Seven Ponds, in Maine. He is reported to have taken a 3lbs. trout there, a very large one for those waters. This fish was immediately liberated, after being weighed. The party had all the fish they needed, and they thought it best to return so fine a fish for breeding purposes. By the way, it begins to be theorized that the trout are improving in size in that pond, since minnows are beginning to be found there. In a party recently returned from the Inglewood Club in New Brunswick, were Mr. Cobb and Mr. Follet This was Mr. Follet's first visit to the trout waters east of New York, and he is greatly pleased. He took landlocked salmon and is delighted with the fighting qualities of that fish. Mr. T. D. Hyde is back from Maine, where he had good sport with the trout.

The salmon fishermen are returning. Mr. David H. Blanchard, well known for his efforts to prevent salmon netting, is back from his river, the Northeast Branch of the St. Marguerite. He has taken 30 salmon this season, one of the most successful he has ever spent on that river. He was accompanied by his friend Mr. Brown, his daughter and children. Mr. Richard O. Harding was not there this year, he has been among the New Hampshire hills for a month or two this summer, recruiting. He had become a good deal overworked early in the spring, but is back again in Appleton & Bassett's tackle store, and feeling much improved. Mr. Blanchard's salmon were of good size, two weighing about 31lbs. each, with several weighing from 25 to 28lbs. Mr. Walter M Brackett, the salmon painter, is back from the lower part of the same river. He also had excellent luck, taking in all some 38 fish. Mr. George von L. Meyer, Speaker of the Massachusetts House of Representatives, has had excellent salmon fishing at the home of the Restigouche Club. He took five salmon in two hours, a record that it is hard to beat. He was accompanied by T. Jefferson Coolidge, Jr. Col. E. C. Fitch has had very fine fishing at his river, the Romayne. Dr. Brown of Boston was with him. They have made a very fine average of salmon killed. Hon. Henry Hitchcock and his brother, A. E. Hitchcock, have been kept away from the Nepisiquit this year, notwithstanding they had counted a good deal on their season's fishing.

A. H. Wood has had very fine fishing on the Miramichi. Louis Cabot, of Brooklyn, with Geo. H. Richards as his guest, has had superior fishing on his river, the Grande. Generally the water in the salmon rivers has been very low and the salmon have come up rather slowly. But fishermen who have had the patience to wait have been rewarded by fair to good catches. Mr. Henry C. Litchfield, with Dame, Stoddard & Kendall, has not been able to get out salmon fishing this year, though he has fitted out many of his friends. He says that perhaps the only salmon he shall ever catch was the one he hooked at Bangor and lost.

Mr. L. Dana Chapman, in the same house as Mr. Litchfield, says that the Megantic Club, in which he is much interested, is having a most remarkable season. The club houses have been full nearly all the season. There are nearly forty people there at present, including members and invited guests, with their families. Game is reported remarkably plenty in that section. Deer are especially numerous, and great sport is expected in the open season this fall. Partridges are also mentioned as fairly numerous. From other sections of Maine the reports are not encouraging concerning the prospects for partridge shooting.

The weather has been too hot and dry for much shore bird shooting in the vicinity of Boston thus far.

Special.

## NOTES FROM THE ANGLING WATERS.

Claremont, N. H., Aug. 7.—Frank Pitcher and a friend have just retured from Camp Diamond on the shores of Little Diamond Pond. They left Claremont on Aug. 2, having been gone six days. They report a great time with the trout, having caught over 500. Two gentlemen and their guide took 30lbs. If fishermen wish to visit this pond the address is Camp Diamond, M. B. Noyes, manager, Diamond Pond, N. H. I saw 10lbs. of Mr. Pitcher's trout which he brought home, and they were beauties.

A Mr. King, who has a cottage near Montclare, Sunapee Lake, with a party of friends, took 90lbs. of bass on Wednesday, Aug. 1. Columbia.

---

White Lake, Mich.—The bass and trout fishing is good here at present. Squirrels and grouse are scarce this season. In this part of Michigan woodchucks climb trees and wild pigeons lay two eggs. E. S. D.

---

Cranberry Lake Hotel, St. Lawrence county, N. Y., Aug. 8,—Yesterday Messrs. Austin and Whitmarsh caught four trout running 2lbs. each; and to-day they took one of 3½lbs. and four of 2lbs. each. They were guided by Wm. Howland. W. R. Bishop.

---

### Mr. Bishop Makes a Record.

Yesterday while S. P. Avery, Jr., of New York, and B. Bishop of New Russia, were fishing off Button Bay, Lake Champlain, the former accomplished an unusual feat. Mr. Avery was fishing with a 7½ oz. fly rod, common trout line, single gut leader and hook baited with a minnow. Suddenly the minnow was taken in by a pike weighing about ¾ of a pound. As he was drawing the pike along towards the boat he felt a sudden and heavy jerk on the line and immediately the pike went down and out of sight. Mr. Avery let out 150 feet of line and after "playing" for an hour succeeded in bringing in a wonderful haul. It appears that when he had the pike near the boat a large pickerel discovered the precious morsel and undertook to devour it and in so doing wound the gut leader around under his gills in such a way as to securely fasten himself, and after diving and plunging for an hour gave up the battle. Last evening Mr. Bishop had the pike and pickerel on exhibition in front of the post office in this village. The pike weighed nearly ¾lbs. and bore the marks of the pickerel's teeth where he had shut on. The pickerel weighed 10¼lbs. Taken all in all we consider this one of the greatest feats ever recorded in the history of angling.—*Elizabethtown (N. Y.) Post, Aug. 9.*

### The International Angling Association.

Toronto, Aug. 7.—*Editor Forest and Stream:* An association which has been working quietly but effectually in the interests of angling, and one of whose objects is the advancement of fair angling, a term not understood by too many fishermen, is the International Association of Anglers. This Association was formed at Niagara-on-the-Lake, Canada, last August, on the occasion of a celebration of the ter-centennary of Izaak Walton. The Governor-General of Canada is one of the honorary presidents of the Association, and the President of the United States has been invited to act in a similar capacity. The objects of the Association, as defined by its constitution, are the promotion of fish and fishing interests in international fresh waters, the advancement of fair angling, the promotion of friendly relations between the anglers of both countries, and the holding of an annual convention at some point adjacent to international waters.

The first annual convention will be held this year on Friday and Saturday, Sept. 7 and 8, at the charming place of Niagara-on-the-Lake, situated at the mouth of the Niagara River. The hotel accommodation here is excellent, and the bass fishing is renowned and historic. At the convention the reading of papers and the discussion of angling topics will find a prominent place.

The disabilities under which American anglers labor when plying their sport in Canadian waters will also be considered and action taken toward the amelioration of existing regulations. As a number of prominent Canadian politicians are members of the Executive of the Association, anything advanced by the American members will not fall on idle ears. A fish banquet in the ball-room of the Queen's Royal Hotel, Niagara-on-the-Lake, prepared by a chef whose hand is very cunning in the preparation of such repasts, will be a feature of the convention.

The most interesting part of the programme will be the fly-casting tournament for valuable prizes, while a bait-casting competition will also be held. It is intended also to hold a sweepstake of professional fly-casters at $5 each with $50 added by the Association, entries for which close on Sept. 1. All information can be obtained and entries made to Charles Hunter, Standard Life Assurance Company, Toronto, Canada.

PROGRAMME.

*First Day.—Friday, Sept. 7.*

Annual meeting and convention will be opened at 11 A. M.

At 3 P. M., Event No. 1, long-distance fly-casting, amateur class, open to all anglers who have a known fly-casting distance record of not over 85ft.; entrance fee, $2. First prize, International Anglers' Association gold medal; second prize, handsome greenheart trout rod.

Event No. 2, amateur class long-distance fly-casting, open to all anglers who have no known record of over 70ft.; entrance fee, $2. First prize, silver medal of International Anglers' Association; second prize, specially made handsome greenheart trout rod.

Event No. 3, amateur class fly-casting, distance and accuracy combined; entrance fee, $2

At 7:30 P. M., first annual banquet of Association in ball room of Queen's Royal Hotel. Fish dinner.

*Saturday, Sept. 8.*

Meeting of Association, continued, at 11 A. M.

At 3 P. M., Event No. 4, expert class long-distance fly-casting, open to all, sweepstakes, entrance $10 each, to be divided 75 per cent. to first, 25 per cent. to second, third to save his entrance; winner to receive gold medal emblematic of International Association championship.

Event No. 5, bait-casting, competition for distance and accuracy, single-handed casts, weight cast ½oz., weights furnished by tournament committee. Each contestant shall have five casts, two trial casts being first allowed. First prize will be awarded to contestant obtaining best average of five casts. The second prize will be awarded for longest single distance cast. Entrance $2.

CONDITIONS OF FLY-CASTING CONTESTS.

All casting shall be single-handed. Rods over 11ft. in length or 10oz. in weight barred. Two flies only, of a size not larger than No. 5, allowed. Leaders not longer than 9 and not less than 6ft. of single gut. Knotting of lines or any other device to lend weight to cast prohibited. Seven minutes allowed each contestant. No cast to count when stretcher fly is missing. No time allowance to replace fly. The casting will be on the river front, from a platform extending into the water along a line of buoys parallel to the shore.

In all contests four entries shall be a minimum. Three judges will be appointed and their decision shall be final in all cases. Forest and Stream rules shall govern contests in all cases not herein provided for.

The Queen's Royal Hotel will give anglers reduced rates of $2.50 per day. Excursion rates can be obtained by those living at a distance to Niagara Falls, from which Niagara-on-the Lake can be reached by half an hour's picturesque journey. The bass fishing at Niagara-on-the-Lake is excellent, and the fish are renowned for their size and gaminess.

The secretary would be glad to hear from anglers who intend to be present. Entries close Sept. 1, 1894. Charles Hunter, Sec'y.

---

### Sunapee Lake.

Springfield, Vt., Aug. 8.—I have just returned from a three-weeks' fishing trip to Sunapee Lake. Our party occupied a cottage at Blodgett's Landing and all fell so in love with the place that we intend to return every year. We had very good luck at the bass; our best string was twenty-seven in two hours' time on four lines. The bass there do not run very large, but are rather medium in size and the most gamy it was ever my fortune to strike. We did not fish for trout much, as at this season of the year they are in deep water and do not bite well; however, a few are taken right along. One gentleman in particular, Mr. C. F. Goodnow, of Massachusetts, who owns a pretty cottage on one of the best sites on the lake, succeeds in taking plenty of the "white" trout, peculiar to this lake, as well as many of the "native" or speckled brook trout; many of these trout weigh 2 and 3lbs. each. Mr. Goodnow also took two landlocked salmon during our stay which weighed 9 and 7lbs. respectively. And by the way, this same Goodnow is a royal good fellow and a thorough sportsman, and a good man to cast your lot with; some of the readers of Forest and Stream may know him, as he has fished from Maine to Florida, and has the shy brook trout at one end of his list and the mighty tarpon at the other. The Sunapee Lake Fish and Game League have their annual dinner and excursion on the lake on Saturday, the 11th. I understand that this league is doing a good work and deserves every encouragement. Sunapee has the usual attractions of a summer resort besides its excellent fishing; any one who is interested and wishes to get a good idea of the lake should obtain the last issue of the *Granite Monthly*, a magazine devoted to the interests of New Hampshire, which contains an illustrated article on this beautiful sheet of water. W. W. B.

---

### St. Lawrence Association.

The second vice-president of the Anglers' Association of the St. Lawrence River is Mr. Chas. R. Skinner, of Watertown. The unlawful nets taken last year counted up 87, and were valued at $1,731.

### Killing Trout in Dry Streams.

Claremont, N. H., Aug. 7.—I read "Mascony's" letter last week in Forest and Stream in regard to fishing Little Sugar River with me, and was much pleased and began to plan for a great and glorious time. The last time I went a trouting was July 28, in Grannis Brook. I took 36 trout, put back 16 and saved 20 that were 6in. and over. What was my surprise on dressing these to find 18 full of spawn, and I left off fishing for trout this season. But reading "Mascony's" letter I thought, perhaps, they might not be in spawn yet in the river, and wanting very much to make "Mascony's" acquaintance, and talk over our past fishing experience, I called to see a friend, Mr. Arthur Putnam, to ask if he had had any report from Little Sugar River. He had seen a gentleman who told him that he had never seen the river so low and that the trout had all taken to a few large holes. He had seen them and said there were many trout from 1 to 2lbs. weight. But some fiends had been on the river and had put sods of earth above the holes and turned what little water there was from the holes and then killed the trout after drawing the holes. I am doing my best to find out their names and if I do they will not want to club any more trout to death. I wish "Von W." would make some inquiries and write me, lock box 66, Claremont, or better still, put the Charlestown fish warden on them. It is rather hard when I leave off fishing July 28, because the trout have spawn, to have these fiends go round and destroy them that way. Columbia.

---

### Rideau Lake.

Portland, Ont., Aug. 8.—*Editor Forest and Stream:* You ask for communications from correspondents at fishing resorts, and thinking a line from here might interest your readers I write you. This is a village at the head of Rideau Lake, distant from Kingston forty miles and from Ottawa about sixty-five. Black bass and lake trout are to be caught in abundance, and the boating and bathing is fine. Fish are caught both by troll and rod, minnow being bait used. The hotel accommodations are good; board can be obtained at the Commercial, where I stop, for $1 per day or by week at $6. People coming from New York can reach here easiest via New York Central, making the change at Utica over R. W. & O. R. R. either to Morristown or to Clayton. Here would be about the necessary cost of this trip, leaving New York at 8:30 A. M.: Fare to Brockville and return $15, to Smith's Falls and return to Brockville $1.90, from Smith's Falls to Portland and return $1.50, and three weeks' stay at Portland—$6 per week—$18, incidental expenses say $12. In all less than $50. J. D.

---

### Permanently Engaged as a Mascot.

Mr. D. C. Dean, of the American News Co., has received from Prof. Carl Frommel of Brooklyn, now at Lake George, a postal which reads: "Lake George, Tuesday, Aug. 14.—*Dear Mr. Dean:* Mrs. F. has landed two pickerel—big ones; one 9lbs. and the other 12lbs. This is doing very well and she is permanently engaged as a mascot by me. Prof. Carl Frommel."

This teaches that the fisherman intent on big ones should take his wife along for good luck.

---

### Charleston Lake.

Athens, Ont., Aug. 4.—Angling at Charleston Lake, County Leeds, Ont., this season is unusually good. On July 28 we had the following score: Black bass, 79; rock bass, 38; pike, 1; bullpout, 1; sunfish, 2; perch, 1; total, 122. This was for two rods, six and one-half hours' fishing, worms, guide Dell Woods. Of the seventy-nine black bass only one was under 10in. in length, and a great many between 3 and 4lbs. We returned about fifty to the water uninjured, and we hope they will give as much sport to some other anglers. A Cottager.

---

## Camp-Fire Flickerings.

"That reminds me."

San Antonio, Texas, Aug. 5.—*Mistir Editor of the Forest and Stream:* Dear Sur—Yew would hev died a lafin if you hed a ben here last Sonday arternoon, we wer all or at the metin hous, when Lisha Watkins come over and he hed yewr last Edishun ov august the Fort, and we all got a lookin at it and readin it one by one, when at last that oldest Son of Rufe Johnsons, seed the article whar, that thar Jentlemann from Morgan City who sines his name R. S. W. writ about the fishin down thar, we alus loud that thar Morgan City mus be a mighty good plais to fish as we gits most of our fishes and Oisters from Thar but when that thar Jentlemann writ about that thar big Tarpon Jumt over that 9 foot beam, them boys of the Widder Jones said they would bet a right Smart Pile of yaller yams that he coud hev Jumt at least tew foot further, as they hed been down to Rockport Texas to visit ther Mothers Second Cosins and some more kin folks down thar, and one day they all got up a Regular fish fry and they all driv over tew the bay, and thay loud they seed morn tew hundred at onced, and then they all went and got thair hooks and lines and cut some poles and went tew it, they hed fished and fished and got many a bite, when at last that thar feller Holand, Smith's farm hand yelled out he hed a Bite and he held on ter the little Saplin that he hed fer a Pol, when all tew onct ther was a mity comoshun in the water and Smith and his farm hand wer both in the water and ther Boat botom side up not far from one of the Joneses boys who got it long side hisen and sot it tew rights wen he loake arter that Smith an his hand, Smith was makin a terrible fuss with his hand about that thar fish fer letin it git so clus to the Boat, kase the fish humpt out ov the water exactly as that thar Morgan City fish did and turned em both plum out but the farm hand he held on ter the Saplin and he got him arter foolin around with him fer moren an hour an hit was one ov them thar Tarpon fishes, he was a beautiful fish they said, an when they drive over tew the Store the Store Clerk loud the weighd 113 pounds. Must hev been a Small Whale, well this is all I can tell yew tew day onless I tell yew about the huskin be we went tew last week, thar must hev been nigh on ter 40 People thar all naibors and kin folk, that Widder Elkins oldest Gal she found the Red Ear and she got kised, I kinder loud shed get it as I seed that thar

Watkins Boy sot him self so clus to her an I thought then I seed him take some sort o thing out o his shirt busum and hide it in the Pile before Cindey an when she cum tew it he wus the fust one tew her. She's a right Peart Gal an my old wouman loud tother day Cindy would make some one a rite Peart wife, as she was a smart hand at Kookin Biskets and Corn dodgers.

If this is not tew much ov a Story its all tru yew may Put it in yewr Paper which is the best that can be got of its kind in the world, we air not Regular Subskribers but we goes to Mr. Hewitt and Mr. Tom Jonson's ever Sunday mornin an Buys it thar an if it is a day late yew shuld hear the Boys Growl, and then they would make all kind of talk about washouts and wreks but it makes us all feel good when we gits a day or tew later.

Yewers in haste, OBIGA SMEARS.

P. B.—Oh yes I forgot that Joneses boy said that Both Smith an his farm hand loud that thar Tarpon had jumpt at least 6 yards up before hit draped on the Boat.

# The Kennel.

## The Bell–Martin Case.

*Editor Forest and Stream:*

In reply to Mr. Bell's article in your issue of Aug. 4, I will comment upon such portions of it as I consider worthy of consideration, give the public a true history of the deal with Bell, also the decision of the advisory committee of the American Kennel Club, and leave it to the public as to the true character of this transaction. I have not the papers, letters and telegrams that passed between Bell and myself; these are with the A. K. C., and I am unable to obtain them, consequently I depend to some extent upon my memory. Mr. Bell states in his article that I threatened him with legal proceedings upon leaving the case to the A. K. C. My memory may be at fault, but I am quite positive that I did not write that I would sue him until after the decision of the A. K. C. last May. Mr. Bell further states:

> I had received an order from Martin, and agreed to ship Blemton Consequence and guaranteed that she was in whelp and agreed to take her back if she were not so. I made and carried out this bargain honestly, and in good faith, as I have proved, and am still able to prove, if called upon to do so. I sold Blemton Consequence, as I thought, I believed her to be in whelp. I had her examined, and I shipped her in the usual way. I knew that she was in whelp from the examination of Mr. C. J. Purroy, and of Mr. H. P. Thomson, secretary of the Fox-Terrier Club here, and from my own knowledge and experience. I understood then, having done this, and the dog being shipped at Martin's risk, that I had fulfilled my part of the contract, and that I was entitled to the purchase money.

In Mr. Bell's defense, filed with the A. K. C., he states "that Mr. Berino, of New York (I am not sure that I have this last name correct. He is a veterinary surgeon) saw the dog." In the above extract from his article he states that C. J. Purroy saw the dog; now, which one is it, Purroy or Berino?

The bitch arrived here about six days after leaving Toronto and I immediately received her at the express company's office, and seeing that she was not in whelp put her back in the crate and drove to A. R. Rowat, D. V. S. He examined her and crate and pronounced the bitch not in whelp, nor had she had a premature birth recently. He also examined her again when her time to whelp had expired and issued a certificate to these facts. The express company officials stated that if she had whelped on the road a note of it would have been made by the messenger, and no such memorandum appeared. The bitch was seen shortly after her arrival by Mr. Joseph McLatchie, Mr. A. R. Crowell and Mr. H. W. Fores, President Pacific Fox-Terrier Club (this gentleman acted as Bell's agent in the exchange of Rejoice for Consequence, and is an old friend of Bell's), and they all stated that the bitch was not in whelp nor had she a premature birth recently.

Mr. Bell further states: "After the sale I was notified by Martin that the dog was not and had not been in whelp. Some people might say I should have accepted his statement, received the dog back and returned his money, but I did not know Mr. Martin and I knew no reason why a bona fide sale having been made it should not be strictly carried out."

This is a very lame excuse. If Mr. Bell had taken the trouble to write or telegraph Mr. Fores he could have satisfied himself that my statement was true. I have been buying dogs from the Eastern States since 1881, have had dealings with Mr. Arnold Burges of Michigan, during his lifetime, Mr. J. M. Avent of Hickory Valley, Tenn., Mr. T. I. Ballentine of Peoria, Ill., Mr. August Belmont and Mr. Edward Kelly of New York, Mr. Frank Wheeler, formerly of Canada, and many others.

Mr. Bell further states: "After much threatening and abuse from Martin he laid the matter before the A. K. C., the charge being that I had sold him a dog, guaranteeing her to be in whelp when she was not so."

I ask Mr. Bell to publish one of my letters that he considers abusive and allow the public to be the judge of its character.

Mr. Bell further states: "The A. K. C. decided that the charge was not sustained and it was dismissed and I was then held to be justified in the course that I had taken."

Not so fast. Mr. Bell has overreached the facts in his endeavor to right himself with the public. Why did he not take more precaution and learn the grounds of his disqualification. I herewith give the particulars:

> NEW YORK, June 28, 1894.—Mr. J. B. Martin, 1323 Page street, San Francisco, Cal.: DEAR SIR—In reply to your favor of the 22d inst., would inform you that the advisory committee of the American Kennel Club disqualified Mr. Bell upon the charges preferred against him by you. The fact that Bell sent you the bitch Rejoice in place of Blemton Consequence and knowing that he had done so early in September, and having taken no steps to rectify the mistake was well known by the committee and probably strengthened your charges, but was not officially before the committee, and hence did not figure in the case. I can see no reason why the American Kennel Club should re-open the case, no appeal having been taken. Yours truly, A. D. LEWIS, Acting Secretary.

The charges alluded to in Mr. Lewis's letter were, guaranteeing the bitch to me in whelp and refusing to take her back after she proved not to be so. I wish to state here that I did not particularly care for Consequence, I bought her upon the strength of Bell's guarantee that she was in whelp to Dusky Trap, a dog whom I consider the best sire in the country; Consequence is an old bitch, her show days are over, but I wanted the pups that I expected she would have, for breeding and showing purposes. After seeing that she was not in whelp I wrote Bell that I would give her full time to pup, and if she did not I would return her without cost to him, but Bell was so anxious to have this bitch off his hands that he telegraphed that he would not receive her and had evidence that she was in whelp before leaving Toronto. This in the face of his guarantee and also a statement from him "that Consequence was worth $100, pups or no pups."

Now we come to the most interesting part of the controversy, the discovery by Bell that he sold Rejoice to me in place of Consequence. This he knew in the early part of last September, according to the statement of W. Wade, of Hulton, Pa. (one of Bell's defenders), in the *Turf, Field and Farm* last June, and also from other information that I have received. The discovery was made at the Toronto show one week previous to the filing of my charges against Bell.

Bell states that he listened to the advice of his solicitors not to inform me of the mistake until after the decision of the advisory committee.

Why, at this time there were no charges pending against Bell for decision by the advisory committee. I personally filed the charges, being in New York, and Bell knew of my intention, as I sent him a registered letter from Chicago.

Mr. Bell further states that his solicitors allowed him to communicate privately to me through Mr. Mortimer. Yes, that is so, seven months after the mistake in bitches was discovered the following letter was received by me:

> HEMPSTEAD, L. I., April 2, 1894.—Mr. J. B. Martin: DEAR SIR—At the request of Mr. Geo. Bell, who paid me a visit yesterday, I write to say that he has discovered that the fox-terrier bitch he sent you as Blemton Consequence is not Consequence at all, but a bitch by the name of Rejoice. The matter came about in this way: Bell expressed a wish to see Mr Belmont's terriers and I drove him over there. After looking at the dogs we went to the office where there was hanging a photograph of a fox-terrier bitch. Bell asked Charley, Mr. Belmont's man, what bitch the picture represented and his reply was Blemton Consequence. Bell was very particular in asking all about the peculiarities of Consequence, markings, formation of shoulders, bone, etc., etc., and immediately arrived at the conclusion that she was still at his kennel in Toronto. He accounts for the mistake in this way. He bought Consequence with several other bitches and Dusky Trap of Mr. Granger, of Baltimore, Md., and understood that the evenly-marked, black and tan headed bitch was Rejoice and the solid black-headed bitch was Consequence. He regrets very much the mistake, and says he will forward to you the genuine Consequence, who by the way has just been bred to Dusky Trap, if you will return the other bitch and pay all express charges. I am writing this at Bell's request because he left Hempstead this morning expecting to catch the train for Toronto and would not be able to write you before reaching home. It seems to me the blunder was a very natural one under the circumstances, and I personally hope that you may look at it in this light. With kindest regards, Yours very truly, JAS. MORTIMER.

The mistake was Mr. Bell's. Still, in the bigness of his heart he offers to exchange Consequence for Rejoice, if I will pay all express charges; expecting me to pay for his mistake. I declined the offer. A few words about the express charges. Bell shipped Rejoice in a crate heavy enough to send gold in. The result was, charges to the sum of $17.50, paid by me. When he sent Consequence out at his expense the charges were $6.50. She came in a very light crate.

Now here we have a statement from Bell in Mr. Mortimer's letter that he (Bell) discovered the mistake in bitches in April. Which are we to believe; was it in September or April?

I will ask another question. How could Bell's attorneys advise him to communicate to me through Mr. Mortimer when this letter was sent before Bell would have had time to consult with his attorneys, as he was at Hempstead, N. Y., and stated to Mr. Mortimer that he had just made the discovery of the wrong identity of the bitches?

Bell undoubtedly knew that I had Rejoice early in September last, yet he kept me in ignorance of this for seven months. He would have allowed me to sell pups from Rejoice as being from Consequence and exhibit Rejoice in the challenge class as Consequence (as he says he did at Indianapolis). Fortunately for me, nothing like the above occurred. Upon receiving Mr. Mortimer's letter I did prefer additional charges against Bell, basing them upon this letter, but, as will be seen from Mr. Lewis's letter, they were not considered in the decision against Bell.

After the decision of the advisory committee I consulted a lawyer as to my rights in the matter. He stated that as Mr. Bell had contracted to deliver me Blemton Consequence, guaranteed in whelp in July, 1893, and having failed to do so within a reasonable time, I was entitled to the return of the purchase money and expenses incurred, and to return Rejoice to him. I wrote Bell accordingly upon May 18, 1894, and did not receive a reply until June 10, whereas, if a reply had been sent forthwith it would have reached me by May 29.

In this letter of Bell's solicitors to me was the following statement, "That the two bitches were of equal value, and that I was not damaged at all by the mistake and consequently can have no claim whatever against our client." How can they reconcile this statement with the one in his article, namely: "My solicitors told me that he (Martin) had a right to sue for the money, and that he would demand it, which he afterward did by letter threatening action. I was in hopes that he would content himself with asking for delivery of Consequence, but when he made his claim for the money and was told I would be obliged to pay it, I advertised both Consequence and Rejoice for sale, supposing that Rejoice would be returned home, and I would have both dogs on my hands."

For eleven months I had been deprived of my rights, and at this late day he expected I would return Rejoice and allow him the bitch and the money both, and when they were disposed of he would again in the bigness of his heart forward the money to me.

Yes, Mr. Bell's solicitors did offer to exchange Consequence for Rejoice in the letter of June 5, which was eight and a half months after the wrong identity of the bitches was learned by Bell, one month after the decision of the A. K. C., and after a demand made by me, and in this letter they applied such terms as, "When you wrote your letter of 18th of May its object was blackmail and it was written for the purpose of extorting money from Mr. Bell," etc. I will not comment upon this unwarrantable attack upon me, but I will ask these solicitors why, if they considered this extortion and blackmail, did they advise Bell that he would be obliged to pay the claim made by me, as appears by Bell's own admissions in his article?

I wrote, accepting the offer if it included express charges paid on Consequence to San Francisco and Rejoice to Toronto. Bell's solicitors replied that if I would turn over Rejoice and her pup (the only one alive of the one litter she had here upon Jan. 22, 1894) to Mr. Fores, president Pacific Fox-Terrier Club, they would ship Consequence. I wrote, declining to turn the pup over, and asked them to point out in their letter offering the exchange, or my acceptance, any mention of the pup; also if it was expected that I would allow Bell all the produce of Consequence since July, 1893, and also this one from Rejoice.

Now, as to my advertisement in the *American Field*, warning intending purchasers that Consequence was my property and Rejoice in my kennel. Mr. Bell, without any notice to me, advertised these bitches for sale in the *American Field* of June 2, 1894, my letter claiming the purchase money should, in the ordinary course of the mail, have been in his hands on May 23, and neither he nor his solicitors answered it until June 5, the letter reaching me June 10. I inserted the advertisement above mentioned both to protect myself and the public. I ask Bell and his solicitors how could he give a title to either bitch before this matter was settled?

Mr. Bell further states "that I had a bitch of equal value in Rejoice and had been breeding from her and making money out of her from beginning to end." Mr. Bell priced Rejoice to me at $75 and Consequence at $100. Does he consider $25 difference equal value? Now as to the money I have made out of Rejoice, why does not Mr. Bell inquire of his agent, Mr. Fores, before he makes such a statement. Rejoice had only one litter (three in number) on this coast, one died in the nest, one at 2½ months old in my possession and one is alive and unsold.

Mr. Bell says "he was blowing hot and cold claiming the money and the dog both, and at the same time fuming and blustering in the papers and among his friends in such a way that one would have thought he had never had a dog at all from me and had paid $100 for nothing."

I wrote Bell May 18, claiming the money and he, without immediately replying, advertised the two bitches for sale. I ask in all fairness what course should I have pursued under the circumstances?

I did offer to keep Rejoice if he would refund the $25 difference in the price of the two bitches, but Bell declined. I did this because Rejoice was in season, and I desired to have some pups from her for next year's shows on this coast, as she and Reefer nicked well together, and I also knew that Consequence was not due in season until October next. The prolonging of the matter mentioned by Bell was on account of reasons hereinbefore stated, and which were altogether his fault.

Mr. Bell further states "that Consequence has no pups, and I have realized nothing from her." What has become of the pups due from her in July, 1893, as a result of her having been bred to Dusky Trap May 24, 1893? Also of her litter from the union with Dusky Trap as mentioned in Mr. Mortimer's letter last April? Will Mr. Bell kindly state what bitch is the dam of the young bitch by Dusky Trap, breeder unknown, that is going to beat them all next year? He having bet hats for four with Mr. Robinson of the Woodlawn Kennels on this proposition. Also the dam of the young bitch by Dusky Trap out of a well-bred bitch (name not given), priced to a party in Philadelphia at $25.

Mr. Bell further states that he suggested that the bitch he sent Martin possibly never reached him, but was changed on the way." Yes, Mr. Bell and you urged this point before the A. K. C. in your defense of the charges; you did not hesitate to strengthen your case in this questionable manner, but when later on it developed that I did have the wrong bitch, you hesitated seven months before you offered to right the wrong you did me, and then wanted me to pay for your mistake.

Further on Mr. Bell says: "I have refrained from justifying my conduct in the public print," etc., etc. If Mr. Bell believes his article is a satisfactory explanation of his conduct and expects it will in any way justify his queer actions, he is welcome to the belief. I am quite certain that the public will not coincide with him.

As to the malice, abuse and slander that Bell mentions, I will allow the public, after reading both articles, to be the judge of that.

How often have bitches been pronounced in whelp that subsequently did not have pups. This has been the experience of several breeders that I have spoken to on the subject. Mr. Bell stated in one of his letters before I purchased Consequence that she was a champion. When and where did she win the title?

I now have Blemton Consequence, after waiting one year. She was sold in whelp. I was compelled to accept her unbred or sue Bell for the money, as will be seen from the following letter:

> TORONTO, June 18, 1894.—J. B. Martin, Esq., 1323 Page street, San Francisco: DEAR SIR—We have not heard from you in reply to our letter of 5th June We will wait until the 27th inst., when, unless we have heard from you in the meantime, either by letter or by wire, in answer to this, we shall consider that you refuse the offer which Mr. Bell has made and will advise him to treat Consequence as his own property. Yours truly, MACRAE & BYKERT.

Now, as will be seen by the above letter and quotations from other letters I have herewith given, that while these solicitors were advising Bell that he would be compelled to pay the money claim, they were insisting and writing me that I was only entitled to the right bitch.

Blemton Consequence cost, including all expenses, about $140. If Bell or any of his friends want her for $50 they can have her.

Mr. Bell considered his case so weak that he engaged solicitors to bolster it up for him. How poorly they have succeeded can readily be seen. He also attempts to right himself by throwing the blame on them. The advisory committee, after a full hearing of the case upon the evidence submitted by myself and Bell, disqualified him for one year.

I now leave the controversy to the decision of the public and am confident that the verdict will be in my favor.

J. B. MARTIN.

[In view of Mr. Bell's letter, we may now consider this incident closed.]

## Flaps from the Beaver's Tail.

TORONTO, Can.—A meeting of the Executive Committee of the Canadian Kennel Club was held here on Aug. 7 to receive nominations for the election of officers for the ensuing year. The following members were present: Vice-President J. S. Williams, Toronto, in the chair; Dr. H. S. Griffin, Hamilton; Messrs. R. W. Boyle, C. A. Stone and H. B. Donovan, Sec'y-Treas., Toronto.

Nominations were made as follows: Pres., Dr. J S. Niven, London; First Vice-Pres., J. S. Williams, Toronto; Second Vice-Presidents, Messrs. H. Gorman, Sarnia; W. H. Thorne, St. John, N. B.; R. A. Cunningham, Victoria, B. C.; P. G. Keyes, Ottawa. Executive Committee—Dr. H. S. Griffin, Messrs. H. Bedlington, A. D. Stewart, Hamilton; T. G. Davey, London; R. McEwen, Byron; James Lindsay, J. A. Pitt, Montreal; F. S. Wetherall, Compton, Quebec; C. H. Corbett, Kingston; C. A. Stone, R. W. Boyle and G. B. Sweetnam, Toronto; Sec'y-Treas., H. B. Donovan, Toronto. There being no other nominations these were declared elected. The names of Hon. Senator Sanford, as Patron, and R. Gibson, as Hon. Pres., stand as before, election not being annual.

The secretary was instructed to cast one ballot for the following new members: W. Vipond, Montreal, proposed by J. A. Pitt; L. A. Klein, Black Lake, Quebec, proposed by F. S. Wetherall; Leslie H. Gault, A. F. Gault, Montreal, and A. H. Fowlds, Hastings, proposed by H. B. Donovan.

It was decided to hold the annual meeting on Wednesday, Sept. 12, at 8 P. M., and an executive committee meeting the previous evening at same time. The discussion on the inadvisability of changing Rule 8 of Constitution was deferred to the next meeting, when it is hoped a fuller attendance will result.

---

Mr. P. Hart, Belleville, has bought a smooth bitch, by Scottish Leader, which is to come out at Toronto.

---

We have few Dandies in Canada and will badly miss Kristy, a winner at the Toronto show, which died recently in pupping.

---

Mr. A. J. Groves, Toronto, has sold his whole kennel of St. Bernards, some twelve or fourteen, including the imported Lord Dalhousie, to Mr. Fred T. Miller, Trenton, Ont., a new enthusiast.

---

Mr. L. A. Klein, of the Venlo Farm Kennels, Black Lake, Que., writes me that his new dachshund dog Puck has come safely to hand in Spratts' charge, after a voyage of thirty-five days. Though looking a bit battered, Mr. Klein says he is highly pleased with him and considers him the finest one he has seen for some time He will be shown at Toronto with a number of others from the same kennels. His pair of Dane puppies are coming over in the s.s. Spain.

H. B. DONOVAN.

---

Owners of dogs in England are compelled under the Rabies Act, to give notice to the authorities of the existence of a rabid dog, or of the possession of any animal that had been bitten by a supposed rabid dog. One noted breeder has just been fined twice for not reporting that his dogs had been bitten by a bull-terrier that had shown signs of rabies. This owner had three of his dogs destroyed by the local authorities, among them champion Mariner, the Newfoundland; he claimed $600 for them, but on the case being submitted to arbitration he had to be content with $125.

## POINTS AND FLUSHES.

*[By a Staff Correspondent.]*

THE indications are that there will be, from this side of the line, quite a number of trainers present at the forthcoming trials of the Manitoba Field Trial Club, beginning at Morris, Sept. 5.

Now that the great Northwest is so well settled and chickens so plentiful, field trials there should be an assured success. The Northwest now contains a multitude of sportsmen who own good dogs, and the facilities for holding trials, in the way of birds and grounds, are at their doors.

The last chicken trial held in the States was at Fairmont, Minn., in 1882. Owing to hot weather and scarcity of birds, and the consequent difficulties of conducting and concluding a competition, chicken trials were looked upon with disfavor by the sportsmen of that day. Other circumstances added to the difficulties. The whole support was east of the Mississippi River. The preliminary arrangements as to grounds, horses, hotels, etc., were made with difficulty. As nearly all the sportsmen lived in the East and South, a visit to the trials entailed a great deal of expense.

Aside from a few cities, Minnesota in 1882 was very sparsely settled. A well cultivated or equipped farm was a rarity after leaving the vicinity of St. Paul and Minneapolis. A few crudely built small towns were strung widely apart on the few railroads, the latter being more than ample for the light freight and passenger traffic of the State. Hundreds of miles of prairie, unbroken save by isolated farms of the pioneer settler, afforded endless opportunities for the chicken shooter. Small groves, planted for "wind breaks," denoted the abode of the settler, the high winds of fall and winter making the planting of groves imperative. They were often of a year or two years' growth; one of eight or ten years marked the habitation of a first settler.

Most of the settlers were poor and endured untold hardships for the sake of a prospective home. A cellar, dug in the flat prairie with poles thrown across the top and sodded for a roof, or a room dug in the side of a bluff, dismal caverns of dampness and darkness, afforded a home in many instances for the struggling settler, whose aspirations too often ended in sickness, misery and loss. Huts built of sod and shanties of flimsy construction made a grade higher habitation. A cheap, small frame house, an exceptional structure, denoted a degree of prosperity possessed by but few Minnesota farmers in those days. The commonest necessaries of life were of the cheapest and plainest. In many instances a hole dug in low ground afforded a supply of vile surface water. An alkali flavor often added to its unpleasantness and harmfulness. Fuel was extremely scarce, as can readily be imagined of a country which was a treeless prairie. In some large districts the inhabitants burned dried slough grass and hay, which entailed a great deal of extra labor to that rare personage which the novelist terms the good housewife. Such fuel, before using, was twisted hard into large bunches two or three feet long, and the stove, specially made for such fuel, had to be replenished at short intervals, for the hay burned hotly and quickly. Coal and wood, when obtainable, were high and therefore beyond the means of the ordinary settler. The heavy prairie grass was his best friend. Besides furnishing fuel for him, he often used it to thatch his house, and it was the main material used in the shelter for cattle. A skeleton frame work of poles, heavily covered with hay, made a warm, though far from durable, stable.

The wheat fields, then wide apart, made great gathering places for the chickens when the fall weather lessened the food supply in the open prairies. There were chickens in abundance in those days.

Since that time, that country and far to the westward is now thoroughly settled and tilled, and the comfortable, often luxurious, homes with their air of refinement and thrift, bear no indication of the hardship and deprivations of the long intervening years. There are no connecting links between them and the wretched hovels and "dugouts" of early days, but the march of progress has injured some excellent chicken country. Civilization in this country has spoiled a lot of good shooting. Educating men into true sportsmanship destroys a lot of game, for the savage instinct to kill is present in nearly every healthy, vigorous man, and from that point of his nature to the refined gentleman sportsman the intervening advances are due to education.

Still there is a vast area of country left in which chickens are abundant. And there is a multitude of sportsmen who dwell in that country and who own good dogs, which have the blood of famous ancestors, and good ones which are not famous. So of field-trial material the Northwest possesses abundance. It could, therefore, hold trials of its own.

Manitoba has two field trial clubs which hold successful trials. That they are popular is shown by the steady growth of interest, prestige and patronage, a good part of the latter being from the States, a circumstance which demonstrates that trials on chickens would be liberally supported if held in the States. They would be a considerable gain to sportsmanship if conducted from the same spirit of sport which impels our Canadian friends.

### The Kent Elgin Entry.

FOREST AND STREAM of August 11 contained an explanation from Mr. T. M. Brumby, as Sec'y-Treas. of the S. F. T. Club, in respect to the entry of Kent Elgin, it being also a reply to a letter of Mr. T. T. Ashford, published recently in "Points and Flushes." Mr. Brumby prefaces his remarks with the statement that I used that letter "in order to attack the 'Southern Field Trial Club.'" I cannot imagine the grounds on which he makes that statement. Surely the publication of Mr. Ashford's letter cannot justly be construed as an attack on the club. I had no part in the subject matter of it. There had before its publication been some unsatisfactory correspondence between Messrs. Ashford and Brumby in respect to Kent Elgin's entry, and as it involved an alleged violation of the Club's rules, it was a matter in which the public was interested. As to waiting till the week before the Derby closed, before publishing the matter, as Mr. Brumby claims was done, and presents it as a grievance, I beg to assure him that it never occurred to me in that connection. No one could for a moment make me believe that the publication of that letter would have the slightest effect on the entries. It was not related to them in any way.

It has always been my belief that, when any important matter, unpleasant or otherwise, is of sufficient public interest to require consideration, the proper way is to meet the issue openly, frankly and promptly. If the cause be just, no amount of publicity can injure it, on the contrary, the criticism or discussion which arises will give it greater strength.

Returning to the matter under discussion, it seems to me that when a grave disagreement arose between the club and one of its patrons, an open discussion of it would have brought out the facts much better than would private gossip, which spreads wide and grows into exaggeration from repetition.

Indeed, it seems to me that Mr. Brumby, as an officer of the club, would not have been guilty of any impropriety, had he taken the initiative in publishing the club's version of the matter, when a charge of grave violation of the club's rules was brought against it. He had it in his own power to have the issue settled before the entries closed. It is not a matter in which the Club alone is concerned,—every one who made an entry has a right to know whether the conditions of the stake were or were not violated. It cannot be justly construed as an unfriendly act, to give the Club a chance to publicly set the matter at rest. Therefore when Mr. Brumby states that Mr. Ashford, "through the help of Mr. Waters, jumps on the Club," I think that he labors under a misapprehension both as to the intent and the act itself.

I believe I have several friends among the members of the Club, whom I esteem both in their private and membership capacity. But any body of men in a public position is open to criticism when there is cause for it. Without open discussion, there would be little progress in anything. Hence it is a morbid view which construes a friendly criticism into an attack.

### The Big and Little Kennels and Field Trials.

On the subject implied in the above heading, I read Mr. Bryson's recent article with a great deal of interest. I am indebted to him for calling attention to a matter which had escaped my memory, namely the purchase by the big kennels of winning dogs bred by the amateur or small owner. To make the subject clearer, I will present an excerpt from Mr. Bryson's article in relation to it. He says: "The small kennel owners start out with the assertion that they cannot compete with the large kennels at the field trials. This is a mistake. We will first take Mr. Lorillard's kennel. He has been a large purchaser from the small kennels, purchasing all or nearly all his winners, Count Anteo, Lora, Miss Ruby, Dot Rogers, Rod's Sue, Ightfield Rosalie, and others, from the small kennels. I think I am not far wrong when I state the Blue Ridge Kennel also purchased all their winners, paying big prices to the small breeders for Fannie M., Hope's Mint, and the Derby winners Bessie Shoupe, and Allene, besides paying $2,000 for Antonio, and long prices for their stud dogs and brood bitches, and all to the small kennels."

Mr. Bryson mentions some others, but as I only wish to bring out a point later, the foregoing will amply serve to illustrate it. He draws the following conclusion: "It will be seen, therefore, the large kennels are the best patrons the small kennels have. After selling the pick of their dogs, some of the small kennel owners cry out they cannot compete against the larger kennels."

I think that Mr. Bryson will admit that the large kennels bought dogs, which had favorably distinguished themselves, with a view to a prospective income from them, either for breeding purposes or for their known ability to win at field trials. I think that Mr. Bryson, however, overlooked the full bearing of the acts he describes. Detaching them from field-trial considerations, it really does look as if the small breeders were benefitted. They were in a way; in other ways they were not. They received a direct benefit from a single monetary transaction, but from a field-trial point of view, they had stengthened the competition against them. As fast as one out of the many unsuccessful small breeders produced a dog of eminent ability, he was bought by one or other big kennels. The small breeder is generally possessed of limited means compared to the owners of the big kennels. If he is offered $1,000 for a dog, he cannot afford to keep him. For the small breeder to lose $1,000 is a life event; to the big breeder it hardly attains the dignity of an incident. As the good dogs go from the small breeders over to the big kennels, the competitive difficulties of the small breeder multiply. The best dog he could produce is in the competition against him, and he has greater numbers to contend against. He, generally speaking, must from his limited resources, bring out new stock to compete every year, while the purchases of the big kennel remain permanently as campaigners, the same dogs appearing in every trial year after year.

The small breeder has much greater expense to pay relatively than has his big rival, for it costs relatively more to send one man to a trial with one dog than it does to send one man with six dogs. His chances of winning are numerically in that ratio. When the big kennel buys enough dogs to equip itself for a field trial campaign, it stops buying. The measure of its purchases is the possible value of field trial interests, or kennel revenue.

As the big kennels, from what they themselves produced and by purchases from the small breeders, grew stronger, the small breeders grew weaker. There was a point in this changing of strength and forces, where the weaker brethren had but a remote show to win. Feeling this, the weaker brother stays out. The odds were too great.

Mr. Bryson further says: "If I were a breeder, instead of crying out against the large kennels, I would want a dozen where there is one, as the demand from the large kennels has made possible prices that dogs would not have sold at unless the large kennels wanted them."

The latter is true. But does not Mr. Bryson think that it was field trials which made the large kennels possible? If so, anything which disturbs the success of the trials or damages them, must react on their dependencies. If, by constantly growing bigger while the small breeders grow smaller, the small breeders are out of the competition from their weakness, the foundation of the structure is injured, and there must be injury to the whole. It is small kennels which make trials possible permanently.

Establishing a dozen large kennels where there is one now, as kennels are run at present, would depend entirely on whether there was a sufficient field from which to derive a satisfactory revenue.

The large kennels bought high-priced dogs because they could campaign them, could handle them more economically than the small breeder, and because they had greater resources generally. This condition of buying and selling was not a fixture,—it was an evolution of the big fish.

Save in a very few instances, the big kennel is a commercial enterprise, governed by the same laws of supply and demand which govern all business enterprises. The large purses stimulated the big kennel and set back the small one.

The big kennels bought dogs at long prices because they could derive a revenue from them. If there were a dozen kennels more for every one now existing, the weaker would soon retire. No more could exist than the business warranted.

The bulk of the winnings go to the large kennels. The records will show that they have almost constantly won out well ahead of expenses, taking as a whole the season's campaign as data. Of the small breeders, very few win, and it takes many of them to produce one successful dog.

B. WATERS.

---

We are indebted to Mr. J. H. Burr of Macon, Ga., for a premium list of a dog show that is to be held in that city from Nov. 1 to 8. The show will be held in connection with the Dixie Interstate Fair, and Mr. T. Farrar Rackham of East Orange, N. J., will judge all classes. The list, which has evidently been arranged by an amateur, is a little mixed on dates, but as well as we can make out, the entries will close Oct. 31, and the judging commence Nov. 1. No entry fee is charged and no dogs will be received after 12 M. on Wednesday, Oct. 31. Thirty-six classes are provided for the principal breeds, two for each breed, consisting of one for "Registered dog or bitch" and one for "Open dog or bitch," with prizes of $5 for first and hc., whatever that means, for second. Then there are kennel prizes of $10 each for pointers, setters, foxhounds, beagles and Scotch terriers; also $10 for best pointer bitch with four or more puppies, sire and dam to be registered, and the same money for best setter bitch under same conditions. Entries should be made with J. R. Kennedy, Macon, Ga. Such an opportunity will no doubt be taken advantage of by Southern fanciers, and if more of these shows were held in connection with the different fairs the country people would become educated to the point where they would demand something better for companions and watch dogs than the "yaller" dog too frequently met with in country districts.

## DOG CHAT.

### Toronto Show.

At the coming dog show of the Toronto Industrial Exhibition Association the American Spaniel Club donates the following specials: The Newton Abbott cup, offered by Mr. E. M. Oldham, for the best field spaniel bitch, to be won four times; the Whitehead trophy, for the best cocker spaniel stud dog shown with two of his get, the get only to be judged, to be won four times; two oil paintings, offered by Mr. George Bell, for the best brace of cockers under a year old, any color, dogs or bitches, to be won four times. The above are open for competition to members of the American Spaniel Club only. The Industrial Exhibition Association offer their bronze medal, value $10, for the best kennel of dachshunds.

The Toronto show committee have made a novice class, 96½, for Scotch terrier bitches, first prize $7, second $2, third diploma. Class 96 represents novice dogs. Class 98½ represents Airedale terriers, open, dogs and bitches, first prize $10, second $5, third diploma.

---

The other day we took a run down to Lawrence, L. I., to see Mr. Hughes and the Marlborough Kennels. In spite of the heat and other drawbacks to comfort, Mr. Hughes had the dogs in excellent condition, in fact we never saw a lot of dogs, especially where there are so many different breeds, in better shape. Besides the wolfhounds Argoss, Princess Irma, Modjeska, Zerry and others of note, we saw several familiar faces. Stanley, the great Dane, and Ormskirk Shep, the collie, were the principal ones. Then there is Hia, the beagle, fully recovered from a serious illness which played havoc with her litter of puppies, as she was taken sick just after they were born. There is one puppy left, and this one, one of the prettiest we have seen in many a day, but for great care on the part of Mr. Hughes and his wife, would have succumbed. Burlington Diadem nursed her with her own puppies for a couple of weeks and then a blind bull-terrier bitch, a daughter of Gully the Great and Enterprise, we believe, suckled her till five weeks old. A collie bitch with a litter by Shep formed another interesting family.

---

One is always sorry to hear of the death of a good dog, whether it be one noted for its exceptional beauty of form and fancy points, or one, as we should say of a human being, distinguished for its charming personality. Such an animal was Lady Gay, a red cocker spaniel owned by Mrs. Smyth, of the Swiss Mountain Kennels. Her name is not altogether unknown in prize lists, for she has won two seconds at Philadelphia shows and one at Wilmington, Del., but it was her particularly bright disposition, accentuated by her name, that endeared her at once even to a chance acquaintance like ourself. It may not be generally known, but in the goodness of her heart, when Chip R. died while whelping to champion Cherry Boy, Lady Gay, although she had four reds of her own, came to the rescue and "mothered" the three puppies, thereby giving us a champion Middy, one of the best known and at the same time best abused cockers now on the bench, and also Chip R., another winner, and Pitchdark, who, however, never faced a judge. No wonder Lady Gay was a favorite. Now comes the sad part which we give in Mrs. Smyth's own words:

"Well, Gay's career has come to an end, and it looks very much to me as if by some foul means. She was taking care of a litter of four, had a kennel on the north side of the house and was not shut in. One evening at 10 o'clock she was on the piazza as well as possible, and the next morning at 7 she was found in the brook—dead, with her head pushed into the mud up to her eyes; her front legs were lying straight back under her and her hindlegs out behind her. A post mortem disclosed nothing, no poison of any kind could be found and no reason for her death in any way. Her lungs were full of water, but none in her stomach; so she could not have drank any. Her death certainly is mysterious," and, we would add, points to foul play. Lady Gay was by Brigay out of Mollie, and was whelped Dec. 20, 1889, being bred by Mr. Joseph Walker, Hamilton, Ont.

---

More cheerful news, however, comes about others in this kennel. Empire State is the happy father of nine, ten days old, the original number being thirteen. The spaniels are in fine trim. Miss Waggles, who by the way, is a champion, is proud of and attentive to a litter of four, by champion Cherry Boy, two of them red like the sire. Swiss Mountain Kennels have lately bought Madam B., a young St. Bernard bitch, from A. Burgess. She was at Boston, Philadelphia, and Specialty shows, and is by Sir Hereward out of Lady Adelaide; a large well-grown bitch that will prove a useful addition to the kennel.

---

A glance at our business columns this week will show some interesting reading. The Rhode Island dog show is given prominent notice, and with an entry fee of only $1.50 and $3,500 in prizes, this show should command the attention of exhibitors. W. W. Brown offers well-bred Irish setter pups; McEwen and Gibson, some of their good collie stock; Dr. C. F. Parker, rough St. Bernards; Richwoods Kennels, trained pointers and setters; A. E. Manley, a service to Wellesbourne Charlie; Mere Kennels, a great Dane dog; Handsome Brook Kennels, a trained watch dog; W. E. Money, a bull-terrier.

---

Mr. Mortimer changed his mind about coming back as he intended last week, and will not come on for a week or so yet. He will probably bring his best purchases with him.

---

The Skye collie is the newest breed to come before public notice. The story is too long for this issue, but the breed is really quite ancient and is said to be a sort of English bobtail—Skye terrier, by consent of an otter hound, approaching more the type of a Skye terrier than anything else; blue-grey is the color.

---

Mr. T. J. Smyth, who is or was associated with Mr. Bell in the Cambridge Kennels, writes us that Consequence has not had two litters of puppies since the unfortunate deal with Mr. Martin. He says: "Consequence has not pupped since Mr. Bell purchased her, though one litter came from her in a gelatine state." We have also a letter from Mr. Smyth in which he takes Mr. Watson to task over his letter in our last issue, but as it deals with the question on the mistaken understanding that Mr. Watson was a member of the advisory committee that disqualified Mr. Bell, its publication would not serve to clear the atmosphere surrounding this case, which for the good of dogdom should now be allowed to fall nto "innocuous desuetude."

---

The New England Beagle Club is to run its trials in the week commencing Oct. 22. As this is also the date selected by the N. E. Field Trials Club for the running of the Member's Stake, they will confiict, and several sportsmen who desire to attend both events would have to forego the pleasure of one. It would seem that one of the clubs might change a week one way or the other and this would make a saving to those persons who come on from a distance and who should desire to attend both meets.

---

The famous fox-terrier bitch Nita, owned by Mr. Hotblack, met her death in a manner that shows that the breed is not deteriorating much. She is said to have gone to earth after fur and, according to *Stock-Keeper*, never returned to light. She was very game and was well known as the dam of such terriers as Reckoner, Renown, Raffle and others; in

fact, she produced a winner in every litter while in Mr. Clarke's kennel. She herself was prick-eared, but this was never a fault in any of her progeny.

Mr. W. Stewart Diffenderffer, of Baltimore, who is spending a few weeks at Elberon, N. J., dropped in to see us on Tuesday. He is charmed with his new English setter Count Beaufort that he imported from Mr. Purcell-Llewellyn. The dog is rich in the blood of field producers and is himself superbly broken for the field. He will be placed at stud very shortly.

Al Eberhart is booking a string of dogs for the Des Moines show. The Ohio Humane Society may have a show this fall.

Mr. E. K. Austin, of New York, who has imported several bulldogs, has just bought another, Gold Mine, from Mr. Geo. Smartt, of England. She is in whelp to Smartt's Punch, and as she is the dam of Manalette, Lord George and Gold Link, the importation would seem to have been a wise one.

Mr. Sam Woodiwiss is also becoming interested in smooth collies, having purchased champion Sly Widow.

Mr. A. E. Foster has bought the field spaniel Midnight from the Hempstead Farm Kennels and it is now in Mr. Silver's charge at Tuxedo, N. Y., but is in anything but good condition. We hear of a good pup in the same kennel, a liver by champion Judex out of The Shrew, and owned by Dr. Bradbury, that gives promise of being an "extra.". Mr. Viti's field spaniel bitch Gossip missed to Warwick.

### Des Moines Show.

The Des Moines Kennel Club have added the following classes: Class 7½, challenge smooth St. Bernards, dogs and bitches, prize $10; 17½, Russian wolfhounds, open, bitches, prizes $10 and $5; 43½, challenge Gordon setter bitches, prize $10; 79A and 79B, challenge Skye terriers, dogs and bitches, prizes $5; 84½. novice pugs, dogs and bitches, prizes $5 and $3. Class 5. is for rough St. Bernards, exclusively. The show will close Friday evening, Sept. 7, in time for exhibitors to get the evening trains East, so that those wishing to show at Toronto will have plenty of time to do so. Entries for this show close Aug. 25 with M. Bruce, Des Moines, Ia.

When a woman undertakes to run a kennel of her own she somehow manages to make it pay or come very near it, and while the men lose their puppies and blame the hard times generally, our fair kennel owners don't grumble but show the results of the care and attention they give their stock in a string of sales "Kennel Notes." The Belle Isle Kennels of St. Bernards are owned by Miss A. M. Griffin of Detroit, Mich., and she is gradually getting together some of the right sort. From Mr. Wallbridge she has purchased Clovis, a smooth dog by Survivor out of Peggy, whelped May, 1893, that she expects to prove of service in her kennel. We are sorry to hear, however, that she has just lost her brood bitch Fernwood Urania, by champion Victor Joseph ex Fernwood Inez. This bitch died last Friday from blood poisoning after whelping seven large puppies to Earl Douglass, two days before. As she was the best St. Bernard in the kennel, only three years old and a family pet, the loss is a serious one, especially as it was impossible to save the litter. Urania was the dam of Little Dorritt and Belle Isle Napoleon I., winners at the late Detroit show.

The Mere Kennels will soon have a representative team of fox-terriers, as Ripon Stormer is already in their kennel, and last Friday they received by the America from England two bitches. One is Ray of Light, by Ripon Thunderer ex Day Dawn. She has won a number of prizes on the other side, and is in whelp to Raby Bannister. The other bitch is Dudley Nettle by Kingcraft (by Starden's King) out of Relapse by Vesuvian, and besides being in whelp to champion Dominie, is also a winner at recent shows. These will no doubt prove valuable acquisitions. It will be remembered that we mentioned some time since that a fox-terrier kennel was nibbling at a young, much lauded terrier on the other side. This was Pendennis, and the Mere Kennels was the kennel referred to. On June 4 Mr. Tinne wrote their agent: "I fear I cannot take less than £500 ($2,500) for Pendennis. I consider him the best fox-terrier in England and look forward to his lowering the colors of D'Orsay, Vice Regal & Co. before the year is out." In view of the following criticism, which we find in *Stock-Keeper* just arrived, on Pendennis at the Darlington show, where few, if any, of the cracks were present, it would seem as if the day was not altogether past when Englishmen suppose Americans to be guileless in the matter of dog buying. Pendennis was vhc. reserve to Douglas Driver and Douglas Jostler in the limit class, and the critique runs: "In Pendennis we don't see much, if any, improvement; he is lathy in body, flat-sided and lacking in back rib; his head will just do if it thickens no more; his expression is good, as is his coat, while in front and shoulders he also scores, and he makes the most of himself, being very showy." Pendennis took vhc. in the open class, and the above is certainly not a $2,500 dog criticism. The Mere Kennels probably builded better than they knew when they refused to give such a price. The *British Fancier* also finds fault with his body, and also says: "Not high class in head," "quite a size too big," but praises his shoulders, bone, legs and feet. Pendennis is now about twelve months old.

### The Kent Elgin Entry in S. F. T. Club.

*Editor Forest and Stream:*

In your issue of July 28 is an article from Mr. T. T. Ashford through Mr. Waters. In this letter he makes some very broad assertions in which I am sure he is not correct—and the record of the field trials will prove his assertion is not in accordance with the record, of which proof can be given later if necessary. I do not pretend to know anything about the facts of Mr. Ashford's trouble with the Southern Club (except the entering of Kent Elgin), and will not try to take sides with either. Mr. Ashford has been a personal friend of mine since a boy, and if it was not in the defense of an honest and friendly act of the Southern Field Trials Club I would not have one word to say in this trouble.

Mr. Ashford says "there is a combination between the large kennels and the field trial clubs," and says "the unknown man with one or two entries stands no chance." Mr. Ashford's experience teaches him that the statement does not accord with facts, and I am surprised that he would make such a broad assertion against all clubs. Mr. Ashford had one entry in the different All-Age stakes last season—Kent Elgin. I handled him for Mr. Ashford. He started five times and was placed three times, and when he was not placed it was his own fault; he simply lost his head, chased and gave tongue after his birds like a hound. In his race at the Southern he bolted in the morning and was not caught until next morning, and of course he was justly thrown out.

Now as a matter of fact, the large kennels have from fifty to sixty dogs to select from; they have the best handlers in the country to handle their dogs; are willing to advance money for all expenses and of course have a better chance to win than the man who only has one or two entries, and who has some green man to handle them for him. If Mr. Ashford had not been an old friend of mine and one that I have always thought a great deal of, Kent Elgin would not be known to-day, as I should not have handled him at all. It was only through friendship that Kent had the great opportunity to develop and prove himself to be a great dog. When Mr. Ashford turned Kent over to me in July, 1893, he said that times were so hard he did not feel able to advance money to pay Kent's entrance in all the stakes, especially in the Eastern and Southern where he would have to meet the best of setters. I wrote Mr. Ashford that I would handle the dog just as I would one of my own and do what I thought best with him. After working him on chickens I thought, for the good of the dog, he should be entered in all the trials that my own dogs were entered in, and I therefore entered him in Manitoba, U. S. (A and B) Eastern and Southern, advancing all entrance fees and expenses myself, thereby showing the interest I had in my friend's dog. The only entrance money that Mr. Ashford sent me was a note for $25, on some one at Atlanta, Ga., due Nov. 15. This note reached me Oct. 22, and when I entered my setters in the Southern Trials, Nov. 17, I also entered Kent Elgin in the Pointer Stake, sending Mr. Brumby the note that Mr. Ashford had sent me for $25, and I was informed by Mr. Brumby that the note was paid on the date it was due.

When Kent was entered in the Southern trials his name was not published, and I really did not know whether or not he would be allowed to start in the Setter All-Age Stake, and wrote to Mr. Ashford that it was a shame that such a good dog as he was should be handicapped by his owner not wanting to go to the expense of paying entrance fees, and I really rubbed it in a little hard, as I wanted to make him feel bad for trying to handicap a high-class dog for the sake of a few dollars. The Pointer Stake of the Southern field trials did not fill, and when I asked if Kent Elgin would not be allowed to run in the Setter All-Age Stake, they very properly informed me he would. I did not know until I got to New Albany whether or not he would be allowed to run, but still I took him there, ready to start if allowed in. It is true enough Mr. Ashford did telegraph me not to start Kent, but the telegram was received after the drawing and stake had been started. I considered that Kent was in my hands for his best interests and I started him anyway.

After Mr. Ashford wrote me that he was going to expose the Southern Club unless they returned him the $30, I then wrote him that the dog was entered all right; that they had not violated their rules. After Mr. Ashford still insisted for the $30 I wrote him, before he wrote his letter to Mr. Waters, that I would lose it. I have lost it. Under no consideration would I have the Southern Field Trials Club return that $30 because it honestly belongs to them. I should have explained things more fully to Mr. Ashford, but when I wrote him that they had not violated their rules in this transaction I thought that was sufficient and would be satisfactory, and I am sure that he will be satisfied about the entering of Kent Elgin after reading this.

He has a great dog in Kent, and is mistaken in thinking "he disgraced himself at the Southern trials." What he did is what most all pointers are lacking in, enough go and stay out, and breeders are looking for just such qualities to breed to.

The judges selected by the Southern Club for this year are a new lot, and if Mr. Ashford will only come to see the work himself I think he will not accuse them of "monkeying behind the curtain."

I have not approved, and do not yet approve of some of the actions of the Southern Club members, but still I think they are improving and trying to stop making what we considered mistakes. Therefore I am again willing to risk my full string of entries with them, and have entered every Derby entry that I have except one, and he is in the hands of Mr. Johnson, and I would enter him if Mr. Johnson expected to visit these trials, and have written to Mr. Brumby to put him in if Mr. Johnson had other entries. J. M. AVENT.

HICKORY VALLEY, Tenn., Aug. 2.

## ANSWERS TO CORRESPONDENTS.

O. L., Brooklyn, N. Y.—The St. Bernard Kamehameha I., is now known as Grand Master and is owned by Mrs. Lee, Alta Kennels, Toledo, O.

W. H. M., Ogdensburg, N. Y.—The fox-terrier puppy Spin, Jr., was entered by Rivermount Kennels, 337 Hooper street, Brooklyn, in the W. K. C. show, 1893, and is by Prince out of Brokenhurst Spin, whelped June 22, 1892.

H. L. R, Providence, R. I.—1. You can easily provide shade for your puppies by placing a few boards over a framework 2ft. high in one corner of their run. A good plan is to cut some short branches of firs sufficient to form a dense shade and throw them over the skeleton frame. 2. A little sulphur in their food will often correct the objectionable habit.

J. S. C., Lawrence, Mass.—I have a very fine bred pointer pup, 18mos. old; he has a very offensive smell that comes from his ears. Will you please tell me the cause and what will cure him? He is in perfect health as far as I can see. Ans. Wash ears out well daily and fill them with powdered boraic acid and bismuth card, equal parts of each. Treat for worms and give same mixture as for "M. S. G."

W. H. L., Watertown, N. Y.—Which is best breed of dog to buy for the teaching tricks and for general intelligence, and as a good companion and watch dog?. Ans. A poodle will probably fill all the requirements named above better than any other breed. They have first claim on the trick-dog business, and as companions and sharp watchdogs they cannot be excelled. You will find them advertised in our business columns.

M. S. G., LeRoy, N. Y.—My dog, a black cocker spaniel, 9mos. old, has red sore spots on his skin and scratches continually. I think it must be mange as I have used an eczema cure and it has done no good. Ans. Treat for worms. Wash dog in a solution of creolin (1 to 60) twice a week. Give following mixture:

℞ Mag. sulph. ..... ʒ vi.
Acid sulph dil ..... ʒ i.
Ferri sulph ..... ʒ i.
Aq. ad ..... ʒ vi.
Give dessertspoonful twice a day.

SUBSCRIBER.—I have a beagle pup, 9mos. old, and his dewlap is covered with small lumps, and when you pull out a bunch of hair it is matted together next the skin. The hair will come out by rubbing with your hand, and the skin is very red. His nose is filled with pus, and his eyes run pus. He is very dull and his legs are weak. When he lies down he does not go down gently, but goes down with force. His appetite is good and he is quite thirsty. His breathing is noisy, and at times he will raise his back as though in pain. His mouth is hot and where he is sore the hair is white. Ans. The pup has distemper. Give a one-grain quinine pill three times a day, keep him quiet, etc. Feed well and give half teaspoonful of whisky twice a day. Apply tincture of iodine to chest.

## FIXTURES.

FIELD TRIALS.

Oct. 23.—New England Beagle Club, at Oxford, Mass. W. S. Clark, Linden, Mass., Sec'y. Nominations close Oct. 1.
Oct. 29.—National Beagle Club. Geo. Laick, Tarrytown, N.Y., Sec'y.
Nov. 5.—Brunswick Fur Club. Bradford S. Turpin, Dorchester, Mass., Sec'y.
Nov. 7.—Northwestern Beagle Club. Louis Steffen, Milwaukee, Wis., Sec'y.

### Dakota Coursing Notes.

Mr. Zollars, of Sioux Falls, is in the city looking for Wm. Fox Kenny, who took his Sir Hugo—Fleet greyhound pup. He has been looking for Kenny for a week or more and tracked him to this place. It was getting too warm for Kenny so he left the dog here and skipped out. The writer saw him long enough to be told that "Nominator" would have to take back the way he reported the last spring meeting at Mitchell, and that he was going to expose one or two of the boys who tried to buy the race. In an hour or so later I understood that Mr. Zollars was looking for him.

NOMINATOR.

MITCHELL, S. D.

### National Beagle Club Meeting.

AN adjourned and field trial committee meeting of the National Beagle Club of America was held on Aug. 9 at the A. K. C. rooms. Present, President Kreuder, Geo. Laick, J. W. Appleton, H. F. Schellhass, John Bateman, Geo. B. Post, Jr., A. D. Lewis, Geo. W. Rogers and H. W. Lacy.

The committee on special prizes announced that the Boston special won by Mollie L. had been forwarded to Mr. Mark Lewis, Jr. The secretary reported that he had communicated with the secretary of the A. K. C. regarding the field trial committee of the A. K. C.

Messrs. Geo. F. Reed, Barton, Vt., and N. J. Baldwin, East Orange, N. J., were elected as members. The committee for selecting judges for the field trials recommended B. S. Turpin and he was accepted. Moved by Mr. Schellhass and seconded by Mr. Appleton that Mr. Joe Lewis be also asked to judge. Motion was carried and the committee was requested to communicate with Mr. Lewis. The committee for selecting grounds for holding field trials recommended Hempstead, Long Island, as their choice, and on motion of Mr. Post and seconded by Mr. Rogers, it was decided to hold the next field trials at Hempstead. The committee for formulating classes made their report and conditions and classes were, after thorough discussion, adopted. A special prize was also voted, conditions of which are given below. Meeting adjourned till 3 o'clock P. M., Sept. 6.

Our fifth annual field trials promise to surpass any beagle field trials ever held in America, as we are making great efforts for success.

The premium list will be ready in a few days and a copy of same will be forwarded to every beagle owner or breeder known to the secretary. Should any one not receive a premium list the undersigned secretary will cheerfully forward same on receipt of name and address.

GEO. W. LAICK, Sec'y.

The classes for which entries close Oct. 8 are:

Open Class A—For dogs and bitches, all ages, 15in. and over 13in., that have not been placed first in any class at field trials held in America. Fee to start, $10, of which amount $3 forfeit must accompany entry, and balance to be paid prior to starting the class. First prize $60, second $40, third $20.

Open Class B—For dogs and bitches, all ages, 13in. and under, that have not been placed first in any class at field trials held in America. Fee to start, $7, of which $3 forfeit must accompany entry, and balance must be paid before starting class. First prize $30, second $20, third $10.

Derby, Class C—For dogs and bitches, 15in, and under, whelped on or after Jan. 1. 1893. Fee to start, $5, of which $2 forfeit must accompany entry, and balance to be paid prior to starting in class. First prize $20, second $10.

Champion Class D—For dogs and bitches, all ages, 15in. and over 13in., having been placed first in any class, except Derby, at field trials held in America.

Champion Class E—For dogs and bitches, all ages, 13in. and under, same conditions. Entries close immediately before starting of class. Fee $10 in each champion stake, which must be paid in full before class is started. First prize 60%, second 30%.

Brace Stakes—For dogs and bitches 15in. and under. Fee to start, $10, which must be paid before starting class. First prize 60%, second 30%. Entries close during trials.

Pack Stakes—For four dogs and bitches 15in. and under. Fee to start, $15, which must be paid before starting class. First prize 60%, second 30%. Entries close during trials.

Special prizes: The National Beagle Club of America offers a piece of silver plate valued at $30 for the best beagle, the get of a dog or bitch that has been placed at any field trial held in America. Other specials will be announced later. Entries must be made with George W. Laick, Tarrytown, N. Y.

### Higher Entry Fees.

*Editor Forest and Stream:*

I see in your issue of Aug. 4 the programme for the fall meet of the Altcar Coursing Club, of Colorado. I am well pleased with the main features of it, but I hope the members will not consider me presumptious (because they all know that I am of an exceedingly modest and retiring nature) if I make a few suggestions for the good of the greyhound and this club. Why not make the entrance fee higher in the puppy stakes? The thing nearest to every courser's heart is the puppy which he has bred and reared with all possible care, and then trained it with the utmost vigilance and study to have it perform in the most creditable manner. Now, after all these trials and tribulations this good strong young club asks the breeder to come and run his puppy, provided the stake fills, for a paltry $56, and the $50 added money, $106 in all. This is presuming that the whole of $50 added money will go to the winner. Why not make the entrance fee $20 for members, and $25 for non-members? I am not a member, but will gladly put up my extra $5 on each nomination.

I am also delighted to see this club starting a Produce Stake, but here comes this same blunder of the executive committee. Who cares to go to the expense of breeding, rearing and training a lot of puppies and then run them for a $5 entry fee? By the time a breeder gets a puppy to the slips in fit condition, that puppy has cost him $100 at the lowest calculation. This does not include traveling expenses to the place of meeting nor the expense while attending a meet. My idea of a Produce Stake is as follows, and which I hope the executive committee of the Kenmore Club will adopt, and announce such a stake for 1895. Nominations to close Jan. 1, 1895, at $2.50 each and $20 on the night of the draw of the Kenmore meet at Goodland on third Tuesday in October, 1895, giving the privilege of disposing of the nominations, and the nominator to be held responsible only for the $2.50 in case of declaring out at the draw. If the Altcar Club will so alter its stake I will promise from four to six nominations for 1895.

The bane of American coursing is that as soon as an executive committee is elected, they try to see how low and cheap a stake they can possibly get up. It is very certain that any courser with a good string of dogs would rather run for $25 entrance fee than $5. It is true the number of entries might be less the first year or two, but it would crowd out all the old cunning and worthless dogs, which are always to be despised at any meeting. It is these latter that are the ruination to a good and true greyhound. I hope our judge will watch closely this year and let no dog who fails to do his work, for even a moment, win a course.

Q. VAN HUMMELL, M.D

INDIANAPOLIS, Ind.

## HUNTING AND COURSING NOTES.

We sympathize sincerely with Mr. Pottinger Dorsey, of Newmarket, Md., the well-known beagle breeder, in the loss he has sustained through the death of his wife, which sad event occurred July 27. The late Mrs. Dorsey was known to many of her husband's sportsman friends, and like him was a lover of a good beagle and was well versed in the pedigrees of all the leading strains.

*The* FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable,*

# Yachting.

## FIXTURES.

AUGUST.

16. Rochester, Ladies' Day, Charlotte, Lake Ontario.
16-17-18. Corinthian, Midsummer Series, Marblehead.
17. Manchester, Ch. Pen., Mass. B.
18. Fox Lake, Club, Fox Lake, Ill.
18. American, Seaver Cup Newburyport.
18. Beverly, Sweeps, West Falmouth.
18. Cape Cod, Club, Orleans.
18. Indian Harbor, Ladies' Day Race, L. I. Sound.
18. Sea. Cor., 21ft., Roosevelt Memorial Cup, Oyster Bay.
18. Douglaston, Open, L. I. Sound.
20. Rhode Island, Open, Narragansett Bay.
21. Fall River, Open.
25. Atlantic City Cor., Open, Muckle Cup, Atlantic City.
25. Quincy, Open, Dorchester Bay
25. Squantum, Club Squantum, Mass.
25. Indian Harbor, 21ft., Naphtha Launches, L. I. Sound.
25. Cor. Mus. Fleet, Ann., New Rochelle.
25. N. Y. Bay, Club, N. Y. Harbor.
25. Knickerbocker, Club, L. I. S'd.
25. Columbia, Open, Chicago, Lake Michigan.
25. Cor. Phila., Sweeps, Del. River.
25-26. San Francisco Cor., Cruise, California City.
27. Schoodic, 3d Cup, St. Andrews.
30. Rochester, Club Sail, Charlotte, Lake Ontario.

A VERY improbable story comes from the Clyde of a new challenger for the America's Cup, designed by Watson and now building by Fife for Mr. James Bell and other Glasgow yachtsmen. Of course there is nothing to prevent such a challenge, as the field is now open, but Lord Dunraven's intention of challenging as soon as the time arrives has been so publicly announced as to make it unlikely that others will endeavor to forestall him.

THE Thistle syndicate might well have sent their challenge in the fall of 1886, as they desired to do, and thus have forced the New York Y. C. to have made an agreement in October instead of March, had they availed themselves of the literal provisions of the second deed of gift. To do this they would only have had to send a challenge naming the first day of March or any other date within seven months of the sending of the challenge, say in September. It is quite improbable that either party would care to sail at such an early date; but a challenge in this form would have excluded the technical objection made by the club to what was in all respects a *bona fide* challenge from the Royal Clyde Y. C.

Under the altered terms of the third deed of gift, the earliest date at which a race may be sailed is May 1; there is nothing to prevent Lord Dunraven or any other intending challenger from sending in a challenge at once, naming that date, or even a later one up to July 1, within the required ten months of the time of challenging, say Sept. 1.

It is quite evident that the New York Y. C. will take no action whatever toward the recognition of a challenge until it is compelled to do so by the compliance of the challenger with every technicality; but at the same time it is quite as much, or even more in the interest of the club than of the challenger that all arrangements should be made at latest by the end of October. The challenger can perfect his plans and place his order with the designer, in fact he is compelled by the new deed to do so of necessity; and the construction of the new yacht can go on slowly and properly. The defending club, however, after receiving a challenge, has a vast amount of work to do in hunting up millionaires and working them up to the proper syndicate pitch before a line can be drawn or a contract signed. The necessity for as much time as possible for the defense is so plain that it is incomprehensible why the New York Y. C. has always put off as far as possible the actual receipt of the formal challenge which precedes all building of Cup defenders.

In the interests of both parties, it will be well if Lord Dunraven, or any other intending challenger for 1895 will send a formal challenge at once, naming any date that complies with the ten months clause. If this is done, all preliminaries may be speedily arranged, and American designers and builders may start work on even terms with those of the Clyde.

The exact position of the two countries in the matter of racing for the America's Cup is perfectly clear; both parties want a race next year; both would be much better off if challenger and defender were limited to about 70ft. l.w.l.; the challenger will demand certain restrictions as to number of crew and measurement of waterline to which he is justly entitled; and neither side can afford to risk being outbuilt by the other. The only serious obstacle to a businesslike and sensible agreement on all of these points at an early date is that high regard for red tape and technicality which has always been foremost in Cup racing. The requirements of match racing are now so thoroughly recognized by yachtsmen, that if the clubs are not willing to adapt old methods to modern needs the racing of the future in all great events will resolve itself into private matches, like those between Vigilant and Britannia, made, like any business agreement, by the owners; without the intervention of the clubs.

THE present is hardly the time to criticise any class which fosters racing, but at the same time it is a recognized fact that the new 21ft. class is by no means what it was intended to be. With the experience in this class to guide it, however, the Larchmont Y. C. is planning a similar experiment in a larger class, and under such additional restrictions as the present case has proved necessary. The idea is to establish a class of 30-footers of reasonable cost, accommodation and speed, something after the type of Mr. Eaton's Audax, a boat that is being generally recognized as the ideal "fast cruiser." To this end a committee has been appointed, including Messrs. John Hyslop, E. A. Willard, J. F. Lovejoy and Harold Sanderson, to formulate the limits of the class. The result is likely to be the creation of an excellent type of boat, something after the general type of 30-footers built about 1889.

The main object of the club, as we understand it, is simply to bring into existence a size and type of yacht which has proved to be generally desirable for racing and all-around use, and this without regard to the measurement question at large. At the same time there is a chance for the committee to go much further, without interfering with the special features of the original plan.

Like the 70-footer and the 40-footer, the 30ft. is one of the standard sizes in American yachting; and whatever may be done in the future in the way of classification must be based on these classes or their equivalents rather than on any other classes. It is more than likely that the next change in the rules, whenever it may be made, will be the adoption of a classification by sailing length; and in view of this, the most desirable limit of measurement and classification for the new class would seem to be that now in use by the Larchmont Y. C., of 36ft. sailing length. This limit of size, with some premium on displacement and such restrictions as may encourage a strong and reasonably inexpensive construction, will make a class that not only will fill the end immediately in view, but will serve as a starting point for such a material revision of the general rules governing all classes as has been neeeed for a long time.

Experience has proved that almost any class may be made to go for a season if properly boomed as a novelty; but the after result when the boom collapses, as in the 46ft. class and the Boston 21-footers, can only be detrimental. What is most needed is the permanent recognition of a few good classes, with regular racing and some new boats each year. Of course the advance in construction and the rapid course of out-building are against this, but the only hope of a healthy wth and progress in yacht racing lies in the establishment of such classes by the clubs, and their recognition and support by yacht owners. Such freak classes as the 21-footers of 1891 and Larchmont in 1894, however good in themselves, give no permanent strength to the sport.

When the victorious Vigilant crossed the line at the finish of Monday's race the band of the Royal Yacht Squadron played a tune. What was it? Nobody knows. Some people say it was "America," others contended it was "God Save the Queen." We would suggest to the Royal Yacht Squadron always to play that tune over twice, so that everybody can notice the difference between the two national anthems. Following the example of the far-famed artist who painted the sign of the bird that saved Rome and wrote under it: "This is a goose," the buglers might post up the notice, "This is 'America,'" or "This is 'God Save the Queen.'"—*New York Sun.*

The *Sun* might well have gone further and suggested the playing of the air for a third time in honor of Emperor William, who, we believe, has really the sole right to it. It is a pity that a great nation like America is content to claim for its national air a bit of doggerel that was stolen by England from Germany, and that has lost all its original force and rhythm in the processes of translation and re-adaptation. After worrying along more or less successfully for over a century, it is almost time that this country could boast of a national air that was not only worthy in words and music, but of thoroughly American origin.

OUR attention has been called to a statement in an exchange in which a proposal to refer a dispute between two rival yacht clubs to the FOREST AND STREAM for decision was declined by one club on the alleged ground that the other club was "financially and otherwise" interested in the FOREST AND STREAM; and that it consequently could not expect a fair decision. We would say, for the benefit of the club in question, that the statement is entirely false; this paper has no connection with any yacht club, and is in a position to give a fair and unbiased decision whenever it seems desirable to act in such a capacity.

THE present position of the millionaire in yachting is an anomalous and by no means a happy one. That he is a necessity is most evident when one considers the cost of Vigilant and the probable cost of a new boat to beat her; but at the same time the reception which meets him at the hands of the press, as well as of the fine old conservative club member, is by no means such as to encourage wealthy men to take up this method of spending money as far pleasanter than any other. His course in purchasing Vigilant and racing her in the way such a boat must be raced to win, has brought on Mr. George Gould in six months even more concentrated abuse from Americans than his estimable father received in the same number of years; and on the other side of the water one of the three men who in all England has the spirit to spend his money in the encouragement of yacht racing in the largest class has just been blackballed by that august and exclusive body, the Royal Yacht Squadron. It is hard to conceive of anything more foolish and suicidal than such actions at a time when, more than ever before, yacht racing is dependent on the support of very wealthy men.

After all the brave display of racing yachts, warships and royalty at Cowes last week, the fact cannot be disguised that as a racing meeting the whole affair has been a fiasco, save in the smaller classes; and the reasons therefor are not hard to find. In the first place, the main interest centers in two or three yachts of a size and cost which exclude some of the boldest sailing men and limit the sport to a few princes or syndicates; and in the second place, the racing itself is hampered by absurd and obsolete restrictions which prevent the entry of some of the fastest yachts and not infrequently give the prize to a very slow boat. The first-class racing fleet of the present year includes just five yachts, Navahoe, sailing alone in American waters; Valkyrie, sunk and dismantled; Satanita, disabled for a time and now probably withdrawn; and finally the two still racing, Vigilant and Britannia. While there is no lack of excitement and interest in the meetings of the last pair, the racing of just two boats on the part of the two great yachting nations can hardly be regarded as making a satisfactory yachting season.

The first step in our opinion toward more and better racing on both sides is the establishment by the two nations in common of a class, not only of smaller yachts than Britannia and Vigilant, but unlike the present large class, with a maximum limit, that will, for instance, produce such craft as Titania, Katrina and the first Valkyrie and will bring into the racing ranks once more the keen sailormen who are deterred by the cost of a Tobin bronze 90-footer, as the next yacht, when she is built, is likely to be under present conditions. Experience in many smaller classes has shown the desirability of building to one common limit in even the largest classes and avoiding the constant struggle to get the largest boats; and in the important matter of international racing it will be to the equal advantage of both parties if some limit, whether 90ft., 87ft. or but 70, with the equivalent rating, be permanently adopted.

As to prizes, while there are no means of preventing the offering of prizes with strings attached, or under absurd limitations; the clubs can do much to discourage the practice, and to establish still more firmly the principle of free entry and perfectly fair conditions for all yachts.

At the present time, so far from the yacht clubs of America and England encouraging and developing yachting and yacht racing, the natural course of racing has far outrun the lax and half-hearted efforts of most clubs; and there is a pressing need for a general awakening. The individual racing owner, the designer, the builder and the sailmaker are to-day far ahead of the august bodies which make the rules for yacht racing; and all are practically at a standstill, awaiting the pleasure of the latter.

## Winthrop Y. C. Commodore's Cup.

WINTHROP—BOSTON HARBOR.

*Saturday, Aug. 4.*

THE first of a series of races for the trophy costing $200, offered for yachts of 25 to 28ft. l.w.l., as the result of a dispute over a previous race, was sailed on Aug. 4 off Winthrop in a light westerly wind, the times being:

FOR THE COMMODORE'S CUP.

| | Length | Elapsed. | Corrected. |
|---|---|---|---|
| Beatrice, J. Cavanagh | 26.08 | 1 52 23 | 1 21 38 |
| Harbinger, W. Daly, Jr. | 27.09 | 1 51 33 | 1 22 17 |
| Romance, L. Sears | 25.00 | 1 59 23 | 1 27 19 |
| Climax, M. F. Kelley | 26.01 | 2 02 34 | 1 31 49 |
| Amorita, W. F. Bache | 25.01 | 2 05 51 | 1 33 47 |
| Whisper, W. H. Stimpson | 28.06 | 2 04 57 | 1 36 23 |
| Stanley, W. L. Colson | 26.00 | 2 10 04 | 1 39 04 |
| Mattie, W. N. Gerratt | 25.09 | 2 20 44 | 1 49 28 |
| SECOND CLASS. | | | |
| Eureka, E. B. Rogers | | 1 36 23 | . .. .. |
| Little Rogue, G. W. Spencer | 24.09 | 1 40 43 | 1 16 27 |
| Wivern, G. G. Leighton | 22.01 | 1 46 17 | 1 19 38 |
| THIRD CLASS | | | |
| Myth, E. A. Cook | 24.03 | 1 41 41 | 1 17 00 |
| Harriet, L. T. Harrington | 22.09 | 1 46 04 | 1 20 25 |
| Marion, A. W. Chesterton | 22.00 | 1 47 46 | 1 21 18 |
| Fancy, G. C. Cade | 22.03 | Withdrawn. | |
| FOURTH CLASS. | | | |
| Cadet, C. L. Smith | 19.00 | 1 10 55 | 0 50 57 |
| Magnet, L. Gillies | | Withdrawn. | |

The judges were Com. A. W. Torrey, J. S. Cushing, H P. Morrissy and A. T. Bliss.

Beatrice wins a leg for the cup. Harbinger, Romance and Climax win cash prizes. Eureka wins subject to a protest. Myth and Cadet win legs in the club championship and cash prize, and the Little Rogue and Harriet each win cash prizes.

## NEW YORK Y. C. ANNUAL CRUISE, 1894.

AFTER much argument and discussion and not a little feeling between the adherents of Glen Cove and New London, the rival points of rendezvous for the squadron of the New York Y C on the occasion of the annual cruise, the matter seems to have quietly settled itself in favor of the nearer port, which has now been chosen for four successive years. In theory the extreme westerly end of Long Island Sound is a poor place for the races of a large fleet, and the intermediate ports, between Glen Cove and New London are inconveniently located and offer but poor harbors; however, the fleet manages to make its way with more or less speed as far as the latter port, in fact the squadron runs west of New London each year have been no worse drifts than the ensuing run, from New London to Newport, though a part of the Sound that is likely to be utterly dead so far as sailing is concerned in August.

The programme this year was much as usual, a rendezvous at Glen Cove, Hempstead Bay, on Monday morning, Aug. 6, sailing a special race for the semi-centennial cups offered by the club in commemoration of its fiftieth birthday; Tuesday, first squadron run, Glen Cove to Morris Cove (New Haven); Wednesday, second squadron run, Morris Cove to New London; Thursday, third squadron run, New London to Newport; Friday, Aug. 10, Goelet cups, off Newport; Saturday, fourth squadron run, Newport to Vineyard Haven, lying over Sunday at the latter port. Two more squadron runs, to New Bedford on Monday and Newport on Tuesday, were to end the cruise.

In the absence of Com. Morgan and the flagship May, Vice-Com. E. M. Brown took command of the squadron, in the steam yacht Sheerwater, with him being Fleet Capt. Robinson and the regatta committee, Messrs. S. Nicholson Kane, Chester Griswold and Irving Grinnell.

The usual large fleet was at anchor off Glen Cove on Monday morning, though most of the yachts had reached there with difficulty after the calm weather of Saturday. The course for the special race was from off Matinnicock Point, around a mark off Lloyd's Neck and a second mark off Green's Ledge, Norwalk Islands, and home. All through the morning there was a flat calm, the fleet lying idle, and it was not until 4 P. M. that a light south wind sprang up, increasing so that at 4:25 the single-stick division started, with the schooners at 4:30. The race was finished about 9 P. M., and, being sailed partly in the dark, was uninteresting, even to those on the yachts. As for the members and guests on the club steamer, for whose special benefit the races off Glen Cove are arranged, they fared almost as badly as last year; then they were kept well inside the harbor out of view of the line until the yachts had started in a slashing race, and after the finish, which they managed to see, the steamer was held for a couple of hours at Glen Cove, reaching New York late at night. This time she started for the city immediately after the start, getting her passengers home in time for dinner, for which they were duly thankful, but the whole day was wasted in gazing at the natural beauties of Glen Cove. The only important thing about the race is the official table of times, as follows:

| | Start. | Finish. | Elapsed | Corrected. |
|---|---|---|---|---|
| SCHOONERS—CLASS 3. | | | | |
| Merlin | 4 33 25 | 8 56 15 | 4 22 50 | 4 22 50 |
| Emerald | 4 52 05 | 8 52 29 | 4 20 24 | 4 18 40 |
| CLASS 5. | | | | |
| Ariel | 4 32 02 | 8 43 43 | 4 11 41 | 4 11 41 |
| Marguerite | 4 34 15 | 8 59 53 | 4 25 38 | 4 25 38 |
| Shamrock | 4 34 44 | 9 38 40 | 5 03 57 | 4 58 08 |
| CLASS 5 | | | | |
| Elsemarie | 4 33 39 | 9 47 22 | 5 13 43 | 5 13 43 |
| Loyal | 4 33 18 | 10 25 20 | 5 52 02 | 5 45 26 |
| Neaera | 4 32 20 | 10 30 42 | 5 58 22 | 5 46 47 |
| CUTTERS AND SLOOPS—CLASSES 4 AND 5. | | | | |
| Queen Mab | 4 25 30 | 8 50 14 | 4 24 44 | 4 24 44 |
| Eclipse | 4 27 21 | 10 12 04 | 5 44 43 | 5 37 46 |
| CLASS 6. | | | | |
| Wasp | 4 25 52 | 8 42 08 | 4 16 16 | 4 16 16 |
| Ilderim | 4 26 24 | 9 03 25 | 4 37 01 | 4 36 55 |
| Gloriana | 4 25 23 | 8 53 09 | 4 27 46 | 4 27 00 |
| Jessica | 4 27 10 | 9 21 03 | 4 53 53 | 4 48 58 |
| CLASS 7. | | | | |
| Gossoon | 4 26 40 | 9 15 06 | 4 48 26 | 4 48 26 |
| Awa | 4 27 10 | Not timed. | | |
| Minerva | 4 27 30 | 9 32 47 | 5 05 17 | 5 02 36 |
| Polly | 4 26 49 | Not timed. | | |

The winners ars: Class 3, schooners, Emerald; Class 4, Ariel; Class Elsemarie; Cutters, Class 4, Queen Mab; Class 5, Eclipse; Class 6, Wasp first; Gloriana second; Class 7, Gossoon first; Minerva second.

### First Squadron Run.

GLEN COVE TO MORRIS COVE.

*Tuesday, Aug. 7.*

Tuesday morning was no better than Monday, so far as real racing was concerned, but the starting signal was given at 10:35, the yachts getting over the line as best they could, and later catching a light southwest air which carried them along at a 5-knot gait, bringing them into Morris Cove in good time for dinner. As usual in the Sound in light weather, the fleet was so broken up that there was no close racing on the run. The official times were:

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| SCHOONERS—CLASS 3. | | | | |
| Merlin | 10 45 00 | 5 49 15 | 7 04 15 | 7 04 15 |
| Emerald | 10 45 00 | 6 07 09 | 7 22 09 | 7 19 41 |
| Atlantic | 10 45 00 | 6 17 05 | 7 32 05 | 7 27 27 |
| CLASS 4. | | | | |
| Ariel | 10 45 00 | 5 49 51 | 7 04 51 | 7 04 51 |
| Marguerite | 10 45 00 | 5 57 08 | 7 12 08 | 7 12 08 |
| Dagmar | 10 45 00 | 6 20 13 | 7 35 13 | 7 28 51 |
| Shamrock | 10 45 05 | 6 11 30 | 7 26 30 | 7 18 14 |
| CLASS 5. | | | | |
| Elsemarie | 10 45 00 | 5 47 42 | 7 02 42 | 7 02 42 |
| Viator | 10 45 00 | 6 25 40 | 7 40 40 | 7 31 35 |
| Loyal | 10 45 00 | 6 20 32 | 7 35 32 | 7 26 00 |
| Triton | 10 45 00 | 6 50 43 | 8 05 43 | 7 55 29 |
| Gevalia | 10 45 00 | 6 29 23 | 7 44 23 | 7 38 58 |
| Neaera | 10 45 00 | 6 17 52 | 7 32 52 | 7 15 23 |
| CUTTERS AND SLOOPS—CLASS 4. | | | | |
| Queen Mab | 10 40 00 | 6 16 22 | 7 36 22 | 7 36 22 |
| Wizard | 10 37 57 | 6 36 48 | 7 58 57 | . .. .. |
| CLASS 5 | | | | |
| Eclipse | 10 40 00 | 6 25 00 | 7 45 00 | 7 45 00 |
| Eleanor | 10 40 00 | 6 38 55 | 7 58 55 | . .. .. |
| CLASS 6. | | | | |
| Wasp | 10 38 58 | 5 57 52 | 7 18 54 | 7 18 54 |
| Ilderim | 10 41 00 | 6 02 13 | 7 22 13 | 7 22 05 |
| Gloriana | 10 40 00 | 6 01 53 | 7 21 53 | 7 20 47 |
| Jessica | 10 40 00 | 6 40 50 | 8 00 50 | 7 53 51 |
| CLASS 7. | | | | |
| Gossoon | 10 39 16 | 6 14 28 | 7 35 12 | 7 35 12 |
| Awa | 10 40 00 | 6 35 09 | 5 55 09 | 7 53 27 |
| Minerva | 10 40 00 | 6 25 01 | 7 45 01 | 7 41 12 |
| CLASS 8—MIXED. | | | | |
| Navahoe | 10 40 00 | 5 54 23 | 7 14 23 | . .. .. |
| Oriole | 10 40 00 | 6 45 15 | 8 05 15 | . .. .. |
| Katrina | 10 40 00 | 6 29 54 | 7 49 54 | . .. .. |

The winners were: Schooners—Class 3, Merlin; class 4, Ariel, Marguerite second; class 5, Elsiemarie, Neaera second. Cutters—Class 4, Queen Mab; class 5, Eclipse; class 6, Wasp, Gloriana second; class 7, Gossoon; class 8, Navahoe.

Through an error of an hour in the first reports, the old sloop Wizard was credited with a victory over Queen Mab, but the Watson centerboard cutter actually beat her very badly; Wizard not being measured, so that the corrected time is not known.

### Second Squadron Run.

MORRIS COVE TO NEW LONDON.

*Wednesday, Aug. 8.*

The second run started well, with a fresh S.W. wind, but before long it had fallen, resulting in another dull and slow race, with little sharp or conclusive work; the times being:

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| THIRD CLASS—SCHOONERS. | | | | |
| Merlin | 8 47 18 | 3 08 04 | 6 20 46 | 6 20 46 |
| Emerald | 8 47 46 | 2 56 53 | 6 09 07 | 6 06 27 |
| FOURTH CLASS—SCHOONERS. | | | | |
| Ariel | 8 46 58 | 2 55 20 | 6 08 22 | 6 08 22 |
| Marguerite | 8 47 50 | 3 01 39 | 6 13 49 | 6 13 49 |
| Dagmar | 8 50 00 | 3 14 41 | 6 24 41 | 6 17 48 |
| Shamrock | 8 48 06 | 3 09 25 | 6 21 19 | 6 12 23 |
| FIFTH CLASS—SCHOONERS. | | | | |
| Elsemarie | 8 46 31 | 3 09 15 | 6 22 44 | 6 22 44 |
| Viator | 8 49 06 | 3 36 33 | 6 47 27 | 6 37 38 |
| Loyal | 8 46 39 | 3 28 36 | 6 41 57 | 6 31 48 |
| Triton | 8 48 42 | 3 43 08 | 6 54 26 | 6 43 32 |
| Gevalia | 8 50 00 | 3 32 10 | 6 42 10 | 6 27 39 |
| Neaera | 8 50 00 | 3 46 30 | 6 56 30 | 6 38 41 |
| FOURTH CLASS—CUTTERS AND SLOOPS. | | | | |
| Queen Mab | 8 40 42 | 3 16 47 | 6 36 05 | 6 36 05 |
| Wizard | 8 40 52 | 4 09 44 | 7 28 52 | . .. .. |
| FOURTH CLASS. | | | | |
| Eclipse | 8 41 13 | 3 48 55 | 7 07 42 | 7 07 42 |
| Eleanor | 8 43 22 | 4 06 12 | 7 22 50 | . .. .. |

| | | | | |
|---|---|---|---|---|
| SIXTH CLASS. | | | | |
| Wasp | 8 41 51 | 3 16 13 | 6 34 22 | 6 34 22 |
| Ilderim | 8 40 32 | 3 26 05 | 6 45 33 | 6 45 24 |
| Gloriana | 8 43 48 | 3 23 27 | 6 39 39 | 6 38 28 |
| Jessica | 8 43 20 | 3 54 58 | 7 11 38 | 7 04 05 |
| SEVENTH CLASS. | | | | |
| Gossoon | 8 40 25 | 3 53 06 | 7 12 41 | 7 12 41 |
| Awa | 8 40 46 | 3 59 29 | 7 18 43 | 7 16 53 |
| Minerva | 8 44 23 | 4 01 10 | 7 16 47 | 7 12 29 |
| Polly | 8 40 49 | Not timed. | | |
| EIGHTH CLASS—MIXED. | | | | |
| Palmer | 8 48 02 | 2 54 31 | 6 06 29 | 6 06 29 |
| Navahoe | 8 40 46 | 2 47 10 | 6 06 24 | . .. .. |
| Katrina | 8 45 00 | 3 01 15 | 6 16 15 | 6 07 29 |

The winners are: Schooners—Class 3, Emerald; Class 4, Ariel; Shamrock second; Class 5, Elsemarie; Gevalia second. Cutters—Class 4, Queen Mab; Class 5, Eclipse; Class 6, Wasp; Gloriana second; Class 7, Minerva; Gossoon second; Class 8, mixed, Navahoe.

The oldest yachtsman among the fleet can look back to the time when they still had in anticipation their first experience of the "yachtsman's ball" at the Pequot House at New London; that gathering of fair women and brave men, where sensuous music, softly burning lights and the sweet summer zephyrs combine to make the very poetry of yachting life. There are now young men on the threshold of yachting who read the same old stories in the daily papers, and congratulate themselves that by next year or perchance the year after, they may be fortunate enough to take part in this dream of yachting. We hate to shatter these bright hopes, but truth and candor compel us to disclose the sad fact that the whole beautiful structure is a fiction, not to say a fake. Nothing could be further from the dazzling picture that has existed for years, than the stern reality, a lot of Chinese lanterns hung about the lawn and piazzas and dripping grease on innocent and unsuspecting victims; a violin and piano playing "Sweet Marie" in the parlor, to a few whirling couples who would be puzzled to say which end of a yacht went through the water first. There are yachtsman present it is true, and real yachtsmen too, in white ducks and blue jackets; but they one and all wander up from the dock and stand around the wide piazza with an expression that indicates a wonder why they are there and a wish that they were anywhere else, until finally a thought strikes them and they move swiftly through the hall and across the rear lawn to a large building with screen doors on swing hinges, from behind which come laughter and hilarious sounds. New London is a very convenient place for a stop over night, a famous yachting rendezvous with a good harbor, but its social features exist only in the imagination.

## Third Squadron Run.

NEW LONDON TO NEWPORT.

*Thursday, Aug. 9.*

There was no wind on Thursday morning, but by 9 o'clock a light S.W. air was stirring, and the starting signal was given at 9:20. The fleet had increased by the addition of Constellation, Mayflower and Volunteer, the latter making a classmate for Navahoe. Her new rig, however, is so unsatisfactory that she is not racing, except on the runs; and no comparison between her and the newer boat is possible.

The three miles to Race Rock was a close reach, then sheets were started and balloon topsails set, and later, with a very light breeze, these were supplemented by spinakers.

When nearing Point Judith the wind freshened and good time was made to the finish by the leaders, but a thunder squall from the N.W., with rain and lightning, preceded by a calm, hindered the later boats. The times were:

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| FIRST CLASS—SCHOONERS. | | | | |
| Constellation | 9 30 00 | 1 51 15 | 4 21 15 | 4 21 15 |
| Palmer | 9 30 00 | 2 02 58 | 4 32 58 | 4 30 07 |
| THIRD CLASS—SCHOONERS. | | | | |
| Merlin | 9 30 00 | 1 57 09 | 4 27 09 | 4 27 09 |
| Mayflower | 9 29 40 | 1 51 33 | 4 21 53 | 4 19 17 |
| Emerald | 9 30 00 | 1 59 48 | 4 29 48 | 4 27 08 |
| FOURTH CLASS—SCHOONERS. | | | | |
| Ariel | 9 26 51 | 2 00 48 | 4 33 57 | 4 33 57 |
| Marguerite | 9 26 59 | 1 58 21 | 4 31 22 | 4 31 22 |
| Dagmar | 9 27 49 | 2 17 52 | 4 50 03 | 4 43 10 |
| Shamrock | 9 26 30 | 2 09 33 | 4 43 03 | 4 34 07 |
| FIFTH CLASS SCHOONERS. | | | | |
| Elsiemarie | 9 27 24 | 2 07 12 | 4 39 48 | 4 39 48 |
| Loyal | 9 28 26 | 2 27 52 | 4 59 26 | 4 49 17 |
| Triton | 9 30 00 | 2 49 30 | 5 19 30 | 5 08 26 |
| Gevalia | 9 29 51 | 2 34 46 | 5 04 55 | 4 50 24 |
| Neaera | 9 30 00 | 2 29 04 | 4 59 04 | 4 51 15 |

| Volunteer | 9 21 58 | 1 57 41 | 4 35 43 | Not meas. |
| Navahoe | 9 20 36 | 1 40 30 | 4 19 54 | Not meas. |
| THIRD AND FOURTH CLASSES. | | | | |
| Katrina | 9 23 00 | 2 03 08 | 4 40 08 | 4 40 08 |
| Queen Mab | 9 21 21 | 2 06 13 | 4 44 52 | 4 31 36 |
| FIFTH CLASS. | | | | |
| Oriva | 9 24 46 | .. .. .. | .. .. .. | .. .. .. |
| Eclipse | 9 22 07 | 2 30 48 | 5 08 41 | 5 08 41 |
| Eleanor | 9 22 04 | .. .. .. | .. .. .. | .. .. .. |
| SIXTH CLASS. | | | | |
| Wasp | 9 22 31 | 2 03 42 | 4 41 11 | 4 41 11 |
| Ilderim | 9 21 21 | 2 26 49 | 5 04 28 | 5 05 19 |
| Gloriana | 9 23 58 | 2 09 18 | 4 45 20 | 4 44 09 |
| Jessica | 9 21 50 | 2 31 38 | 5 09 48 | 5 02 15 |
| SEVENTH CLASS. | | | | |
| Gossoon | 9 23 50 | 2 29 31 | 5 05 41 | 5 05 41 |
| Awa | 9 23 04 | 3 02 15 | 5 39 11 | 5 37 21 |
| Minerva | 9 23 40 | 2 36 37 | 5 12 57 | 5 08 49 |

The winners were: Constellation; Mayflower, Emerald second; Marguerite; Elsiemarie, Neaera second; Navahoe; Eclipse; Wasp and Gossoon.

## Goelet Cups.

NEWPORT—BLOCK ISLAND COURSE.

*Friday, Aug. 10.*

As races go, the Goelet cup race of 1894 may be set down as a success, the schooner racing was good, especially for this season, with a fleet of eight fast yachts, and an average of 9 knots over the course, and though the single-stick division was a disappointment, the race as a whole was far better than last year. The victory of Emerald will be gratifying to a great many yachtsmen who have watched the gradual working up of the boat this season after her poor performance last year and in the early races of last June as well. Now that she is in proper trim, with good sails and good handling, she is making a record that her designer, Mr. Wintringham, may well be proud of. The absence of Volunteer in the singlestick class robbed it of all interest, the great difference in size between Navahoe and her competitors, as well as the disparity in every way between Queen Mab and the 46-footers, making a tame and inconclusive race. Navahoe's allowance to Wasp would be about 35m., the former not being measured, and Navahoe covered the course of 38 miles in 55m. less time or 20m. more than her allowance. The known speed of Wasp and Gloriana, both very fast boats in their class, would indicate that, however fast Navahoe may be, no allowance tables can ever make an interesting or conclusive race between boats which differ so greatly in size.

The starters far the two cups offered by Mr. Ogden Goelet, of $1,000 for schooners and $500 for cutters and sloops, were:

| | Measurement. | Allow'e. |
|---|---|---|
| SCHOONERS. | | |
| Constellation, Bayard Thayer | 107.24 | Allows |
| Merlin, W. H. Forbes | 93.95 | 7 51 |
| Mayflower, W. A. Gardner | 89.63 | 10 19 |
| Emerald, J. R. Maxwell | 89.51 | 10 23 |
| Ariel, G. H. B. Hill | 83.53 | 14 39 |
| Marguerite, H. W. Lamb | 83.48 | 14 89 |
| Elsiemarie, J. B. King | 75.60 | 21 00 |
| Shamrock, W. P. Ward | 73.18 | 23 08 |
| CUTTERS. | | |
| Navahoe, R. P. Carroll | Not measured. | |
| Queen Mab, Percy Chubb | 63.28 | Allows |
| Wasp, Lippitt Bros | 54.97 | 10 26 |
| Ilderim, C. Vanderbilt, Jr | 54.88 | 10 35 |
| Gloriana, H. M. Gillig | 54.17 | 11 34 |

The wind was very light in the morning, and the yachts worked out to Brenton's Reef Lightship with clubtopsails aloft only to drift about and wait for wind. About 1 o'clock a light S.E. breeze came in and the signals were set for the Block Island course, 13 miles to a buoy off Block Island, 18 miles to a buoy off West Island, and 6½ miles home. The start for the single-stickers was given at 1:20, and that for the schooners at 1:25, the fleet being timed at the line:

| | | | |
|---|---|---|---|
| Gloriana | 1 20 24 | Mayflower | 1 27 05 |
| Queen Mab | 1 20 37 | Merlin | 1 27 42 |
| Wasp | 1 21 23 | Ariel | 1 28 25 |
| Navahoe | 1 21 40 | Marguerite | 1 28 25 |
| Ilderim | 1 20 50 | Elsiemarie | 1 29 25 |
| Emerald | 1 26 23 | Shamrock | 1 29 59 |
| Constellation | 1 26 54 | | |

Starting, as usual over this course, on the port tack, all stood in for the Narragansett shore, but after a little time the wind came out S.W., making a beat to the first mark. Navahoe easily led the fleet, but the little Queen Mab fought hard for second place and turned the weather mark ahead of the schooners and with the three 46-footers well astern. The unofficial times at the Block Island mark were:

| | |
|---|---|
| Navahoe | 3 15 07 |
| Queen Mab | 3 35 10 |
| Emerald | 3 37 32 |
| Wasp | 3 43 56 |
| Gloriana | 3 44 17 |
| Ariel | 3 45 20 |
| Constellation | 3 45 34 |

With smooth water and a good S.W. wind in her big spinaker Navahoe ran off the second leg, dropping Queen Mab and Emerald. The times at the second mark were:

| | |
|---|---|
| Navahoe | 5 05 27 |
| Emerald | 5 31 50 |
| Queen Mab | 5 34 00 |
| Constellation | 5 36 40 |
| Wasp | 5 45 10 |
| Marguerite | 5 45 35 |
| Ariel | 5 46 05 |

The full times were:

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| SCHOONERS. | | | | |
| Constellation | 1 26 54 | 6 18 30 | 4 51 36 | 4 51 36 |
| Merlin | 1 27 42 | 6 38 23 | 5 10 41 | 5 02 50 |
| Mayflower | 1 27 05 | 6 39 16 | 5 12 11 | 5 01 52 |
| Emerald | 1 26 23 | 6 11 18 | 4 44 55 | 4 34 32 |

## Fourth Squadron Run.

NEWPORT TO VINEYARD HAVEN.

*Saturday, Aug. 11.*

The run to the Vineyard was made on Saturday, the racing being quite on a par with that of last year over the same course, a sort of wind sandwich made up of a breeze at the start and finish and a fine large slice of calm in the middle. The calm was varied by streaks of wind which favored some yachts and skipped others, making the run a very dull affair. The official times were:

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| THIRD CLASS—SCHOONERS. | | | | |
| Merlin | 10 46 45 | 5 35 15 | 6 48 30 | 6 48 30 |

## Fifth Squadron Run.

VINEYARD HAVEN TO NEW BEDFORD.

*Monday, Aug. 13.*

After a quiet Sunday at Cottage City, an early start was called on Monday, and the gun was fired at 8:20 A. M. After a blow on Sunday night, the wind, from the east, fell light in the morning, while it rained hard until the afternoon. The run up Vineyard Sound was made under spinakers, sheets being trimmed for a close reach after passing through Quick's Hole. The sun appeared for a short time near the finish and then the clouds closed in again. The official times of the run were:

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| THIRD CLASS SCHOONEPS. | | | | |
| Merlin | 8 30 00 | 11 23 37 | 2 53 37 | 2 53 37 |
| Mayflower | 8 30 00 | 11 17 35 | 2 47 35 | 2 46 13 |
| Emerald | 8 30 00 | 11 16 42 | 2 46 42 | 2 45 18 |
| Atlantic | 8 30 00 | 11 33 19 | 3 03 19 | 3 00 41 |
| FOURTH CLASS SCHOONERS. | | | | |

| Gossoon | 8 24 26 | 11 34 07 | 3 09 41 | 3 09 41 |
| Awa | 8 25 00 | 11 39 59 | 3 14 59 | 3 14 01 |
| Minerva | 8 23 48 | 11 34 47 | 3 10 59 | 3 08 49 |
| EIGHTH CLASS—MIXED. | | | | |
| Constellation | 8 23 33 | 11 09 08 | 2 40 35 | 2 40 35 |
| Katrina | 8 23 00 | 11 11 31 | 2 48 31 | 2 42 16 |
| Queen Mab | 8 21 50 | 11 19 09 | 2 55 19 | 2 42 06 |

On arriving at New Bedford, a meeting of captains was held on board the flagship, after which the rowing races were called. The cutter race, for the Owl colors, was won by Crusader's boat, with Atlantic second and Oriole third. The dinghy race was won by Republic, with Merlin second, Iroquis third, and Harbinger fourth. The gig race, for the Gamecock colors, was won by Katrina, with Merlin second and Alert third. The naphtha launch race was won by Dagmar, with Shearwater second and Iroquois third. On Tuesday the last run to Newport was made, the squadron disbanding there.

## The Cowes Races.

THE Cowes week of 1894, after all its brilliant promise, has proved but a fiasco, the only exciting features being the matches between Vigilant and Britannia, in the Royal London Y. C. regatta on Monday, in which Vigilant won easily, around the Isle of Wight, and in the Royal Yacht Squadron of Thursday, over the same course as the private match on the previous Saturday, in which Britannia turned the tables and won in "Vigilant weather." The event of Tuesday was the Queen's cup race, open only to yachts of the Squadron, so that Vigilant and Satanita were barred, the starters being Britannia, Carina, L'Esperance, Castanet, Meteor and Mohawk. The course was first to the westward from Cowes, around a buoy off Lymington, then back and well to the eastward, around the Bullock Patch Buoy, beyond the Warner, and home, fifty miles. Carina won easily, the race being a handicap. Britannia was over the line too soon but did not return in answer to the recall signal, so was disqualified.

After Monday's race Vigilant went to Southampton to dock and repair any damages caused by the grounding off Ventnor, but no dock was vacant, so divers were sent down, who reported the lead somewhat injured. They smoothed it off as much as possible and the yacht was towed over to Cowes in time for Wednesday's race, also a Y. R. S. regatta, in which she was to meet Britannia, Meteor and Satanita.

Britannia, after the Queen's cup race of Tuesday, was obliged to dock, her keel being also injured, so was not on hand on Wednesday morning. A meeting of the Royal Yacht Squadron was held on Tuesday and several candidates elected, but Mr. A. D. Clarke, owner of Satanita, a well-known racing yachtsman, proposed by the Prince of Wales, was blackballed. In consequence of this unpleasant incident, Mr. Clarke not unnaturally decided to do no racing in the R. Y. S. regattas, and left Cowes with his yacht. This left only Vigilant and Meteor; and, as the conditions originally called for three starters, there was no race. Later in the day Mr. Gould was invited to sail over for half the prize, but declined to do so. The day was cold and rainy, but with a strong wind and some sea. Vigilant was under way with guests aboard during the day.

| | |
|---|---|
| Mayflower | 3 49 50 |
| Merlin | 3 49 54 |
| Mrrguerite | 3 54 22 |
| Ilderim | 4 04 41 |
| Elsemarie | 4 07 40 |
| Shamrock | 4 09 28 |

The third race of the R. Y. S., for the Town cup, £100, on Thursday, Aug. 8, was over the Lepe and Warner course, as on Saturday, the wind being fresh N.W. and holding through the race. Only Vigilant and Britannia started, both setting jibheaders, and then shifting to clubtopsails before the start, as the wind lightened a little. Starting to windward, Britannia was under Vigilant's lee bow when they tacked on the line, and planted herself on the weather bow by her superior speed in stays. Britannia held this advantage out to the Lepe Buoy, where they turned: Britannia 10:54:43, Vigilant 10:56:17.

| | |
|---|---|
| Gloriana | 5 46 30 |
| Mayflower | 5 50 27 |
| Merlin | 5 50 59 |
| Shamrock | Not timed. |
| Elsiemarie | Not timed. |
| Ilderim | Not timed. |

After jibing spinakers were set to starboard and carried until well past Cowes, then they were taken in and finally set again, though but for a short time, being stowed before Ryde Pier was passed. The times at the Warner were: Britannia 11:48:00, Vigilant 11:48:45.

The course back to the line was by the wind, with a fresh squally breeze, and Britannia gained a good lead, the times at Cowes being: Britannia 12:56:36, Vigilant 12:59:11.

Beating out to the Lepe Buoy with more wind, Britannia continued to gain, and they were timed: Britannia 1:19:10, Vigilant 1:23:53.

Again they carried spinakers past Cowes and reached off for the outer mark, Vigilant picking up a little. The times at the Warner were: Britannia 2:15:30, Vigilant 2:19:13.

On the way to the finish, with plenty of wind in hard puffs over the land, Vigilant gained, the final times being: Britannia 3:18:05, Vigilant 3:20:19.

Britannia wins by 4m. 18s. corrected. The average speed was just 10 knots, as compared with 11.7 on Saturday; but on that occasion working topsails were carried by both yachts, while to-day they carried club topsails. The wind was strong and at times very puffy, and Vigilant is described as carrying her canvas less easily than Britannia and showing a great deal of side when she heeled. There were no flukes and the race was a fair one from start to finish.

On Friday the race for the Meteor shield took place, being a sail-over for Britannia, and on Saturday the Royal Southampon Y. C. regatta was sailed, but none of the large yachts started. Vigilant being docked for repairs to her lead keel. The reports of the injury are very indefinite, but the keel was cut and scored on the rocks in Monday's race. The sails were also altered under Mr. Wilson's direction, and new jib and forestays were fitted, while the yacht was thoroughly overhauled wherever needed. Mr. Gould has challenged for the Cape May cup, and for some days negotiations have been pending between him and the Prince of Wales for a match of 15 miles to windward and leeward for a cup offered by Lord Wolverton, the date first proposed being Monday, Aug. 13. The docking and necessary repairs of Vigilant made it imperative to select a later date, so Wednesday was named. By dint of hard work everything was ready on Vigilant by Saturday night, but the later date had already been agreed on.

The cable reports of the Cowes races have been meagre and indefinite, but it is evident that much ill feeling exists between the partisans of Vigilant and Britannia among the spectators ashore, as well as some of those closely connected with the boat. The complaint is quite general that while Britannia has been saluted by cheers, guns and whistles whenever she has won, that Vigilant's victories have been received by the fleet and those ashore in cold silence. The attitude of the Prince of Wales throughout has been most sportsmanlike and he has taken Britannia's defeats in a proper spirit, but from all accounts the Cowes assemblage has taken a different course.

Apart from this outside matter, it is apparent that there is a feeling that is anything but friendly between some of those connected with each boat; and it found vent in the luffing in the Royal London Y. C. regatta, around the Isle of Wight, when both yachts went on the rocks. No intelligible account of the occurrence has been received on this side, but it would seem that Britannia and Vigilant were working the shore closely, the former to windward and the latter inshore of her; and that Britannia failed to give way, thus crowding Vigilant in on the rocks and striking herself in so doing. In the previous race, the private match, it is stated that Vigilant, after hailing Britannia for room when close inshore, failed to follow the latter after she had tacked, but stood on for some distance. If this is true, it offers an explanation of Britannia's refusal to give way in the next race. Mr. W. G Jameson's reputation as a sharp racing man who will push the rules to the last letter is known even on this side; but he has quite met his match in Mr. C. Oliver Iselin, the managing member of the Vigilant syndicate of last year, who has sailed on her in the late races at Cowes.

On Tuesday the first regatta of the Royal Victoria Y. C. was sailed in a strong west wind, the only starters being Britannia and Satanita, Vigilant being at anchor off Cowes, her crew preparing for the match of Wednesday.

Satanita won by 1m. 10s. corrected time, after an exciting race.

## American Y. C. Annual Regatta.

NEWBURYPORT, MASS.

*Monday, Aug. 7.*

THE American Y. C., of Newburyport, Mass., sailed its 9th annual regatta on Aug. 7, with a large fleet and a fresh S.W. breeze, the result being a great success. The times were:

| | Elapsed. | Corrected. |
|---|---|---|

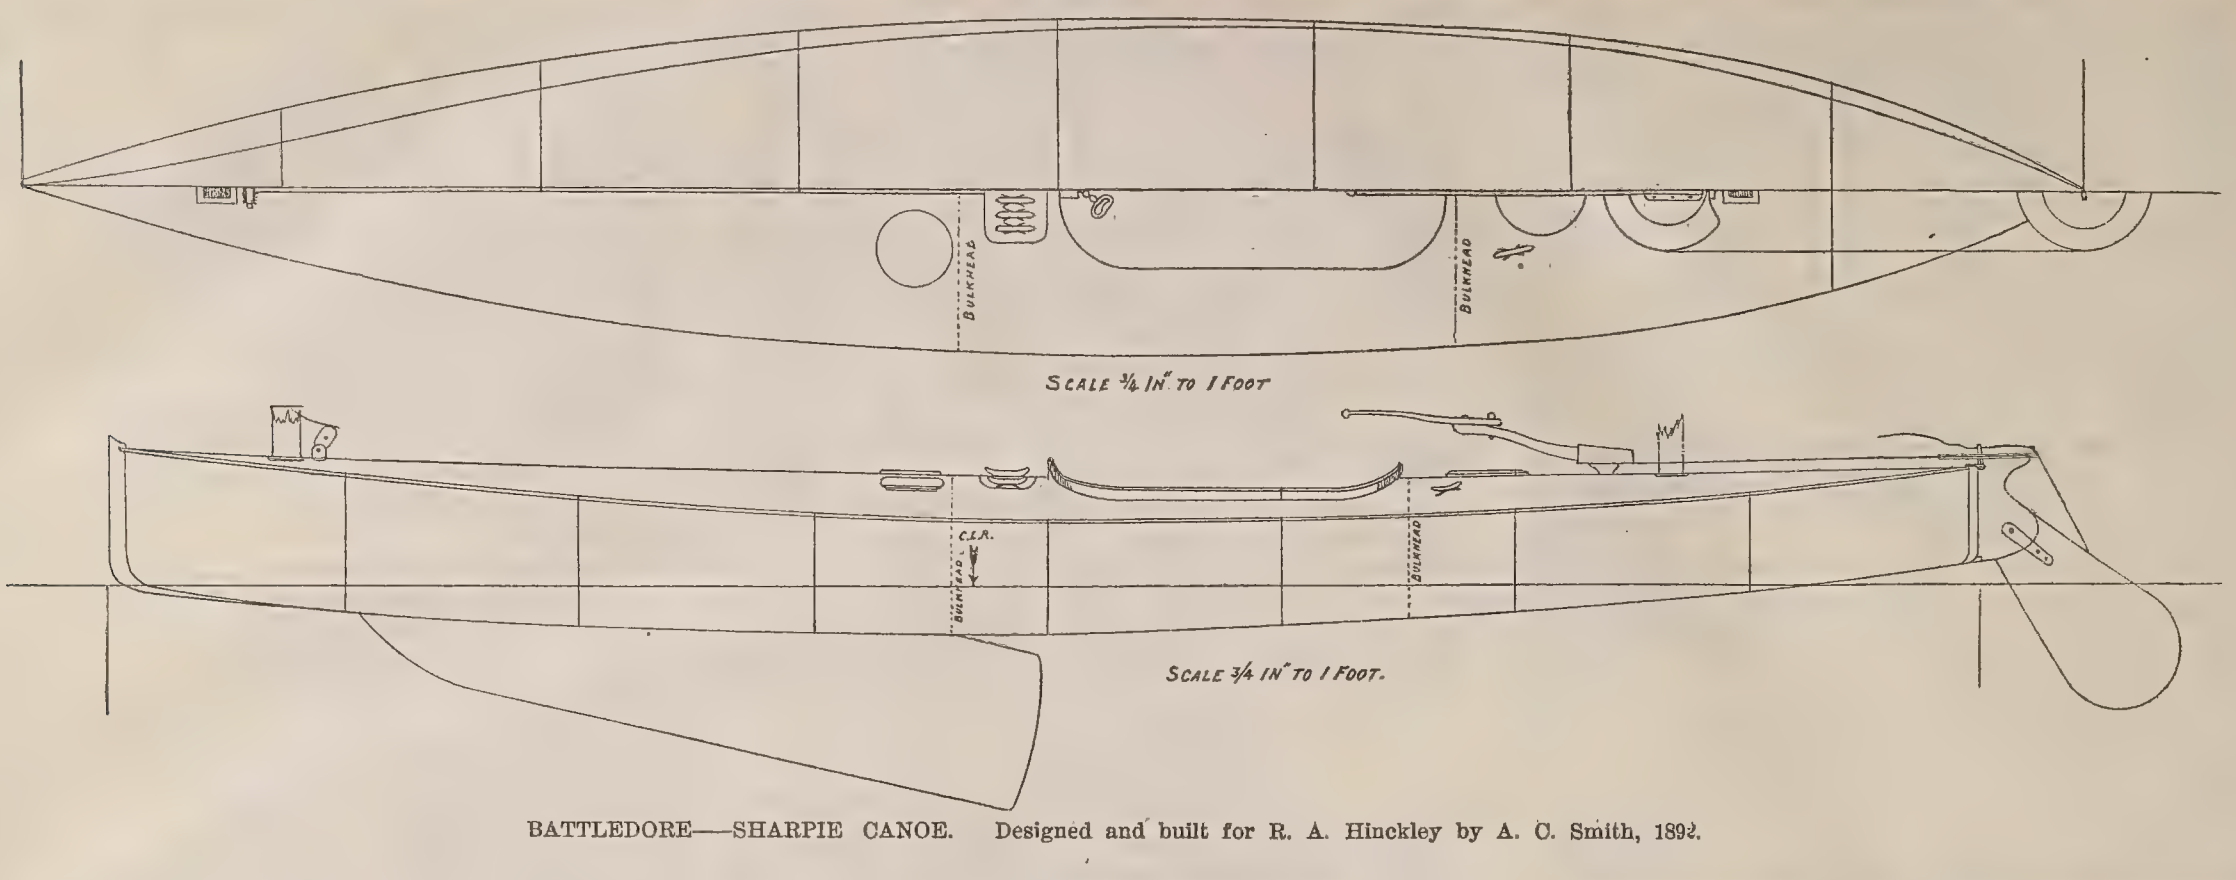
The judges were William J. Creasey, R J. Calef, E. P. Durland, Moody Kimball and P. H Creasey.

## Kill von Kull Y. C. Annual Regatta.



PORT RICHMOND—NEWARK BAY.

*Saturday, Aug. 4.*

THE Kill von Kull Y. C. of Port Richmond, Staten Island, sailed its annual regatta on Aug. 4 over a triangular course on the Kill von Kull and Newark Bay, the wind being fresh from N.E. The times were:

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| CLASS C—OPEN CATBOATS, 20 TO 23FT. | | | |
| Torment, Wm. Haughwout | 20.00 | 1 39 40 | 1 35 50 |
| Tempest, Wm. Haughwout | 22.10 | 1 39 53 | 1 39 53 |
| CLASS D—OPEN CATBOATS, 16 TO 18FT. | | | |
| Minnie H., J J. Houston | 19.10 | 1 43 43 | 1 39 39 |
| Maria, Geo. Ross | 18.06 | 1 48 50 | 1 42 40 |
| Doctor, Dr. Barber | 18.00 | 1 46 54 | 1 39 54 |

| CLASS F—OPEN CATBOATS UNDER 16FT. | | | |
| Irving H., J. J. Houston | 15.00 | 2 17 32 | 2 04 43 |

The regatta committee included Messrs. Geo. Ross, chairman; H. E. Buel, T. F. Donovan and A. G. Hastings.

BATTLEDORE—SHARPIE CANOE. Designed and built for R. A. Hinckley by A. C. Smith, 1892.

## Indian Harbor Y. C. Annual Regatta.

GREENWICH—LONG ISLAND SOUND.

*Saturday, Aug. 4.*

The annual regatta of the Indian Harbor Y. C. brought out a fine fleet of entries, but the wind was lacking, the start being postponed from 11 to 1 o'clock, and even then the first part of the race being sailed in a light breeze. The times were:

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|

| Chippie | 1 32 32 | Did not finish. | | |

The winners are: Schooners, 70ft. class, Viator; cutters, 46ft. class, Nirvana; 40ft. class, Minerva; 35ft. class, Daffodil; 30ft. class, Infanta; 25ft. class, Pyxie; 21ft. class, Wahneta; 21ft. special, Celia; 21ft. racing length, probably Wave; cabin catboats, 30ft. class, Mary; 25ft. class, Oconee; 21ft. class, Win or Lose; jib and mainsail, 25ft. class, Alf; 20ft. class, Zelda; open catboats, 25ft. class, Gold Dust; 22ft. class, Violet; 20ft. class, Lohengrin.

Infanta is a Fife cutter, built last year by Saunders of Bristol, for Mr. J. B. Mills, of New York, the frame being sent out by Mr. Fife, ready to put together. Wave is a sailing boat of 1-rating carried at the davits of Mr. Barber's new steam yacht Cleopatra. She is of a type quite popular in England, and was built by Sibbick, of Cowes.

## Quincy Y. C. Championship.

QUINCY—BOSTON HARBOR.

*Monday, Aug. 7.*

The fourth championship of the Quincy Y. C. was sailed on Aug. 7 in a two-reef breeze; the times being:

| | Elapsed. | Corrected. |
|---|---|---|
| FIRST CLASS. | | |
| Beatrice, John Cavanagh | 1 56 31 | 1 27 19 |
| Gypsy, H. R. Drinkwater | 1 59 31 | 1 28 56 |
| Mudjekeewis, E. E. Davis | 2 02 00 | 1 32 28 |
| Eulalie, R. G. Hunt | Withdrew. | |
| SECOND CLASS. | | |
| Opechee, W. P. Barker | 1 25 50 | 58 42 |
| Magpie, H. G. Otis | 1 25 54 | 59 46 |
| THIRD CMASS. | | |
| In It, R. B. Williams | 1 25 06 | 56 11 |
| Mab, G. E. Pfaffman | 1 29 25 | 59 36 |
| Primrose, H. M. Faxon | 1 31 40 | 1 02 33 |
| Dux, C. F. Colby | Disabled. | |
| Sunbeam, H. B. Faxon | Disabled. | |
| CRUISING CLASS. | | |
| Korban, E. M. Horton | 1 26 43 | 1 02 39 |
| Tautog, W. P. Whitmarsh | 1 33 57 | 1 04 50 |
| Smoke, H. L. Rice | Disabled. | |

The cash prizes were won by Beatrice and Gypsy, Opeechee and Magpie, In It and Mab, and Korban and Tautog. The championship legs were won by Beatrice, fourth time, Opechee, second time, In It, fourth time and Korban.

## Beverly Y. C.

The 212th race, second Buzzards Bay championship, was sailed Aug. 4 at Monument, in a light wind, N.W. at start, but shifting to W., and giving second class a free wind over the course. In this class Kalama won fairly and showed herself the best light weather boat. The course was 9½ miles. Third and fourth classes sailed 7½ miles, fifth class 3¾ miles. Nobska and Gilt Edge sailed a very close race, Nobska finally winning by 15s. They beat their class badly, leading the next pair, Eina and Puzzle, by 10s. Fin and Grilse did the same thing in fourth class, leading the first knockabout by 9m., and beating all the third class but Nobska and Gilt Edge on actual time. Fin beat Grilse to windward 3½m. The latter's sail as cut down is not big enough. Off the wind she gained and finally got a foot or so ahead close to finish, but caught a lobster pot, which pulled her back, and Fin crossed 5s. ahead. Scintilla was ruled out for fouling Kaloola at start. Gilt Edge protests Nobska for fouling Kaloola at start. This protest is not yet decided:

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| FIRST CLASS. | | | |
| Violet, Toby Club | 24.04 | 2 07 44 | 1 55 43 |
| SECOND CLASS. | | | |
| Kalama, Chas. Brewer | 23.07 | 1 54 01 | 1 41 10 |
| Mist, Geo. H. Lyman | 23.09 | 1 57 40 | 1 45 01 |
| Bernice, J. J. Young, Jr. | 23.05 | 1 59 36 | 1 46 34 |
| Gymnote, W. E. C. Eustis | 23.08 | 1 59 45 | 1 47 00 |
| Linotte, W. P. Wilson | 23.02 | 2 02 16 | 1 48 57 |
| Ulula, W. H. Winship | 22.08 | 2 02 45 | 1 47 27 |
| Anonyma, F. L. Dabney | 23.08 | 2 03 59 | 1 51 14 |
| THIRD CLASS. | | | |
| Nobska, A. A. Beebe | 19.06 | 1 47 37 | 1 29 22 |
| Gilt Edge, D. L. Whittemore | 19.07 | 1 43 52 | 1 29 43 |
| Eina, J. Parkinson | 19.11 | 1 53 59 | 1 40 12 |
| Puzzle, Wm. Amory, 2d | 19.10 | 1 54 12 | 1 40 20 |
| Kaloola, H. N. Richards | 19.08 | 1 56 07 | 1 42 04 |
| Daisy, L. M. Stockton | 18.02 | 1 58 10 | 1 42 19 |
| Colymbus, Alfred Winsor | 19.11 | 1 58 19 | 1 44 32 |
| Doris, J. Parkinson | 19.08 | 2 00 52 | 1 46 49 |
| Scintilla, G. S. Fiske | 20.00 | 2 03 41 | 1 50 00 |
| FOURTH CLASS—CATS. | | | |
| Dodo, H. Parker | 16.06 | 1 53 21 | 1 35 16 |
| Dawdle, R. S. Hardy | 16.03 | 1 56 11 | 1 37 45 |
| FOURTH CLASS—JIB AND MAINSAILS. | | | |
| Fin, H. Stockton | 16.02 | 1 49 30 | 1 30 56 |
| Grilse, W. E. C. Eustis | 17.00 | 1 49 35 | 1 32 12 |
| Tourmaline, Edw. Hamlin | 16.06 | 1 58 22 | 1 40 17 |
| Torfrida, H. S. Carruth | 16.06 | 1 58 39 | 1 40 34 |
| Kitten, C. H. Jones | 16.03 | 2 00 50 | 1 42 24 |
| Turkey, C. S. Dennison | 16.08 | 2 01 10 | 1 43 20 |
| FIFTH CLASS—JIB AND MAINSAILS. | | | |
| P D Q, R. W. Emmons | 12.00 | 0 56 40 | 0 43 30 |
| FIFTH CLASS—CATS. | | | |
| Weona, Henry Ware | 14.00 | 1 00 45 | 0 49 20 |

Nobska and P D Q won and hold pennants. Kalama, Fin and Dodo won legs for pennants, beating Anonyma, Grilse and Dawdle. Violet and Weona win legs for pennants.

Regatta committee, N. H. Emmons, J. G. Palfrey, W. Lloyd Jeffries.

## Shelter Island Y. C. Regatta.

GREENPORT—GREENPORT HARBOR.

*Saturday, Aug. 4.*

A fine race was sailed at Shelter Island on Aug. 4, with a number of new and good boats starting. The original fin-keel, the Herreshoff Dilemma, won from the newer boats built to beat her. The times were:

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| CLASS C—SLOOPS. | | | | |

## Biddeford Pool Regatta.

SATURDAY, AUG. 4.

On Aug. 4 a very good race was sailed off Biddeford Pool, for cash prizes presented by Mr. J. C. Richardson, of St. Louis, the wind being light at the start, but freshening into a good sailing breeze. The times were:

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| FIRST CLASS. | | | |
| Hazard, G. P. Wadleigh | 29.03 | 3 59 01 | 3 00 50 |
| Susie, W. D. Turner | 27.06 | 4 05 25 | 3 12 19 |
| Swirl, H. W. Presbury | 42.00 | 3 53 48 | 3 19 32 |
| Brackett, H. E. Brackett | 27.05 | 4 16 49 | 3 23 43 |
| Geneva, Geo. Randall | 31.00 | 4 06 35 | 3 24 21 |
| Gwendoline, Geo. C. Owen | 35.00 | 4 02 14 | 3 24 51 |
| F. C. Seavy, F. C. Seavy | 34.10 | 4 08 51 | 3 26 51 |
| Yolande, A. B. Lewis | 36.02 | 4 12 19 | 3 31 31 |
| Vixen, J. C. Richardson | 56.03 | 3 52 15 | 3 32 00 |
| SECOND CLASS. | | | |
| Beatrice, Geo. E. Orr | 26.00 | 4 24 07 | 3 34 31 |
| Evelyn, G. W. Chase | 30.07 | 4 18 17 | 3 35 23 |
| Edith, Chas. A. Holland | 24.05 | 4 33 53 | 3 41 39 |
| THIRD CLASS. | | | |
| Emma Pearl, Bennell Bros. | 21.00 | 1 34 20 | 1 01 03 |
| Gem, S. S. York | 19.04 | 1 39 44 | 1 01 08 |
| Evangeline, D. H. Willard | 24.02 | 1 31 48 | 1 03 11 |
| Emma C., F. L. Trott | 23.11 | 1 34 25 | 1 04 32 |
| Marie, D. D. Brennon | 19.09 | 1 43 41 | 1 08 47 |
| Sagamore, J. A. Brookmire | 22.02 | 1 40 30 | 1 09 42 |

## The 21ft. Class.

A race of the 21-footers was sailed off Larchmont, over the Matinnicock course, on Aug. 4, the fourth of the series, for various prizes. The wind was fluky and variable, and most unsatisfactory. The start was made at 1 P. M. Vaquero, sailed by her owner, H. B. Duryea, led over the whole course, the times being:

| | Finish. | Elapsed. |
|---|---|---|
| Vaquero, Herman Duryea | 5 34 00 | 4 24 00 |
| Minnetonka, A. B. Alley | 5 46 38 | 4 36 38 |
| Houri, W. B. Duncan | 5 48 30 | 4 38 30 |
| Blonde and Brunette, H. B. Seeley | Withdrew. | |
| Dorothy, H. P. Whitney | Withdrew. | |

The record of wins, including this race, is as follows:

For Com. Husted's cup for the boat winning the most races—Vaquero 3, Dorothy 1.

For the Larchmont cup for the yacht scoring the most points in the series—Vaquero 14, Dorothy 4, Houri 4, Blonde and Brunette 2, Adelaide 2, Minnetonka 2.

For the New York *Times* prize, a pair of marine glasses for the helmsman making the best record—H. B. Duryea 12, T. Hitchcock, Jr., 4, W. B Duncan 3, H. C. Ward, A. Bryan Alley, J. F. Lovejoy and Dr. J F. Woodbury, 2 each; E. A. Willard 1.

For W. G Brokaw's cup for the boat first to win three races—Vaquero 3, Dorothy 1. Vaquero wins the Brokaw cup.

## Shipshape and Bristol Fashion.

Things aboard ship have been kept essentially in shipshape fashion ever since the earliest times of navigation. We find, for instance, that Thucydides wrote, B. C. 424: "I think that the best and most perfect arrangement of things that I ever saw was when I went to look at the great Phenician merchant ship; for I saw the largest amount of naval tackling separately disposed in the smallest possible stowage. I remarked that they severally lay in such a way that they did not require any one to search for them; and yet they were neither placed at random nor entangled one with another, so as to consume time when they were suddenly wanted for use. I saw the captain's assistant in his leisure moments examining and testing everything that a vesssel needs when at sea; so as I was surprised I asked him what he was about, whereupon he replied: 'Stranger, I am looking to see, in case anything should happen, how everything is arranged in the ship and whether anything is wanting or is inconveniently situated; for when a storm arises at sea it is not possible to look for what is wanting or to put right what is arranged awkwardly'."—*Marine Journal.*

## YACHT NEWS NOTES.

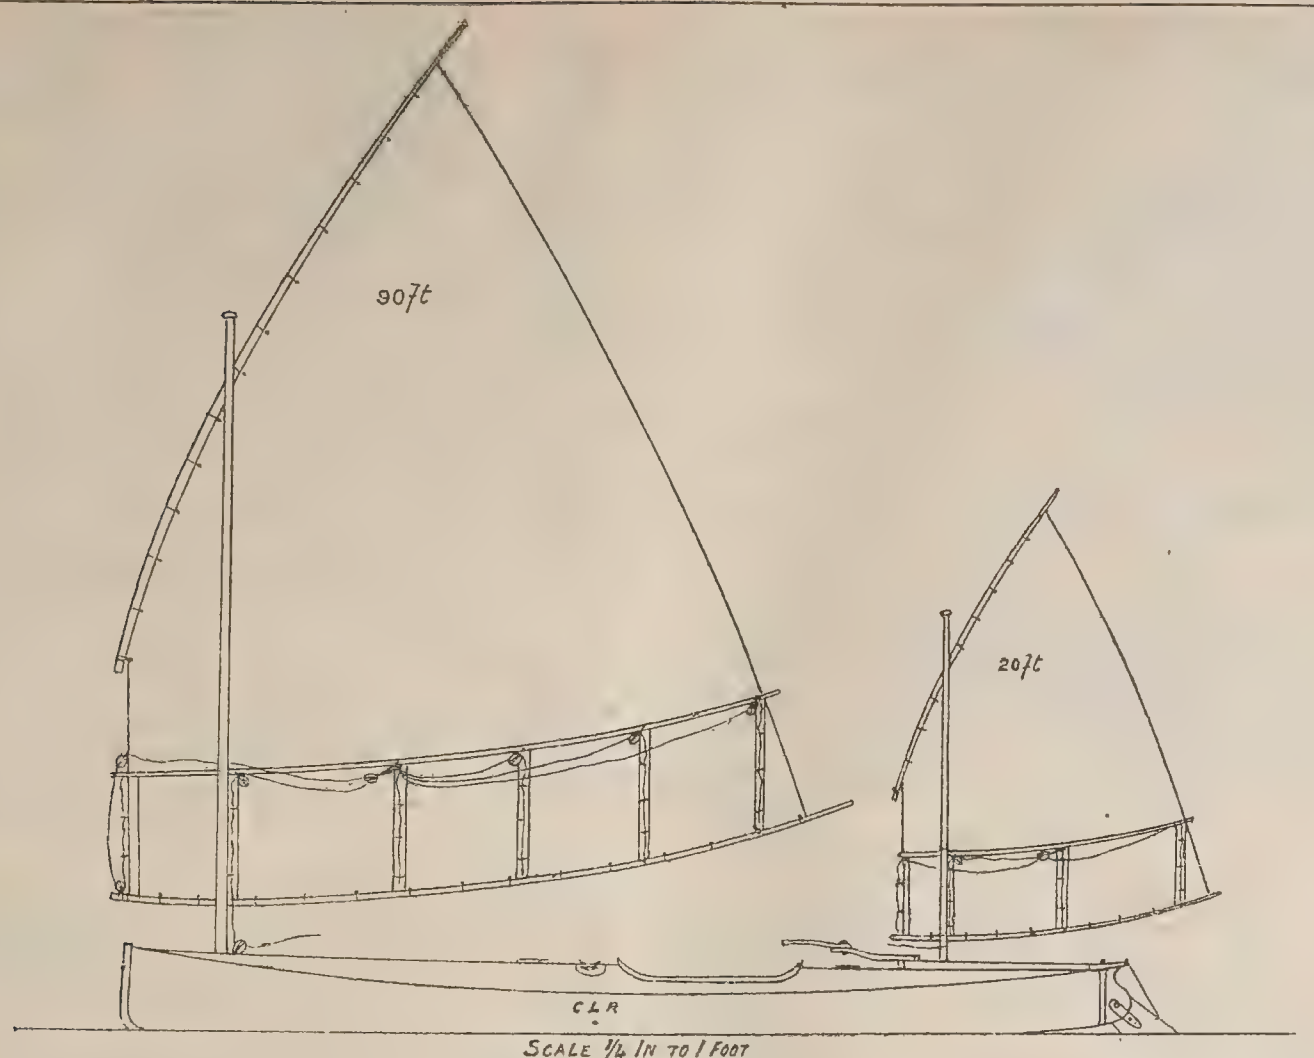
The Corinthian Y. C. annual sweepstakes off Newport will this year be open to the Larchmont 21ft. class, and will probably be sailed this week.

The new purchaser of Valkyrie's hull is a Glasgow iron merchant, John Younger, who paid for her £680 at auction on Aug 3; the spars, boats and sails being sold separately and bringing low prices. It is not stated whether the new owner will repair the yacht, but she is likely in time to be refitted as a cruiser; being too valuable to destroy for the lead and copper. Before the sale was ordered by the underwriters the wreck was surveyed by Messrs. Watson, Henderson and Will Fife, Sr.

Lagonda, steam yacht, has recently been chartered to Edwin Gould, with the privilege of purchase.

A special race for knockabout boats under the definition of the class adopted by the Corinthian and Beverly yacht clubs will be sailed from Marblehead harbor on Monday, Aug. 20, at 2 P. M., unless unfavorable weather necessitates postponement. All matters connected therewith, not otherwise specified, will be governed by the racing rules of this club so far as they may apply. Entries (which must inclose a certificate from the measurer of one of the above clubs) must be delivered to the secretary, William S. Eaton, Jr., Eastern Y. C., Marblehead, Mass., before 9 o'clock P. M., on Saturday, Aug. 18. Each yacht must carry a number, which will be supplied by the regatta committee at the club house, upon each side of her mainsail, above all reef points. The prizes are: First prize, $50 and the medal of the club; second prize, $25, if five or more start; third prize, $15, if seven or more start There will be no time allowance, the crews will be limited to three, all amateurs, only mainsail and working jib will be allowed, but a storm jib may be substituted for the working jib.

A correspondent writes us that about Sept. 22, last year a sloop was abandoned by two boys on the Hudson River about three miles above Lansingburgh, New York. The boat is about 18ft. long, 7ft. beam, with centerboard, half decked, and painted white above the water line and green below; and apparently has been used on salt water. It is now in the possession of persons living near where it was abandoned. The boat was apparently stolen.



The house committee of the Seawanhaka Corinthian Y. C. has made further arrangements for the accommodation of yachtsmen by establishing a telegraph office in the Oyster Bay clubhouse, and also arranging with a laundry company to receive articles to be laundried and to return them on the second day after. A barber will be in attendance at the club house on Saturday afternoons and Sundays.

The New York Yacht Racing Association has appointed a committee of nine members to manage its sixth annual regatta on Labor Day, Monday Sept. 3; which will be open to the 21 clubs composing the Association. The courses and conditions will be the same as last year. Entries must be made to E. Langerfeld, 180 W. 88th St., New York, not later than Aug. 27.

The little single-hand yawl Deuce, of 14ft. l.w.l., has been sold by the estate of the late John C. Abbott to Mr. W. A. Ruddick, of the Hull Corinthian and Boston yacht clubs.

The publication of the first volume of the "Transactions of the Society of Naval Architects and Marine Engineers" has been seriously delayed by a fire in the printing office, but the work has at last been completed and forwarded to members. The large quarto volume, containing some 300 pages of text and 60 plates, is well printed and made, and reflects credit on the secretary, Mr. Washington L. Capps, who has had charge of this important detail of the Society work. The fourteen papers presented at the inaugural meeting last November are published in full, with the ensuing discussions. The next annual meeting of the Society will take place in New York on Nov. 15 and 16 of this year.

In honor of the semi-centennial of the club, Secretary Oddie of the New York Y. C. has prepared a specially handsome and elaborate year book, the cover being a dark blue morocco, with the title and seal in gold. In addition to the list of some 1,100 members and the fleet of 300 yachts, the book contains a lithographic reproduction of the minutes of the original meeting on July 30, 1844, and also a complete list of the officers and standing committees for each of the past

SCALE 1/4 IN TO 1 FOOT

BATTLEDORE—SAIL PLAN.

fifty years. The book will be preserved as a valuable souvenir by all who are fortunate enough to possess a copy.

We have received from George Wilson, 23 Sherwood street, Piccadilly Circus, London, his very complete catalogue of yachting requisites, including charts of all waters, books, nautical instruments and every description of yacht fitting and furnishing.

The year book of the Stamford Y. C. is a neat volume in fine white canvas, containing, with other matter of the usual nature, a chart of the club courses on Long Island Sound, and also one of Stamford Harbor. The club has prospered well in the four years of its existence, and is now in a very satisfactory condition. It sails under the Seawanhaka rule, with waterline classification.

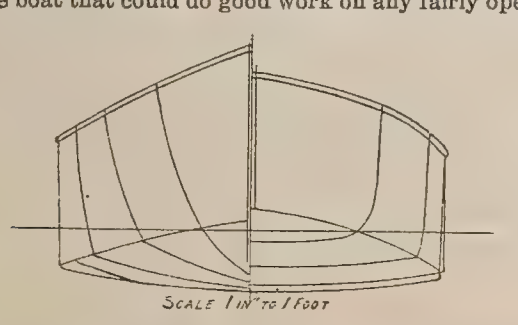
One of the most attractive club books which we have received this year is that of the Corinthian Y. C. of Philadelphia, prepared by the club's energetic secretary, A. F. Bancroft. The make-up of the book is particularly clean and attractive; it contains a picture of the club house at Essington, on the Delaware River, and a chart of the river with the club course. The club uses the Seawanhaka rule.

The American Y. C. of Newburyport, has celebrated its ninth annual regatta by a souvenir book that is well arranged and interesting.

The "Signal" march is the name of a new "two-step" composed by Walter A. Dolane and dedicated to the officers and members of the Brooklyn Y. C. It is published by R. B. Treacy, 56 Court street, Brooklyn.

# Canoeing.

## FIXTURES.



SEPTEMBER.

3. Holyoke, Ann., Holyoke, Mass.
3-5. Passaic River Meet.
5. Ianthe, An., Passaic River.
15. Red Dragon, Fall Regatta, Delaware River.

HOWEVER unsatisfactory the outlook in canoeing may be, and compared with the keen enthusiasm and big racing fleets of even five years since, there is much reason for regret; there is still some comfort in the thought that three great gatherings of canoeists are celebrated duly each year. The meets of the American Canoe Association and the Western Canoe Association, both successful affairs, have just terminated; and now a similar meet is under way in England, that of the British Canoe Association, which opened at Salcombe Harbor, on the Devon coast of the Channel, on July 30. This year the B. C. A. will "continue the surroundings" for three weeks, closing on Aug. 20. The location is very picturesque, and a pleasant meet is anticipated. One of the features of the meet will be the presence of Mr. William Willard Howard, with his fast canoe Yankee.

## Battledore.

THE tendency of canoe designing in this country has always been toward the production of all-around models, that are equally at home whenever they are called on to race; all being built primarily for racing at the A. C. A. meet; which might be on Lake George, the St. Lawrence River, or in half a dozen other places; while in the club racing of each season the Vesper boats visited New York and raced successfully on the Bay, or the New York boats were taken to the Hudson or the Connecticut River. It may fairly be said that the existing conditions in America since the establishment of the sailing races for canoes have been against the creation of special types, and in favor of the boat that could do good work on any fairly open water.

SCALE 1 IN TO 1 FOOT

In England, however under different conditions, the reverse has been the case; and not only has there been a difference in the general characteristics of the racing canoes of the two countries, but the tendency abroad has been toward the creation of a number of local types.

The American canoe, as the result of open courses and long straight legs in the more important races, has been built almost straight on the keel; some, such as all of Mr. Howard's boats, being absolutely straight from end to end, with a deep forefoot and heel. There is no doubt that this distinctive feature has been often carried too far, though under the circumstances the result has been less hurtful to speed than the other extreme would have been.

The English canoe is built first of all for comparatively narrow water with many turns to the courses and very short tacks in such windward work as is had; and to this end she is rockered to excess, too much so for anything but this special work, as was proved by Nautilus, Pearl and Charm in America. Further than this, the model is affected by the particular narrow river on which the canoe is sailed, the Thames, above or below bridge, the Mersey, the Clyde or the Tyne, each having developed its special type or model. The British Canoe Association, the national body, is strictly a cruising association, with no racing rules and but little racing at its annual meets: the principal club, the Royal C. C., is a local body, though its position and influence are greater than those of any one American club in this country, and more like that of the A. C. A. What racing there is—and it has fallen off materially since the days of the old Pearl and Nautilus—is mainly local; and each canoe is built primarily for some one locality, rather than to be taken anywhere with a good chance of winning. The canoe here illustrated, for which we are indebted to the *Model Yachtsman and Canoeist*, is a good example of one local type, designed for use in local waters, though it must be said that she has shown her speed in many other places, as have others of her type.

The Thames at Oxford is a stream such as Americans have no idea of, as they would not for a moment think of racing on it, even if nothing better were at hand. With all of its disadvantages in the way of narrow, winding reaches and broken, squally winds, this part of the Thames is the home of some very hard sailing; and that at a season when the American canoeist has not even begun to look up the price of varnish, the racing beginning in February and lasting into December. The canoe Battledore, interesting to Americans as the winner of the R. C. C. challenge cup this year, and also of several races in which the American canoe Yankee took part, is of a type which had its origin at Oxford, and which has been developed to a high state of perfection there, but of which the underlying principles are distinctly American, being found in the sharpie and skip-jack. Many small craft of this general form, notably the Red Jacket, have been built by Thomas Clapham, and old canoeists will remember the two or three experimental canoes, the Coffin was one, which Paul Butler had at Bow-Arrow Point in 1887 and at Lake George a year later, with nearly flat floor, straight, flaring sides and a sharp chine at the bilge. None of these craft, however, have made any special reputation, and the type has attracted little attention in America.

Whatever its origin, the development of the sharpie-canoe must be credited mainly to the Oxford builders, H. C. Smith and Theo. Smith, the former being the designer and builder of Battledore, while the latter produced the famous Snake and the earlier boats of the type.

Battledore is specially notable as the first canoe sailed with a Butler sliding seat in British waters, the seat being used in the Oxford races, though until this year not allowed in the races of the Royal C. C. down the river. Without it, however, she won the challenge cup in 1892, her first year, being sailed from the deck, but without a slide. She is lightly but very strongly built, and carries a 60lbs. centerplate, the only ballast. She has a bucket well. She was built for Mr. R. C. Hinckley, who still owns her. The details are clearly shown in the drawings; the sail plan is limited by the R. C. C. rule to 112ft.

# Rifle Range and Gallery.

## Here is a Score.

SAN FRANCISCO, Aug. 6.—*Editor Forest and Stream:* I inclose a score made yesterday in pistol practice by Smith Carr, one of the "reliables" of the Columbia Pistol and Rifle Club. Mr. Carr had his brother, Howard Carr, who is an expert gunsmith, fix up a pistol as follows: A .22 rifle barrel having a quick twist and chambered for the .22 long rifle cartridge, was cut off, leaving the barrel 10in. long. The latter was then "turned" down until of correct size to be inserted into a .45cal. S. W. revolver of about 3lbs. weight, *i. e.*, the revolver barrel had the lands bored out leaving it a smoth bore into which and through one aperture of the cylinder passed the little .22 10in. barrel. The sights used are of the open variety. The trigger pull was much below the regulation, being only about 1lb. Of course this score is not official, but it is genuine, and is, so far as I know, the best 100 consecutive shot score ever made. Here it is:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Smith Carr | 9 | 9 | 9 | 10 | 9 | 9 | 9 | 7 | 10 | 9—90 |
| | 10 | 10 | 10 | 10 | 10 | 10 | 9 | 10 | 10 | 10—99 |
| | 6 | 7 | 9 | 10 | 10 | 10 | 10 | 10 | 10 | 10—92 |
| | 10 | 10 | 10 | 10 | 9 | 9 | 10 | 9 | 10 | 8—95 |
| | 9 | 10 | 10 | 10 | 10 | 10 | 10 | 10 | 10 | 10—99 |
| | 9 | 8 | 9 | 10 | 7 | 10 | 8 | 10 | 10 | 10—91 |
| | 10 | 10 | 10 | 10 | 9 | 10 | 9 | 10 | 9 | 9—96 |
| | 9 | 8 | 10 | 8 | 9 | 10 | 9 | 8 | 9 | 9—89 |
| | 10 | 10 | 10 | 10 | 10 | 10 | 10 | 10 | 9 | 10—99 |
| | 9 | 10 | 9 | 10 | 10 | 10 | 10 | 10 | 10 | 10—98—948 |

You will observe that there are three scores of 99, a clean 100 in ten consecutive shots in third and fourth strings, with a 10 on the eleventh shot of this particular series. Frank Poulter, one of our most expert rifle and pistol shots, acted as "running mate" to Carr in his last 50 shots and made a fine score—93, 95, 88, 93, 94. The shooting was done on our regular 50yds. range at Shell Mound, on the standard American target.

I was sorry to learn from a recent issue of the FOREST AND STREAM that the challenge of the Columbia Club for an all around match would hardly meet with a response. ROEEL.

## New York Schuetzen Corps.

THE monthly shoot of the N. Y. Schuetzen Corps, Captain Henry Offerman, was held in the Union Hill Park, Aug. 10. The scores are appended:

Ring Target: F. Schmidt 217, Aug. J. Christen 201, John Hainhorst 197, Wm. Hahn 196, B. Zettler 195, Ph. Feigel 195, Henry Hanschen 187, John C. Bonn 186, John Bunz 181, Chas. Grosch 178, John D. Wilkens 177, H. Lohden 175, F. Facompré 175, H. Buthfer 173, G. Mehrenberg 174, H. B. Michaelsen 167, F. Plump 159, E. Bindewald 155, H. Offermann 154, John J. Thoelke 151.

Man Target: John G. Thoelke 57, Aug J. Christen 56, F. Schmidt 55, Ph. Feigel 55, Chas. Grosch 51.

Bullseye Target: Wm. Hahn 2, B. Zettler 2, E. Bindewald 2, J. N. Herrmann 2, G. Wehrenberg, E. Meyer, J. E. Bonn, H. B. Michaelsen, J. H. W. Meyer, Chas Grosch, Aug. J. Christen, Fred. Schmidt, Henry Meyer, F. Facompré, F. Hoops, J. H. Hainhorst, F. Plump, H. Offermann, John Bunz, each one.

## Walnut Hill Scores.

WOBURN, Aug 11.—The regular weekly shoot of the Massachusetts Rifle Association was held at the Walnut Hill range to-day. The result of the shooting will be found below. The scores were made at 200yds., on the standard American target. Mr. Hadley won the silver pistol medal:

Silver pistol medal: Won on 10 scores of 86 or better by J. Hadley:
86 90 86 93 89 89 88 88 86 88

## Excelsior Rifle Club.

JERSEY CITY, Aug. 8.—At the weekly gallery shoot of the Excelsior Rifle Club, held at headquarters last night, eight members were present and participated in the competition. Scores: Jos. Hughes 238, Wm. Hughes 229, D. Duff 232, G. G. Williams 229, H. Walter 220, J. Binns 219, F. P. Thompson 213, Kastendick 214.

*Aug. 10.*—Three members of the Excelsior Rifle Club visited the Schuetzen Park this afternoon to participate in the weekly practice on the 200yds. range. The weather was clear and warm, with a light westerly wind. Captain Hansen found himself in fine fettle and succeeded in making some of the best scores in his experience as a rifleman. Scores, 50 shots, German target:

| | | | | | |
|---|---|---|---|---|---|
| L P Hansen | 216 | 223 | 224 | 228 | 231—1122 |
| Jos Hughes | 191 | 202 | 205 | 208 | 211—1017 |
| O C Boyce | 173 | 194 | 198 | 201 | 215— 981 |

## Schlicht Rifle Club.

GUTTENBURG, N. J., Aug. 7.—At the weekly gallery shoot held at headquarters last night, eleven members participated in the competition for class medals. The winners and scores are appended: Geo. Schlicht, champion medal; Aug. Meyer, first class medal; George Reichert, second class medal; Charles Meyer, third class medal. Scores: Charles Meyer 232, Wm. Schlicht 223, Fred Lambrix 219, Jacob Diehl 225, Conrod Schlicht 220, Geo. Reichert 232, Louis Dorr 213, Aug. Meyer 229, Geo. Schlicht 236, Capt. Dedrick 224, Jacob Schlicht 224.

## The Columbia Challenge.

SAN FRANCISCO.—*Editor Forest and Stream:* You inferentially state in issue of 28th inst., that the Columbia Pistol and Rifle Club's all-round challenge includes only Springfield rifle and pistol (or revolver). By reading the challenge again you will see that the fine or target rifle is also included in this challenge. Moreover, we challenge (second choice) for pistol only; also (third choice) for Springfield rifle only, practically three distinct challenges, though we much prefer the acceptance of our all-round challenge.

DR. L. O. RODGERS, Pres.

## Greenville Rifle Club.

GREENVILLE, N. J., Aug. 11.—The weekly gallery shoot of the Greenville Rifle Club, held in the club house last night did not have the usual attendance, warm weather and counter attractions are responsible. Scores:

First class—Collins 240, C. Boag 239, G. Purkess 239, J. Boag 228. Second class—Gotthardt 228, Charlock 238, Chase 230, Agneau 231. Third class—Rinker 219, Graef 220, Hill 210.

## The Bluemthaler Co. No. 6 of New York

HELD their weekly shoot Aug. 11. Twelve members were present and did some fair shooting:

| | | | | | | |
|---|---|---|---|---|---|---|
| H D Muller | 238 | 238 | 235 | 234 | 230 | 229—1404 |
| W Hicks | 242 | 235 | 234 | 229 | 226 | 223—1389 |
| F Schill | 217 | 227 | 226 | 224 | 219 | ...—1113 |
| F Norwicki | 225 | 223 | 222 | 213 | ... | ...— 883 |

HENRY D. MULLER.

## RIFLE NOTES.

The Newark Shooting Society will hold a shoot in the Schuetzen Park on Aug. 21. The point target will be open for visiting riflemen.

The Zettler Rifle Club will hold its bi-monthly shoot at Cypress Hills Park on Aug. 19.

The annual festival of the Plattdeutsch Verein will open at the Union Hill Schuetzen Park on Aug. 19.

The late George Schalke, of Pottsville, Pa., gained an enviable reputation as a gunsmith; his rifles had a national reputation for their good shooting qualities. These rifles are to-day in the hands of our expert riflemen in almost every State in the Union. With his death it was thought that the Schalke system would continue only as a pleasant memory in the minds of those riflemen who had had the good fortune to possess themselves with one of these famous rifles. We understand that Harry M. Pope, of Hartford, Conn., one of our expert riflemen, and whose name is familiar throughout the country in connection with the Columbia and Hartford bicycle, is about to commence the manufacture of rifle barrels on the same lines as carried out by Schalke. Mr. Pope is a thorough mechanic and was one of Schalke's most enthusiastic disciples. We have no doubt that the Pope barrel will maintain the excellent qualities held by those of the Pioneer of this system.

The affairs of the National Shooting Association (Schuetzen Bund) are progressing in a satisfactory manner. Work will soon be started in the Glendale Park, L. I., preparatory to the building of the new range (45 targets) for the great festival next July. One of the California riflemen, a man who has been in the swim for many years, in writing to one of our Eastern sportsmen in reference to the coming festival, says: "We intend to take your king prize back to California with us next year." There is no doubt as to the ability of the Western riflemen to make a strong bid for the honor, but—

The representative of a nitro powder manufacturing company was a visitor to one of our club shoots last week loaded with nitro and information as to its use, with his outfit, and he had a supply of thick felt wads cut from hair felt, to be used upon the powder as a cushion. The tanners in removing the hair from the hides in the process of tanning in most instances use lime to expedite their work. The felt from which the wads referred to were cut were made from hair removed from the hides by the lime process, and the wads were largely impregnated with lime dust. Now, it is a well-known fact that nitro with its high velocity has a tendency to lead the barrel of either a shotgun or the rifle when using lead projectiles, and with the addition of a little lime dust deposited from the felt wads in the barrel, it seems to us as though the process of leading would be accelerated. It would be well for any of our riflemen who may be experimenting with nitro and using felt wads to consider this problem. One would think that the manufacturer in putting his goods upon the market would have covered all avenues that would lead to the successful introduction of his goods to the public.

The proper primer for nitro in the rifle is still a matter of much vexation to those who would use nitro powder. We had a little experience last week with a new primer just put upon the market to be used with nitro in the rifle, and which was said to be satisfactory for the purpose. We found them to be entirely unsatisfactory, not having the strength to properly ignite the powder, the interior of the barrel from chamber to muzzle having a deposit of unburned powder. This particular primer was recommended by the representative of the nitro powder company referred to above as being just right.

Experience with the new Winchester No. 3 W. primer leads one to the belief that if this primer was made up from brass it would give better satisfaction and less liability to blow out. Our shotgun shooters speak well of it as it is; but in the rifle, with the heavy pressure necessary to force the bullet through the rifling, it is hardly up to the work required of it.

The fall meeting of the New Jersey State Rifle Association, which opens at Sea Girt on Sept. 3, bids fair to be well patronized. It is reported that teams from New England and as far south as Georgia will be in attendance to compete in the Interstate match. One of the directors of the Association, in speaking of the coming meeting, informed us that he should try to have an extra prize of $25 put up on the schuetzen target as an inducement to draw out our New York experts.

# Trap-Shooting.

## FIXTURES.

Aug. 13-18.—John Parker's fourth international tournament, blue rock targets and live birds, at Des-chree-shos-ka Island, near Detroit, Mich.

Aug. 15-16.—Richmond (Me.) State shoot. C. O. Rowe, Sec'y.

Aug. 21-22.—Sturgis, Mich., Rod and Gun Club's annual tournament, Hotel Thornton's guaranteed stake $50. W. E. Pearson, Sec'y.

Aug. 21-23.—Hot Springs (S. D.) Gun Club's tournament; $250 added.

Aug. 21-24.—Pennsylvania State Sportsmen's Association annual tournament, under auspices of Altoona Rod and Gun Club, at Wopsononock Park, Altoona.

Aug. 22-24.—Central Illinois Sportsmen's Association annual tournament, at Bunker Hill, Ill.

Aug. 29.—Central New York Trap-Shooters' League, fifth tournament, at Auburn.

Aug 29.—Staunton, Va., Gun Club tournament. J. M. Kinney, Sec'y.

## DRIVERS AND TWISTERS.

*Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.*

At the final medal shoot of the season of the Seattle (Wash.) Rod and Gun Club class A medal was won by J. N. Hardy on a score of 27 out of a possible 30 targets. This makes him first on average for the season. In class B F. S. Stimson, Joseph Schlumpf and Fred Charles tied for the medal on 21 each, Schlumpf winning on the shoot-off at 5 targets. Johnson leads B class in average for the season. The scores follow: Class A—J. Hardy 27, Churchill 21, Moreton 20, Hall 17, W. A. Hardy 17. Class B—Schlumpf 21, Stimson 21, Charles 21, Treat 19, Johnson 18, Dahlem 14. The following scores were made in a six-man team shoot at 10 targets each: Churchill's team—Churchill 9, W. A. Hardy 9, Hall 7, Charles 4, Treat 4, Dahlem 8; total 41. J. Hardy's team—J Hardy 8, Moreton 7, Wallingford 5, Schlumpf 9, Stimson 10, Johnson 9; total 48. Sweepstake No. 1, 10 singles: Kimball 9, Churchill 9, Charles 8, W. A. Hardy 8, Tupert 8, Wallingford 8, Stimson 7, J. Handy 7, Hall 7, Dahlem 6, George 5, Johnson 3. No. 2, same: Kimball 10, Charles 10, Churchill 8, Stimson 8, George 8, Hall 7, Schlumpf 7, Dahlem 7, Johnson 7, J. Hardy 6, Tupert 6, W. A. Hardy 6, Wallingford 5.

The members of the Newark Gun Club do not seem to fancy warm weather shooting, only seven of them appearing at Erb's on Aug. 9, and only five of them doing any shooting. The day was cool and pleasant and the birds a fair lot. There were two events shot, one at four birds, $3 entry, and the other the club shoot for points. The results:

| | Rating. | Club shoot. | Gain. | Sweep. |
|---|---|---|---|---|
| Zeglio | 7 | 2221222111—10 | 3 | 1112—4 |
| Henry | 7 | 1111111111—10 | 3 | 1111—4 |
| Hedden | 7 | 2111012122— 9 | 2 | 1101—3 |
| Castle | 7 | 0•21112111— 8 | 1 | 2112—4 |
| Erb | 7 | 1101122011— 8 | 1 | .... |

The Paterson Gun Club's monthly shoot held at Willard Park, on Aug. 7, was attended by a solitary trio of shooters. The first event was at four live birds, $3 entry; the second was the shoot for the club medal at ten live birds, this being the final contest for the fiscal year. The result was a tie between Morfey and Wright, the former winning on the shoot-off. The scores.

| | No. 1. | No. 2. | Tie. |
|---|---|---|---|
| Morfey | 2222—4 | 2220222222—9 | 2221 |
| Wright | 2220—3 | 2222022222—9 | 2220 |
| George | 1210—3 | 1210100022—6 | .... |

J. Warren Smith was in great form on Aug. 11, at the monthly shoot of the Maplewood (N. J.) Gun Club, winning both the club medal and special badge contests. The club medal is shot for under amateur rules at 25 singles. The scores: Class A, J. W. Smith 23, W. N. Drake 22; Class B, D. W. Van Iderstine 15, Wick Smith 22, Harry Howard 18; Class C, Edward Reeves 13. Special badge shoot at 25 singles, expert rules. Class A, J. W. Smith 25, W. N. Drake 25; Class B, D. W. Van Iderstine 17, Dr. Jackson 19. Harry Howard 20, A. A. Parry 21; Class C, Wick Smith 15, Edward Reeves 10.

Half a dozen members of the Walsrode Gun Club of Newark spent the afternoon of Aug. 9 on their grounds at Beck's farm shooting at Empire targets. The opening event was a two-men team race at 50 targets per man between Lenthaeusser and Neigert on one side and Roth and Winters on the other. The scores were: Lenthaeusser 35, Neigert 35; total 70. Roth 30, Winters 38; total 68. In a series of 10-target sweeps the scores were: Lenthaeusser 6, 9, 8, 5, 5, 5; Winters 8, 6, 6, 7, 5, 4; Neigert 5, 4, 4, 6; Roth 6, 7, 9, 8; Schaeffer 4, 6, 5, 7, 6; Young 6, 7, 8, 7, 5; Reinhardt 6.

The Chillicothe (O.) Gun Club held its medal shoot on Aug. 3 at 25 singles each. The scores were: Dehus 21, Gilmore 18, Clark 21, Chapman 15, Rudman 16, Blacker 16, Farmer 16, Freeman 10, Aid 15, James 16, Defue 14, Drake 12, McVicker 17, Murphy 12, Hinson 17, Schilder 16. In a 20 target sweep the scores were: Clark 20, Dehus 20, Defue 18, Blacker 17, McVicker 18, Rudman 13, Farmer 14, Chapman 7, Aid 11, James 11, Gilmore 13, Murphy 9, Hinson 9, Schilder 14.

Next week will see trap-shooters galore riding up the picturesque sides of Wopsononock Mt. *en route* to the annual shoot of the Pennsylvania State Sportsmen's Association, which begins on Tuesday and closes on Friday. All who can should take along a pair of field glasses, the larger the better, to enjoy the view from Lookout Point, from where can be seen seven counties, comprising almost the entire valley of the Juniata.

The Parkway Gun Club held its monthly shoot at Dexter Park, on Aug. 8, with nine members present. In the club shoot at 7 live birds, club handicap, Elias Helgins and H. J. Bookman tied when Helgins waived his right to shoot-off and gave the competition to Bookman. The scores: Class A, E Helgins (28) 7; J. Bennett (28) 6; A. Botty (30) 6; T. Short (28) 5; H. Bramwell (28) 6; H. J Selover (30) 4. Class B, J. Wooley (25) 4. Class C, H. J. Bookman (25) 7, E. Steinhaeusser (25) 5.

The annual shooting tournament for the live bird and target medals emblematic of the championship of Bloomsburg county, Pa., took place under the auspices of the Bloomsburg Gun Club, on Aug. 2. The live bird medal was shot for at 10 live birds each, Yocum, Hagenbach and Yetter tieing on 9 kills each. On the shoot-off, miss-and-out Yocum won on the seventeenth round. The target contest at 25 blue-rock targets, each went to Hagenbach on 22 breaks.

The monthly shoot of the Unknown Gun Club held at Dexter Park, on Aug. 9, attracted nine members. The regular shoot was at 7 live birds, club handicap. J. A. Khurst, J. Flynn and Dr. W. A. Little tieing for first and dividing. The scores: J. A. Khurst (25) 7; J. Flynn (28) 7; Dr. Little (27) 7; I. Hyde (30) 6; H. Knebel Sr., (28) 6; H. Skidmore (25) 5; W. Schumacher (25) 5; E. A. Vroome (30) 4; H. Van Stader (24) 3.

The Boiling Springs Gun Club will hold a whole day's tournament at targets on their grounds at Rutherford, N. J., on Saturday, Sept. 15, 1894; on that day will also shoot a match against the Climax Gun Club, of Plainfield, for cup, emblematic of the championship of New Jersey, now held by the Boiling Springs Gun Club. Shooting begins at 9:30 A. M.—W. H. Huck, Sec'y Boiling Springs Gun Club.

At the July medal shoot of the Little Rock (Ark.) Gun Club, Woodson won with a score of 49 out of a possible 50 at unknown angles. Other scores were Duley 35, Irwin 39, Thibault 42, Alexander 30, French 42, Dickenson 37, Cunningham 48, Schaer 36, Pemberton 42, Fletcher 42, D. Alexander 31, Litzke 32, Lenow 39 and Reeves 38.

At a recent shoot of the Binghamton Gun Club, C. W. Hobbie, M. E. Boss and H. W. Brown broke 24 each out of 24 targets, N. W. Waldron scoring 23 and G. W. Kendall 22. Brown leads for the club medal, having broken 86 out of 100 in four shoots, Kendall having 83, Waldron 80, C. F. McHenry 78, Hobbie and Boss 74 each.

A fair number of shooters assembled at North Paterson, on Aug. 8, to contest at 20 bluerock targets, each for a $65 shotgun. The only man to break straight was T. C. Wright who won the gun from Ed. Pierce. Morfey broke 16. In a sweep at 6 live birds, Morfey and Manis divided first on straight scores each.

Instead of holding a shoot at Lynn, Mass., on Aug. 23, as previously announced, the next shoot of the New England Shooting Association, will be held under the auspices of the Putney (Vt.) Rod and Gun Club, on Sept. 3 and 4. The club will put out an attractive programme of sweepstake and prize contests.

At the second tournament of the Sturgeis (Mich.) Rod and Gun Club, on Aug. 21 and 22, the programme each day will comprise seven 10 target events; two at 15 targets each; two at 20 targets each and one at 25 targets. The club adds $5 to one of the 20 target events and to the 25 target event each day.

At the shoot of the Onondaga County Sportsmen's Club, at Maple Bay, Syracuse, on Aug. 7, the scores were; Class A, Ayling 48, Mann 41, Wagner 41, Hookway 39, Ginty 34; Class B, Jones 43, Cool 43, White 40, Mosher 39, Walter 38, Boyde 39. The shoot-off for Class B medal was won by Cool.

The East Side-Mutual Gun Club of Newark holds shoots at Weidenmeyer's Park, Hamburg place, every Thursday afternoon.

At the August shoot of the Hamilton (O.) Gun Club, the scores were out of a possible 15: Warndorf 14, Lingler 14, H. Hemann 14, E. Hemann 12, Straub 12, Schumacher 11, Ehrhart 11, Atherton 11, Hoffman 7, Morner 6, Stroh 7, Zosch 3, Schwab 1. On the shot-off Warndorf won the club medal.

The Lowell (Mich.) Gun Club will hold a tournament on Aug. 20 and 21, with $80 added money and $50 worth of merchandise prizes. A feature will be the shoot on the first day for teams of any three residents of Michigan at 25 singles per man, $4.50 entry, $10 added.

J. D. Eastburn and J. D. Green, of Woodbury, N. J., shot a match at 150 bluerock targets each at Woodbury, on Aug 9. Eastburn breaking 118 to Green's 117. This was one-half of a 300 target match for the championship of Gloucester county.

The monthly shoot of the Acme Gun Club took place at Dexter Park, on Aug. 7, just a half-dozen members being on hand. In the club shoot Peter Boliver was the victor, Chas. Stuetzle and Henry Bailer dividing second honors.

T. W. Morfey, the Paterson expert, will shoot a 50 bird match for $50 at Paterson, on Aug. 22, his opponent being J. R. Dunkerly. The match will be under Long Island rules and will be shot at Thomas Rogers's.

The Labor Day tournament of the Endeavor Gun Club to be held on Al. Heritage's Marion grounds, will be open to all comers. Mr. Heritage says there will be plenty of lunch and liquid refreshments.

The Keystone Shooting League has installed a competent superintent over its new house and grounds at Holmesburg Junction, and practice may be indulged in on any day excepting Sunday.

So J. L. Brewer and Dr. Carver have come to terms at last! A match at 200 live birds, for $2,000 a side and the championship of the world. Match to come off at Woodlawn in September.

Dr. Roth and Henry Lenthaeusser were billed to shoot a 25-bird race on the grounds of the Walsrode Gun Club, on Aug. 9, but were obliged to call the match off owing to the scarcity of birds.

To club secretaries, scorers and managers: Remember that a one cent stamp will not carry written matter. Carbon copies of scores require letter postage of two cents per ounce.

Dr. Carver and W. F. Crosby, of O'Fallon, Ill., are matched for three 100 bird shoots for $200 a side each match, the contests to take place in St. Louis between Sept. 20 and 25.

Forest and Stream's "Ready Reckoner" contains 270 combinations of figures to a page or an aggregate of 10,800 combinations in all. And all this for 25 cents.

Go to Altoona next Monday night, and on the following morning ascend the side of "Old Wopsy" to the shooting grounds at Lookout Point.

Rolla Heikes of Dayton and Charley Young of Springfield tied for an $85 gun at the Circleville shoot, Heikes winning on the shoot-off.

At the August shoot of the Fremont (O.) Gun Club at 30 single bluerocks, Buckland scored 28, Day 27, Stevenson 18 and Lang 11.

At the Aug. 3 shoot of the Sherman Gun Club, of Columbus, Ohio, at 25 singles, Ward broke 24, Fink 22, Henry 21 and Cold 20.

The next championship tournament of the New England Shooting Association will be held at Lynn, Mass, on Aug. 23

"Jack" Parker won first tournament average and first average on each day of the Ionia (Mich.) Gun Club shoot.

The Hot Springs (S. D.) Gun Club will add $250 to the purses during its tournament on Aug. 21 to 23, inclusive.

Every gun club within reach of Freehold, N. J., should enter a team during the club tournament next month.

The Parkway vs. Newark friendly team match will not take place until October. It will be shot at Erb's

The Essex Gun Club postponed their July and August shoots until the third Thursday in September.

At the Syracuse Gun Club shoot on Aug. 3, Col A. C. Courtney broke 91 out of 100 targets.

To-day will be "open to all Saturday" on the grounds of the South Side Gun Club, in Newark.

John Erb is strongly in favor of discontinuing live bird shooting from June 1 to Oct. 1.

The return match between the Union and Climax gun clubs will be shot at Fanwood.

The Highland Gun Club, of Moline, Ill., will hold a tournament on Labor Day.

The tents of the Interstate Association will be pitched at Altoona next week.

C. H. Townsend.

## The E. N. Y. League Tournament at Albany.

The third tournament of the Eastern New York Trap-Shooters' League, of the series of 1894, was held under the auspices of the West End Gun Club, of Albany, N. Y., Tuesday, Aug. 7. Trap-shooting events on this circuit, aside from the weekly competitions at the gun club grounds, are not likely to attract a large patronage in the month of August, and the fact that the Albany meet gained a good attendance may reasonably cause the West Enders to lay the flattering unction to their souls that they stand well in the estimation of their league brethren and are pretty solid with the trap shooters of eastern New York generally. Trap-shooting has for years invariably fallen off in this particular summer month, and why it should passeth my understanding, unless it be that the opening of the season for field shooting, or a portion of it, has occurred in the eighth month of the year. August woodcock shooting it was that formerly enticed the sportsman afield; now, alas, the shooting of ruffed grouse is by law permitted as early as the fifteenth of this month, and many gunners avoid trap work at or before the opening of the season for shooting wild game as being detrimental to the quicker methods required to kill birds in the jungle-like growth of summer and early fall covert. So we are feeling pretty serene over the fact that at our meet there were many gunners who have gained renown in the "brush," and who good-naturedly set aside their prejudice against trap practice at this time of year and joined the squads at the firing points on our tournament day. We were favored with fine weather, and though the sun shone brightly there was no great discomfort felt at the exposed firing points and scorer's station, the dreaded muggy condition of "dog days" being entirely absent from the clear, still air. The weather thickened toward nightfall and a shower fell, but the moist visitation came long after the report of the last gun had ceased its reverberations over the vast stretch of sandy country to the west of the little suburban hamlet of Shaferville, where the West End Gun Club's ground is located.

Of those in attendance at the tournament the local contingent consisted of Secretary Kratz and the well-known shooters, Greer, Sanders, Buesser, Cargill, Leon, Stone, Taylor, Keays, Reineck, Peters and "Pop" Gove. Among the visiting shooters were "Uncle Sammy" Goggin and John T. Betts of Troy, Hart and Lynch of Loudonville, H. M. Levengston, Jr., of Saratoga; Parker J. Staples, Dr. B. L. Mosher and their good "Ladd," of Granville, and from the more faraway places came George A. Mosher, the popular manager of the Syracuse Arms Co., and our own beloved Green Mountain man, Myron F. Roberts of Rupert, Vt.

The equipment of the West End Gun Club is a fairly good one, and includes a full battery of 5 bluerock traps, with electric pulls, but on the occasion of which I write, traps Nos. 1, 2 and 5 worked badly, breaking bird after bird in the carriers, and all because of their insecure fastenings, which permitted a violent rebound nearly every time they were sprung. This annoyance the shooters bore with characteristic patience, but wouldn't Paul North's dark eyes have glittered with indignation and disgust if the swarthy Cleveland boy could only have been present and seen the wretched handling of these creations of his inventive genius?

The events of the day consisted of five 10-bird, four 15-bird and one 20-bird sweeps, all shot at bluerock targets. The entrance fees ran from $1 to $2, and the purses in all events, except the first, were divided 40, 30, 20 and 10%. The birds were thrown at a slashing good speed, at sharp angles, and the averages of the leaders in the race are praiseworthy, to say the least. Their records, and those of the others who chipped in to swell the purses and enjoy the day's sport, are given in detail herewith:

No. 1, 10 singles, entry $1:

| | | | |

AWARDS FOR HIGHEST AGGREGATES

A special purse of $15, divided $5, $4, $3, $2, $1, was awarded to the shooters making the highest aggregate scores in all of the above events, except the first. A contestant shooting through the events to qualify for this purse had to shoot at 120 bluerocks. The winners and their scores are herewith given: Levengston, Saratoga, 111 (92½ per cent.), won first money; Dr. Mosher, Granville, and Sanders, Albany, 108 (90 per cent.), divided second; Geo Mosher, Syracuse, 99, won third; Leon, Albany, 98, won fourth; Taylor, Albany, 91, won fifth. The other shooters who waded thruogh the events to qualify for the purse made the following totals: Stone, Albany, 89; Goggin, Troy, 88; Staples, Granville, 87; Wadsworth, Albany, 83. Horace B Derby.

## Millerton Gun Club Practice Shoots.

Millerton, N. Y., Aug. 6.—Inclosed herewith I send you reports of the several shoots held at our grounds since last report:

S. Wilkinson, Sec'y.

## Welch Defeats Dando.

Robert A. Welch of the Riverton Gun Club on Aug. 9 won the Riverton challenge plate for the fourth consecutive time, defeating Thomas S. Dando, also of the Riverton Gun Club. The match was at 100 birds each, 30yds. rise, 50yds. boundary. At times both men shot in first class style. Welch was weak in the beginning of the match, while Dando killed his first thirty-two birds in fine style. As the match progressed Welch braced up while Dando weakened perceptibly. Welch made some very pretty shots, his 29th, 33d, 78th, 84th and 97th birds being about as hard as any seen on the Riverton grounds for a long time. Dando also made some very pretty shots, his 10th, 21st, 65th, 71st and 80th birds being hard ones. This match was the seventh for the possession of the Riverton plate which was first won on May 5 by Fred Hoey. Hoey was defeated by George Work, the latter also defeating Dando. Welch then challenged Work and defeated him by one bird. Since then Welch has met and defeated Fred Hoey, James Wolstencroft and Thos. S. Dando. The record to date stands: Welch has won it four times; Work twice and Hoey one. The next shoot will be between Leonard Finletter and Welch, which will probably take place at Riverton next week. The score:

| | | |

## Myrtle Gun Club Shoot.

Dexter Park, L. I., July 31.—The newly organized Myrtle Gun Club held its second monthly shoot to-day in Dexter Park. Seven of the members took part in the club shoot of 7 live birds, under Hurlingham rules, and H. Knebel, Jr. and C. Gottfleisch killed all their birds. A sweepstakes at clay pigeons was won by H. Knebel, Jr., who again smashed all the birds. The summaries:

Club shoot, 7 live birds:

| | | | |
|---|---|---|---|
| H Knebel, Jr | 1111111—7 | J Luderman | 0011101—4 |
| C Gottfleisch | 1111111—7 | E Wohlke | 1100001—3 |
| F Markhoff | 1111100—5 | E Roberts | 0010001—2 |
| H Halsteadt | 0011110—4 | | |

Sweepstakes at 8 targets:

| | | | |
|---|---|---|---|
| H Knebel, Jr | 11111111—8 | E Wohlke | 10110100—4 |
| F Markhoff | 01011110—5 | E Roberts | 01011000—3 |
| J Luderman | 00101010—3 | | |

# MEMPHIS BIG SHOOT.

## Elasticity of the Porter.

MEMPHIS, Tenn., Aug. 8.—When, in the course of human events, I boarded the Illinois Central train at Chicago, bound for Memphis, I was met at the door of the railway car by a personage whose dignity rather overpowered one. This was the Pullman porter, noted—in the North—for his haughty dignity and imperious manners. In a superior way this individual permitted me to enter the car owned by himself, and to care for my wants as well as I could. This was 1:35 in the afternoon. During the rest of the day I managed to get along by being careful not to offend the porter. At sundown I noticed a slight relaxation on the part of the porter. He spoke to one or two passengers and inquired how they were getting along. At midnight when I went to bed the porter was undergoing a gradual but unmistakable change. He was becoming actually affable! At breakfast in the morning the improvement was still more marked. The porter was becoming attentive. At early lunch he was a different being. He was jealous of dust on my luggage. He fanned away the flies from the table. He smiled and jumped if I opened my mouth to speak. He was a changed and much improved porter, and I liked him better, and told him so before I realized the cause of the improvement. At first I did not remember that I was now south of the invisible line named after Messrs. Mason and Dixon. I am disposed to think that a porter who travels east and west has no great amount of variableness, but the porter who travels up and down on a parallel of longitude is a most mobile and elastic being, and one that will do sufficiently well for a north and south geography.

## Multiplicity of the Spring Chicken.

If one were unable by consulting his porter to know that he was south of the invisible, faint and faded division line above noted, he might easily be able to discern the fact by examining the legs of the spring chickens. In the South there are more spring chickens than in the North, and they are fatter, and their legs are yellower. I do not know whether or not this fact in natural history has ever before been noticed. It is very interesting. You can nearly always find interesting things in FOREST AND STREAM.

## Authenticity of this Story.

Underlying the two discoveries above noted is the first annual tournament of the Memphis Gun Club, which wasn't too far away for FOREST AND STREAM to send a man to. FOREST AND STREAM was the only weekly paper having a staff representative on the grounds. The rest can't afford it. FOREST AND STREAM has a bar'l. It buys and gets and pays for more trap news and other news than all the other sporting papers in America. So far as real silk-fringed newspaper work is concerned, therefore, this may be considered the only authentic story of the big shoot. The newsdealers in Memphis tell me that they sell two copies of FOREST AND STREAM to one of any other sporting paper. This is the reason of those. FOREST AND STREAM has the most authentic reports. This one would be even more authentic if the weather were not so warm, but it is pretty authentic. The other papers will have to keep on in their policy of living on what the neighbors bring in to them—although one must admit that the Memphis craft are the best and most obliging of neighbors, whether you go to Memphis or stay at home.

## Eccentricity of the Record.

It is to the unvarying courtesy and energy and ability of the Tennessee guild of sportsmanship that so great and successful a tournament as this one now closing could be given—one of the best and unmistakable successes of the year. What are our Northern friends doing in the way of accomplishment this season? They have allowed the South to easily eclipse them. With two such big events—both fairly to be called national shoots—as the Knoxville and Memphis tournaments held so close together in the same season, the State of Tennessee may undoubtedly claim the banner for the best State record. This may seem an eccentric sort of record for a State which hasn't seemed to try very hard about it, but it comes mighty near being the fact. That this should prove so for a point apparently so far away from the great bulk of the trap shooters, so late in the trap season, and so deep in the middle of the hot summer season of the South, is all the more strange. The fact remains, however, that Memphis has duplicated Knoxville at her first attempt. I question if ever an old club ever gave so successful and smooth a tournament for a first effort. I question if ever there was chronicled in these columns the story of a more pleasant, a more useful or more entertaining shoot. Somehow, the atmosphere was different. Perhaps you have to go South to find a social system whose courtesy doesn't need oil on the hinges. Anyhow, it was a very pleasant and agreeable time the trap friends had here. Of course, the rounders were here—as hot a crowd of shooters as ever got together—but the unusual feature was seen of many merchants and professional men shooting in the ranks for sport; an especially large number of elderly or old men being thus noteworthy. I never saw so many old men at a shoot, and never saw so many old men enjoy themselves so much, or shoot so well.

Still another thing was the remarkable numbers of spectators. Some of the best people of Memphis, ladies and gentlemen, were on hand as visitors and remained faithfully watching the regular grinding of the target mill all through the tournament. To these the visiting shooters paid altogether too little attention. Perhaps they did not know the value of this rare tribute. A trap tournament in the North rarely has so distinguished an attendance. To the "gang" this mattered little, perhaps. Anyhow, they went on sawing wood in their endless attempt to break all the targets on earth and to earn enough to keep the wolf from the door. The management, in the laudable attempt to give the spectators something to interest them, got Capt. J. L. Brewer to give a little exhibition of fancy shooting at the close of each day's shoot, which was very nicely received. To me the main points of interest of this tournament were the old men shooting for sport and the spectators who were watching the sport. There is a little lesson in it. The South, which is the natural home of sport, has not yet learned much of the modern systematic tournament. The South will be the next field of growth for this sport, or will neglect it altogether, which is not likely. There is a little moral in it also. The sentiment of the South, which brings out the best people to see a tournament, is worthy of encouragement and care. If there were in the North more visitors, more little refinements more care and courtesies to the visitors, and less of a mad rush to get into the middle of a target-grinding machine at the tournaments, it would certainly be all the better for the tone of the sport, and I believe for the sport itself. On account of this approximate freedom from the usual tournament dryness and mercenariness I like this Memphis shoot. It leaves a good taste in the mouth. You wouldn't mind going again to a shoot like that.

## Audacity of the Undertaking.

Let the members of the Memphis Gun Club therefore be heartily congratulated on the success, and the double success of their first annual undertaking. We can hope that all their future shoots will be pleasant, and may they also be fully satisfactory in a financial way. It certainly required financial nerve to announce at this time and in these times a shoot with $760 added money. Of course, this is what brought the shooters. In these days, the shooters couldn't make a living without added money to shoot for, because they—so many—shoot too nearly alike. In order to add money, the club must throw all the targets possible. It must sell its restaurant privileges, charge gate money, do everything to take in funds, even to getting donations of cash from its citizens. The average rounder cares nothing where the added money comes from. He does not thank the citizens. In this way the highly-systematized, unnatural and purely artificial sport of trap-shooting is kept up. This year has been the best ever known for the shooter. Perhaps eventually the sport will have to be reorganized, and the shooter be put on a more manly footing than that of taking the unknown citizen's money, and then never saying good morning to him when he comes on the grounds. We might just as well figure on these things while we are figuring on the longevity of a sport where pooling and combining and dropping for place are openly practiced, and the square shooters thus eaten up by the crooked ones.

But all this is neither here nor there, as applied to Memphis shoot, for which I have a distinctly kind spot in memory. It was a double success and worthy of sincere study by any club intending to give an open tournament.

## Mendacity of the Register.

The register of the Peabody Hotel on the first day showed the following names of shooters from all parts of the South and North. But this wasn't half of them: J. A. R. Elliott, of Kansas City; C. A. Young, of Springfield, O.; F. D. Alkire, Woodlyn, O.; James L. Ward, Columbus, O.; J. M. Gurton, King's Mills, O.; J. J. Sumpter, Jr., Hot Springs, Ark.; J. M. Pemberton, J. K. Thiebault, J. F. Fletcher and D. T. Alexander, all of Little Rock, Ark.; Paul North, Cleveland, O.; F. A. Morris, John W. Conner and R. Van Gilder, of Knoxville; Wm. Wagner, Washington, D. C.; John L. Brewer, New Jersey; Ferd V. Van Dyke, New York; J. L. Baker and C. C. Holt, of Macon, Ga.; Pat Henry, D. M. Porterfield, Dan Searles and A. A. Ehrman, of the Vicksburg Gun Club; John A. Ruble, Wm. H. Skinner, Chicago; W. B. Powell, Gunnison, Miss.; C. H. Walton, Anguilla, Miss.; D. A. Bondswell and W. A. Page, of Starksville, Miss. Messrs. Jas. Irwin, J. M. Rose and John Dickinson, all of Little Rock, came in on a special from Little Rock, arriving Wednesday morning. Capt. A. W. Du Bray, of the Parker gun, also appeared that morning, with many others from widely separated sections, swelling the total into one one of the largest and most enthusiastic shooting crowds seen for many a moon.

## Paucity of Bobbles.

Mr. T. A. Divine, president of the Memphis Club, is at this writing unfortunately lying very ill of a fever, and Mr. W. P. Halliday, the club secretary, is out of town. This has thrown the responsible management of the shoot largely into the hand of Mr. Irby Bennett, who may be said to have made the practical success of the shoot by his untiring hustling. No man ever worked harder than he has, or did it with half so much good nature. Mr. Bennett is Southern salesman for the Winchester Repeating Arms Co. In the work of systematizing the work and freeing the affair of all friction, the quiet and efficient aid of Mr. Roger Van Gilder, of Knoxville, was invaluable, and there were many such lieutenants who had been under tournament fire before. The net result was a remarkably smooth shoot, one almost free of the usual "bobbles," and one for which the management deserves compliments of high order. The working of the traps was not of the best, but this was due mainly to carelessness of the darky trappers, who sometimes handled the targets pretty roughly. Both bluerock and empire targets were used. Two sets of traps, one for the experts and one for the amateurs, were kept busy. There were ample tents and plenty of good accommodations, even to a good restaurant.

## Electricity of the Street Cars.

The grounds were arranged on the old Billings driving park, to which it was only a few minutes' trolley run from the Peabody, a very comfortable and easy way of getting in and out by lightning. At the park, which is now no longer used for its original purposes, there is a spacious and cool grand stand, to say nothing of the special stands erected near the score. This made a cool lounging place, and sometimes a shooter who was tired and warm would sneak over there and take a nap in the shade. The restaurant was located beneath the grand stand. One could take a nip down below and a nap up above if he liked, and it is difficult to see how any other tournament is going to beat this feature.

## Duplicity of Any Violator.

Following I offer the rules and regulations which the club printed in their programme, certainly a very gentlemanly invitation to join in a gentleman's shoot:

"It is the desire and wish of the members of the Memphis Gun Club, that all shooters have as near an equal and fair a chance in this tournament as it is possible to give. We know that it is very difficult to class all shooters as they should be, and we must insist that in the opening event of the first day every shooter who knows that he can shoot an 85 per cent. gait, will enter as an expert and stay in that class during the entire tournament, and in this way demonstrate to the amateur that the experts are not here to rob him. Again, we beg that our brother shooters will not pool and drop for place. The $760 in cash that the Memphis Gun Club adds to the purses is for the purpose of drawing together a large number of the very best shooters of the United States, and we ask the hearty support of all visitors in making this a high-toned gentlemen's tournament.

"We will have but two classes: 1st class shall be known as experts; 2nd class shall be known as amateurs. experts will shoot from known traps, unknown angles. Amateurs will shoot known trap, known angle.

"All known 85 per cent men will have to shoot as experts during the tournament. Amateurs who win a place for first or second money, or score 18 out of a possible 20, shall shoot as an expert until he fails to win a place for first or second money, or score 18, then he can return to the amateur class and remain until he wins again, as above stated."

It must have been a person very far below the rank of a high-toned gentleman who would fail to heed a request like the above, and who would drop for place in a shoot like this. The shoot was designed to be one for the amateur as well as the expert, though the system of handicaps employed cannot be held conclusive, any more than any system yet discovered. The result was certainly a shoot less wholly professional than any of the big shoots of recent dates. The shooting was hard enough for any, the traps being well set up, and the targets thrown low and fast.

## Catholicity of the Suppport.

The tournament was heartily taken up by Memphis, in spite of the heat, a number of the leading men of the town, who love anything pertaining to a gun, were daily on hand to see the shooting. Dr. Taylor, Dr. Cooper, and Mr. Mosher came all the way over from Brownsville just to look on, and to get information for their own new club. Mr. A. Wheatley, long time president of the Beaver Dam ducking club and his friend Mr. Austin were interested observers, Col. P. H. Bryson, owner of the great old dog Gladstone, worth to his owners over $20,000 in all, and over $15,000 in 6 years, came out to see if the young men to-day shot as he did when he was a younger man. Col. Bryson, with the universal Southern instinct, hunted up the FOREST AND STREAM man and bore him off bodily to his own home. Col. Bryson knows a good thing when he sees it, I notice.

### *Tuesday, First Day, Aug. 7.*

The weather was hot and humid, and shooting was serious business, even in the lightest possible attire. The tents and awnings were naturally intensifiers of the heat, but under the wooden canopies which protected the raised seats provided for spectators it was cool and comfortable. A remarkably large number of visitors assembled to witness the sport, which in such magnitude is new in this city. Many ladies were present. All seemed to find a certain interest in the rather monotonous spectacle of a modern target tournament. Capt. Brewer's exhibition of difficult shots with the Winchester repeating shotgun, which was offered at the conclusion of the day's shooting, was well given and well received, evoking much applause. The entries in squads had been largely prepared the night previous, each shooter paying in his entry for the entire day, $24, and having assigned to him a certain squad position. Under this system shooting progressed steadily and in good order all day long. A famous squad was the "Ohio squad." Heikes, North, Young, Alkire and Ward, all being of Ohio. "Shorty" Bacon, also of Ohio, was intended to fill out this squad, but failing to get in on time, McMurchy took the last place on the squad. The Arkansas contingent followed a similar plan and made a formidable team. The day's entry was in the neighborhood of sixty, and therefore all shooters knew that the success of the tournament was secure, and that it was to be one of the large affairs of the season, quite worthy, with Knoxville shoot, to challenge the record of any State for the current year in the sport. As mentioned above, the shooting was under the class division principle, the amateurs shooting known traps and angles, the experts known traps, unknown angles. Nothing could be more regular than the programme. Each event was at 20 targets, $3 entry, $25 added by the Memphis Gun Club. Score:

J. A. Ruble ("White") won first average for the day.

### *Wednesday, Second Day.*

Almost the same comment might be made as for the day before The weather continued oppresively warm, the number of spectators continued large and the shooting under precisely the same conditions, continued, unvarying and regular. Capt. Brewer repeated his exhibition of the evening previous. The number of shooters contesting went past the high number of seventy in one event. The tournament was proving an unmistakable success. Scores:

*Thursday, Third Day.*

The weather was hotter than ever, unusually hot for this region, but the enthusiasm of shooters and spectators continued unabated, although the entry fell from sixties to the forties. Shooting continued until far in the dusk at extras after the programme was finished, the last contest of the sort, at 10 singles and 5 pairs, being watched to the close by an interested group of late stayers. In this the glory was divided by Heikes, Brewer and Col. Woodson of Little Rock. The latter brought out frequent applause by the success of his inimitably cool and easy style of shooting. The last gun for the big Memphis shoot was fired almost in the dark. The tournament ended with the best of good-nature all around. I never saw a shoot where there was more fun or where there seemed more good fellowship, and apparently more general satisfaction on both sides. It was remarked that Mr. Divine, who is very sick, would be glad to know of the success of the shoot in whose preliminaries he labored so faithfully. Mr. Bennett and Mr. F. P. Poston, who also did yeoman service in the hustling line, were mopping their foreheads this evening, but they seemed happy.

To-day there were on the grounds many new faces, although many had departed for their homes. No doubt over 100 shooters participated in all. Mr. E. L. Gilmer, all the way from Greensboro, N. C., was on hand to-day. Mr. Tolive of Orlando, Fla., was here yesterday. Messrs. Piety and Eberhardt, who came in for two days' shooting, are respectively of Topeka and Atchison, Kas. Missouri, Arkansas, Tennessee, Kentucky, Ohio, Mississippi, Georgia, Florida, North Carolina, the District of Columbia, Illinois, New York, even far away New Jersey were all represented here. Memphis certainly seems a good place to hold a shoot. And now comes Roger Van Gilder of Knoxville and says that next May his town hopes to offer $3,000 in cash to the shooters. Of this the club will put up $1,500. One hundred shooters will put up $10 each (thirty-eight shooters have already agreed to this and the rest is easy) and it is hoped the manufacturers will add $500. Verily these be great days, and the trap-shooter waxeth fat. Old Tennessee so far leads the list for accomplishment this year and promise for the next.

## Averages and Runs.

Yesterday's daily average was won by McMurchy. Daily average for to-day was won by Charlie Young of Columbus, O., he scoring the highest tournament run, 97 out of 100. The next highest run was made by McMurchy, 96 out of 100. McMurchy had a fine start to win the first average for the tournament, but went off, and this was won by Alkire of Ohio. Second tournament average was won by McMurchy. Heikes, who was not at his best earlier in the shoot, pulled up to-day enough to win third tournament average. "I've got a roll to-night," said Rolla, with a pleasant Dayton, Ohio, smile.

## The Shooting.

A very pleasant feature of the day was the team race, 6-men teams, $5 entrance, 25 targets, between teams from Arkansas, Tennessee and Mississippi. This was not in the programme, but afforded variety and was watched with interest, showing the difference between a sweepstakes for a purse only and a match with additional competitive features to it.

The special shoot set as Event No. 9 for Tuesday was not concluded until to-day. It was at 20 targets, with special prizes as follows: First prize, one $80 Lefever hammerless gun; second prize, 500 nitro powder loaded shells; third prize, one leather gun case; fourth prize, one leather shell case. In this Mississippi won all the glory. Messrs. Porter and Foote carried back the Lefever gun to Mississippi with them without shooting out their tie. Messrs. Dinkins and Walton, both of Mississippi, took the 500 shells. Mr. Sumpter, of Hot Springs, won in the tie for the gun case, and Mr. C. C. Holt, of Macon, Ga., won the shell case in the shoot-off. This event was shot at known traps and angles, and there were 34 entries. The other scores of the day follow:

Tennessee won.
This was Tennessee's day.

## True, Partially True, and Possibly True.

*F. P. Poston, Acting President.*—The club made about $150 clear on the shoot. We took in $743 in target money, sold the restaurant privilege for $205, took in $160 gate money, and cleared $78 on the special prize shoot, in which we did not give a purse of the entrance moneys, but offered the gun, etc. We did not beg a dollar, and did not solicit one article of merchandise to offer as a prize.

*The Merchandise Prize.*—I was the only fellow that wasn't in it. I think I will go back to the Ark. I used to be in it, in the days of the Ark.

*The Citizen.*—Allow me to express my thanks for one shoot at last which I was not asked to support.

*The South.*—There has been a mistaken notion extant that it was only the North that could hustle. Don't you believe that any more, my children.

*The Daily Press.*—We know how to report a shoot down here, and to give it the sort of mention which will help make it a success.

*The Management.*—There will be one Chicago shooter less at our next tournament. We will not tolerate unreasonable kicking on these grounds. We will not permit figuring for place and we will put off the grounds any man practicing such dishonesty as soon as we detect it. We do not mean this as the same old bluff. We aim to give a square shoot and we will do it.

[This is not the old bluff. The reform of the old crookedness in trap shooting will begin in the South. It will only need an example or two to stop pooling and dropping. The Memphis men have the sand to make the examples. Their next tournament may have special interest in this regard.—E. H.]

*The City of Memphis.*—I am the biggest little city on earth. I have 75,000 whites, besides 40,000 blacks that don't count. I am the largest inland cotton market, the third boot and shoe market, the fourth grocery market, and the first square tournament market in America.

*The Amateur.*—It looks as though I might have a chance for my life here. This is strange if true.

*Irby Bennett.*—I have discovered that running a shoot is hard on the lungs, the legs and the voice. But did you see the Winchester repeaters come to the front in this shoot. Now watch my style as I break a few straights. I shoot one myself.

*H. McMurchy.*—I now have my name blown in the top shot wad of my shells. I couldn't shoot a plain wad any more. I think this is the secret of my unvarying regularity. I never miss a bird except when I feel as if I ought to.

*Capt. DuBray.*—I have rheumatism in both wrists, but joy in my heart, because the new Whitworth barrel Parker is just coming out.

*The Climate.*—I wasn't as hot as New York. This is the healthiest place in the U. S. All I wanted was just to assure a red hot shoot even if the shooters had to appear in pajamas.

*Paul North.*—I think all of us manufacturers' agents, who have all or part of our expenses paid, ought to be handicapped in some way more nearly fair to the shooter who puts up his own money.

*Twenty-Five Other Known or Secret Agents.*—Really, Mr. North, you shock us!

*The Nitro Load.*—I am growing bigger every year. Once I was 43grs., now I am 45, 46, even 48 or 50grs. I was used by all but three shooters at this shoot.

*Col. P. H. Bryson.*—I attended the first field trial ever held in America. We had it at Memphis, and ran it in conjunction with a big wild live bird tournament. Capt. Bogardus shot in the tournament. We took him out quail shooting after the event, and many of our quail shooters could beat him. There have been many changes in field trials and tournaments since then.

*Mr. Pinkston, of Mississippi.*—The idea has gone forth that New England is not so woolly as Mississippi, but the fact is Mississippi is the most Puritanic State in the Union. Our Legislature passed a law making trap-shooting a gambling game. It killed the sport in the State. We are plenty good.

*The Mosquito Bar.*—The more you see of me, the better you will like me.

*Intelligent Observer.*—I note that the maccaroon, the octoroon and other things grow in great abundance in Memphis. I observe also that the streets are lined on one side with magnolia trees, and on the other with julep trees. The julep tree is not indigenous to the North.

*Unknown Lady on the Grand Stand.*—Who is that tall, handsome gentleman coming this way?

*McMurchy, Bennett and Seventy Other Shooters Who Will Read This.*—Must have meant me! Well, I don't deny it, I was a regular Memphistopheles.

*The City Water Works.*—Gentlemen, you embarrass me (financially).

*C. A. Young, of Ohio.*—Captain Brewer has challenged me to shoot him a race at 200 targets. I told him I would shoot him a race at 300, but that he would have to get down to my weight. He weighs 283lbs. and I weigh 94lbs.

*Popular Consent.*—Col. Woodson, of Little Rock, was the coolest and prettiest shot at the score. John Dickinson, of Little Rock, is the quickest shot in America.

*J. A. R. Elliott.*—I have got into my present fine form by a system of my own invention. It consists of eating a watermelon or two just before going to bed each night.

*Dan Searles, of Vicksburg.*—If you will just wait for a few moments I will sing you a few stanzas from that touching song known as "Daisy Bell."

*Capt. Andy Meaders.*—I am over 100 years old in general belief, but I decline the title of has-been. I am still with you, as you may observe by consulting the score sheets.

*W. R. Hobart.*—While I am still willing to admit that the Lake Michigan lobsters are the finest on earth, I must give the palm for general loveliness to the Tennessee yellow-leg chicken.

*The Visiting Shooters.*—The Memphis shoot was a cracker-jack. It was the best shoot of the year. We can't do this in the North. There's something to it besides the money up, and we don't just exactly understand how, what or where it is. We will come here again the first chance we get.

E. Hough.

909 Security Building, Chicago.

## Lynchburg Gun Club.

Lynchburg, Va., Aug. 7.—Weekly shoot, conditions 10 single targets, unknown traps and angles, American Association rules:

RAVELRIGG.

## The Traps At Wellington.

WELLINGTON, Mass., Aug. 11—This was a most delightful day and there was a large attendance of spectators at the clubhouse of the Boston shooting association. The shooters were out in force, and had it not been for an unforeseen accident to the traps, there would have been nearly 3,000 targets broken. As it was nearly an hour was consumed in repairs and some of the shooters were forced to leave several events uncontested. There were 1016 targets broken and 15 clean scores made, divided as follows; Dickey 4, Cowee 3, Snow 3, White 2, Sanborn 2, Jones 1. The winners of the sweepstakes follow:

Ten targets, Keystone system—Snow, White and Dickey 10, Cowee and Adams 9, Sanborn 8.

Ten targets, keystone system reversed—Dickey 9, Herbert, Cowee, Sanborn 7, White 7.

Ten targets, keystone system reversed—White and Dickey 9, Sanborn and Cowee 8, Jones 7.

Ten targets, keystone system—Cowee and Sanborn 10, Snow and Dickey 8, Adams 6.

Ten targets, keystone system reversed—Dickey 10, Allison and White 9, Adams and Sanborn 8, Cowee and Herbert 7.

Ten targets, keystone system—Cowee, Snow and Dickey 10, Jones and Sanborn 9, Warren, Allison and White 7, Herbert 6.

Ten targets, keystone reversed—Dickey 10, Snow, Sanborn and Allison 9, Cowee, Herbert and White 8, Jones and Warren 6.

Ten targets, three unknown traps—Cowee, Sanborn, White and Jones 10, Snow and Herbert 8, Warren, Dickey and Daniels 7, Allison 6.

Ten targets: keystone reversed—Snow 10, Cowee, White, Allison and Sanborn 9, Herbert and Dickey 8.

In the merchandise match these scores were completed: Cowee and Sanborn 28 each, Snow and Dickey 27 each, White and Jones 25 each, Allison and Herbert 22 each, Warren 20, Daniels 18.

## "Trap-Shooter's Ready Reckoner."

THERE has just come from the FOREST AND STREAM press an extremely useful pocket reference book for trap-shooters Its full title reads: "Trap-Shooter's Ready Reckoner. A series of tables showing at a glance the division of purses under all conditions, simple and complex, with entries from one to fifty. For use by individuals, clubs, and tournaments. Compiled by J. C. Clark, Secretary Kansas State Sportsmen's Association." Price 25 cents, postpaid, by Forest and Stream Pub. Co.

## The Unions Defeat the Climax.

BELOW we give the scores made at Springfield, N. J., on July 30, in a team match between the Unions of Springfield and the Climax of Plainfield. The scores were mailed to us on the day following the shoot, but owing to the fact that a one-cent stamp only was affixed they failed to reach us until Aug. 7:

## Trap at Jessups, Md.

R. B. POND, a well known trap-shot and member of the Standard Gun Club of Baltimore, gave an afternoon tournament on Aug. 3 that proved one of the most interesting and pleasant affairs ever held at Jessups. The main interest centered in two races, one 100 targets for two handsome prizes and the entrance money, for known experts; the other at 50 targets, for amateurs and prizes. Two events at 10 targets each and one at 15 opened the ball, then came the two big races. Scores of three first events were as follows:

No. 1, entry $1: Bonday 8, Duvall 10, Willey 8, Wagner 8, Bond 8 Franklin 10, Mattingly 10.

No. 2, entry $1: Bonday 8, Duvall 8, Willey 8, Wagner 9, Bond 9, Mattingly 9, Dr. Fort 8.

No. 3, entry $1.50: Bonday 13, Duvall 11, Willey 15, Bond 12, Franklin 8, Mattingly 12, Dr. Fort 15.

Eight men now lined up for the 100 target race with the following result:

| | | | |
|---|---|---|---|
| Dr Fort | 24 23 24 22—93 | Mattingly | 21 23 21 22—87 |
| Wagner | 24 21 24 24—93 | Bonday | 24 17 19 23—83 |
| Franklin | 23 22 23 24—92 | Duvall | 22 17 23 20—82 |
| Bond | 22 22 22 22—88 | Willey | 18 19 18 23—78 |

Tie on 93: Dr. Fork 10, Wagner 9.

Following this, 9 amateurs began their race:

| | | | |
|---|---|---|---|
| Lohman | 21 19—40 | F Cole | 13 16—29 |
| F Hawkins | 16 22—38 | T Cole | 16 12—28 |
| Baker | 20 17—37 | Murray | 12 11—23 |
| Baldwin | 19 13—32 | Hammond | 6 11—17 |
| Watts | 15 16—31 | | |

Mr. Bond proposes making this a monthly function, encouraged by the very great success of his first effort this summer. He has a good ground, a large tent, and knows how to keep things hustling; the numerous ladies present added to the general pleasantness, and spurred the participants to do their best by frequent applause.

PICUS.

## Squires Wins the Climax Shoot.

THE following scores were made at the shoot of the Climax Gun Club at Fanwood, N. J., on Aug. 8:

| | |
|---|---|
| Smith | 11101110111111101111111 —22 |

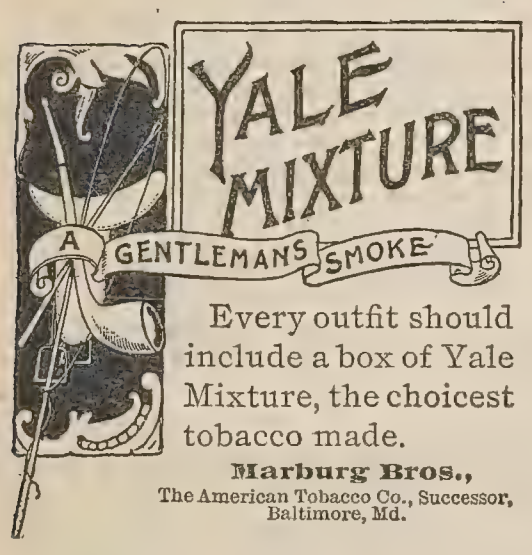
# Answers to Correspondents.



**No notice taken of anonymous communications**

W. S., Germantown, Pa.—Can you tell me the nearest place to Camden, Me., where I can buy live quail for stocking purposes? Ans. None that we know of nearer than New York city.

E. S. D., White Lake, Mich.—Will you kindly inform me if the whippoorwill and night hawk are the same bird. I claim they are not. Ans. Night hawk and whippoorwill are different birds; consult any ornithological work or any dictionary.

P., Phillips, Me.—It is so understood and quoted in our game laws to the best of my knowledge and belief, that it is unlawful in the State of Maine to at any time kill a cow moose. The *Game Laws in Brief* does not give this provision. Ans. The law was amended in 1893; cows and bulls are now given the same protection.

INQUIRER.—I expect to visit Maine and Canada during latter part of this month To reach my destination I must go to Montreal and there connect with the Canadian Pacific R. R. so as to reach my point, which is in Maine. Now, will the Custom House officials at Montreal make me pay a license fee or duty on whatever weapon or ammunition I may have with me? Ans. No, not if the baggage is checked through to an United States point. No duty is payable on goods in transit.

Every outfit should include a box of Yale Mixture, the choicest tobacco made.

**Marburg Bros.,**
The American Tobacco Co., Successor,
Baltimore, Md.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY

MARSTERS HAS WORMS

**Sand Worms 12 and 15c. per doz. White or Blood Worms, 25c. per doz.**

**I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and not decreasing the quality, it increases my business every year.**

One lot of Split Bamboo Fly and Bass Rods will be sold at $1.19 until all are sold. These rods are all nickel mounted, solid reel seats, silk wound, extra tip, complete in wood form and will give satisfaction.

# Standard Works for the Sportsman's Library.

ANY BOOK HERE NOTED WILL BE SENT POSTPAID ON RECEIPT OF PRICE BY THE FOREST AND STREAM PUBLISHING CO., 318 BROADWAY, NEW YORK.

## ANGLING.

### The American Angler's Book.

Combining the natural history of sporting fish, the art of taking them, with instructions in fly-fishing, fly-making and rod-making, and directions for fish breeding. Description of salmon runs, inland trout fishing, etc. By THAD. NORRIS. 80 illustrations. Cloth. Price, $5.50.

### American Fishes.

A popular treatise upon the game and food fishes of North America, with especial reference to habits and methods of capture. By G. BROWN GOODE. With numerous illustrations. Cloth, 496 pages. Price, $3.50. This is, by far, the most popular work which has ever been published on the fishes of America, and is the book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss.

### Book of the Black Bass.

Comprising its complete scientific and life history, together with a practical treatise on angling and fly-fishing, and a full description of tools, tackle and implements. By JAMES A. HENSHALL, M.D. Illustrated. Cloth, 470 pages. Price, $3.00. Dr. Henshall's monograph is the standard work.

### More About the Black Bass.

Being a supplement to the "Book of the Black Bass." By JAMES A. HENSHALL, M.D. Fully illustrated. Cloth, 204 pages. Price, $1.50. This is a supplement or sequel of Dr. Henshall's first volume, in which the author's aim is to bring the subject matter down to date.

### Fly-Fishing and Fly-Making for Trout, etc.

By J. HARRINGTON KEENE. With plates of the actual material for making flies of every variety. Illustrated. Cloth, 160 pages. Price, $1.50. The matter of the book embraces everything which the fly-fisherman wants to know about the senses of fish, practical fly-fishing, casting and fly-making; with list of standard flies and their dressings; the feathers, silk and other material used in fly-making, there are samples of all, attached to blank sheets like pictures by way of illustration.

### Fishing Tackle.

Its Materials and Manufacture. A practical guide to the best modes and methods of making every kind of appliance necessary for taking fresh-water fish and for the equipment of the angler and fly-fisher. With 454 illustrations and explanatory diagrams. By J. HARRINGTON KEENE. Price, $1.50.

### With Fly-Rod and Camera.

By EDWARD A. SAMUELS, President of the Massachusetts Fish and Game Protective Association, author of "The Ornithology and Oölogy of New England and Adjacent States and Provinces," "Among the Birds," Associate Editor of "The Living World," etc., etc. Cloth, 480 pages (7×9½in.), 147 illustrations. Price, $5.00. The author is known as one of the most devoted and expert salmon fishermen of America. The volume is likewise noteworthy as an example of the rare possibilities of amateur photography.

### Fly-Rods and Fly-Tackle.

Suggestions as to their Manufacture and Use. By HENRY P. WELLS. Illustrated. Cloth, 364 pages. Price, $2.50. The most exhaustive work on the subject in print.

## MANUALS.

### Game Laws in Brief.

Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream*. Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream*.

### Woodcraft.

By NESSMUK. Cloth, 160 pages. Illustrated. Price $1.00. A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

### Tricks of Trapping.

Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 300 pages. Price, $1.00.

### Log Cabins.

How to Build and Furnish Them. By WILLIAM S. WICKS. New and enlarged edition. Price, $1.50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

### Hints and Points for Sportsmen.

Compiled by "SENECA." Cloth. Illustrated, 224 pages. Price, $1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

## SHOOTING.

### Names and Portraits of Birds

Which Interest Gunners, with Descriptions in Language Understanded of the People. By GURDON TRUMBULL. Cloth, 222 pages. Price, $2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

### Antelope and Deer of America.

A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidæ of North America. Second edition. By JOHN DEAN CATON, LL.D. Cloth, 426 pages, 50 illustrations; steel portrait. Price, $2.50.

### The Gun and Its Development.

With Notes on Shooting. By W. W. GREENER. Breechloading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeboring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, $2.50.

### The Art of Shooting.

An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, $3.00. New edition.

### Field, Cover and Trap-Shooting.

By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksmen; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, $2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

### The Still-Hunter.

A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 390 pages. Price, $2.

### The Breech-Loader and How to Use It.

288 pages. Price, $1.00. A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study.

## CAMP AND HOME.

### Uncle Lisha's Shop.

Life in a Corner of Yankeeland. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, $1.00. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

### Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, $1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

### Pawnee Hero Stories and Folk-Tales,

With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, $1.75. New edition, revised. Like most Indian tribes, the Pawnees are story tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

### Blackfoot Lodge Tales.

The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., $1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfeet presents a series of graphic pictures of savage life in peace and in war.

### Our New Alaska;

Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 209 pages, illustrated. Price, $1.50. Mr. Hallock's writings are always vivid and full of life.

## THE KENNEL.

### Dogs: Their Management and Treatment

IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 208 pages. Price, $2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

### Kennel Record and Account Book.

Boards, $3. An indexed volume of 180 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

### Dog Points and Standards.

First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

### Training vs. Breaking.

Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream*. Revised and re-written. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, $1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

### Modern Training;

Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, $2. This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

### House and Pet Dogs;

Their Selection, Care and Training. Paper, price 50 cents.

### Lee's Modern Dogs.

History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor London *Field*. Illustrated, 584 pages. Price, $6. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

### Kennel Secrets.

How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, $3.00.

### The Spaniel and Its Training.

By F. H. F. MERCER. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, $1.

### Scientific Education of Dogs for the Gun.

By H. H. Cloth. Price, $2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study."

## YACHT AND CANOE.

### Small Yachts.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14½×12½. Price, $10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

### Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 267 pp. Price, $3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

### Canoe and Boat Building.

A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream*. Cloth. Fourth and enlarged edition, 264 pages, numerous illustrations, and fifty plates in envelope. Price, $2.00.

### Canoe Handling.

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 168 pages. Price, $1.00.

### Yacht Architecture.

By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition. Super-royal 8vo., 530 pages, numerous plans and designs. Price, $16.80.

### A Manual of Yacht and Boat Sailing.

By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. Price, $10.

### *RANGE OF THE SHARPTAIL GROUSE.*

AMONG the Western game birds whose introduction into Eastern covers has been recommended the sharptail grouse has often been named, and in two or three cases the experiment has been tried. What measure of success has attended these efforts cannot now be told.

The sharptail grouse—the "prairie chicken" of a good portion of North America—has an extended range, extending from Michigan and Wisconsin on the east, through the mountains of the Pacific on the west, and from the Plains of the Yukon and the Great Slave Lake on the north, south to Colorado or northern New Mexico. It is thus a bird of very wide range, equally at home on the plains and in the valleys of the high mountains, being often found quite up to timber line. Although generally regarded as a bird of the prairies, its range is by no means confined to open country, and it seems to be more adaptable than any of our grouse, being found not only on the high, dry sage-brush plains in the same country with the sage grouse, but also in timbered regions with the ruffed and the dusky grouse, as well as on the prairie with the pinnated grouse.

Some years ago there was a great deal written about the westward extension of the range of the pinnated grouse, and statements were made that the species had followed the cultivated areas along the railroads westward, and had been taken in Utah, Nevada and elsewhere on the Pacific slope. There is no doubt that all such extreme statements were erroneous, and that the birds taken were not pinnated grouse, but sharptails, the error arising from the common English name applied to both species, the observers not knowing that more than one sort of "prairie chicken" existed.

At the same time there is a grain of truth in these statements, and it is certain that the range of the pinnated grouse has spread westward with the cultivated area, but—so far as we know—only about to middle Nebraska and western Minnesota and eastern Dakota. With the advent of the pinnated grouse, there appears to have been also a diminution in the numbers of the sharptail, though there are many localities where both are abundant. In Texas and the Indian Territory, where "prairie chickens" are still very numerous, a form of the pinnated grouse is the prevailing—if not the only—species.

Statements have been made recently to the effect that the sharptail grouse is extending its range eastward from Manitoba—where it is abundant—along the line of the Canadian Pacific R. R., it being claimed that they are now fairly abundant about Port Arthur on the North Shore of Lake Superior, where formerly none existed. If this is true there should be no difficulty in establishing the fact. Matters such as this possess special interest for readers of FOREST AND STREAM, and there seems a peculiar fitness in their lending their aid to settle any question as to the distribution or range of the birds or mammals which they pursue. We should be glad to receive from observers in the West any notes on the distribution of either the pinnated or the sharptail grouse. Such observations ought to be verified by specimens, and we will gladly identify all such that may be sent in to us. It will not be necessary to send complete skins for this purpose, unless it is quite convenient to do so, a head, wing and tail being sufficient to determine the species beyond a peradventure.

The sharptail grouse is a bird of the North. Stout and hardy, fearless of snowstorm and blizzard, it has little to dread from the weather, and would certainly be able to survive the severest winters of our Northern States, and if introduced in the East, given time to establish itself and then an adequate protection, it might for a long time be able to hold its own. On the other hand, if the season in which this bird could be shot were made as long as that for our native birds, it is quite certain that it could never gain a foothold among us.

### *SHOTGUN AND CITIZENSHIP.*

EMULOUS of the extended fame of the District Attorney of New York as an interpreter of the game laws, the Attorney-General of South Dakota has been trying his hand at the same business; and has given out an opinion that the prairie chicken season should open on Aug. 15, or two weeks before the time designated in the statute. The shooters appear to have accepted the dictum as giving them license for August chicken shooting. They have adopted the time-honored principle of every man for himself; and are in for the general scramble. What with the destructive work of the market trappers, and the fusilades of the out of season shooters, precious few chickens will be left for the sportsman who bides his time and awaits the legal opening of the season. If the reports which come to us of the extent of prevailing disregard for the law are not exaggerated, there will need to be few birds left then, for there will remain few shooters who will not already have shot their shots and bagged their share.

What is the significance of such a condition of affairs as that presented in the prairie chicken country of South Dakota and adjoining States? Does it not go to substantiate the theory, which is sometimes advanced, that in certain sections of the West, largely peopled by recent comers from Europe, the community is impatient of all game laws, because they are thought to savor of the restrictive game systems of the Old World? If there be anything in this view of the case, if the provisions for the protection of game and of fish are thus ignorantly regarded as obnoxious and oppressive, the remedy lies not in the more stringent warden system, called for by our correspondent, but is to be discovered rather in popular enlightenment and education to a more reasonable and truer understanding of the nature and purpose of game protection. In this country, the new comer should be taught, fish and game are protected not for the benefit of any one favored class at the expense of any other; but in theory and practice for the common good of all. Each is required to respect the law, not that others may profit thereby, but that he himself and his children who come after him may reap the advantage. The new comer finds in America a land rich beyond the countries of Europe in the variety and worth and natural abundance of its game and its food fish. There is no other civilized land on all the globe where the supply is so abundant, and the privilege of taking it so free. There is no other land where the obligations of good citizenship demand more imperatively of the individual that these privileges be conserved and perpetuated; no other where such obligations should be recognized more cheerfully, nor where the rewards of such recognition are more generous and certain.

Rightly comprehending the purpose of game protection and the benefits which follow from it, the Western homesteader from the Old World should of all men show himself zealous in its support. To give him such comprehension, to promote popular education respecting the game laws and thus to insure appreciation of them, is a task which may well engage the attention and the efforts of sportsmen's associations—the attention and the effort of all good citizens, it might be said, for the time has come when in this country we should leave off thinking and speaking and writing of the conservation of our fish and of our game as if it were something that concerned alone a class termed sportsmen; for it concerns the community and the commonwealth. The duty imposed upon the individual citizen to respect the common interest of all, as embodied in the game and fish statutes, is a duty quite as binding as are other obligations of good citizenship. No one, whether of longest lines of native descent or fresh from the other side, may ignore this principle, set up shooting and fishing license for himself, and yet make claim to good American citizenship. If there are entire communities where the disregard of the game law is general, their citizens are not in this respect Americans, though hey live in America.

### *SNAP SHOTS.*

It will be recalled that a demand was made for a duty on imported birds' eggs, on the ground that the destruction of wildfowl eggs in the Northwest for import into this county for commercial products was affecting the game supply. Under the new tariff the eggs of birds, fish and insects are on the free list; but a specific provision is made that "this shall not be held to include the eggs of game birds, the importation of which is prohibited except specimens for scientific collections." If the importation of wildfowl eggs from the Northwest ever had anything to do with duck shooting, we may look for larger flights when the new tariff shall have been running long enough.

Some one out in Indiana has sent us from a local paper a story of Farmer Sutherland of Muncie, who went dynamite fishing, attended by his faithful dog. Mr. Sutherland, it is related, having lighted the fuse of a stick of dynamite, pitched it into the water. The dog, taught to retrieve from water, plunged in, seized the explosive in his mouth, swam to shore, and hastened to return the prize to his master. The man fled, the dog pursued, the dynamite exploded, the dog disappeared, and Mr. Sutherland started post-haste for the nearest newspaper office, to publish his determination henceforth to fish with hook and line. It is a pretty little story; we printed it long ago as having started in Maine with a local hero and his dog; it has come to us from California with another local hero and his dog; and now we have it from Indiana.

If ever one should keep a diary it is while in camp, for there so many things are seen and done worth noting as promptings of memory in the after days. A camp diary need not be prolific nor detailed. The briefest mention and barest record will be sufficient to revive recollections of woods scenes and incidents, to snatch one up from the surroundings of every-day life and transport him back to the stream, the field and the mountain. There are sportsmen's diaries, scores of them, that money could not buy, and which are more precious now than ever before. Keep a notebook of your outing; it will aid you to live the woods life over again.

If you hear a gunner bragging over a tremendously long shot, and on the strength of it taking to himself credit as a mighty sportsman, you may put him down either as a novice, or, if experienced, as one not entitled to much credit in the craft. For one who has done much shooting understands perfectly well that extraordinarily long shots are chance shots, and for that reason not necessarily indicative of skill; while the well-trained sportsman will hesitate to make such shots, knowing full well that they are more likely to wound than to kill. A long shot is often a wanton shot.

Most folks bent on duck shooting in Ontario would rather pay the required license fee and enjoy peace of mind, than to play the game of dodging wardens, after the manner related by a correspondent to-day.

# The Sportsman Tourist.

## AT MARTHA'S VINEYARD.

MARTHA'S VINEYARD seems to be a misnomer or an anachronism. There is assuredly no aroma of Tokay or Falernian about her wave-washed precincts (the sands bear witness), but rather "an ancient and fish-like smell," which is perhaps most noticeable when the tide is out or the wind blows fresh from the south'ard. Romancers may contend that grapes were abundant on the tight little islands when Gosnold discovered it in 1602; but whatever was then is not so now. No vines are found. Prohibition reigns supreme, and there is neither saloon nor "speak easy" in the entire domain. As an old skipper declared to me on the Edgartown wharf, "The only vintage I ever heard of was balm of gilead buds soaked in rum, which the sailors used to take to sea with 'em to cure sprains and bruises." Yet, Hudibrastically speaking, I fancied I could detect a trace of old port about the harbor, an intimation which the ancient mariner received with a sardonic smile.

---

And this reminds me of the flush times, fifty years ago, when Edgartown was all alive with whaling vessels just in from the Pacific or up for the ice, and the ring of the jolly "yo-heave-ho" was heard in the roadstead of vessels getting under way. Jack Tar was metaphorically in clover then, and the atmosphere was heavy with oil. Fortunes were sometimes made in a single three years' cruise. Hopeful apprentices did not so much mind "crossing the line," when possible bonanzas were in prospect. Like the earlier argonauts from Greece, they came home bearing gifts from foreign climes, and every one's sweetheart flew blue peters from her Sunday hat when their vessels hove in sight. Even now the older dwellings are filled with whilom souvenirs, and dooryards teem with introduced exotics. It was the fashion then for resident shipowners to build little conning decks upon the roofs of their houses between the chimneys, whence they could discover their incoming argosies twenty miles away. Many of these high perches are conspicuous still at Nantucket, as well as at Martha's Vineyard, and often the summer sojourner will observe thereon a venerable form, white-haired, but stalwart, looking seaward over the balusters, not so much from present interest as force of early habit, for the whaling business took a tumble in 1846, and vessels and captains have long since gone out of commission. Most of the old salts lie in the cemeteries, with fulsome epitaphs in marble, and of the entire fleet only a sole dismantled hulk survives, creaking lugubriously against the wharf when the waves heave a mournful memento of prisine activity and a perennial object of curiosity to *fin de siècle* visitors at the Vineyard.

Aye, my mates, things are vastly different now from what they were in the old days, when Edgartown was essentially the Vineyard, just as Paris was allowed to be France, and the rustic islanders used to ride into the busy port of entry from the outlying precincts of Chilmark and the Tisburys, and even from the land's end, twenty miles away, to buy knicknacks and comfits, and get the gossip from the main land by the weekly mail boat which crossed the sound to Holmes Hole. Excepting those who regularly "followed the sea," few ever left the island. They simply vegetated and intermarried, as all insulated communities do, until every one became related; so that whenever any one unfortunate sailor was lost at sea, the whole community mourned. Visitors seldom came, and strangers never cared whether the Vineyard schools kept or not, or whether the Mayhews, the Coffins, the Marchants, the Butlers or the Allens ruled the village roost.

---

Now Martha has donned a new attire and assumes light airs. She has thrown aside dull care and vulgar trade, and subsists on souflées and ice cream, like all the rest of the giddy world. Perhaps it is just as well, at this time, for Martha has naturally a "Gay Head," and attracts readily by her blandishments. Not only have the retired sea captains made Edgartown their asylum, but the entire wave-cinctured island has become a cosmopolitan elysium—a populous summer garden, where the blare of trumpets and the hilarion of the outdoor girl rings from Squibnocket to Chappaquiddick. Sea View houses and hotels occupy all the breezy points. Flags stream from the high bluffs. Rows of bathing houses line the pebbly shores. Steamboats ply to all contiguous points. A noisy railway motor industriously weaves its social web along the beach between the ancient oil town and the old camp meeting site, now occupied by Cottage City and the Highlands, with their parks and plazas and asphalt walks, their domes, spires and minarets, their parterres of flowers, band stands and tennis courts, all blithe with flags and pennants, and all so gay and jaunty that the scene looks more like Vanity Fair than a pious camp ground. Then there are booths and news stands, and cabs and soda fountains, and lines of horse cars that run to Vineyard Haven, where multitudes of yachts glide in betimes and make the harbor brilliant with their anchor lights at night, whose jaunty crews in blue and gilt enjoy to come ashore with a nautical hitch of the trousers, and interview the old ship captains, flinging their sea vernacular recklessly to windward. Everything is animated and restless, like bees swarming. Thirty thousand people enjoying together the delights of frivolous pastime and keeping cool in torrid weather while less fortunate ones are sweltering; for there is no spot along the coast where refugees can be so certain of exemption from excessive heat as on this sea-girt isle.

---

Oh! it is a beautiful isle, my mates! with its pictured cliffs flashing with chrome and carmine, and its green heights crowned with cedar; a plaything of the ocean, tossed by the great waves, lashed by tumbling surf, and fanned by the soft winds of summer. It is at its best in July and August, when the air scintillates with a golden haze and gulls hover over the reefs; and I could tell you of many a stroll along the shore then, and what the receding tide revealed; or of jaunts over land to South Beach, where there is delectable surf bathing and feeding grounds for snipe; of clam dinners at Katama and excursions to Gay Head, with its incidental ride to the lighthouse "In an ox cart driven by an Indian guide," as the bills read; or of a flying trip around the entire island on a smart smack with a wet sheet and flowing sea; or of a morning cruise after mackerel, starting before daybreak and returning with a spanking breeze in the afternoon. Sometimes the fishing vessels bring in a swordfish, and perhaps a sawfish, mighty with their armature, which have been harpooned from the surface of the deep when the sea was smooth, and strangers are always interested to inspect such goodly prizes whenever they are landed on the fish house wharf. At least 100 sloops and catboats are engaged in mackerel fishing during the season, making diurnal trips out and in from the schooling grounds. Punctually at noon each day they appear in the offing, away to the southward, looking like pearl buttons on the selvage of the horizon, and usually by 3 o'clock they run into Edgartown harbor with a fair wind and a rap full; and it is inspiring to see so many white-winged craft bunched up together and swooping down into port like a flock of gulls, with their canvas flashing in the sunlight. It is a favorite pastime always to fish off the wharves in the running tide with cut fish bait and handline. Ladies frequently saunter down from the cottages and hotels and amuse themselves in this way, and they don't mind the gore and the slime when good luck attends. The largest plaice I ever saw taken on hooks were caught by a lady in this way. One of them weighed 8lbs. and another 12lbs. I hardly know whether to call them plaice, flounders, flatfish, mud-dobs, turbot or sole. They all look much alike. One of the wharf loungers called them "bots," which I infer is short for turbot.

---

Few places indeed afford a greater variety of landscapes or more novel pastimes than Martha's Vineyard, even to those who come at the "eleventh hour." And as for food and comfort, especially sea food, the fare is incomparable. There are all the modern improvements and attractions, with nothing lacking, though as a fashionable resort it is not mentioned in the society journals. It is a choice between Cottage City and intermittent gayety, and Edgartown with restful quiet. As the local paper says: "The town is well laid out in squares, has many shaded streets, fine concrete sidewalks, street lights and many fine residences and summer houses; also a national bank, U. S. Custom House, fine county court house, jail buildings, with keepers' residence, three church buildings, two school houses, town hall, Masonic lodge, a newspaper, good hotels, boarding houses, and stores of all kinds." Nevertheless, there is nothing exciting about Edgartown.

The antiquity of the island is charming. Eight generations have passed since Rev. Thomas Mayhew took formal possession of it under a grant from Lord Sterling, in 1614, and assumed a suzerainty over the resident Indians. In July, 1641, he organized an Indian church, the care of which was transmitted from father to son, until 1692, when the island was annexed to Massachusetts. The site of the first house built in 1630 is easily located, and in the old burying-ground on Tower Hill are grave stones with legible inscriptions 250 years old. The old Mayhew house on South Water street is still tenable, with a record of 180 years, and away back in the fog and spoon-drift of the misty past there are traditions of early voyagers who navigated without disaster the intricate channels, sounds and "holes," which thread and divide the many islands, reefs, banks, shoals and rips which beset the Vineyard, where in more recent years far stauncher vessels have gone to pieces. Selah!

CHARLES HALLOCK.

## THE FETISH OF THE PIPE BOWL.

BABY has ceased her chatter, and worn out by play, has journeyed to the land of dreams. Her curl-framed face is pink-hued as the fairest rose that blooms. The quiet patter of the rain outside on the summer's leafage weaves strange fantasies 'mid the curling smoke rings that drift upward; and under its conjuring influence my mind wanders back to the time when mayhap my face too was soft and pink as baby's is now. Ah, well, that was before the prairie winds and mountain snows had combined with the scorching sun of the alkali plains to give me the bootleg complexion I now show. Well, the face goes with the experience which begot it, I suppose, and I would not give that experience for a dozen pretty faces, and I like personal beauty, too!

Somehow the light in the room seems to dim. Has it stopped raining, too? Well, what of it—bound to stop some time, isn't it?

That smoke has a queer smell. What is it? Pine trees? No. Salt water? No. Sage? Ha, that's it; sage brush. I knew I had scented that before!

Well, well, how came I here? I've been here before and know the spot well. This is Wyoming, and over that hill about fifteen miles west are Pumpkin Buttes. Do you remember the first time I was here? No, of course not; pshaw, I know now I was alone! Come, I will take you to that little knoll yonder and show you what I saw there. Now, so: do you see that white thing yonder, and this one and this? There are twenty-six altogether. Don't you know what they are? Skulls! Skeletons, man, meatless bones and eyeless skulls, that lay there shining in the sun; twenty-six of them, and almost within pistol shot, that's all! Who killed them? Come and see. See, the bones are all here, none missing, not even a skull.

No Indian killed them then, for he would have left but little to the coyotes and buzzards. The Indian uses all the carcass, and cracks the bones to get the marrow. No soldier here pieced out with buffalo meat the rations for his pack train, or wagons would have taken the quarters and the humps at least, and the leg bones are not missing.

No hunter killed them; there are too many. And do you see, it was a cartridge ball, one that crushed and splintered where it struck, one that killed by the shock, and not the round ball of the hunter's muzzleloader, that makes a smooth round hole through the shoulder blade and stops the buffalo's life pump! No, I know his work; I'll show you a shoulder blade down on Wildhorse Creek that he drilled. Don't you see the tongue still in that hairy old skull? This wind of the sage plains does not rot anything; it dries it, mummifies it; and there you see this old fellow's tongue still in the jaws, though he has been dead for many moons. The old hunter would never have left *that* there.

Nor did the foreign nabob, who has helped exterminate our buffalo herds, have a hand in this. He would never have left all these heads here. Why, man, look at that one; I doubt if you could lift it when it was first killed. He almost always hunted on horseback, too, and these animals saw no horse on their trail before they fell; they were still-hunted, killed while feeding. Don't you see plain enough that they lie too close together to have done much running.

Who did do it? Ah, don't you know that nondescript who sent the river steamers from old Fort Benton to St. Louis loaded to the gunwale with buffalo robes? The hide hunter and no other is responsible for these twenty-six skeletons bleaching in the sun!

Come, we will climb to the east rim of the valley and I will show you how it was done. This will do. Now, you must picture the men and buffalo and all as though they were there now, and were alive, and I will show you a hide hunt. Notice first the formation of this valley, bowl-shaped, with high, steep bluffs all around, except to the north, where it runs into the cañon head. The wind is from the northwest. See, the knoll is in the center and the buffalo are to the north of it. Some are standing about the muddy margin of the little alkali pool, some are lying down, some are feeding; but all in the valley. See, here come the butchers, there on the mesa to the south. They have seen the herd; they ride up to the south side and dismount just out of sight behind the valley rim and picket their horses. Now they drop into the ridges and furrows of the valley edge and creep down like an epidemic on the unsuspecting animals. The buffalo are to windward and have no thought of danger in this peaceful place. The men reach the valley, drop like snakes down among the sage brush and bunch grass, and work across toward the knoll. They are "ornary-looking cusses," too, blear-eyed, with hair and beard that never knew a comb, a hang-dog air of general meanness about them that says they are not sportsmen. I don't want to get to leeward of them, for I'll bet they smell of green hides and trading post whisky, worse than a Piute Indian. I wish one of those big yellow rattlesnakes would spring his little music box and scare them up out of the grass.

They reach the mound, sneak to the top and ambushed among the rocks, push their murderous repeaters toward the herd. Two reports mingle as one, and two buffalo go down. The herd bunch around them; they hear the sound, but know not where it comes from. Two more shots; one down, another wounded. The herd breaks, circles, sees the smoke cloud and starts toward the cañon. Ah, those devils in the rocky knoll know how to shoot! Faster grows the firing; here and there an animal drops or staggers out of the thundering herd and stands with feet braced far apart, sorely wounded, done to death. At last the herd is gone, there is nothing left for the hot guns to belch at save the wounded; and the men need the horses to keep their cowardly skins whole, when they venture among them. Back to their horses they go; and now they ride among the slain. A shot rings out as some poor brute is finished. One starts away to the left. Two shots and he is down, broken back and broken hip, anywhere to get him.

Here comes another of the human hyenas driving a wagon around the valley edge. He finds a place to get in. Pity he didn't break his neck doing it! The horses are unhitched and taken care of. Now for the skins; they are worth whisky, and powder and lead that get more skins.

Right merrily they work while the sun sinks down in a golden glow, twilight glimmers and a hideous, goulish howl floats out on the evening air, for the loafer wolf is about and will feast ere break of day. Darkness settles down and a camp-fire of buffalo chips glows red against the bottom of the valley. We have seen the tragedy. Come away, let us— What? Eleven o'clock? Where is my pipe? Well, I'm getting chilly, too! Wonder if it has stopped raining?

"Bring baby a drink and come to bed?" All right. Gracious, my neck is stiff; wish I had gone to bed long ago.

EL COMANCHO.

---

## AN AUGUST-OCTOBER REVERIE.

BOSTON, Aug. 10.—A beautiful, crisp and cool morning, with just a suspicion of autumnal haze in the atmosphere, such a morning as really belongs to September or October, but which has come this 10th of August, has made at least one disciple of FOREST AND STREAM clank his chains. What visions such a morning brings to the memory of the lover of woods or mountains, or outdoor life in general, after having suffered for weeks with the oppressive heat, intensified by the heaps of bricks and stone which go to make up a great city! Sweet reminder of days to come which delight the heart of the man of whom FOREST AND STREAM ironically asks: "Chained to business?" "Yes, we are," with an extra yank at the iron fetters!

The maple tree in front of my house seemed hardly natural with its green foliage, when I turned out at daybreak to drink in the beauty of the autumnal morning. I felt myself involuntarily looking for the red and gold leaves of a later season. Up in the haze there forms a mirage, and I mentally perceive the dark outlines of the distant mountains, and see their darkness fade into a lighter blue as old Sol awakens them from their slumber. The blue gives place to the violet. then a scarlet coat is theirs; and so develop the evolutions of a matchless mountain sunrise, until at last they stand before us in their everylday dress of green and yellow, with the flashes of a thousand diamond dewdrops set in the emerald of the surrounding pines. The brooklet at my feet gurgles and bubbles as if it too had caught the poetry of its existence in the protecting arms of the silent virgin forest. I tread noiselessly along the mossy banks, not to desecrate by vandal sound the handiwork of the Creator, when—*B-r-r-r-r!* ahead of me one of the princes of the ruling house seeks protection from his arch-enemy among the thick foliage of a century pine. But these are day dreams from which I am rudely awakened by the clank, clank! of that merciless chain calling me to my duty. Farewell, mirage and beautiful morning together; the fierce August sun will soon remind me that you were only forerunners of days which are not yet, but soon will be.

It is in just such moods, when the chain which binds you to your business seems to increase to an enormous weight; in just such a place do we most appreciate and enjoy the privilege of turning to the pages of a paper such as FOREST AND STREAM submits to us. Who is it that can tell the number of chafed ankles healed by FOREST AND STREAM in its weekly work of mercy? When the chain has been hurting me I read FOREST AND STREAM and get well; I do it to-day with as happy effects as I did ten years ago when I used to be a boy among the Swiss Alps and had to study FOREST AND STREAM with the aid of dictionary and translate it for my grandfather, who was as fond of FOREST AND STREAM as he was of chamois hunting, which means very much indeed.

MATTERHORN.

# "Forest and Stream's" Yellowstone Park Game Exploration.

No. 13.

## THE END AND SOME CONCLUSIONS.

### A Hard Task In Protection.

As I WRITE the concluding paper of a series perhaps too long, it is August and not March, and the sweltering heat of the lowlands has taken the place of the cool breath of the mountains. There have been important changes in the situation since the time the material for this story was gathered, but the change has been all for the better and all in the way of benefit to the public and to the sportsman. There seems to be no reason now to change the belief that the FOREST AND STREAM Expedition was "lucky" in every way, unless in the story the writer has failed altogether to give any true notion of the Park in winter and of the situation there as to the protection of the game. One might easily fail in this, for the subject is a large one and all its details are large. One deals here in immensities, and to write of immensities conveys no impression whatever unless the reader has some yardstick of immensity by which to measure.

On one point I am especially anxious to be clear, and that is the extreme difficulty of protecting the Park with the means provided by the Government. The task set by the authorities at Washington is altogether too large. Two troops of horse and one scout cannot protect the Park at any season. In the winter these two troops are not two troops. They are only so many men as can travel on *skis*. The army regulations do not exact a knowledge of *ski* work. For $13 a month you can get many men who will act together, who will drill well, shoot well, fight well, be good soldiers under the regulations, but out of them all not all will be good mountaineers, adventurous *ski* runners, tireless climbers, fearless woodsmen and educated scouts. Some of the troopers will be near enough to all this to do work in the winter. The great majority will not. The authorities at Washington do not know this. Regular, formal—blind, that is almost to say in some respects—to them two troops of horse are two troops of horse, and should be sufficient. It is supposed that a trooper can ride fifty or sixty miles a day if necessary. In the Sioux campaign troopers often rode that far. Ergo, the authorities perhaps reason, troopers should ride that far in the Park on any day when necessary, and should be able to pick up a poacher in any corner of the Park.

Perhaps the great American public, which has long been robbed of the Park buffalo, of many of the treasures which it owned there, may unite in the above cheerful belief. Especially those who have ridden through the Park in comfortable stages may unite in the question, Why can not the Park be protected perfectly?

The authorities at Washington, the public at large, know not whereof they speak, or such questions would not be asked, and things would not be as they are. The authorities and the public do not know that there are two Parks to protect, and not one, and that the winter Park is fifty times as large as the summer Park, so that no trooper can cross it in a day nor in a month, nor in the entire winter. The authorities and the public should know, and I hope that even by the mite of these small writings they might be encouraged to begin to try to know, that the Park is not the Park, and that the two troops of cavalry are not two troops, for the greater part of the year and at the very time when protection is most imperative, as the news discovered by our party has conclusively shown.

Now all this time we read of the corruption of American politics, of the waste of public money, of the gigantic frauds by which this foolish and patient nation is successfully and successively robbed. We throw open the gates of our beautiful country and welcome in the outcasts of the Old World, creatures whom the Old World does not want and who cannot earn a living in that country. We welcome this low rabble, and make it equal to ourselves in the making and the enforcing of the laws of this land. We allow this rabble to lower the national American tone of respect for restraint and for law and order. We permit the growth of a carelessness for the public heritage of great game—even a carelessness and an ignorance as to so magnificent a possession as this great Park, which is to-day better understood and better valued by better class Europeans than by better class Americans. We permit the imported rabble to embroil us in riotous labor troubles—these men who could not earn a living in the Old World—and we are forced to spend millions of dollars to put down the troubles, even then in a deprecating way. But meantime America has no money to spend for the America of the past and of the possible. There must be no "waste of the public funds" by which a half dozen, or two, or one additional scout shall be given the public to help guard one of the public's most priceless possessions. The public shall not even have its two troops of the guard made actually two troops, or one-tenth of that, during the most important part of the year. No. We must not do that. We must go on in the good old way. Meantime America is not America. America is no more. We have opened the gates and we have been flooded by a debasing tide. We have bartered America, the once unrivalled and even now the land of wonders, and have sold her for the humiliating price of a few political votes. Under these broad truths, for which these columns are hardly the proper place, lie none the less the difficulties of game protection in this country, and many of the difficulties in properly protecting the Park and its remaining specimens of some of our vanishing game. Congress has made a great step for the safety of the Park, but it has not yet done all that is needful. It needs to realize the value of this great region and its game as any other country would realize.

Congress needs to set the mark for a change in sentiment, and to invite a sentiment American at heart, which shall keep America, or at least the rarer portions of America, free from further spoliation. No railroads in the Park, no more game killed in the Park—this is what an honest American Congressman should say. Saying that, he may vote to save a little money out of some well-known scheme, and devote it to the placing of six, or two, or even one additional mountain scout on the Park guard, which now has only one scout.

Congress has not 200 men on guard at the Park in winter. It has just one man. His name is Burgess, Park scout. This is the only man of whom Congress can officially ask duty such as the necessities of the service exact. This U. S. Army, of one man—one man upholding the safety and dignity of this whole great country in one of its richest treasure vaults—must cover a territory larger than the State of Connecticut, rougher than the White Mountains, deeper under snow than Labrador, colder in climate than Manitoba. If we are to have success, even under the efficient new law, the U. S. working army must be made larger than one man.

F. JAY HAYNES.

HOWELL AND THE PARTY THAT BROUGHT HIM IN.

### Thanks to Both.

Fresh from the wild country up the Park, and fully impressed with the immense extent of it, its impenetrability, its savage inhospitality to the winter traveler, I could only say to Capt. Anderson that it seemed to me a wonder that the poacher Howell had been caught, and yet more a wonder that the guards of the Park, from commanding officer to private, were not discouraged at the task set before them—a task which by reason of fundamental lack in its conditions, could never be more than half done, since (at that time) the detection of crime, difficult as it was, could never be followed by proper punishment.

Up to that time, in common with the general public, I had been absolutely ignorant of the way the Park was protected or what its protection meant. If this story of the Park in winter has made some few others acquainted with these facts, then a great purpose of the FOREST AND STREAM enterprise has been gained.

Meantime, thanks, let me say, to Capt. Anderson and the FOREST AND STREAM, Congress has given the public since that time (in the month of May) a law which in one sense revolutionizes the whole situation at the Park, and makes the once impossible task now in a way fairly practical and certain. With the killing of a buffalo made a penitentiary offense, the attached penalty running as high as $1,000 or years in the penitentiary, or both, Capt. Anderson has something to stand upon. When the report of the next arrest of the Howell kind comes in he can feel unqualifiedly exultant and can know that the arrest means something.

Summing up on the facts, it is not likely that another poacher will soon go into the Park. Should he do so, and should he not resist arrest and so be brought in for trial, he will be retired from active public life for a while. The average bad man of the mountains, however, while he may have a disregard for local or State laws administered by his friends, has a superstitious fear of any United States law. He doesn't want to run against Uncle Sam, for he knows Uncle Sam's arms are long and his heart hard when it comes to going after a criminal. In March it was not impossible to go into the Park and kill some buffalo heads for sale without serious risk, and every hunter in Montana, Idaho and Wyoming knew it. To-day, since the little FOREST AND STREAM expedition went in—whether or not because of it—it is a crime to do that same act, and every one of those hunters knows this, too, for news of this sort flies fast in the mountains in its own mysterious way. One or two of the more daring may go into the great winter country after some of the few remaining great animals which still remain there, but the pitchers of these will go too often to the well. The day of poaching in the Park approaches its waning. The American public, let us hope, has begun in some measure to see to what great extent and of what priceless possessions it has in the past been robbed. Agitation has had its result. The change since the snows of winter were deepest in the Park has been a great one. Every lover of nature, of fair play, of decency, can only congratulate himself when he gazes on that picture and then on this. I imagine that Capt. Anderson has entered on this season's campaign with greater zest than ever before. The public has only to wish that he may enter on many and many another, for his equal in that post will not be found. FOREST AND STREAM, which hopes that it has been useful in securing a better law for him to work under, will hope also to see him some day given more men of the necessary sort to help him in the still exacting and difficult task of enforcing the law. Let us all hope that the Attorney-General will not delay the appointment of deputy marshals who shall also be competent scouts until the stock of buffalo is cut down still more or perhaps placed beyond the possibility of a survival. The Park law is excellent, and it may of itself deter poaching, but no law is altogether good which is not sustained by proper machinery of enforcement. Troops of cavalry do not constitute such machinery when they cease to be cavalry, but are dismounted for eight months of the year by snow.

The primary object of the FOREST AND STREAM expedition was to learn about the existing numbers of the big game in the Park. The conclusions as to that have been given from time to time earlier in these articles. I give them with all diffidence on my own part, but with confidence after all in their general accuracy, since they are in the main founded on the good judgment of experienced men such as Hofer and Woody, who were on the ground with me. Beyond this, we base the accuracy of our report on careful and conscientious work in the region covered, leaving nothing to guesswork when possible to do otherwise.

As by our earlier record of the antelope, I can summarize by saying that we think there were about 400 antelope alive in the Park last winter, all on or near the Gardiner Flats.

### Twenty-five Thousand Elk.

Judging by what we saw at Yancey's and near there, I should not think an estimate of 25 000 elk would be extreme, allowing that not all the elk have drifted to the northeast corner of the Park where we saw so many. If the elk are as scarce in the Pelican country as they are in Hayden Valley, and if the East Fork country really has most of them, then 25,000 would be a liberal estimate.

### Not Ovér Two Hundred Buffalo.

I do not personally believe there are over 150 buffalo left alive in the Park. I will say 200, more out of deference to those who say, "There certainly must be more buffalo than you think," rather than for any reason I can see for such belief. I know the popular estimate was 500 head, but while that may be right, we could discover no reason for thinking it was right. We discovered many reasons for thinking it quite wrong. The Park was never

so thoroughly traversed as it was this winter. It was covered very thoroughly in the main buffalo range, and partially on what might be called the alternate winter range of the buffalo. We had the reports of every officer, every soldier, every scout, every hunter and even the solitary poacher who had been in the Park, besides our own knowledge. I can make up no actual count even equalling 150 head. The winter range is so small that these men and ourselves would be more apt to see the same bunch twice than to pass by even a small bunch unseen. I add the 50 head only because of the latter possibility. I know Captain Anderson in his last report thought the buffalo far more numerous than this, but he made his report on data not so thorough as those of this winter, and I believe even his informants of last year advise him in accordance with our smaller figures of this year. He told me that without further reports he could not again report over 250 head alive. I do not think he will put it so high as that.

It was the chief accomplishment of our expedition to show how mistaken was the general idea as to the numbers of the Park buffalo, and how alarming the possibility of their absolute extinction. Against this easy work of revenge or of mercenary greed let us hope the authorities will take especial measures, at least for the coming winter.

### Other Game.

We have nothing to submit by way of figures as to other game. Mountain sheep were seen by others, and there seems to be a band or so. We saw none. We saw in all about twenty-five deer, all blacktail, and all near the Mammoth Hot Springs (two bands only). As to the bears we could not, of course, say. We saw one and the trail of another. We saw the trail of two mountain lions and of innumerable foxes. There seemed to be more foxes than coyotes, even. We saw a few lynx trails, and one trail of a wolverine. Some of the wild fowl I have already mentioned, but we saw no grouse or ptarmigan of consequence, two in all only, I believe. There were a few mountain jays—"camp robbers," some Clark's crows, and once in a while a raven. Kingfishers, bluebirds, waterousels and wild ducks (mostly mallards) were wintering on the Gardiner below the Boiling River. My recollection is that we saw two eagles, but I have no note of more than one. The tracks of the pine marten, of the squirrel and of the "snowshoe rabbit" were common. The upper Park was very silent and bare of visible life, even in small animals.

### All Were Kind.

The officials of the Northern Pacific road were very kind to FOREST AND STREAM in every way. Capt. Anderson was so kind that it is useless to try to thank him properly, and Mr. Deane was very kind to let us into the hotels of the Park Association after they were closed, and Mr. Haynes was exceptionally generous and kind in allowing the use of his magnificent game pictures, the best ever made in the Park. Every one, it seemed, united in the effort to be courteous and helpful to us, and to all there as much as to the actual members of our party the thanks of the readers of this paper are due, if any be felt at all. The paper has already made acknowledgment of this unsquared account, to which acknowledgment we must add our personal one.

### Last Days at the Park.

Billy and I put in our last days at the Park—or rather my last days, for he lives right at the edge of the Park—while I was waiting for the weekly train down from Cinnabar, in fishing for trout in the Gardiner and Yellowstone rivers. We got trout, too, though not any such very big ones, as it was too early. Then one morning the time came to go, and I said good-bye to Capt. Anderson and the pleasant gentlemen around him and started for Cinnabar, where finally I left Lieut. Lindsley and Billy. Billy was tougher and browner even than when he went in. Every man of the party was lean and hard as though trained fine. The reflection from the snow, even on the coldest days, had burned us all to copper-color. We were all in perfect health and great form. No possible regimen or system of exercise would put a man in as splendid shape as a month's trip through the mountains on the *skis*. The beneficial effects of that trip—the greatest one of my life and one not likely to be again taken by myself—endure to-day. And even now I can see the rushing flood of the noble Yellowstone, and can see the great white mountains and the geysers at the rising of the winter sun. I can almost feel the shadow of the forests at night, and hear the rushing of the mountain streams, unfettered even by the general shackles of the cold. The white plains, the black cañons, the dominant peaks, the brilliant lights of the varying sun, all make up a picture seemingly almost unreal, but bright, vivid, imposing and I hope enduring. It was a journey for a lifetime.

E. HOUGH.

## IN THE CLEARWATER COUNTRY.

WHEN the Carlin party was lost in the Clearwater Mountains, that event brought that country quite prominently before the public. It was my good fortune to spend many happy days and a few disagreeable nights in the twenty years I passed in that country.

In 1865 a party of four of us mined on the South Fork of the Clearwater. It received its name from being so very clear. The Indians called it "Koos Koosky," signifying "clear water this." But where we worked it was somewhat like the Missouri during the June rise, only a little more so. It was entirely too thick to drink, and not quite thick enough to walk on. This condition was caused by the numerous hydraulic mines which dumped their debris into it above our claim. We managed to get along, however, for we were like the majority of miners, we thought that water was a success for mining, navigation and irrigation, but that as a beverage it was a flat failure.

We had worked hard all summer, and when the water failed on us in the fall, we concluded that we would spend a few weeks prospecting up in a range of mountains between the Clearwater and the Salmon rivers. There was a mineral belt extending through the whole chain from South Boise in South Idaho, to Kootenia, in British Columbia. So like all miners we were full of confidence and hope that we would strike a new camp. Our outfit for each person consisted of 75lbs. self-raising flour, 30lbs. beans, 15lbs. sugar, 15lbs. bacon, 5lbs. salt, 10lbs. dried fruit, 5lbs. coffee, ½lb. tea, a pick, two shovels, an axe, hatchet, 2lbs. small nails, a rocker iron, pair of blankets, one change of clothes, navy revolver and ammunition. As I was the smallest I had the lightest pack, which weighed 67lbs. when ready to put on. My brother and Jack, very large and powerful men, had 90lbs. each, while Gilbert had 75lbs. Bright and early we were on the trail, we had to go down on the north side of Clearwater opposite where a mountain stream called Twenty-Mile puts in to the main stream.

As soon as we left our cabin I struck out ahead and Jack kept close up, but as my brother and Gilbert were never known to hurry, they were nearly an hour longer reaching the mouth of the Twenty-Mile.

As soon as Jack and I got to the crossing we dumped our packs and took a survey of the situation. The Clearwater here is 75yds. wide and from 3 to 4ft. deep. The bottom is covered with round-washed gravel, which in turn is covered with a slimy sediment. After resting a few minutes to cool off gradually, I sat down and began pulling off my boots and clothes. At first Jack said he would wade with his boots and clothes on; but I told him he would feel much better after he once got across by pulling off his clothes, and if I could stand it then he could try. Having everything in readiness I started in. I had a good stout walking stick to lean and balance on. Putting my foot down, it would come on to a smooth boulder covered with slime, slip off, and sometimes wedge down in between two stones, which would be so close that would have to feel for another place. I soon got across all right, but it was a terrible dose. When I reached the bank my limbs were about as red as a boiled lobster. We had no thermometer to tell how cold the water was, but from the contortions of Jack's face it must have been at least 50° below zero. I soon had my clothes on and felt the reaction. There was plenty of good dry wood handy, and I soon had a roaring fire. Jack got across all right, but said it was "the bitterest pill he ever took."

We stood around the fire for a few minutes, when I proposed we cut some poles and try Twenty-Mile for trout. I started up the stream to some big boulders. I soon found a place I thought would be a favorite haunt for some big fellows. There was a great eddy, and a lot of foam was making its regular revolutions. I took a grasshopper from the tin box, threw it near to the foam, and in an instant there was a silvery flash, with a red tint to it; then a splash, splash, splash; and I could not tell how many big trout had made a grab for that hopper. But the first one missed it. I threw my hook out near the foam, when it barely touched the water before it was grabbed, and from the way that line sung I was sure I had hooked a 3 or 4lbs. trout. I soon threw him out, and a beauty he was. I had no scales, so had to guess at the weight, which I put at 1½lbs. Soon I had another. This I kept up until I had 18, and started to camp. Jack had caught 12, which varied little from mine. We had dinner well under way when my brother and Gilbert put in an appearance on the opposite side.

I told the boys that it was not bad crossing, a little cold, but nothing as it was when mush ice was running. I assured them that they would feel fine when once across; and as a stimulus to hurry them up, I held out a string of dressed trout. They got across, and as they were tough, made no complaint; but as soon as they were ready we sat down to a square meal, and when the inventory was taken after the last one was through it was found that we were sixteen trout short. Gilbert being the only one that used tobacco, filled his pipe, and soon filled the air with his poisoned fumes, which he termed solid comfort. After a hearty rest we concluded we would catch a few more trout, for we would leave the river the next morning. My brother soon had a rig; and he was a much better fisherman than either of us. I never met any one who has the patience he has. When I fish a minute or two in a nice pool, if the fish do not bite, I move. But here it required no patience and but little skill. We returned to camp in less than an hour with fifty-seven nice trout. Two of us took care of the fish, while the others set about making camp comfortable for the night. The boys cut down a fir tree, broke off the fine browse, spread them down even to the depth of a foot, then put down a couple of gun pouches, then our blankets; and we had a splendid bed. After a good trout supper, with a huge log fire, which threw its genial warmth and cheerful light in to the tent, we had a cheerful home, such as is seldom enjoyed by sportsmen or miners.

We were awakened quite early by the chattering of pine squirrels. They are nice little fellows, and are about the size of a half-grown gray squirrel in the States, but I think their flesh is better. When they are alarmed they make a noise something like that of the kingfisher. After breakfast Gilbert and I added the surplus trout to our packs, and we were soon on the road. This was as far as any of us had been in these mountains, and all before us was a vast wilderness. The mountain was so steep that we had to go down about half a mile before we found a place we could get up at all. Finally we came to an old elk trail, and this we decided to follow, thinking that we could manage to get up where those monarchs of the forest could come down. But we found it quite a task.

We would go for 15 or 20yds., when we would have to sit down against the mountain and rest a few minutes, then try again. By noon we had reached the top of the first bench. While we were resting my brother went down into a small cañon and got a kettle of water, and soon we cooked our dinner. We cleaned up the surplus trout out of my pack, which made quite a difference in the feeling of my load. Resting an hour after dinner we packed up and started. For the first mile we had very fair traveling; then we struck a pine thicket. The timber had been burned a few years before. The young pines had come up nearly as thick as wheat; the old pines had rotted off at the ground, and had been blown down in every direction. In many places a man could go several hundred yards without getting on to the ground. But with heavy packs such as we had, it was impossible, so we had to go down the mountain until we could pass around the windfall. This took us until late in the afternoon, when we got back on to our ridge. We followed this up until at 4 o'clock we struck a spring, and we went into camp. A short distance above camp we saw a number of fresh elk tracks.

In the night I was awakened by an elk whistling; he had probably scented our camp. I awoke the boys and as it was the first whistling they had ever heard at first they did not believe an elk could make such a noise. Judging from the sound he could not have been more than a couple of hundred yards off. The next morning we were up early, had a good breakfast of the remainder of our trout and we started on up the divide. We had not gone more than a mile when we saw seven elk, among them being one with the largest pair of antlers I had seen in this country. They were not much alarmed, but trotted off a short distance and all faced about and took a good look at us. As we had all the load we could carry and plenty of grub we did not molest them. When we first saw them I could have killed one without any difficulty with my navy revolver.

This day we had good traveling and must have made twelve miles. We could tell we were getting quite high from the tamarac and small black pine. About 3 o'clock we struck what we thought was the summit of the divide we had been following up. We turned down to our right and soon came out into a beautiful meadow of a few hundred acres, with a small stream running through it. Here we camped. When we would approach the stream we could see quite a number of little mountain trout as they would dart from one bank to the other, but it was too late to fish any that day. The grass in the meadow was over a foot high and there were a great many elk beds scattered over it. Along in the night we heard another elk whistling, and he was answered from across the creek. They kept up their bantering nearly all night. Early in the morning we could see them in the lower part of the meadow; one was quite large and had a fine pair of antlers; the other was a spike, yet was nearly as large as the older one. But he seemed to be afraid to fight, for the large one kept driving him around from place to place.

We prospected here for four days, then we moved up the creek about six miles, near to Buffalo Hump, a very high mountain on the divide between the Salmon and Clearwater rivers. Here we prospected for a week and found a few fine colors; that was all, yet it satisfied us that we were near the gold belt. We began to notice that when we would move camp our packs were considerably lighter.

One afternoon brother said he would go across the divide and take a look at some gulches in what he thought was a basin near the base of Buffalo Hump. The rest of us finished prospecting the creek we were camped on. Supper time came and my brother had not put in appearance. Before going to bed we shot off our revolvers but did not hear any answer. I felt a little anxious, but tried to believe he would be in every few minutes. But when morning came and we sat down to breakfast, there was an empty place. As soon as I got through breakfast I buckled on my revolver and told the boys I would go up on to the divide that my brother had said he was going to cross and if he should come in while I was out they should fire their revolvers. I left camp and walked very fast for about an hour, when I came on to the divide where I could see the basin. I fired my revolver, and the echo had hardly died away, when to my joy I heard an answering shot from the basin. I started on a trot in the direction of the shot. After going about a mile I fired again. This time the answer came a great deal nearer. Then we were in calling distance; and we soon met. He was perfectly cool, while I was all excited. "Well," said he, "did you think I was lost?" I replied, "I knew you were lost, and was afraid we would not be able to find you." As we went back to camp he told me how he had come to stay out. He had gone further than he intended, and it was nearly dark before he started to return. Just before dark he shot a rabbit. Then he struck a gulch that had very thick brush in it, and in crossing he fell into what he thought was a hole made by the upturning of a tree, he fell over a stump that had been cut with an axe. He then built a fire and could see that work had been done there; and concluded that as he had plenty of game he would camp there and take a look around in the morning before returning to camp. In the morning he found that considerable work had been done in the gulch. They had sluiced out a place about 20ft. wide and 100ft. long, about 2ft. deep. The work had been done some three or four years before.

We reached camp a little while before noon, and after dinner packed up and moved over to the deserted claim. The next morning early we were up and went to prospecting; we could get some good prospects but the ground was spotted. We made a rocker as there was not water enough for us to sluice. Two of us went to rocking, the others trying to trace the pay streak. We rocked for two days, when we cleared up, and thought from the bulk of the dust that we had an ounce or a little more; but when we reached our cabin and put it in the scales, it was like the big fish, and deer and bear that are guessed at; it weighed just $9, or half an ounce and one-sixteenth. We could not locate the pay streak. The men who had worked there before worked out all of the streak they could find.

Our provisions began to get low; we were out of the trout range, and were too busy to hunt for pheasants. One morning early I went up toward the upper part of the Basin hunting. I had not got more than a mile from camp, when I saw a cow and calf elk. They had seen me first and had trotted up on to a small ridge and stopped broadside. I shot at the calf and killed it; the cow stood there looking at me, and waited until I got within 20yds. of her before she left the calf. Then she trotted off a short distance and stopped. I had all the meat I wanted. After breakfast we dressed the calf and packed it into camp.

That day we finished prospecting there, and went down about half a mile on to another gulch. Here we struck a fair prospect, but we could not find the main chanel or streak.

We were through our breakfast and ready to travel by the time it was light enough. Although the going was heavy we made very fair time, and by noon were on the summit of the last bench above Clearwater and not far from our first camp at the mouth of the Twenty-mile. When we got down to the river I did not stop, but went right across, as I thought the muddy water could not make me any wetter than I had been for the last few miles. But I found out that it was a deal colder. When I got out, I rustled around for dry wood to make a fire. I had thoroughly dried my matches and put them in my pack, and had no trouble in starting the blaze. The boys helped and we had another big fire. As soon as we had shoveled away the snow and had our tent set, we changed clothes and had our dinner. Then some of the boys wanted to go up to the cabin. I told them they could go, but that I should remain in camp for the night; so all concluded to remain. The next morning early we started and reached our cabin, all feeling well and not very badly exhausted, but perfectly satisfied with our prospecting trip in the Clearwater Mountains.

LEW WILMOT.

# Natural History.

## WAYS OF THE FISHER.

The reading of an article on the wolverine in a recent Forest and Stream carries me back nearly forty years to my old trapping days in northern Wisconsin, and reminds me of a cousin of the wolverine. What a pest the fisher was to the trapping fraternity in those days. To great strength of muscle was added pertinacity of purpose with extreme cunning, and it was almost an impossibility to outmaneuver him.

We had a line of traps, some twelve miles in extent, mostly deadfalls, for at that time the steel trap was rather costly and burdensome to carry. We had our cabin at one end of the line. Sometimes when the line extended some twenty miles or more we would have our shanty midway, so as to go over the half every two days or oftener. These lines were blazed through the woods, and generally began at our cabin on some water course, along its edge or around a pond or lake for mink, otter and beaver, then up over the knoll, through the woods, for martin and sable, to other water courses.

Our line at the time I refer to ran some twelve or fourteen miles over the hills. We had been having pretty fair luck for a week, taking more than a dozen pelts, when one morning we found every deadfall had been visited and destroyed, and not only the bait but the captured animal taken. It was easily surmised by Ralph, the old trapper with me, that the culprit was "a doggoned fisher." We had killed a deer but a day or two before; his paunch and head, drawn over the route, had left a strong scent for the rascal to follow up, and in one night he had destroyed the work of many days.

The fisher is very strong and very cunning. He can rarely be caught except in steel traps, and that, too, when they are buried and the scent of the same well smoked off. The fisher upon approaching a dead-fall will invariably go around to the back side and by main strength pull out or break off the stakes of the deadfall, when, of course, the bait can be eaten without danger. The day I have referred to Ralph was very angry, and to tell the truth your humble servant felt anything but amiable. Some twelve or fourteen of our best paying deadfalls were in ruins and no pelt to show, and worst of all we felt sure the scoundrel would call again. Oh, for even one good Newhouse. The half dozen steel traps we had were small and would only hold mink or muskrat, and we could not afford to lose them. We had them set around the lake and brook for mink. Ralph, after relieving himself by the generous use of some strong Western language, seemed wrapped in deep study for several minutes as he gazed on the wreck of our last fall.

Presently jumping up he said, "Blast 'is 'ide, I guess we can fix 'im." We rebuilt the fall, and over the back part, sufficiently high up not to attract attention, we fixed a heavy log to a pair of saplings, so fastened that a strong pull at any of the back stakes of the fall would loosen it. "There," said Ralph, "if that works right and comes down on the skunk's skull we'll have a pelt worth havin'."

A couple of days after this, it being Ralph's turn to go over the line, he started out, dragging the deer's head behind him. He had been gone probably a couple of hours, and I had been busy mending up my leggings and fixing up after breakfast, when I heard a shout, and upon going to the door of our shanty I could see up the river the big fellow (he only stood 6ft. 4in. in his stockings) coming on the ice toward the house swinging a big black thing in his hand and yelling "I've got him, I've got him, here's the cuss." Upon his approaching sure enough he had the reptile, as he called it, a full-grown fisher, as black as jet, full 28in. in length with a splendid bushy tail of some 18in. more.

Ralph had found him with a broken back at the fall we had fixed up for his especial accommodation. The big boy was so tickled he didn't even wait to skin it, but hurried home to show it to me. It was a prime pelt and not only worth more in market than any two mink, martin or sable, but it probably preserved for us money that otherwise we would have lost, for we were troubled no more that season with torn down falls.

Ah! the memory of those trapping days! They come over me like pleasant dreams. The life of a trapper is a life of hard work, interspersed with rough times now and then, with incidents of adventure and sometimes of danger in his encounters with the larger animals, the bears, lynx and more especially catamount or American panther, but the latter is now rarely met with even in our wilder regions. The very far West I know personally nothing about. But a trapper's life has its excitements and its pleasures, far outnumbering its dangers and drawbacks. It is a life of independence in the free woods. With what an appetite he enjoys his meals of venison or trout; how well he sleeps on his bed of balsam after a day's tramp, and with what intensity of pleasure he approaches a trap and finds a prime pelt his reward, and how like a miser he gloats over his prizes as they hang to dry in his cabin, or are packed away for transportation. He comes out of the woods strong of muscle and robust of stomach. Who ever heard of a trapper catching cold or being sick or laid up except by some accident of axe or gun? Would that I were a trapper again even for one small month. I don't believe that I have forgotten all my cunning. Jacobstaff.

["Jacobstaff" leaves us a little in doubt as to whether the animal captured was really a fisher. Some of the qualities attributed to it seem more like those of a wolverine, yet he describes the fisher. The two animals could hardly be confused.]

## FRIENDLY FLYING SQUIRRELS.

Syracuse, N. Y.—I noticed what Mr. Eugene McCarthy wrote of flying squirrels last week, in reply to a question as to what they will eat. For several years past several flying squirrels have made their home in my house, sometimes when at night causing disturbance by their pranks, creating a desire for their extermination, but as neither a rat nor a mouse has been seen in the house since they came, their occasional racing is tolerated.

But there are two mysteries connected with them. Whence came they? I know they are here, for several times they have been seen in different rooms, and once I saw one "fly" to one of the large elms in front of the house. Of their identification there is no doubt. And upon what do they subsist? No tracks or traces of them are to be seen about the house, and their presence would never have been suspected but through personal observation and their occasional racing. They have never committed any ravages of any kind. I am utterly at a loss to know upon what they feed. More than this, they are never seen among the many trees in the vicinity, so that if they leave and return to the house they do so only at night.

They are mysterious little fellows, but I like to harbor them, for they are wholly inoffensive. But I never cease to wonder how they support their lives. D. H. Bruce.

## TOUGH TOAD AND TURKEYS.

Ithaca, N. Y.—*Editor Forest and Stream:* As showing that it is the singular that sometimes happens even in the prosaic walks of life, let me present a circumstance recently encountered by Mr. Chas. Aikens, a man whom I know to be strictly trustworthy and truthful. Mr. Aikens, who resides some twenty miles north of Ithaca, in digging a well on his farm had occasion, upon reaching a depth of 12 or 15ft., to do considerable blasting. In the mass of broken rock thrown out was found a frog, apparently dead, while upon the surface of certain pieces of the rock was an exact outline of the amphibious curiosity. But more wonderful still, the frog soon exhibited unmistakable symptoms of life, and in a brief time thereafter hopped off, after the manner of his kind, as lively and evidently as full of the essence of exhilaration as the liveliest of well fed frogs can be. Perhaps the Forest and Stream's brotherhood of natural history students may explain whether this is a common or an uncommon freak of the frog family.

In connection with this incident, Mr. J. H. Wilbur, of this city, took occasion to relate an experience of his, which illustrates the fallacy of the theory that the average turkey of a young and tender age is an exceedingly delicate creature, and particularly susceptible to anything out of the line of mild and propitious weather conditions. Mr. Wilbur's flock of young turkeys was confined in a coop in the dooryard, and one afternoon the rain descended and the floods came. After the storm passed a dozen drowned turkeys were spread out on a convenient board and allowed, through unintentional neglect, to remain there over night. The following morning the sun burst forth with a wealth of warmth and heat. Mr. Wilbur passing across the yard a little later was astounded to observe sundry twitchings of beaks and bones among his supposed lifeless turkey crop, which soon developed into vigorous manifestations of activity, finally resulting in the entire brood gaining its feet and pursuing the even tenor of its way. This is directly in line with the evidence which I have heard more than one old-time hunter advance as proof that the young of the wild turkey is a hardy bird, especially after the first few days of its existence. M. Chill.

### A Tame Mountain Sheep.

Estes Park, Col., Aug. 9.—*Editor Forest and Stream:* During a drive that I took yesterday with my brother I saw something which has inspired me to write to you. We had started in a phaeton to drive from the Estes Park Hotel to Lamb's, and when we had got a mile and a half perhaps from the hotel, and were driving through a big pasture dotted with cattle, I saw the drab coat of a mountain sheep, feeding among the cattle about 100yds. from our wagon. I stopped and pointed her—it was a ewe—out to my companion, who thus had his first sight of that kind of game. She looked up at us, trotted a few steps, and then went to grazing again.

When you consider the nearness to a traveled road and the plentiful tourists continually on the march, the incident seems very extraordinary for animals so wary; especially, too, is the tameness of the ewe, as seen by her resuming her breakfast in the presence of the neighboring enemy, strange to me. I have heard of sheep invading the bunch of horses of a party of prospectors in early days; but I thought that all that simplicity had worn off. Certainly this experience is the only evidence I ever had of that trait. H. G. Dulog.

[Mountain sheep—and bison—are protected by law at all seasons in Colorado, and the tameness of the sheep seen by our correspondent would seem to indicate that the law is well respected in Estes Park.]

THE FISHER.

# Game Bag and Gun.

## ON ST. LAWRENCE MARSHES.

Sing, oh Muse, the sorrows of an old party of friends of Forest and Stream, who were camped on the broad St. Lawrence on the twenty-ninth of last August, on which day it pleased the weather clerk to unload on that fair river a very vigorous cyclone, which he had concealed up his sleeve, and which dampened most horribly the ardor and likewise the baggage, bedding and skins of Crown Prince, Abou Ben Tuska, Tony Van Kite and me Sing also, fair Muse, in praise of the fast flying duck pursued by swift death, leaping forth with lurid flash from its rounded cell, the graceful smoothbore's barrel. What labors will we not undergo, what fatigues and privations will we not endure in order to have even a chance of matching our skill against his in his own chosen field. Nothing could prevent me, nor shall, from going duck shooting when I have enough money to reach the shooting ground. I care not whether I have enough to get back. I can walk and swim back. No previous failure daunts me, no prospect of ill success holds me back. Therefore in August, when Abou, who made last year's trip to the Rideau Lakes with me, and Tony and Crown Prince offered to join in a second invasion of those happy hunting grounds, and asked me to go also, I leaped at the chance.

We rendezvoused at my island home on the St. Lawrence, and on the 28th of August started in three boats on our three days' pull. Then at the very start began the sorrows that I have requested the Muse to put to music. Abou and Crown Prince paired off in the smallest boat, only 13ft. long. Abou weighs about 110lbs. and the Prince about 200. In consequence, when Abou rowed and Crown Prince sat in the stern, the bow rose so high in the air that the oarsman could scarcely get the oar blades into the water, and the boat's stern exhibited perhaps an eighth of an inch freeboard. When they reversed positions and Crown Prince put his ton-weight person at the oars, the skiff's bow was so depressed that it was utterly impossible to keep a straight course, for as every one familiar with a boat knows, a vessel so trimmed will persistently attempt to turn in circles. Tony and I cast our lot together, and but for the tenderness of my companion's hands (he a novice at the oars) and my own delightful habit of splashing, which made a trip with me rather a watery amusement, we got along excellently. George Patterson, the guide, cook, protector, camp-master, etc., of the party, flocked by himself, and he rowed one boat altogether, his strength being equal to that of any two of the others. So much for our division of labor.

We started out from near Alexandria Bay with the intention of making Kingston, Canada, 33 miles away, the same evening. But we did not. Owing to getting away late, and the scandalous conduct of Abou and Crown, we had advanced only about fifteen miles by 4 o'clock, when it began to rain and we decided to camp on "Jiminies" Island. We took a nice spot and set up two tents, one 7×7, for George, and a larger one for ourselves. Then we took a bath in the rain and river, and cooked some ham for supper. While eating I saw a loon about a hundred yards away. Taking out a .25-20 rifle I fiddled with the sights, posed prettily and lectured to the admiring crowd on the proper elevation, etc. I fired and missed the bird by about ten feet. I did not look at anybody and no one made any remarks, but I thought many things of a most lively character.

At about nine we went to bed. Then began the circus. All night long the rain leaked into the tent. At 2 A. M., the wind arose; at 4 a gale was blowing; at 6 the front of the tent blew in; at 6:05 a hole appeared in the side and at 6:10 another. The gale was now a hurricane and every five minutes a new slit appeared in our canvas house. At 7 the last relics of it blew away and we fled to George's tent, where the five of us crowded into its 7×7 feet of space, with the sides continually blowing in, and the cold rain running in in streams. Through it all, the Crown Prince sat stolidly on the ground, reading the Scottish Chiefs. Abou Ben Tuska and George ventured forth in the storm to seek a place of shelter under the lee of some friendly rock, but returned exhausted and unsuccessful. We endured this until 3 P. M., when we launched our boats at great risk and fled from that cursed island, venturing out on the river, preferring to run the chances of drowning in the attempt to reach Gananoque, to perishing of exhaustion and starvation on shore. We left all our stuff, guns, cartridges, everything behind us. We finally did reach the little Canadian town in safety after a very respectable pull. I have lived on the St. Lawrence every summer for twelve years and have never seen such a blow, nor have I ever met an uglier cross sea than that which ran off Gananoque that August day.

The next day we went back and picked up our stuff; and after two days spent in repairing damages proceeded. We left Gananoque on the 31st and reached Kingston Mills Locks at exactly the same moment as did Chief Constable Brickwood. He proved another hurricane and gave us the choice of paying $25 for a permit to shoot, or going home. We paid. Having camped on the shooting grounds on a spot between two immense marshes, we chose the northern one for our evening's shooting, and concealed ourselves therein. Not a duck did we see, but in the southern marsh about a hundred birds were killed.

When we arrived at our camp at Sand Lake, Tony and I had good and at the same time pretty bad shooting, about forty ducks offering themselves to our aim, and all escaping but three. Although we were in a good spot, we went on eighteen miles further, in order to meet Charlie Coalhole. He was to have joined us at Newboro; and having left an excellent camp on Sand, with its good shooting, all on his account, we were met by a letter from him stating that he could not come. At Benson Lake, where we camped four days, Tony and I used to vanish in the morning searching the bayous all day for game and returning about an hour after dark. We feared the game constables, as we had only one permit for four shooters, each of whom should have had one, and Abou and Crown Prince, who always remained at home, fixed a code of signal lights to hinder us blundering into camp in the darkness, in the event of a game constable's presence there, and giving away the fact that we had both been shooting. Their code was as follows:

No light at all—Come home. All well.
White light—Stay away. Constable here.
White and green—Be careful. Constable has been here.

See the result. When they showed no light at all, the first night we could not find the camp, and wandered out of our way in the endless stumps, getting thoroughly lost. The second night, having cooked dinner, they sat down to eat it, and in order to see what they were doing, they put a white lantern on the table, which lantern Tony and I saw from the distance and kept off for an hour or more, thinking that the constable was waiting our return and that the light was the warning agreed upon. While we, hungry as hunters, paddled back and forth at a safe distance, Abou and his companion in crime ate a most comfortable supper, smoked their pipes, and read some old newspapers by the same light that was keeping us away from those joys.

After a few days at Benson, we went back to Sand, where we had some more good shooting. To illustrate the difficulty of successful shooting on the Rideau Lakes, I will state that it took Tony and myself a full hour to get a bird which fell about sixty yards from us, owing to the mass of stumps, logs, water and morass between. From Sand Lake we came back to Gananoque over land, boats and all, and then rowed home. We enjoyed our trip, in spite of the hard knocks fortune treated us to.

FRANK LAURENCE DONOHUE.

## NITRO POWDERS PAST AND PRESENT.

*Editor Forest and Stream:*

Nitro-cellulose or gun-cotton constitutes the principal base of the great majority of the modern smokeless powders. It is only within the last decade that the treatment of nitro-cellulose has assumed a certain degree of technical perfection. Prior to that time much difficulty was experienced in the endeavor to impart to nitro powders sufficient stability and uniformity of action. The smokeless powders as first introduced were particularly susceptible to atmospheric influences. This was partly due to the presence of a large percentage of saltpeter in some cases, but more so to the soft surface of the grain.

Schultze and E. C. powders were the first in the market with this objectionable feature removed or at least greatly diminished. This change for the better was brought about with the aid and application of ethers, whereby the grains were given a sort of surface crust, and various kinds of ethers, among them acetic ether and aceton, are now generally employed for a similar purpose. Several attempts were made to accomplish the same end with paraffin, varnish, etc., but it was found that these substances did not serve the purpose.

Later on it was discovered that the surface of gun-cotton powders can be given a greater degree of density and thereby rendered less susceptible to moisture, by simply steeping or dipping the compound into ethers. But this process again was coupled with an objectionable feature. It was found difficult, yes next to impossible, to extract the ethers from the compound after their presence was no longer desirable. The peculiar odor given out by some nitro powders after having been stored and subjected to changes of temperature may always be taken as a sure sign of the presence of ethers.

Manufacturers of military powders have thus been prompted to adopt a different process for making these powders. The gun-cotton is now dissolved by them in hot nitro-glycerine, with and without camphor, and a sort of a dough is obtained by such a process which can be kneaded, rolled into sheets, cut in leaflets or formed into grains, ords or square pieces. But it is still an open question whether the powders made under this last named process will prove to possess superior keeping qualities.

In judging the properties of a propelling agent of this nature we must bear in mind that, for instance, frost affects both nitro-cellulose and nitro-glycerine very seriously. The probable effect of heat ought also to be considered since gun-cotton, when subjected to a high temperature, loses considerably in weight.

It is even worse with nitro-glycerine which has a tendency to evaporate at all temperatures, and which behaves very strangely, often very violently, in a frozen condition.

In view of these last named facts, some manufacturers of nitro powders have dispensed with nitro-glycerine altogether, while others have gone so far as to reduce also the percentage of nitro-cellulose to the lowest possible limit. Instead of gun-cotton they employ invariable salts, especially nitrate of baryta, while the treacherous nitro-glycerine, on the other hand, is replaced by a series of nitrated aromatic carburetted hydrogen. It is claimed that particularly the solid fused dinitrotoluol is capable of dissolving large quantities of gun-cotton, and produce a very hard mass. The keeping qualities of the powders made under this process are said to be very satisfactory, and we are further informed that their body is composed of seventy-five per cent. of crystallized products and only twenty-five per cent. of gun-cotton.

But we now come to the most important claims advanced for these powders. It is asserted that they do not react to increased charges more violently than black powders, or in other words that they are even safer than fine grain black powder, that they never endanger the gun or the shooter in case the load is accidentally or intentionally increased to double the quantity of the service charge; that they do not corrode or pit the gun barrel even when the gun is not cleaned for weeks after use, and that the same grade and grain can be used with equal good results in the sporting rifle, shotgun and revolver.

For most of these claims we have so far no other proof than the assurance of the manufacturers, and such assurance is very often biased and unreliable. But the claim for safety is amply sustained by the result of official tests carried out under Government control.

Should the other claims also prove to be warranted we would at last have reached a new departure in the line of smokeless powders. The ideal smokeless propelling agent would be within our reach and the days of black powders counted, at least among the shooters, with whom the question of cost cuts no figure.

Thousands of shooters who still hesitate to use a nitro powder, simply because the latter, as a rule, and up to the present, are less safe than black powder, would throw the old reliable but noisy propelling agent overboard and substitute for it smokeless powder combining all the good qualities of both the nitro and black powders. The news is almost too good to be true, and I am still somewhat skeptically inclined toward the remarkable claims set forth for this latest invention among propelling agents.

I therefore prefer to withhold the name of this new powder and other data concerning it until I have had time and occasion to determine the question whether the powder referred to really is the ideal powder looked for so long and anxiously by every shooter the world over. I have ordered samples of the powder, and hope to be in possession of the same within a month. When they reach me they will be tested thoroughly and your readers may thus expect to hear from me again on the subject at some future day.

ARMIN TENNER.

## A DISMAL CHICKEN OUTLOOK.

SIOUX CITY, Iowa, Aug. 17.—I have lately visited the towns on the Iowa side of the Missouri River from Council Bluffs, Ia., to Vermillion, S. D., and, of course, naturally inquired closely into the prospects for shooting this fall. The information I gained, however, was very discouraging and I will look elsewhere for my chicken shooting this season. The universal answer is, "There are hardly any chickens left; the farmers trap them all." That this is true I am thoroughly satisfied, for in every town one hears on all sides such statements. At some points I learned that there were a few quail, but the chickens were too scarce to hunt. At Vermillion, Elk Point and Jefferson, South Dakota, the chickens are reported as having been very numerous, more so than for several years, a fact seized upon by the trappers as an argument to prove that their work does not decimate the supply. They tell now, however, that the birds are getting scarce as shooting has been general for three weeks past; in fact, game laws are a dead letter.

With very few exceptions, the merchants care nothing about the matter; if at all it is a disposition to shield the violators of the law, and they appear to be in full sympathy with the farmer who traps—and that means nearly every farmer in the country. The trapping is done later in the season, November and December, and the argument used is that the birds caught are not those bred in their section, but others that are migrating from the North.

I had quite a conversation with one merchant at Jefferson, South Dakota, on the subject. He had been on a farm for fourteen years and made a regular business of it. He told me that he had used from 100 to 300 traps every year, and sometimes had gathered up a wagonload of birds a day. That was when chickens were more numerous than at present. He could not see, however, that the work of himself and his fellows was responsible for the decreased supply. He blames the city sportsman for that. This section of South Dakota seems to be in urgent need of a game warden, and one who will attend strictly to business.

Further west, on the line of the C. M. & St. P. road, chickens are reported as being very plentiful—unusually so. Scotland, Tripp, Armour and several other towns in that vicinity are very good points. Parties going along the Missouri River west of Yankton in Charles Mix county will also find plenty of birds. I would advise any one contemplating such a trip, however, to hurry up about it, as the statement from the State's attorney that the Aug. 15 law holds good is generally accepted and acted on. Whether this be true or not, or whether the attorney ever said so is a matter I know nothing about; but I do know every one is taking advantage of the fact.

While in central Nebraska the first of this month, I found that illegal shooting was already quite general, and was done by a class of men who rank as the best sportsmen of the State. Their excuse is of course, that as every one does so they must either do it themselves or get no chickens. The delightful way in which game laws are calmly ignored in many of our Western States is anything but encouraging to those who would observe the laws. South Dakota and Nebraska have no game wardens I believe; and those who, you would suppose, would make an effort to see the laws enforced, are among the first to break them.

I left my gun at home this trip so as to be sure to keep out of mischief, but I very much fear that by the time Sept. 1 arrives I shall find nothing left to shoot.

W. R. H.

Mr. H. G. Nichols, of Mitchell, S. Dakota, writes me the following interesting information concerning the way chickens are preserved by legal enactment in S. Dakota. Under date of Aug. 15, he writes: The pot-hunters are as plentiful this fall as ever, regardless the law and gun clubs for protection. To-day, the fifteenth, and every man with a gun and dog is out. While exercising some greyhounds this morning I ran across six different outfits out shooting chickens. You know in several papers of this State they published articles stating that the Attorney-General had made or expressed an opinion that the law was open Aug. 15. I have written him, and also the State's attorney for a copy of this decision, but have failed to hear from either as yet."

B. WATERS.

## PROPOSED SPORTSMEN'S EXPOSITION.

THIS prospectus has been sent out by the following firms: Hartley & Graham, Union Metallic Cartridge Co., Winchester Repeating Arms Co., Laflin & Rand Powder Co., E. I. Du Pont de Nemours & Co., Schoverling, Daly & Gales, Marlin Fire Arms Co., Von Lengerke & Detmold, Charles J. Godfrey, A. G. Spalding & Bros., United States Net and Twine Co., Tatham Bros., Fred Sauter, the W. Fred Quimby Co., Empire Target Co., Hunter Arms Co. A meeting will be held Aug. 27, at 2 o'clock P. M., in the rooms of the Hardware Club, Postal Telegraph Building, Broadway and Murray street, New York, and all houses in the trade are earnestly requested to have a representative present.

### Preamble.

It is generally admitted by manufacturers at home and abroad that there is no way of bringing their products before the world, equal to an international exhibition or fair. By such means the manufacturer is enabled to learn of the various products in his special line, compare notes and discover improvements. The distributor is made aware of the sources from which the goods he wishes to handle come, and the consumer learns of the various articles in use in the business or pleasure he is engaged in, while the public at large is interested and enlightened.

Exhibitions general in character, both on a large scale and small scale, have from time to time been given at home and abroad, but Europe long ago recognized the value of special exhibits, and these are admitted to be a great stimulant to trade. During the past few years several successful exhibitions of sportsmen's goods have been given abroad with pronounced success. Those who have visited these exhibitions have wondered why America has not followed the example set abroad.

It is confidently felt by many interested in the articles used by sportsmen that the time has arrived when a successful exhibition of this nature can be given in America, and it is earnestly requested that this matter be given your careful attention.

It is proposed, in the near future, to give an elaborate exhibition of all the utensils used by the sportsman, in the past as well as at the present time, and to this end it is proposed to extend invitations to all manufacturers, at home and abroad, of all lines of firearms, ammunition, light ordnance, camping equipments as related to field sports, taxidermy in all its branches, fishing tackle and all appurtenances used by sportsmen. It is proposed to hold this exhibition in New York city, the same to extend over a suitable period, so as to give all interested an opportunity of visiting it.

The elaborateness of this affair will be determined after the formation of a proper organization to conduct it, when officers will be chosen and the character and scope of the exhibition determined, the classes arranged, judges appointed, and full and complete arrangements made for carrying the matter to a successful issue.

No event of this kind has ever occurred in the United States, and it is confidently believed that the opportunity will be unequaled of bringing before the public the numerous inventions and various implements used by the great and rapidly increasing class of sportsmen throughout the world. The recent Columbian Exposition at Chicago proved most unsatisfactory to many, and to no little extent this dissatisfaction has prompted this movement. Those having exhibited at Chicago were forced to recognize that its vastness made inconspicuous the comparatively few exhibits there made. It is by specializing and concentrating these industries that products and inventions can be brought most conspicuously before the world, and directly to the attention of the consumer.

### Suggestions for the Exhibit in Detail.

Following the line of the above general plan, several gentlemen interested in the trade and the proposed exhibition, have discussed with the management of the Madison Square Garden, New York city, those points touching upon its financial and artistic success, and as a result, make the following suggestions for the consideration of those to whose share it will fall to take up the project and carry it to successful completion.

In view of the central location of Madison Square Garden, at Twenty-sixth street and Madison avenue, New York, and of the desirable facilities it offers, it is thought that this great amphitheater would be the most suitable place in which to hold such an exhibit as that contemplated.

The most desirable dates now unfilled, according to the schedule of the Madison Square Garden Co., are those of the first two weeks in January, 1895. It is believed that if the work of preparation is taken up at once, and vigorously prosecuted, the exhibit can be opened to the public on those dates.

The Madison Square Garden Co. having had long experience in the handling of such enterprises, given under different auspices, is especially equipped to conduct them successfully, and to the satisfaction of all interested.

It is proposed, however, to conduct the exhibit under the auspices of a duly organized and representative association, composed of leading houses engaged in the manufacture and sale of the products it is proposed to exhibit, and it is to the end of effecting such organization, for the purpose of co-operating with the executive head of the Madison Square Garden Co., that the above call has been made.

The work of classifying the exhibits would, of course, rest with a committee to be subsequently appointed. In order, however, to give you some idea as to the character and scope of the exposition, the following classification is submitted:

Class A.—Prepared ammunition—Metallic cartridges and paper shot shells.

Class B.—An exhibit of rifles, revolvers, pistols and other small arms.

Class C.—An exhibit of sportsmen's arms.

Class D.—An exhibit of all the products handled by wholesale dealers, manufacturers' agents and importers of firearms and sportsmen's goods.

Class E.—An exhibit of gun implements.

Class F.—An exhibit of the different powders used for military and sportsmen's purposes.

Class G.—Sportsmen's wear—Shooting coats, leggings, gun cases and other leather and canvas goods used by sportsmen.

Class H.—Lawn tennis, cricket, baseball, football and field sport supplies.

Class I.—Fishing tackle, rods, reels and anglers' supplies.

Class K.—Rifle sights and accessories.

Class L.—Boats, canoes and yachting supplies.

Class M.—Kennel supplies, such as prepared foods, remedies and leather goods.

Class O.—Artificial targets, traps and electrical apparatus used by trap-shooters.

Class P.—Machinery used in the manufacture of small arms.

Class Q.—Examples in the art of taxidermy and taxidermists' supplies.

Class R.—Hand cameras and photographic equipments as used by sportsmen.

Class S.—Camping equipments and supplies, such as tents, cooking utensils, canned goods, beverages and other requisites and luxuries for campers.

The above classification has been hastily made, and can doubtless be greatly simplified and improved. It is offered, as above stated, simply to give some idea as to the scope of the exhibit.

In addition to the exhibit of manufactured products, it is believed that with proper representation such magnificent collections of trophies, consisting of implements of war and of the chase, of costumes worn by native hunters, and of other trophies of interest to the sportsman, as those possessed by the King of Saxony, the Duke of Saxe-

Coburg, the Duke of Ratibor and other European noblemen, as well as those possessed by many prominent American sportsmen, can be procured for exhibition.

It is still further believed that the governments of Great Britain and Europe, as well as that of our own country, can be sufficiently interested to direct an exhibit of the military costumes worn by their respective armies; also, that the costumes worn by the armies of the Orient and the semi-barbarous tribes of Africa can be secured.

The exhibits which it is believed will be shown by leading taxidermists of the country, will interest not only sportsmen, but the naturalist and the general public as well, for the reason that it will contain specimens of large and small game indigenous to all parts of America, as well as specimens of game birds, both of the present day and those now extinct.

It is further suggested to represent in *papier maché* and in mounted specimens scenes of the chase after native animals, as conducted in the Arctic regions, in Norway, Denmark, Sweden, Russia, India, Australia, Ceylon and other countries, whose costumes, people and animals we in the United States know but little of.

Another suggestion, which it is thought can be carried out, and which there is little doubt would interest the general public greatly, would be the exhibition of a small herd of buffalo, of a bull, cow and calf moose, of a quartette of elk, of Austrian boar and other game, all of which can doubtless be secured for the purpose from some one of the great game preserves.

In order to make the exhibit of lasting value to exhibitors, it is suggested that medals be awarded for superiority in the different classes entered by exhibitors.

Many other features, which would especially interest the general public and contribute to the financial success of the undertaking, will suggest themselves as the work of preparation progresses. The floor space of Madison Square Garden would be divided into uniform spaces, and is such manner as would be most advantageous to the display of the products entered. It is proposed to fix a rental price for each of these spaces, and that the same be placed at the disposition of intending exhibitors, each exhibitor using one or more spaces as he may elect, to a reasonable extent.

The amount of interest shown by leading houses of the trade in New York city at so early a stage of the project's developement would seem to promise the ultimate success of its undertaking. Once under way, and with the exhibit assuming material shape, there seems but little question that applications for space will come from many quarters which the projectors have thus far not counted upon. If the earnest co-operation of the trade in all of its branches is extended there is every probability for the successful holding of an exhibit, which will prove of value to the trades interested, and of much interest to sportsmen and the general public.

It is for the purpose of considering the enterprise in detail and arranging for the earnest prosecution of the work that the meeting set for Aug. 27 in this city has been called, and it is hoped that such action will be taken at that time as will interest the trade, the press and the public in the ultimate success of this, the first exhibit of its kind contemplated in this country.

### Getting Ready in Boston.

THE shooting parties are already making up, and some of them will include business and professional men of a good deal of note. The Megantic Club is drawing this year as never before, and it is to be hoped that the supply of game and fish may prove ample to keep up the interest. Thus far its officers say that there has been no lack. On Friday morning, Oct. 12, Vice-President M. C. Prescott, with Kidder, Peabody & Co., will take the following party of noted gentlemen to the happy hunting grounds: Hon. Everett A. Stevens, Dr. E. D. Robbins, Dr. Robert A. Blood, Dr. E. W. Branigan, Orrin R. Dickey, Sumner Paine, Jacob W. Hoffman, Harry E. Haynes, T. R. Bidwell, O. H. Hallett, Philip Prager, Joseph Trowbridge, Dr. Church, Capt. Seth Lowe, John H. Kenney, F. R. Tackoberry, Leonard W. Marston, Myron L. Wetherbee, G. W. Preston, Wm. Litchfield, Joseph Morrill, M. D. Cressey, A. V. Lincoln and Chas. Rickenberg. The party will have a special car and go by Moosehead Lake, remaining there over night Friday, and reaching the Spider Lake club house Saturday morning, Oct. 13, at 10:30. The special car remains at Megantic two weeks till the return of the party about the first of November.

Last year the record of this party was ten deer killed, besides numerous small game. This year much better results are expected, though almost any other party of hunters would be pleased with such a record. To show what a healthy place the location is it is mentioned that the aggregate gain in weight of the party last year was 125lbs. This party claims to be the largest and best equipped of any starting from Boston at any time.

SPECIAL.

### Not as It Used to Be.

EAST PEPPERELL, Mass., Aug. 13.—*Editor Forest and Stream:* I have been trying to write you for a month, but since my call at 318 Broadway on July 3 I have been on the wing. This is my old stamping ground, where forty years ago I used to hook apples, snare partridge, dig out woodchucks and join in other sports dear to the heart of the average boy. But there is no chance for a boy here now. The woods are cut off; the streams are dried up or poisoned by chemicals from the paper mills, and the apples are not half so good as they used to be. Perhaps, after all, the fault is mine, but it has caused a sad feeling just the same. Things don't look as they used to. The brooks are narrower; the ponds are smaller; while the hills, which as a boy I used to think were young mountains, have degenerated into hummocks.

Well, we old fellows must accept the inevitable. But I do feel hurt that they should have cut down the wood where I shot the old cock on his drumming log, and filled up the spring under the big rock, where I used to drink from a grape leaf cup.

However, I have had lots of comfort trudging over the old roads and lanes and finally coming upon some half-forgotten rock or tree, where I would seat myself and go back over the years, until by shutting my eyes I could almost dream I was a boy again.

I believe my old friend the chipmunk is nearly extinct. I have only seen one since I came North, and I found one woodchuck hole and started a partridge. Wasn't that glory enough for one day? TARPON.

### Stop the Sale of Game.

A PLATFORM PLANK.—*The sale of game should be forbidden at all times.*—FOREST AND STREAM, *Feb. 10.*

*Editor Forest and Stream:*

I want to get on that platform right away, along with the thousands of other true sportsmen in this great land of ours. Stop the sale of game. This is the time when we must come out flat-footed for or against right and wrong, and every honest man wants to be in the right.

Thank goodness the law is at last being enforced here. Simon Maier, the butcher, mentioned by "Culpepper" some weeks ago, was brought to trial and the case was decided against him, the court holding that no matter whether deer or other game was killed in the State or out of it, said game could not be offered for sale. The statement that was made, to the effect that the deer sold was killed in Texas, did not go down with the court.

Many of your readers will be sorry to see Mr. Hough soon finish his letters of "The Yellowstone Park Game Exploration." Can he not go again soon and give us more notes on that wonderful country. A. H. S.

### What About the New York Grouse Season?

ITHACA, N. Y., Aug. 16.—The opening day on ruffed grouse and woodcock was not favorable, so far as the weather was concerned, for anything like satisfactory results, it being a hot, windy, sunshiny day. The first-day contingent was, no doubt, out in force, but so far as I have been able to ascertain the shooting was of an inferior sort. The fact is, the opening day on grouse should be deferred for at least two weeks. The birds are small and floppy and don't begin to afford the sport that they do a little later, when clothed in the full vigor of maturity and with wits sharpened to a keen and penetrating edge. Woodcock will be found in fairly good numbers in Tompkins county. The shooting will be better though a little later on. Good ruffed grouse shooting after Sept. 15, say, may be had near Harford Mills, on the line of the S. C. R. R., along the eastside of Cayuga Lake, around Mecklenburg, near Spencer and West Danby, points easily reached from Ithaca.

By the by, your editorial in current issue of FOREST AND STREAM, "Mr. Messiter is not to Blame," is a scathing arraignment of a class, large and growing larger, irrepressibly seeking, as you trenchently put it, "to invade the rights of the public." M. CHILL.

NEW YORK, Aug. 13.—*Editor Forest and Stream*: Your editorial on the New York deer season is very plain and will be much appreciated. I wish you would say something on the laws on ruffed grouse. A year or two ago I was out on Aug. 15, which I believe now commences the open season, and our dogs caught young birds that had not been shot at. One bird flew across an open field and becoming exhausted dropped in the grass, where one of our dogs found it, in too weak a condition to fly. I heard of several birds being caught that day. This law ought to be changed. A. F.

### The Wyoming Elk Supply.

MARYSVALE, Wyoming.—*Editor Forest and Stream:* I do not agree with Mr. Dodge that only one out of every ten elk caught survives to reach the corral. They are not chased with horses here in Jackson's Hole, but are caught by men on snowshoes. It is a poor business, ever so well followed, and I would like to see it stopped. But we have two things worse on the elk than catching them alive. One is when a poor shot and poor hunter starts out for his meat, firing big balls into a large bunch of elk. He always cripples a great many that he does not get. The other is tourists that employ their guides and helpers in Idaho and Montana, and come in here hunting. They have no interest in the preservation of the game and kill all they can. The article written by "Shongo" two years ago was a fair example. Any sportsman should be satisfied with at least two good elk.

Now that we have some law in the Park, and that the Indians are to be kept out, and if we get some officers to see that the game is not abused in here in the winter, and if sportsmen will engage their guides in Wyoming, who have some interest in the prese.vation of the game, then our big game supply is assured. We like to have Eastern sportsmen come out and have a hunt when they come right. S. N. LEEK.

### Notes from the Capital.

TOM MARRON of the National Museum, saw a remarkable flight of yellowshanks at the Eastern Branch boat house on Sunday, Aug. 12. To quote his words: "It must have contained fully 800 birds. Just at the bridge they separated, about one-half going up the Branch and the others down the Potomac. The flock was variously estimated at from 800 to 1,500. I think 800 is nearer the actual number. There were several smaller flights, ranging from 5 to 30 in a flock, during the afternoon. This great flock of birds was a most remarkable sight for the Eastern Branch, and old gunners do not recollect anything like it before. It being Sunday and raining hard, none were killed that I know of."

The superintendent of the Museum buildings, Mr. Henry Horan, has a wonderfully sagacious terrier named Fannie. She had a litter of pups recently, and all but one of them were killed by the excessively hot weather. Fannie dug a hole in the ground in a shady spot, placed the remaining puppy therein and covered it with dirt, leaving only its head exposed. The little one has survived and promises to reach maturity, thanks to the intelligence of its mother. T. H. B.

### Missouri Quail.

MOBERLY, Mo., Aug. 8.—I have spent several days on the large farm of my brother-in-law (who is member of Congress from this district), and have had grand sport with doves and young rabbits. The season here has been favorable to quail, and as a result there is an immense crop of these birds. While fishing on the Chariton River I noticed a great many dead fish, of all sizes and varieties, floating on the water. On making inquiry I found that a party of vandals had been encamped on this stream, and had been using dynamite. This stream flows through the farm, and as I have the names of the scoundrels who perpetrated this deed, I intend to see that it is made hot for them. L. C. B.

### In Massachusetts Covers.

WHITMAN, Mass.—The prospect of good duck shooting in the mill ponds is better than it has been for years; the mud rails have arrived and will furnish good shooting for the next two months. There are more partridges and woodcocks here than usual. The woodcock law in this State, I think, is a little at fault; it should come off in August, as most of the birds have left before September. Although we had a severe winter it did not have much effect on the quail in this section, as there are more birds to the square mile than I ever saw before. Now if the sportsmen will leave them alone during this closed year, as any true sportsmrn should, they will furnish good shooting in time to come. W. W.

### Connecticut Quail.

NOROTON, Conn.—Quail are unusually abundant. I have been all over this end of the State and as far west as the Hudson, but I find more quail in this neighborhood than at any other section that I have passed over. M. L. C.

### A Connecticut Deer Law of 1677.

HARTFORD, Conn., Aug. 12.—At the last session of the Connecticut Legislature a law was passed forbidding the killing of deer in the State for a period of ten years, under a penalty of $100 fine. Since then two deer have been seen at large, doubtless truants from inclosures. In this connection it may be of some interest to give a copy of a law passed by the old Colonial Court of Assistants at a session held at Hartford in May, 1677, and which also furnishes precedent to the statute which forbids the transportation of game beyond the borders of the State. The old law, which may be found in the Colonial records, is as follows:

"*Whereas*, It is fownd to be prejudiciall to the pub: weale to transport out of this colony the skinns of bucks and dowes, which are so serwiceable and vseful for cloathing, it is now ordered by this court that after the publication hereof, whosoever shall ship on board any vessel greater or lesser, for transportation, or otherwise shall transport any such skinns out of this colony, he shall forfeit the skinns so shipped, or the full value of them; the one-halfe to the complayner, and the other halfe to the county treasury; except they be shipped to be transported to another place in this county, and in such case before they ship them they shall give sufficient bond to the full value of the skinns so shipped that they will deliver them to such place in the colony as they pretend to and will not transport them thence." E. HART FENN.

## Camp-Fire Flickerings.

"That reminds me."

YOU at one time were having quite a run of yarns on the extraordinary shot subject. Here is one that may not be far behind the score, and it is a true one: Dr. Cummins, of Jersey City, was recently up around Greenwood Lake way, during the woodcock season, with a few friends, and on the morning I refer to he had made a capital shot. A woodcock rose before his dog and pitched into the brush. The doctor blazed away and brought down his bird, and at the same time a cry, in fact, two cries, arose from the other side of the thicket. Upon investigation it was discovered that he had not only killed his bird, but had brought down (*i. e.*, peppered) his two friends on the other side of the hedge, or copse—Rev. Mr. Kennedy and Dr. Olcott, both of Brooklyn. "Whew!" says the lucky marksman, "a doctor, a dominie and a fall woodcock at one shot." Fortunately, neither of the two friends were much injured, and they joined in the congratulations upon their escape from serious injury. JACOBSTAFF.

SOME one not long ago suggested we hear from those who had guns that kicked. I have not such an article, but heard of a good story of one while up in the big woods of Maine camping out. An old fellow came into camp one dry day, and the conversation turned on guns. "Talk of intelligent guns," he said; "why, boys, I had one that kicked every time I looked at it. Why, one day I was walking on some nice clear ice when a goose flew right over me. I up with my gun and shot. Do you know, that gun kicked me flat, and then when it had me down it kicked me three times more. Now that's what I call a smart gun."

He may not have missed the goose, but his aim was short-sighted in telling the story, as it was a temperance crowd, and nobody asked for the historic quotation of the Governor of South Carolina. .45 GOVT.

## Sea and River Fishing.

### WASHINGTON FISHING MEMORANDA.

WASHINGTON, D. C., Aug. 18.—The shad fry which were placed in one of the fish ponds last spring have developed into enormous schools of little fish which may be seen leaping above the surface almost any fine evening while feeding on insects and small water fleas. The bass are thriving also and the prospect of a great yield is now very encouraging. Mr. Edwin A. Newman received 400 young black bass from the Fish Commission in 1892 and put them in a lake at Lakeland, Md. In the spring of 1894 he reported a stock of about 30,000 as the result of that plant. As only 90 of his original bass were yearlings and the rest smaller, he thinks the attempt worth repeating.

Our market is full of choice fish, sheepshead, bluefish, Spanish mackerel, and hundreds of beautiful red snappers. A dusky shark was caught in the Potomac last week in a gill net and Mr. R. A. Golden had it on exhibition at his stand on Friday. The creature was nearly 9ft. long and weighed 300lbs. The skin will be mounted by Mr. Wm. Palmer and will probably form one of the permanent curiosities in Mr. Golden's possession. The capture of a great shark in fresh water so near Washington was a surprise and shock to the visitors at the bathing shores down the river. He had probably just got wind of the menhaden investigation by Congress and was on his way to defend his rights in the old school fashion.

The aquarium at the Fish Commission office is undergoing extensive repairs and will prove more attractive than ever before when the work is completed. The grotto now has a metallic lining moulded into the shape of rough, red sandstone blocks, and the ventilation and lighting are greatly improved. It will soon be stocked with many kinds of marine and fresh water fish.

Reports of bass fishing in the James River are very discouraging. Mr. E. M. Gadsden returned last week from Daggers, which was formerly a celebrated place for black bass, and said he found it very hard to get bait, and still more difficult to take bass. Only a few were caught and they were small. Clifton Forge, where General Hampton has captured so many fine bass with the fly, is almost equally unproductive this year. Minnows are unusually scarce and large bass are absent. The best all-around bait for the James is a small catfish, because of its tenacity to life and its favor in the estimation of the bass. Small frogs are used also very effectively at certain times. Boats can be hired with guides for $1 a day and board costs another dollar. There are no hotels at Daggers, but any of the farmers will take care of anglers. T. H. B.

## A RED-LETTER DAY WITH THE TROUT.

This was the trout fishers' ideal morning, warm and misty after a night's gentle rain. Every leaf and every blade of grass were laden with the pendant rain drops. With an ever changing tremulous motion imparted by a gentle breeze they glistened in the warm rays of the morning sun, which now and then gleamed through the drifting banks of mist. It was a morning to inspire one with those joyous feelings indescribable, but pleasant beyond comparison, and it would be hard to find two beings with nature more susceptible to these feelings than Freezy and I, and in the exuberance of our spirits we were boys again for the while. "Well, old chum, if we do not fill our creels to-day, we are of no earthly use whatever," said Freezy, as we jointed the rods on the banks of as pleasant a trout stream as ever yielded up the spotted treasures. "We never will have a more favorable day anyhow, and I feel confident we shall gather them in," I made reply, "that is if you will only keep out of the deep holes."

At this juncture Freezy put a stop to our raillery in an effective but pleasant manner, for at the second cast he opened the game with a half-pound trout, and I soon followed suit with another of the same sort.

We were at the edge of an open swampy wood of maple and swamp oak perhaps a half-mile in extent. Here the stream flows quietly between low banks of black mucky soil, thickly set with the odorous skunk cabbage; the swamp is devoid of undergrowth, but the heavy soil makes travel rather laborious. The stream is a puzzle to the uninitiated, here flowing shallow and swift over beds of clay yellow soil, and there dashing into one of the countless bends and elbows, scooping a deep hole beneath the root bound-banks. It's so crooked that in many places one may stand in the U-shaped turns and fish the stream on either hand by short side casts; and there are good fish here as chum and I well know. At one of these bends I had an exciting but fruitless tussle with an educated trout. Happening along the stream a few days previous I had a fleeting glimpse of a big fellow at this bend. Judging that this was his private residence I thought I would just yank him out to-day; but all the same he was not yanked (not that day). Stepping into a shallow just above, the current soon carried the bait down into the eddy and with a whirl it disappeared under the bank. In about a second I knew old speckled sides was at home, for the fact was well proven by sundry lively demonstrations at the other end of the line. The antics of this old veteran was in direct opposition to the well known tactics of trout in general. Instead of the high leaps and long runs usually indulged in, he hung in under the bank and just yanked and surged on that line; I being determined to pull him out and he just as determined to stay where he was. Presently the struggle ceased, but still the line hung fast to something; and upon investigation I found that the old rascal had disgorged the hook, fastened it to an old root and just swam off, chuckling at his own cleverness and my discomfiture. Now Freezy, seated on a log handy by, had watched the proceedings with interest, and at this unlooked for termination I was favored with a look of compassion as he groaned out: "Well, great Scott! some folks have a deal to learn about trout fishing yet;" and as he arose and walked down stream I caught something that sounded like "champion root fisherman," or words to that effect. Good old chum, we know one another too well to care for this kind of banter, which we seldom fail to duplicate on one another at every opportunity.

Upon regaining my wind, which was completely "knocked out" by Freezy and the trout, I followed on down stream. Rounding a bend in the stream, I came suddenly upon Freezy and a couple of pilgrims in close conversation. Their rods and general make-up proclaimed their pleasant occupation; and upon closer approach they proved to be a well-known character about town and a friend. With a strong passion for the cup that cheers, the old man was well "loaded," and his friend was but a little better off—truly a most deplorable condition in which to follow a trout stream. We decided to shake them as soon as possible, but found this no easy matter, for they appeared to us repeatedly, sometimes from the rear, now in the lead, always whooping, singing, crashing along the banks, and of course making successful fishing impossible. Freezy and I were well nigh in despair, when of a sudden came our relief. We suddenly struck one of the two contentedly sitting in water up to the armpits, industriously fishing underneath a log, with not a vestige of bait on his hook. This was a little too much even for his friend, who, with a disgusted look, pulled the old man from the stream. We started them off to find the road, and they faded from view.

After this break in the day's programme we settled down to business again; and how the darlings did take hold. We had long since left the woods, and were approaching choice grounds, choice because jealously guarded by the owner, a fiery, hard-fisted Irishman, who, never fishing himself, will never allow others the pleasure—a veritable dog in the manger. Now, Freezy and I usually manage to borrow a few good ones from this preserve, and to-day as chum slid over the wall and let his line down between the alders that fringed the stream, I saw by the quick, firm grip of the rod and the eager, expectant flash of the eye that the churl would lose one good trout. Next to catching a fine trout myself, I dearly love to see a friend take one; and here was the opportunity. He made that reel fairly scream as he started off at a Nancy Hanks gait; but when chum concluded he had gone far enough, a strong pressure on the drag slowed him up. Finding he was thus balked, he made one strong rush for the surface; and as he shot into the air, Freezy pulled him over into the stream and kept him coming for shore. Several times he made a break for liberty, but a gentle reminder from the drag brought him back; and as he came skating in on his side, Freezy stooped and lifted him out. Oh, how I wished for a Kodak as my companion held his prize up for inspection. "Good boy," said I, as I viewed the dripping beauty. He was the largest caught that day, weighing 1½lbs. About this time there came floating on the still air certain unpleasant sounds from the vicinity of the farmhouse, and judging from the marshaling of forces in that direction, there was destined to be stirring times in that meadow shortly; so we concluded we did not want any more trout there, and so skipped along down below the road.

We were now in a charming meadow with no one to interfere and we just took solid comfort. We fished, lolled on the soft meadow grass, then fished some more, now and then creeling a fine trout; and so across the meadow down below the clearing, where the woodsman has effectually put a stop to all angling by filling the creek with brush.

Down in the big woods is a fine large pool, where the overshadowing trunk of a huge buttonball silently guards the cool crystal depths. Now Freezy had always held to the belief that here was the home of some old giant *fontinalis*, and to-day he went especially fixed for him. The day before he had taken no little pains to secure a young wood mouse, which in its callow state is a killing bait for big trout. He carried the little fellow in a warm nest of cotton in a stiff pasteboard box cut full of breathing holes. There was a tacit understanding between us that chum should work the pool alone, and certainly he lost no time in getting at it. He tried all the tricks known to the craft, offered flies, worms, bugs and grasshoppers; but no, he would have none of them; he just reserved his appetite for that mouse. "Never you mind," said chum, noting my quiet smile, "I have got something that will fetch him." Well, the proud moment came and the fisherman prepared for the grand struggle. The box was produced and the cover lifted; first a hurried examination, a blank look, and then his jaw dropped. The mouse was dead. But chum soon regained his usual good temper, for being of a sunny disposition he took his disappointment as all good anglers do, like a man; but all the same he vowed that some time in the future he would have that trout, even if he had to start a mouse farm to do it.

Well, all days come to an end, and soon the lengthening shadows warned us that even this glorious day was no exception; so only stopping at the old willow to make a few casts, long enough, forsooth, to extract two more of the beauties of the brook, we hurried along to catch the home train, our heavy creels giving substantial proof that the morning's promise was no idle boast that this was to be the anglers' ideal day. E. M. Brown.

Connecticut.

## ANGLING NOTES.

### Habits of Smelts.

One morning as I came in from a day's fishing at Sunapee Lake, N. H., Col. N. Wentworth, Fish Commissioner of New Hampshire, and Dr. John D. Quackenbos were at the dinner table when I opened my mail and found a query from Panet Angers, Q. C., of Canada, an enthusiastic angler, canoeist and yachtsman, who said: "We catch smelts here in the St. Lawrence twice a year, in April or May, and again in October or November. At both seasons they are full of spawn. How is this to be accounted for? Do they spawn twice a year, or are they not the same individuals that run up spring and fall?" My first thought was that there was an error about the fall smelt spawning but I could not say so in the face of a statement to the contrary. That very day we had gathered in a small dead *aureolus* trout less than 6in. long, and when the fish was opened it was found to contain spawn, which seemed for a moment to be remarkable, as this species does not spawn until October or November.

A brief examination, however, showed that the spawn was so small that it would not be cast until late in the fall, and I jumped at the conclusion that the October smelts would not spawn until the next spring. Then I was dumbfounded by a remark from Col. Wentworth that in New Hampshire they had two runs of smelts, one in January and one in May, but the January fish were not spawning fish, although they might have undeveloped spawn, as so many fish do have months before their regular season for spawning. Col. Wentworth has promised to get me full particulars of the habits of the smelts at Laconia station from the superintendent of the hatchery at that place, for it is there that the two runs of smelts are said to take place. At the time that the letter of inquiry came I had for some weeks been cutting up smelts at Sunapee for trout bait, and if they had contained spawn I think I would have noticed it, although I was not looking for it, but Mr. Quackenbos, who has cut up hundreds of smelt for bait, tells me that he never saw spawn in one, and upon inquiry, he cannot find any man who has seen spawn until spring. So that I am led to the conclusion that, although smelt may run in the fall or winter, they spawn only in the spring. Trout show spawn all summer, but they do not cast it until fall.

I have had a memorandum about smelts spawning which I have had on my note book since last May. When the Fish Commissioners of New Hampshire were seeking smelts last spring they went to Davies Brook. The eggs were fairly rotting in the brook presumably from lack of shade in the brook and the warm weather. One of the men fishing out in the lake near the mouth of the brook where the water was 45ft. deep caught a small stick of wood from the bottom and it was covered with smelt eggs in good condition, and it was the opinion of Col. Wentworth that the large smelts spawned in the deep water of the lake and did not run into the streams as the small ones certainly do. It has been considered that all smelts run up the streams in the night to spawn, but this seems to be an exception to the rule, and other exceptions may be developed when we know more about the fish.

Knowing that Mr. Mather had hatched smelts more extensively for the N. Y. Fish Commission than any other man I wrote to him on the subject and he replied under date of Aug. 9: "I never heard that smelts spawned in the fall. They do not do so on Long Island, the only place that I have had experience with them. I think there are smelts in our harbor now from what I have seen from boats, but will try to catch some and see if they are smelts. They do not run into the fresh water and are probably only feeding. No doubt they have spawn started for the spring campaign. Will tell you more when I know more."

### Killing a Salmon.

Mr. J. J. McCormick, of Boston, went to Canada this year with the experience of having spent $5,000 to kill a sea salmon without success. Mr. Mowat tells me that Mr. McCormick came to him and related his experience, whereupon he was sent to the Metapedia and soon hooked a big fish and lost it when it was almost near enough for the Indian to gaff. Another salmon was hooked and gaffed and placed in the canoe, and in ten minutes this fish too was lost, and despair was in the heart of the fisherman, for it seemed as though Mr. McCormick was not to succeed; but after two days he made another attempt with his boys, and in ten minutes he hooked, played and landed a 30lbs. fish which was saved, and this was followed by six others—30, 20, 17 and 14lbs. being among the number. The guardian killed a 27lbs. fish on Saturday, and one of 28lbs. on Monday.

A gentleman from Philadelphia, whom I met recently on the cars told me that a few years ago on the Metapedia he had no difficulty in killing five or six fish in an afternoon. In fact, it was no trouble to kill salmon, but he did have difficulty not to kill too many when he fished, and of course he only fished in season, and then only in the pools nearest to his house.

### Two Incidents.

My notebook gathers so many notes—on the water, on the trains, and in all sorts of places, that occasionally one gets lost for a time for obvious reasons, something that should not occur with a well-regulated notebook. This morning I made a search for the skeleton of a note which I knew must be there, for it made such an impression upon me that I knew well that I put it there and also that it led to a second note, and that also in reality made two notes of two different events, both about, as I have heard the old-fashioned toast-master say, "The ladies: God bless them." I was an actor in one incident and a witness of the other, and they prove that ladies can and do fish, no matter what the conditions of the weather may be.

One morning last summer I asked a young lady to go a-fishing in Sunapee Lake for Sunapee trout, which means, in July, sitting for a long time in the sun at a buoy which is baited with cut-up smelts to attract live smelts, which in turn attract trout, which are caught on a rod with a hook baited with live smelts. She declined because she said she would bring me no success, as she never canght a Sunapee trout, never expected to do so, and, besides, the sun being hot and the air still, the water would be like an oven. I told her nothing she said caused me to lose faith, and she consented to go with me. When the boat was fastened to the buoy I arranged her line for her, but it was only a short time before I wished that I had not invited her, for though she made no complaint, the sun was beating down in a very hot and uncomfortable fashion. Soon she caught a trout of little over a pound, and I suggested going in to shore, but no. She was out to fish, and stay she did until her arms were burned to two great blisters, not a good, healthy, desirable brown, but blisters that caused considerable pain after. Under the circumstances it was a shame that I should catch a larger trout than any she brought to the net, for she showed great pluck and determination, without the shadow of a complaint about anything, so that hereafter I would prefer to fish with her than with any man. Even when her arms were poulticed she made no murmur of complaint, but said she was ready to go out again.

The other incident occurred at about the same place. With Rev. E. A. White I was fishing for the "white trout" at the same place, when a boat came out from the shore toward us and in the stern was a lady. There was a little sea on the lake and the sky was overcast. As the stranger boat neared us I discovered that the lady had a strike on her rod and she at once got on her feet and proceeded to play the fish, and played it well, too, for she played it to the landing net. When the boat got up to us we found it contained Mr. and Mrs. C. F. Imbrie and their guide, and after a few moments of conversation they went on down the lake. In a short time thereafter a heavy thunder shower came up and every boat in sight made for some shelter on the shore, until we were alone. We had rubber blankets to cover everything in the boat, and rubber coats for our own backs, but after it had rained fiercely for some time we, too, decided to go to a cottage on the shore for shelter. When the shower was over and we were getting our boat ready to start, Mr. and Mrs. Imbrie came slowly rowing up to where we were. Asked if they found shelter from the storm they said no, as they had not tried really. Mrs. Imbrie said they had not thought much about it. The guide did go into a place where the trees sheltered them a little, but it was more for him than for them, and it was rather pleasant than otherwise, except the fish did not bite.

The next day or so when we again met Mr. and Mrs. Imbrie, and I had some old broken flies in my hat, Mr. Imbrie, with a smile, said: "I am going back to New York to-morrow, and will tell them down there that I saw you here with a lot of flies in your hat fishing at a buoy with live bait for trout." I replied that if he would also say that the *aureolus* trout could be caught only in that way, I would not mind the balance. But as he gave me a box of very useful sinkers, a new thing, in the form of wire to be broken off at any length desired, and which I found very convenient at those very buoys, I really cannot find fault with anything he may have said.

A. N. Cheney.

### Tennessee Indian Fashion.

Clarksville, Tenn., Aug. 11.—The dove season opened in Tennessee Aug. 1, but the birds are scarce, no large bags being reported.

Several parties of campers have gone to White Oak from here this season fishing, and have had fair luck with small-mouthed bass. One party goes from here every year who catch fish in a novel way. They use nothing but old-fashioned bows and arrows and shoot fish Indian fashion. Some of them are very expert. Mr. Bennett can often kill four or five running without a miss. Jack Fulmer was with the party; but as he said, "I'm no Injun," he took his fishing tackle, and the boys have been teasing him about catching a hog. It seems that Jack had set out his tackle near camp and was lying in the shade, when he heard the music of his reel and ran to investigate, crying, "I'll bet that's a big bass." But it was not. In some unaccountable way a hog had run off all his line and dragged his rod down the creek.

I suppose that in every community there is a man who is noted for telling tall stories; but of all I have met none are in it compared with our friend "Tarquin." The story of his musical reel and the 314lbs. cat reminds me of a man who was writing in another paper about being on a big quail hunt, then going to dinner where cantaloupes, watermelons and peaches were served. It seems to me that the bird season was a little early or the melon season a little late, I don't know which. Slippery.

## DAYS AT OKOBOJI.

June 22 was selected as the day for starting on our trip; rather late for good fishing, but as George could not leave his business sooner we made the best of it. My "young hopeful," having made the acquaintance of the train men, elected to ride on the engine, where he amused himself by blowing the whistle most of the way. We arrived at the lake at 3 P. M., and by supper time we had our five tents up, beds made, and with appetites sharpened by the fresh air as well as our labors, we needed no second call to the dining tent, where smoking hot we found a dish of fresh fish, caught by young hopeful, aged seven. It was the first meal in camp of "The Kickers" of '94.

Four o'clock Saturday morning found George and myself stirring, and after a refreshing plunge in the lake, we started in to finish up the remaining things necessary to establish our housekeeping. Among these was cleaning out the cellar—a large box we have sunk in the ground and with a cover on hinges, in which we keep our supply of ice, butter, cream, and such fish as we catch. We found it in good repair, though well filled up with leaves and dirt, the accumulation of the past winter.

After breakfast we decided that the next thing in order was to get a boat into Lake Minnewashti (popularly called Middle Gar Lake) with as little delay as possible. This is one of a chain of small lakes connected with Okoboji and very popular with us, for in it we have always met with fine success. Bass and pickerel are in abundance, with a fair sprinkling of wall-eyed pike as well. By a short cut through the woods it is not over a quarter of a mile from our camping grounds; but by water it is fully six miles, and for about one-third of the way through an almost impenetrable mass of water vegetable, that makes life a burden to him who attempts the passage. On this account we always leave one boat there during our entire stay at the lake. In the trip around we pass under four bridges, two of which are usually so close to the water that we have to lie in the bottom of the boat in order to get through; this year, however, being exceptionally dry, we found the lakes at least four feet lower than usual. Lower Gar Lake we found completely choked up with weeds, so much so that the water was only visible in a few small patches, and at the entrance of this lake we found ourselves at 10 A. M., a broiling hot sun beating down and rapidly blistering arms and faces. Through it we had to go, however.

By dint of hard work we at length found an opening that carried up beyond the outlet and into somewhat more open water, though still so dense with weeds that we had to use our oars as paddles, and after three hours hard work we managed to get through and into the open water of Middle Gar.

This lake is about two miles long and a little over a mile wide, with heavily wooded shores, full of bays and promontories and a perfect gem of beauty. Owing to its inaccessibility by boat it is fished but little, and one is reasonably sure of good sport.

Thoroughly tired out from our struggle through the weeds, we stretched ourselves out under the trees. Then we rigged our rods for the first time and gently rowed along the shady side of the lake—up and back again, alternately casting and taking turns at the oars, rewarded for our efforts with only three small black bass of a pound each and one wall-eyed pike of 3¼lbs.

We returned to camp by the short cut, arriving about 5 P.M., hot, tired and hungry, and as it proved none too soon. I had just stepped into our tent, but an urgent call from George made me rush out. I found George frantically searching for an axe, hammer, or anything else with which to drive down tent pegs. He pointed up the lake; and there I saw a sight that started me to hustling on my own account; coming down the lake and bearing directly toward the camp was a wall of water and foam several feet high. It was the worst storm we had ever seen on these lakes; and here were the tents all open and things scattered around promiscuously, and just right to blow everything clear across the State. Before we could do a thing the storm was upon us, the wind blowing with the fury of a tornado, the trees bending like reeds before its might, the rain pouring down in torrents and those tents flapping in a mad dance with the elements. In less time than it takes to tell it, George and I were drenched to the skin and the water running out of our shoes at every opening. We soon had the tent flaps down and then commenced a rapid scramble from one peg to the other, varied by an occasional excursion after some of our household goods that the wind carried away. The ground had been very dry and crumbly; and with a perversity worthy of a better cause those pegs kept pulling out with painful regularity; one tent in particular, the oldest in the lot, insisted on rising like a balloon, and was only restrained from soaring over the tree tops by the corner ropes made fast to convenient trees. My wife, who viewed the whole panorama from the end of our tent, says that for the wild grandeur she never witnessed a more beautiful scene than that storm-tossed lake. George and I, however, were too busy with our tent pegs to think of anything else, save to give an occasional glance of apprehension as some huge branch came toppling down, or a near-by tree gave way and measured its length on earth before the fury of the blast. Fortunately for us it passed away as suddenly as it had come; and as the sun came out beneath the banked up clouds, causing countless thousands of diamonds to flash forth from the rain-kissed leaves, we sought the seclusion of our tents and dry apparel.

Just as supper was cleared away, from out the darkness came a shout, and by the aid of a lantern we discovered a team tangled up in the fallen tree tops. It proved to contain the rest of our party—my brother-in-law, his wife and eleven-year-old daughter, just arrived from hot and dusty St. Louis.

Sunday morning dawned bright and clear and the sun found us all in conclave, gravely discussing the momentous question of wherewithal we should be fed.

On Phil had fallen the responsibility of purchasing our main supply of provisions. With childlike innocence he had intrusted them to an express company, and here we were ten miles from town (and the express office closed besides), and nothing between us and starvation save a sack of flour, a little coffee and a stray package or so of salt.

We ate waffles for breakfast, though how they were evolved from our scanty supplies remains a dark mystery safely locked in the bosom of our cook.

After that substantial meal we resolved ourselves into a committee of the whole to discuss ways and means of averting the threatened famine; the outcome was that George and myself were detailed to forage for meat and anything else we could lay hands on, and with strict injunctions to return empty-handed at our peril. Taking one of the larger boats and a cold waffle or two under our arms we sallied forth with a do-or-die expression on our classic faces, as determined a pair of pot-hunters as ever lived. The day proved uncommonly hot, the wind variable and the fishes better observers of the day than we. Along toward the middle of the afternoon we returned, hot, tired and hungry, but flushed with victory, for in our boat we had about 50lbs. of fish of assorted kinds, shapes and sizes. On starting out George had announced in a determined voice, "Billy, everything goes," and go it did—everything was fish that came to our landing net, including a venerable fowl that had roamed from home.

"The Kickers" now being all in camp, an introduction is in place. First, George S. and wife (from that thriving metropolis of the Northwest, St. Paul, and as ardent a sportsman as ever wet a line or shoved a tight shell into a gun), Miss B. of Sioux City, Phil P , wife and daughter, of St. Louis, the writer, his wife and young son, claiming St. Louis as home, Lizzie, the cook, and last but not least, Sam, a red Irish setter and the property of George, a veteran of ten years' work afield, old and deaf as a post, but still able to give the younger generation of dogdom a few pointers on the art of finding birds. It was my intention to bring my own dog, a three-year-old Irish setter, with me, but Sport is like his master, somewhat given to roaming, and is at present taking an outing on his own account, and as his post-office address is unknown, we had to leave without him.

Monday morning found George and myself as usual up before the sun, and leaving the sleeping camp behind us we soon pushed our boat out in Gar Lake. All around us we could hear the pleasant song of birds, just arousing to greet the awakening day; a gentle ripple stirred the water, while here and there a great swirl showed some hungry bass was foraging for his morning meal; over all the merry voice of Bob White piped loud and clear from every side, and just tinging the sky with crimson and gold came old Sol, smiling a warm good morning to the wild flowers that perfumed the air.

Leisurely rowing along and paying more attention to nature than to fishing, we passed entirely around the lake, pausing here and there to cast into some favorite spot, now into a deep bay thickly grown with moss, and again close beside some steep and rocky bank, under the shade of leafy oaks and drooping willows, catching an occasional bass and pickerel and drinking deeply of the beauty of the scene. Thus we passed two delightful hours. Our catch, though large neither in size or numbers, still repaid us for our time; though indeed had we had never a fish neither would have thought the trip unprofitable.

When we first started out I had had a vigorous strike that did not hook, and repeated casts failed to again arouse him, and now as we neared our landing place I suggested trying the spot once more. We rowed to the place, a small bay having a steep rocky shore line, and getting our boat near the center cast in all directions for several minutes without success and concluded that our friend of the bronze back was not at home. As I carelessly reeled in the final cast the bait was seized with a jerk that almost took the rod out of my hand, and with a rush that caused the reel to sing a merry tune out went twenty-five or thirty yards of line directly toward a dense bed of moss and weeds. Once he got in there I knew that I stood a good chance of losing my prize, so I jammed my thumb down hard on the spool with a force that made the pliant little six-ounce bethabara tie itself into bow-knots. The maneuver had the desired effect and brought the fish to the surface and out of the water nearly two feet. Down again he went with a rush in a new direction, this time directly at and under the boat, calling for lively movements to save my tackle from destruction. By this time George had rowed me out into deeper and open water, and I had things more my own way. I reeled in time and again, only to lose the line as rapidly, as he rushed about, now sulking at the bottom and again high in the air, and dancing a hornpipe on his tail as he tried to shake the hook from his jaws. Six times the beauty jumped clear out of the water, shaking his head like an angry bull and making rushes that jerked the handle of the reel out of my fingers. At last I brought him to net, tired, but by no means conquered. I could have played him some time yet, but I feared the hook—none too well fastened—would tear out. He weighed on the scale 4lbs. 2oz. and had fought for twenty minutes. I was thoroughly tired out and trembling all over with excitement when at last he lay in the bottom of the boat, and I was well satisfied, though they claim the large-mouth is not a fighter. Willingly I rested on my laurels and we started for home, reaching camp just in time for breakfast, over which meal I fought again my battle with the big bass.

The others of the party, hearing the results of our trip, were eager to try their hand, so started out, taking three boats, in each of which was a large pail filled with ice. We passed a pleasant day, although the wind was so light that the fishing was poor. Our string of fish, though not large, was more than enough for our immediate wants, and we divided with some neighbors.

Tuesday morning dawned in so threatening a manner that we deemed it best not to venture out that morning. Large masses of clouds hovered around, driven in every direction by a wind that blew in fitful gales from all points of the compass and lashing the lake into a seething mass of foam. It made us think a repetition of Saturday's storm not improbable. We filled in the time by practicing with a .22cal. Colts rifle, at this sport my youthful son developed unexpected aptness, hitting a target 4in. square on an average twice in five shots at a distance of 60ft., being his first experience. I felt a very pardonable pride in his work

About the middle of the afternoon the wind died down in a measure, and though the lake was still very rough, my wife and I determined to vary the monotony by catching a fish or two, or at least having a row. So out we started, taking one of the large boats and two pairs of oars. Our fishing, however, was unsuccessful, for though we managed to reach several spots in which we usually find fish, we could not hold the boat against the wind and waves long enough to make more than one cast, even with the aid of a 20lbs. rock for anchor. We trolled; and the only strike after an hour's work was a pickerel of between 4 and 5lbs., that fell to my wife's rod. We made one attempt to cross the lake to smoother waters, but though my wife handles a pair of oars as well if not better than the average man, we were forced to turn back after going about a third of the distance. Coming back we drifted over a reef of rocks which usually yields some good-sized wall-eyed pike; but all we could do was to tangle up our tackle in the rocks, breaking several yards of new line and losing our hooks. The pike were evidently not "at home" to-day, so we concluded to set them a good example and go home ourselves.

Lester, my son, all through the spring preparations, had expressed so evident a desire to possess everything in my tackle box, that I concluded to get him an outfit that he could call his very own. I bought him a small tackle box and filled it up for him. Last year, young as he was, he had showed a desire to use a reel; so this year, when ordering our new tackle, I bought him a very fair multiplier and gave him about twenty-five yards of silk line. It was part of a hundred yards of high-grade line that I bought some time ago, but had hardly used at all on account of its being heavier than I like to use. His rod I made myself, a three-piece lancewood of 6½ft., and stout enough to stand the rough usage I imagined it would get. Much to my surprise, however, he came out strong as an angler this year, and under the instructions of the crowd generally, and George in particular, has learned to cast with a precision that many persons of several times his age would not be ashamed of. His knowledge of fishing tackle has also developed into the critical stage, owing, I fear, to George's coaching; and as I sometimes amuse myself with rod making in an amateur way, I find myself pledged to produce before another trip a split bamboo "with more spring in it" than the somewhat heavy affair he now has.

It is amusing to watch this small edition of a "Compleat Angler," perched in the bow of the boat, gravely casting with the rest of the party, and usually getting the most strikes, by the way. He handles his fish entirely by himself, and save an occasional request for a frog or minnow, or for some one to use the landing net, he troubles no one.

Fishing in the mornings and evenings, lolling lazily in the hammocks through the heat and burden of the day, reading back numbers of the grand old Forest and Stream, and eating three times a day with appetites made keen by our outdoor life, we lived while the days swiftly glided by. No news from the outside world, with its railroad strikes and turmoil, reached our shady Arcadia. Peacefully and contentedly we drifted on, drinking at nature's fount renewed health and happiness. Thus passed the time, until on July 5 our outing came to an end, and we regretfully "folded our tents like the Arabs" and wended our homeward way.

W. R. Hall.

## SALMON OF THE TOBIQUE.

*Editor Forest and Stream:*

Last week "J. W. B." expressed a wonder which is shared by very many others, that the young salmon, leaving its home the first year, when not much over 6in. in length, should return the next year a grilse weighing from 3 to 8lbs. My own misconception on that point was pointed out about a year ago by Mr. D. G. Smith, of the Mirimichi *Advance*, who wrote that the more probable explanation of this seemingly marvelous growth the first year in salt water was that the young salmon does not return to its fresh-water home at all for several years. That, furthermore, the females did not spawn every year, but that several years might elapse, which would mainly account for the greater abundance of salmon some years than others, in the spawning beds.

I take the liberty here of quoting from Mr. Smith's letter a matter of interest regarding the salmon's food, lest it may not have been published elsewhere: "* * * These problems of the salmon are interesting, but we all want more definite information than we possess. Mr. Mowat, to whom I have referred, is perhaps one of the four best authorities on the salmon, but he has committed himself to the statement that 'the salmon will not touch a smelt,' yet only a fortnight since I saw four smelt taken from the stomach of a salmon (10lbs.) that was netted at Escuminac, forty miles below Chatham, in the Straits of Northumberland."

In regard to the salmon on Tobique I recently learned from Mr. Taylor, of Fredericton, N. B., who is known especially for having taken the best photographs ever taken of the New Brunswick wilds, a story which, if true, is worthy of note.

Mr. Taylor related that in "1863 or 1866" (the exact date slipped his memory at the moment) Mr. David Wilson, secretary to Sir Arthur Gordon, Governor of New Brunswick, was with a party fishing for trout from Bathurst Lake (on Nepisiquit) across to and down the Tobique River. Mr. Wilson alleged upon his return that when on his way down the main Tobique he had a rise from a fish which he was not able to secure, but of which he saw enough to satisfy him it was a salmon and not a trout. No one believed him then, for at that time a salmon had never been known to take a fly in that river. Mr. Taylor made many inquiries there afterward, but no one had known of a salmon having risen to the fly. Salmon fishing with fly really did not begin, said Mr. Taylor, until after the introduction into Tobique waters of salmon from other waters, and from that time salmon have been steadily taken there. And it was his belief that the salmon caught since then have chiefly been the offspring of the fly-taking fish put into the river.

Tappan Adney.

### A Ronkonkomo Bass.

Mr. W. A. Gray, of Brooklyn, caught in Lake Ronkonkomo, Long Island, last Saturday, a large-mouth black bass weighing 8lbs. This is supposed to have been the big one that had been hooked and lost by so many other fishermen. Mr. Gray was stopping at the house of John W. Davis, of Ronkonkomo. Mr. Davis made a bid for the fish to stuff with sawdust and set up on the office mantel as a mascot for his fishermen guests. But it is not every day that a frog-caster, cast he never so seductively, can take in an 8-pounder; and when fortune does send such a fish the lucky catcher does not leave it behind him in such seclusion as the country hotel grants, but takes it home to show to his uncles and his cousins and his aunts.

## SKITTERING FOR BASS.

SWARTSWOOD, N. J., Aug. 16.—The dry weather has had a depressing effect on fishing the past month. The bass are more than usually capricious in feeding. Four out of five will strike apparently to drive away the monotony from their own existence and incidentally add some spice to the ——'s. (I don't like rodster, and would not for the world hurt the feelings of the increasing army who will acknowledge no other name.)

It is a woeful loss of time to tempt the bass in this lake with flies. The most successful methods of taking them are still-fishing and skittering. At present helgramites and minnows are the best *menu* in deep-water fishing.

The natives here in skittering use a bamboo pole from 12 to 20ft. long with a line a little longer tied to the end. Frogs are generally used for bait, sometimes minnows. As the boat is slowly rowed the bait is cast along the edge of weeds or rocks. When the fish are feeding well, many bass are captured in this way. But many fine ones are lost on account of the difficulty of taking in slack line or by breaking loose. The limited range of casting is also sometimes an objection. But for ease in handling I prefer this primitive tackle to a jointed rod and reel. I have made a skittering rod that has the advantage of both styles. I set a slender bamboo stick into a rather heavy butt, making a total length of 15ft. The balance is so adjusted that a couple of hours' constant casting is not wearisome. This is equipped with reel-seat and guides. Ordinarily I use about 20ft. of line. With this I can cover the water within a radius of over 30ft. But when a fish is hooked or a longer cast is advisable the reel is brought into play.

In still-fishing I use a 10oz. steel rod which seems specially made for the wiry small-mouths of this lake. These fish frequent the numerous springs at the bottom of the lake and feed best between 5 and 8 o'clock in the morning. The best fighters seem to be those between 2 and 3lbs., although I have had many a hard tussle with little fellows of much less weight. The "wide-mouths" are caught mainly by skittering, and are occasionally hard fighters, but usually their struggle is short though fierce.

I have no story to tell of big strings caught in a short time. In eight days I have caught but 12 bass, averaging nearly 2lbs. But when a man can have a reasonable assurance of a trial of skill with half a dozen fiery bass with a fair chance of landing half of them (I often lose my fish), he is willing to go to bed at 9 o'clock and rise at 4 o'clock; and even if he goes home with an empty creel, the lungs full of fresh morning air, the appetite for breakfast, the enjoyment derived from the awakening of the fields, woods and streams are a reward to be appreciated by one whose life work keeps him a prisoner in the city ten months in the year. A. V. T.

## THE JINGLE OF THE SALMON SPOON.

SEATTLE, Wash.—*Editor Forest and Stream:* In your issue of Aug. 4 "An Ex-Secretary," etc., has "a query for 'El Comancho,'" which I take pleasure in answering to the best of my ability. The querist wants to know "what kind of a spoon" it was that conducted the jingling operation in conjunction with the salmon.

The particular spoon I had in mind at that time was made from a piece of ship copper. I made it myself, because I could not find at any of the dealers one large enough to suit me; so I got a piece of ship copper, a pair of tinner's shears, a little electric light wire and a few tools, and went to work on my own ideas. The result was the spoon in question, which was responsible for the death of sundry individuals of the tribe *Salmo* before it was taken by the particular fish that did the jingle act.

Of course the readers of FOREST AND STREAM understand that salmon visit this coast by the thousands in the fall, and that they are caught in great numbers by trolling. They are of large size, and as game, I suppose, as any salmon in the world. At any rate they take a spoon with a savage rush that often parts the line unless it is of good material and well handled, too. The fishing is done in salt water, ordinarily with a plain brass spoon about 2½in. long and 1in. wide, the hook being a 6-0 or 7-0 plain Kirby without a fly or other bait. The Indians use a cockle for bait in connection with the spoon, and as they have better success than the whites I made it a point partly to copy their way. I found after a while that the fish take a larger spoon better than they do the ones offered for sale by the dealers, and this led me to manufacture my spoon after my own model, which by trial I found to be about the right article. It was made to turn around a copper wire which connected the line and the hook, and to insure perfect work two or three washers were put on the wire stem. By the way, the spoon is not patented and any of the "family" are welcome to the model. I will send a pen and ink drawing, exact size, if FOREST AND STREAM wants it for publication.

The whole contrivance has a good deal of noise about it if shaken a bit. It may be that these salmon are different from Eastern fish in their way of fighting, so that "Ex-Sec." would have to come to the Sound to hear the spoon jingle, but here it is a common thing for a fish to leap clear of the water and shake himself savagely, the result being a decided jingle of the spoon against the gill covers of the fish.

The fish I had in mind at the time I mentioned the head shake was a big "jack salmon," which I should judge would weigh nearly 20lbs. He took the spoon about 15 or 20ft. under the water; when I had 120ft. of trolling line out, and came straight to the top. I felt a quick, hard pull on the line and a second after the fish leaped clear of the water to a distance of 2 or 3ft., shaking himself as only a fighting fish can. Three times he did this, then the line came slack and I brought it in minus about 40ft. of line, my pet spoon and a mighty big salmon! After the line parted he jumped out of the water twice more, and each time rattled the spoon like a Siawash tom-tom. The silver salmon does the same trick, and the jingle can be distinctly heard on an average of at least one in three fish hooked.

Things may be different with river fishing for salmon, and perhaps "Ex Sec." has killed his fish in fresh water with a fly, in which case he would hardly hear the jingle. But that it is a fact there is no doubt at all, and it is only the natural result of trolling with a metal spoon for a fish that leaps clear of the water and shakes himself while in the air. Hoping this will enlighten the inquirer I must stop and rig my tackle for these big silver and green liveried denizens of the vasty deep which are chasing herring off Cape Flattery somewhere at the present time. They are due in the Sound in a few weeks, now and then— perhaps a few more remarks on their ways from daily observation. EL COMANCHO.

## AT THE MIRAMICHI CAMPS.

MR. JOSEPH E. CAVEN has a pleasantly written story in the New York *Commercial Advertiser* of an excursion to the Miramichi salmon-fishing camps. Here is his account of his first work with the great king of fishes:

Camp Adams, the property of Michael Adams, a member of Parliament, a thorough sportsman and most splendid gentleman, was our first stopping place. This is a regular fishing camp, delightfully situated on the banks of the Miramichi. Here we took boats of the dugout variety, drawn by a horse and man accompanied by two canoe men with poles to keep it off the rocks and banks. A guide rode the horse and we went splashing and sailing away twelve miles up this magnificent river to Camp Crawford.

Camp Crawford is one of the most thoroughly-equipped and well-appointed establishments on the Miramichi. It is the property of William Crawford, the well-known New York merchant prince of the firm of Simpson, Crawford & Simpson. Mr. Crawford is a most enthusiastic sportsman, who spends a few weeks each year in the pursuit of his favorite pastime. He was one of our party, as was William E. Webb, another dry goods dictator, from the firm of Dunham, Bulkley & Co. B. Y. Pippy, an extensive cloth manufacturer, "Bob" and the writer made up "the bunch."

We were soon installed in our quarters in the comfortable camp, and it was hard to realize that we were in the heart of a great forest in the British possessions, far away from the influences of churches, newspapers and telegrams, on the banks of a grand old stream, in which the trout and salmon were so plentiful that, to use a favorite expression of the guides, "they were liable to come ashore and bite you."

I must confess that I had never caught a salmon, but had entered into a conspiracy with George, the guide, to be early on the pool, and under his care and tuition try to land one of these broad-back fighters of the deep.

ON THE MIRAMICHI.

Hastily swallowing a cup of coffee, we started for the river, and in a few moments were floating on the clear, placid bosom of one of the best salmon pools on the river. After being duly instructed in the salmon rig I was placed in possession of a fine two-handed bamboo salmon rod, with a reel, on which was wound numberless yards of good silk line. Being used to fly-fishing for trout I soon had a gang of flies in operation, and I tried some of the most likely places. As I had been making long casts toward the upper end of the pool for some time without result, and was beginning to get a little bit discouraged, George offered a suggestion. "Try over there," said he. I did, with the most astonishing results, as on my third cast I had a rise and a strike at the Jock-Scot fly that surprised me. Away went yard after yard of my line, when I incautiously threw up the tip, put on too much strain, and whatever it was—I still think it was a whale—went away with part of my rig, leaving me with a fairly well developed attack of something very much akin to "buck fever."

We soon repaired damages and tried the lower end of the pool where, after about an hour's patient and careful casting, I got a rise that almost made my hair stand up. I struck quickly and had the satisfaction of seeing that glistening, dripping, quivering fish, of fine size and beautiful contour, leave his native element and leap into the air in a manner that came near proving fatal to all hopes of securing him. But more by good luck than good management he was well hooked, and away he went for the upper end of the pool, taking out my line in a manner that caused me to expect to feel a snap and look down and see an empty reel barrel; when suddenly he turned and swung round to the left, affording an opportunity for getting in a little of the line. Inch by inch, slowly but surely, in comes the line, always very cautiously—as I had profited by my former experience—and was extremely careful.

I would gain a little and lose a lot, and lose a little and gain a lot, until the strain of the tackle, coupled with the exertion of swimming, began to tell on the silver-sided warrior until he commenced describing the circles that announced that the fight was nearly over. Round and round we swam, the strain of the tough wood and cruel steel causing the circles to grow smaller and smaller, until I began to wonder why George did not gaff him, when a slight movement in the canoe sent him off again, apparently as fresh as ever. After going all over the battle again, he was finally brought near enough to the boat to give George his opportunity. Then came a quick, unerring stroke, and the noble fish was landed. I had him. The fight had lasted a little over forty minutes, and I am free to admit that it was the most exciting, exhausting forty minutes of my life. It took a hour's rest and a hearty breakfast to put me in shape for the rest of the day's sport, and I viewed my catch with a degree of satisfaction as he hung suspended from a spike in bold relief against the birch logs of the kitchen.

I don't remember ever seeing a more striking picture than I saw that same evening, when a loud shout called our attention to Mr. Crawford standing on a rock on the other side of the pool, holding up an immense salmon that he had killed half an hour before. There he stood, with his guide behind him, each man clad in thick boots and old trousers, woolen shirts and slouch hats, the merchant looking like anything wild and savage more than one of the guiding spirits of that great beehive of a store on Sixth avenue.

Everything on the Miramichi dates from the big fire, which, I believe, occurred something like a hundred year ago, and the frequent allusions to it remind one of the story of "Hank Monk," that everybody hears so often on the Western stage routes. B. Y. Pippy fell in the water and got wet and burned up all the guide's birch bark trying to catch salmon by artificial light. He built a huge fire on a rock and wore himself and one of the guides out trying to make the salmon at the bottom of the pool believe it was daylight, but with no other result than to create an immense amount of profanity and cause the cook to be an hour late for breakfast.

## BOSTON NOTES.

A GENTLEMAN whom I fished with when a boy tells me a good story illustrative of the fancied prowess of the barefooted boy with his ozier rod as compared with the modern split bamboo. The story, he says, he saw in some paper; but it is told of a chain of ponds where we used to fish, Lock's Pond and Gore Pond, in Hamlin's Gore and Greenwood, Me. We both remember when these ponds were stocked with pickerel, and particularly remember when the few years of protection following the stocking were over. What fishing there was! What strings we caught. But those pickerel were particularly "ugly," we called them. It took the strongest of rigging to capture them. A tremendous pole was selected, and the line was of the strongest doubled and twisted hemp that we could get. Between the line and the hook we had either a wire or several links of a wire chain; for the Gore Pond pickerel were particularly vicious and would bite the line off. We should both have laughed a good deal at an 8-ounce rod, and the modern silk line would not have answered at all.

Well, the gentleman says that a sportsman and his son paid these ponds a visit a year or two ago, resolved to fish them for pickerel. They were equipped with modern tackle; fine rods, that of the son weighing only 4oz. They engaged a boatman and his boy, or rather the boatman brought the boy along, doubtless to show the city sports what could be done. He explained to his guests the vicious nature of Gore Pond pickerel, and quietly smiled at the rods and reels taken into the boat by them. The barefooted country boy had an enormous juniper pole, 12 or 15ft. long, as stiff and as dry as a broomstick. His line had once been a strong one, no doubt, but perhaps age had weakened it a little. The country boy had the first strike, evidently a powerful fish. It should be stated that between the hook and the line there was the old time chain, to prevent the fish from "chawing" the line. The country boy waited the traditional time—till the pickerel had "swallowed the bait and begun to run." Then he gave a tremenoous jerk over his head and backward. The fish did not start, but the line did, and the barefooted boy went over backward and out of the boat. This did not matter, however, for he could swim, and was soon in the boat. The water was warm, and the boy did not mind his bath, but went to fishing again, declaring that the fish was the "old big one that had broken so many hooks, lines and poles for him."

Next the city boy had a strike, evidently a good fish. His father quietly told him to mind his instructions, and not get excited. The boy played the fish beautifully. The rod held him in great shape, the boy giving and taking line as required. After a fight of nearly half an hour the big fish was brought to the net quietly, and netted by the boy's father, the countrymen being so awkward with that instrument that it was not deemed safe to trust either of them to take in the big pickerel. It was truly a big pickerel, weighing nearly 5lbs. The country boy opened his eyes in astonishment when he saw how the capture was managed, and his wonder grew to delight and enthusiasm when he saw the size of the fish. When the fish was in the boat and being killed by a well-directed blow over the head, the country boy fairly shouted with astonishment when he saw his own big hook and piece of chain dangling from the fish's mouth. The whole capture was a revelation to him, and so delighted was he, and so devoted to the boy with the beautiful rod that the city boy, under direction of his father, made him a present of a handsome modern rod on their departure for the city again. No more alder poles and chains for that boy.

Mr. F. K. Dexter, well known in Boston, is at Kennebago again this season, with Mrs. Dexter. I say again, for it was thought last year that he would never visit that well-known trouting and hunting resort again, though he had previously been there for many seasons. He was taken with a fever there last year that lasted for months. In fact he was brought out to Rangeley on a cot, where Dr. Vogle, of Boston, pulled him through. The old loves are strong, and the Dexters could hardly stay away from Kennebago. They are sure that the fever last year was contracted elsewhere. Mr. Walter L. Hill will scarcely make his fall fishing and hunting trips this year. At least he will be rather late for them, since he sailed for Europe last Saturday on a business trip to extend for a couple of months at least. Dr. Vogle has been at Kennebago again this year for a couple of weeks. Not to attend Mr. Dexter this time, but out of pure love for that region, acquired while attending his patient last year.

SPECIAL.

### An Awful Warning to Trout Ticklers.

W. C. MAY, of White Oak, while fishing in White Oak Creek last week ran his hand under a log, when it accidentally found its way into the mouth of a huge pike. Thinking he had found something good to eat, the fish at once proceeded to swallow Mr. May's arm up to the elbow. May made desperate efforts to free himself from his finny foe, but in vain, until he pulled his antagonist on the bank and called on a friend to assist in extricating his arm from the vise-like grip of this gamest of game fish, whose long, sharp teeth were buried deep into his biceps. The fish was a beautiful specimen, weighing 23lbs.—*Hazel Green Herald.*

### Fishing in Hartford.

THE Park River is a picturesque stream that runs through the center of Hartford, Conn. It skirts the grounds of the State Capitol and adds a charm to the composition of photographs of the celebrated Soldiers' Memorial Arch. Were it not that it receives a considerable part of the sewage of the city it would be a thoroughly delightful stream. As it is, its distant vistas are much more charming than near-by views, and it is said to be a serious menace to the health of the city.

Much has been written about this classic stream, but it has not heretofore been regarded as a fishing water. Last Friday, however, an enterprising citizen took nearly a barrel of fish from it, almost in the center of the city—"the largest catch he ever made," remarks the Hartford *Post*. The catch consisted of eels, bullheads and suckers, but at the expense of a good fish story, we are forced to add that they were not taken by any orthodox method known to the craft of anglers. Truth compels us to state that they were already dead when captured. They were found floating on the placid bosom of the river or lodged on shoals or the banks of the stream. From the *Post* we learn that "the cause of this sudden revelation of the plump creatures which have for season after season fed upon the fertile mud of our beloved stream seems to have been a quantity of strong acid poured into the river from one of the large factories between the Capitol avenue and Broad street bridges."

### The Follett Trout-Netting Case.

SHEFFIELD, Mass., Aug. 13.—*Editor Forest and Stream:* The Follett case was not called at the July term in Pittsfield. His lawyers pleaded sickness and made other excuses for an adjournment. They had previously tried to settle the case out of court for less damages than the lower court imposed, which was $150 and costs. But District Attorney Gardner, who conducted the case for the Commonwealth in Pittsfield (the appeal case), would not accept anything less, and was not willing to adjourn it. It was, however, agreed that Follett was to settle it on Aug. 20 on the fine imposed, $150 and costs, which probably would mean $250 or $300; or else it would be carried on to the January term in Pittsfield, but on a new basis, viz., he would be fined $5 per fish for all the fish we could prove he had taken, and as he admitted taking 150 fish, it would at least cost him $750. But we were prepared to prove that he had much more than he admitted.

The "Prohibition Plank" is good. I talk it. We all need it, and it's bound to come. HARRY S. ANDREWS.

### A Large Small-Mouth Bass.

JOSEPH A. BURR, of Brooklyn, who is spending the summer at the Loomarwick House, at Lake Waramaug, Litchfield county, Conn., came down to New York on Monday on an important errand. He had succeeded in taking a monster small-mouth bass weighing 7lbs. 6oz., and brought it with him to have mounted. The bass was taken at high noon Saturday after a struggle of twenty-three minutes. In company with Frederick Ohman, his guide, Mr. Burr was still-fishing, using small perch for bait. He had out three light rods and one bamboo pole belonging to his guide. The bass, defying all rules of good taste, took the bait attached to the latter outfit, and with such a rush that the pole had to be thrown overboard to save the tackle. Mr. Burr, however, soon succeeded in recovering it, and then the battle royal began, which lasted as above noted, twenty-three minutes. The fish was weighed immediately after being taken from the water in the presence of witnesses, and is the record bass for Lake Waramaug.

### Maquam Bay Bass and Pike.

SWANTON, Vt., Aug. 5.—I thought peahaps it would be of interest to some of the readers of your paper to know where they could make excellent catches of black bass and pike, so I will tell you some of the catches. Many sportsmen, if they knew of a place so near and handy to reach, and could always be sure of making good catches, would come in almost a moment's notice. On Monday last Mr. Cochenthaler, of Montreal, made a catch of fifteen fine bass, several pike and one large muscalonge. It is not unusual for one person to go out for half a day and secure twenty bass. There have been five pickerel caught, not any of them weighing less than 8lbs. The Original Hotel Champlain is only three rods from the lake shore. Four trains from Boston and New York arrive daily in front of hotel. The steamer makes daily trips to Plattsburgh and back. A person can leave New York in the morning and arrive in time for supper.

C. F. SMITH.

### Schroon Lake.

SCHROON LAKE, Adirondacks, Aug. 18.—The fishing here in Schroon Lake has been particularly good this year. Several good catches have been made and reports of large fish come in daily from all parts of the lake. Mr. W. H. Doan, of East Orange, N. J., has many large bass and pickerel to his credit, among them being a pickerel weighing 14lbs. Mr. Carl von Holy, who is stopping at the Grove Point House, is an ardent fisherman, and recently hooked and caught a black bass weighing 3¾lbs.

A party of three gentlemen, Mr. von Holy, Mr. A. R. Free and Mr. S. F. Rawson, from the above-mentioned hotel, went out fishing on the 17th and returned with over 60lbs. of bass and pickerel.

But one deer has been killed as yet, this one having been shot at Big Pond, about two and one-half miles from here, by two native hunters, Jenks and Whitney. The deer was a good buck, weighing 130lbs. when dressed.

J.

### In Connecticut Waters.

NOROTON, Conn., Aug. 9.—Striped bass, weakfish and blackfish are now biting. Several bass weighing 15lbs. and thereabouts have been caught here lately. Some nice weakfish are being caught off Norwalk Island and the small islands east of Shippan Point, one weighing 5lbs. A neighbor caught twenty-five weakfish about two weeks ago. A blackfish weighing 6½lbs. was caught off the "Clumps," and I landed one with a light rod while fishing from a rock near the beach that just tipped 8lbs., an hour or so after landing him. M. L. C.

## Fishculture and Fish Protection.

### Degeneration of the Youghiogheny.

SMITHTON, Pa., Aug. 10.—*Editor Forest and Stream:* Having read your item in FOREST AND STREAM of July 28, entitled "Menace to the Youghiogheny River Bass," I cannot refrain from adding a word. From 1872 to 1882 I enjoyed fishing the waters of this beautiful stream in the vicinity of Smithton, Pa. It abounded in bass, salmon, catfish, white perch and pike. Many pike were taken from 20 to 30lbs. weight. But from 1882 to 1884 the sulphur waters from the coal fields then being opened up destroyed all the fish from Bradford down. So we lovers of angling must either go above the coal fields or seek other waters for our sport.

Since the destruction of the fish in the lower waters of this river, I have often fished it between Confluence and Ohio Pyle; and although the beautiful salmon and pike of the lower waters are not there, I find it very good bass fishing; and I sincerely hope that this tannery company at Confluence will not be allowed to destroy the fish in the upper river as the coal and coke companies have the lower.

A SUBSCRIBER.

### For Seining in the Kishwaukee.

ROCKFORD, Ill., Aug. 11.—*Editor Forest and Stream:* The other day Sheriff Ames, of Boone county, got after some Rockfordites for seining in the Kishwaukee in that county, and five were fined. The victims were Charles Holland, E. J. Hoffman, Frank Gruninger, H. V. Fritz and George P. Eggleston. They paid $18.75 apiece at Belvidere yesterday. Sheriff Ames deserves much credit for his action in this affair; we trust that his example in the performance of duty will have a good effect. Our streams require close watching and a rigid enforcement of the law. LONE TRAIL.

### Popular Scenic Route to the East.

THE new vestibuled train service via Chicago & Grand Trunk, Grand Trunk and Lehigh Valley Railways, between Chicago, New York and Philadelphia, via the St. Clair Tunnel, Niagara Falls and the beautiful Susquehanna, Wyoming and Lehigh Valleys, known as the "Switzerland of America," offers elegant appointments and is the most picturesque route connecting these leading cities. Train leaves Dearborn Station, Chicago, daily, 3:10 P. M., and has attached a Pullman Vestibuled Sleeping Car for Toronto, Montreal and Boston, via Montreal. During the summer tourist season there will also be attached to this train, a Pullman Buffet Sleeping Car for the White Mountains and tourists' resorts on the Atlantic Coast, by way of Montreal and the Portland Division of the Grand Trunk Railway. The beautiful scenery along this route makes it one of the most picturesque and attractive tourist routes to the East. Baggage can be examined and passed Customs at Dearborn Station, Chicago, thereby avoiding delay and inconvenience on entering Canada. For sleeping car reservations, rates, time tables, etc., apply to E. H. HUGHES, General Western Passenger Agent, 103 Clark street, Chicago.—*Adv.*

## The Kennel.

### FIXTURES.

DOG SHOWS.

Sept. 4 to 7.—Des Moines Kennel Club, at Des Moines, Iowa. M. Bruce, Sec'y.
Sept. 10 to 14.—Toronto Industrial Exhibition Association, at Toronto. C. A. Stone, Sec'y.
Sept. 10 to 14.—Pittsburgh A. C. Kennels, at Pittsburgh, Pa. A. A. Batchelor, Sec'y.
Sept. 18 to 21.—Rhode Island State Fair Association, at Cranston, R. I. W. W. Dexter, Sec'y.
Sept. 19 to 22.—Orange County Fair, at Newburgh, N. Y.
Sept. 19 to 22.—Stockton Kennel Club, at Stockton, Cal. John Hefferman, Sec'y.

FIELD TRIALS.

Sept. 5.—Manitoba Field Trials Club, at Morris, Man. R. J. Gallaugher, Winnipeg, Sec'y.
Nov. 5.—United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.
Nov. 6.—International Field Trials, at Chatham, Ont. W. B. Wells. Sec'y.
Nov. 23.—Eastern Field Trials Club, at Newton, N. C. W. A. Coster, Saratoga, N. Y., Sec'y.

### Large Pointer Litter.

*Editor Forest and Stream:*

As being of interest to your many readere I send you this well authenticated bit of news. Mr. George Ferguson of this place is the owner of many valuable dogs, including pointers, setters, both Irish and Gordon, and collies. Of the lot, his young pointer bitch Suffolk Beggie, by American Boy (30,796) (King of Kent—Westminster Ina) out of Spinett (Lad of Bow—Spinaway III.), has always been a favorite. She was whelped May 19, 1893, and in due time was taken to the South Side Club to Mr. H. R. Duvall's Phra (31,225) (Robert le Diable ex Mona). On Aug. 11 she whelped a litter of eighteen puppies, sixteen bitches and two dogs. Twelve of the former died within a few hours, but the remaining half dozen, four bitches and two dogs, are in excellent health and are little beauties. How often has this number in a litter been exceeded? C. P. ROGERS.

HUNTINGTON, N. Y., Aug. 17.

### "Wire-Haired" Cocker Spaniels.

*Editor Forest and Stream:*

A sarcastic novice wants to know what a "wire-haired" cocker spaniel is. That is not a novelty. I breed dogs for all sorts of work; a few years ago a friend offered me big prices for a small all-round farm dog, for vermin, birds, rabbits and a watch-dog that had "sand." I knew all about cockers for part of the work, and also that Welsh terriers cannot be beaten for vermin, and are as game as a pebble; so I crossed a cocker dog with a Welsh terrier bitch and got just the very animal I wanted—a wire-haired cocker; some of them are down East. Perhaps the class was made for them.

I did not know I was making a new breed, thought they were mongrels; but they do what they were bred to do, which is more than most of the so-called thoroughbreds will do.

J. OTIS FELLOWS.

HORNELLSVILLE, N. Y., Aug. 16.

### New England Field Trials.

*Editor Forest and Stream:*

A meeting of the governors of the New England Field Trial Club was held in Boston, Aug. 9. It was decided not to hold the regular open trials this season, but instead to run a Members' Sweepstake, $5 to nominate and $10 to start. Entries close Sept. 15, and the trials will be run Oct. 23 on the club grounds at Assonet Neck, Mass. The details were put in the hands of the field trial committee—Messrs. Ed. Brooks, W. C. Baylies and A. R. Sharp. It was also voted to offer the use of our club grounds to the Gordon Setter Club of America, who will probably run their trials as soon as our Members' Stake is completed.

ARTHUR R. SHARP, Secretary.

TAUNTON, Mass., Aug. 13.

## POINTS AND FLUSHES.

*[By a Staff Correspondent.]*

UNDER date of Aug. 10, Mr. J. B. Stoddard, who is located at La Salle, Man., writes the following notes concerning field trial matters. Messrs. Pickering and Sheldon are trainers who reside in Manitoba, and have been prominent in the competition of past years. He says:

"Mr. Pickering is at Oak Point, and Mr. Sheldron at Armstrong's Point, both with good strings of dogs. I do not hear of any world beaters. There may be some dark horses, or it may be that the array of talent, from abroad, now in the province has had a depressing effect on the local wielders of the check cord.

"The weather has been remarkably dry all season, and the birds hatched well. There was a bit of territory here and there burned over during the nesting season which rendered it necessary for the birds in the burned districts to set up housekeeping in a new place, but as the weather has been favorable the second hatchings are coming on in good shape. The young grouse grow very rapidly, and almost before you know it they are able to fly. Some of the early hatched birds can hardly be told from old birds.

"Harvest in this section has just begun and we may now begin searching the stubbles for grouse. There are plenty of birds, and the Manitoba Field Trials will no doubt be a great success. The quality of the dogs shown should be the best ever seen in this country judging by the entries received. Several, five in fact, of the best kennels in the States are represented, viz.: Avent & Thayer, Blue Ridge, Charlottesville Field Trial, Hempstead Farm and F. R. Hitchock. Then there are T. G. Davey's and J. J. Spracklin's strings from Ontario.

"You can readily see that the trials here this year should be as good as they make 'em."

### Field Trial Suggestions.

There are valuable suggestions in a letter written to me by Capt. McMurdo, under date of July 25, the part referring to field trial matters being herewith presented:

"With the long experience and knowledge some of us have, I cannot see why a field trial club should not be got up and managed so as to carry out exactly what we want. I have never seen a trial conducted entirely to my satisfaction yet, though great improvements have been made in the management of the Eastern.

"A thoroughly good judge will be the hardest thing to find. No one but a professional can be expected to know everything about dogs and the tricks of handlers, but a non-professional would in other respects be more desirable. However, I think rules could be made with regard to the handling of dogs that would prevent a professional having any advantage over an ordinary sportsman.

"Speed has always been over-estimated. I believe all the very fast ones are running, not hunting, a great part of their time. It may show bird sense, but I don't want a dog that runs from one likely spot to another, and hunts those places only. Of course he may find more birds than one that hunts all the ground I am walking over, but I hate not to have all the reasonably good ground worked out.

"Field trials are required by breeders for the purpose of ascertaining their success in breeding; making money out of them is not the object. One or more perfectly competent judges are necessary.

"Handlers must obey the directions of the judge or they must take up their dogs.

"Trials should be run on suitable grounds and in suitable weather.

"Aged dogs must be thoroughly trained—ones that cannot be handled by an ordinarily good sportsman will not do.

"No Derby puppy should be more than twenty months old.

"Members of the club should be elected by vote."

Capt. McMurdo's comment on the dog which runs swiftly is worthy of special consideration.

### Parallel Cerebration.

A most remarkable instance of two persons writing the same article came to my notice recently. In the Memphis *Commercial Appeal* of July 22 there appeared a most spirited description of a fox hunt, vividly realistic and written in a most pleasing style. It had the caption "Death of Old Bob at Last." It was unsigned. The author was Mr. P. H. Bryson, of Memphis. A Western contemporary, in its issue of Aug. 11, has the same article, word for word, but signed by Mr. G. V. Young, Meridian, Miss. It is a remarkable case of unconscious cerebral appropriation or swift journalism which preaches "that he should take who hath the power, and he should hold who can," though it is supposed at the same time to be an exponent of true gentility.

In a pleasant letter Mr. W. W. Titus writes me that Mr. Frank Richards, the celebrated field trial handler, has Little Ned going in great shape this year. Also that Mr. George Richards has some promising youngsters. These three handlers are training in North Dakota. B. WATERS.

909 SECURITY BUILDING, Chicago.

### A Show for Pittsburgh.

*Editor Forest and Stream:*

After a wait of nearly three years Pittsburgh fanciers will have a chance to show their dogs. The members of the Pittsburgh Athletic Club, the largest and best known athletic organization between New York and Chicago, have organized the Pittsburgh Athletic Club Kennels, and between the dates of Sept. 10 and 14 they will give a show in the Pittsburgh Auditorium.

The dates were chosen on account of the G. A. R. National Encampment, to be held here that week, and which it is expected will bring 250,000 strangers to the city. All the railroads are offering one-rate excursions and the concessions obtained from the express companies will be announced later.

The premium list is out and can be had by addressing Secretary P. A. C. Kennels, P. O. Box 357, Pittsburgh. The prizes are liberal. For the challenge classes the club offers $15, $10 and $5. For the more important open classes the prizes are $15, $7 and $3 for first, second and third; and in the others $10 and $5. The puppy and novice classes get $10 and $5. Kennel prizes of $10 and a handler's prize of $50 will be offered. The P. A. C. boys are not only ardent fanciers, but hustlers of a wide acquaintance and experience, and they are utilizing both to work up the finest list of special prizes ever offered here.

The club has been fortunate enough to secure the services of Mr. John Davidson, who, with two competent assistants, will make awards in all classes.

The selling classes in sporting and non-sporting dogs have been liberally provided for, and any animal entered in any of the other classes can be shown in the selling class without extra charge. An auction sale of dogs will be held on the last day of the show, and for this reason the managers request that exhibitors put a price on their stock. By making this auction sale provision the club endeavors to mutually benefit owners who want to sell and local fanciers who want to buy, and to give the latter a chance to bid on some of the best blood now on the bench. The club hopes in this way to bring some of the new good ones permanently to this city, and they are assured of success, as the Smoky City has a Class A reputation as a market for good dog stock. The entry fee has been fixed at $3, and the list will close on Sept. 3. ALF. R. HAMILTON, Sec'y.

PITTSBURGH, Pa.

# DOG CHAT.

If secretaries of clubs giving shows or field trials desire communications regarding these events given the earliest publicity they should endeavor to have copy for the current week's issue at this office by Monday. Communications from the Toronto show and New England Field Trials Club and Pittsburgh Athletic Club Kennels arrived too late for our last week's issue. We go to press at Tuesday noon, and this fact should be borne in mind. While always anxious to publish news when it is news, we do not care to wait till journals which are issued later in the week have taken the "dew" off it.

Mr. James Mortimer will judge dachshunds at Toronto show in place of Major J. M. Taylor. From what we learn from the principal breeders and exhibitors there will very likely be a large entry from kennels this side of the border. The facilities afforded by the transportation companies are set forth in the premium list, and we should think a saving in trouble and expense would be made if some of the handlers chartered a special car to the show and return to Providence in time for the Rhode Island show.

The Leinster Kennels, of New Orleans, La., seem to be doing good work for the fox-terrier in the Creole City, as a glance at our Kennel Notes will show. This kennel, although debarred by distance from taking part in competition with such kennels as they would meet at Northern shows, can, however, put down a team that would be noticeable anywhere. At Louisville, for instance, their dogs were "feeling the money" in almost every class, besides capturing the kennel prize.

Those who have the best interests of dog shows at hear will condemn the auction sale of dogs connected with dog shows under A. K. C. or general rules. Catch-penny affairs of this sort lower the tone of such exhibitions. The auction in most cases is a mock affair. There was one held in connection with the N. E. K. C. show last April and most of the dogs were returned to their benches after being knocked down to fictitious bids. In the first place no breeder who sets a marketable value on his stock desires such a convenience, as he knows that not even reasonable prices will be forthcoming. Then again the sales are held in the judging ring, and it requires a man with a voice first cousin to a calliope to reach as far as the railings where the people are grouped, the consequence is the crowd surrounds the auctioneer and there is precious little chance for any one to get a view of the animal under sale. No prices that amount to anything have ever been realized at such sales and their institution gathers together a lot of scrub dogs which lower the tone and object of the show. Selling classes with a restriction as to price, afford ample and decent opportunity for sales and obviate the objectionable features of an auction which at best is only a mockery.

A correspondent in writing to us for the address of prominent bulldog breeders, gives further evidence, if any were needed, of the estimation in which these dogs are held by those who know them and appreciate their good qualities. He says, "I wish to purchase a first-class bulldog. One that will play with the children daytimes and watch my residence (inside) during the night. Have just killed such a dog for old age, and find that I cannot get along without another to take his place."

The new tariff bill will make no change in the regulations regarding importations of dogs to this country.

There were some doubts expressed as to the possibility of a dog's playing the piano, and the undertaker's agent expressed disbelief of the whole story. "I assure you it is true," answered the narrator. "Why that spitz frequently plays duets with himself." "How's that possible? To play duets requires four hands." "Well, you see, he uses his forepaws!"—*Express.*

The two bull-terriers for Messrs. Vandergift & Co., that we spoke of having come over on the Bovic, are really two white English terriers for Mr. L. A. Van Zandt, of Yonkers. One is the bitch we spoke of in February, as having been sent over to be bred and the other, well, we are not to be told till the New York show entries close, but its a good dog and is to win, sure.

Letters from P. H. Bryson, Tracy Gould, T. B. Robinson, T. Shellcross and G. Muss Arnolt are unavoidably held over till next week.

Fred Kirby, of Woodbury, N. J., is thinking of attending the Des Moines show, and as he intends taking in the whole fall circuit this will afford an excellent opportunity to those owners who wish to exhibit, to send their dogs in his charge. As it is well known that "Fred" never loses the judge's eye till the next class is called, full justice will be done all the dogs in his charge.

Our informant was in error in stating that Mr. Viti's field spaniel bitch Gossip had missed to Warwick, as we find that she both whelped and reared six strong pups, proving herself one of the best of mothers. It is well sometimes not to pay too much attention to idle gossip.

Uncle Dick's recklessness has brought out a challenge from friend Dole in which he will bet anything but "whisky or edible matter" that he has a bull-terrier pup that will beat his at the New York show. He has ten bull-terrier pups by Gully the Great, and others that will do when the time comes.

Mr. Frank F. Dole has been keeping pretty quiet since the spring shows, but a letter from him gives us the first intimation that he has been ill during the summer, but is now, we are pleased to hear, on the mend. Canine deals have therefore been pretty quiet in the Elm City, but Mr. Dole tells us that he has just consummated a bargain that we are sure the members of the Bulldog Club will regret to hear of. He has secured the well-known show winner and stud dog Pathfinder from Mr. E. K. Austin, of New York, and will send him to Mr. W. H. Ford of Maidenhead, England. Mr. Ford has been anxious to have the dog for a long time, but only a generous check and the bull bitch Princess Venn persuaded Mr. Austin to part with this crack sire. This was the bitch we alluded to recently as having been imported by Mr. Austin. Pathfinder sailed for his old home on the White Star steamer Runic on Tuesday last. Pathfinder for the opportunities he has had has proved himself the sire of the day, and that he has not been more appreciated in America is to be regretted. Mr. Dole remarks: "I should like to see Jack Ellis's face when he hears that his old pal is home again," and this will probably give him the first intimation. As the sire of King Lud and Found It, two of the best over here, Pathfinder has shown his ability as a stock dog. To prove how little he has been used a reference to the New York catalogue, 1894, will not show one American-bred dog by him.

Those who read the FOREST AND STREAM will not be unprepared for the abandonment of the Newark show this fall. In our issue of July 14 we said: "Several circumstances have arisen lately which, in all probability, will result in the N. J. K. L. deferring their proposed November show till next year. The matter will be definitely settled at a meeting to be held very shortly." This week the secretary of the N. J. K. L., Mr. E. H. Morris, writes officially: "Will you kindly announce that our club will not give a show during the fall at Newark, as was our intention?" A number of local and outside fanciers will be disappointed, as the kind treatment they received last year at the hands of the president, Mr. Rädel, and other members of the committee, had induced them to look forward to this show with kindly feelings and make preparations to exhibit. Now the Rhode Island show is the only prominent one this fall that will be held within reasonable distance of the big kennels and cities in the East. Providence should have a bumper entry.

We shall not reopen our columns to further discussion of the Bell—Martin case now that the principals have stated each side of the case. We have a letter from Messrs. Macrae and Rykert, Mr. Bell's lawyers, and with this excerpt from their letter we consider the case closed as far as this journal is concerned. They write: "He (Mr. Bell) desires through us to call attention to the closing words of Mr. Jas. Mortimer's letter, published in full by Mr. Martin. Everyone knows Mr. Mortimer's position in dogdom and how competent he is to form a correct judgment upon a dispute such as this one, and he says in writing to Mr. Martin as follows: 'It seems to me the blunder was a very natural one under the circumstances, and I personally hope that you may look at it in this light.' This is the judgment of a competent outsider fully versed in the facts. Had Mr. Martin taken Mr. Mortimer's advice, as he might well have done, all this trouble would have been avoided." These gentlemen, however, seem to forget that Mr. Bell knew of the wrong identity of the two terriers as far back as September, 1893, and Mr. Mortimer's letter was written April 2, 1894.

If the Gordon setter breeders ever intend their dogs to take a prominent, or even fairly recognizable, position as field dogs in this country—this may be rather severe, but we draw our conclusions from those of the breed we have seen run in public—it is time they bestirred themselves. The New England Field Trials Club affords them an excellent opportunity next October on grounds that should suit them and under conditions in handling that should be acceptable to all. There will be a judge on the grounds, Mr. Wallace, who understands his duties, and who is painstaking enough and conscientious in his work to suit even the most ardent lover of the breed. There is no excuse this time and we look for a good gathering of the black and tans.

The challenge class for foxhounds at Toronto has been divided and the classes will be numbered—36 for dogs, prizes $10 and diploma, and 36½ for bitches, with the same emoluments. Exhibitors should bear in mind that entries for this show close Aug. 29 with C. A. Stone, 82 East King street, Toronto.

As additional specials Messrs. Purse & Wilson, of the Headquarters Hotel, Toronto, donate a silver cup, value $15, for the best red cocker bitch in the show. The Industrial Association offers $20 for the best St. Bernard in the show.

The big one day's show held at Darlington, England, has just taken place. There were 800 entries, and when it is remembered that the show commences at 10 A. M. and closes at 4 P. M. one will understand there is little chance for dawdling. A good lot of dogs were on hand and the judging was not without some upsets in public form. For instance, Princess Florence, the crack St. Bernard, could only get third to Siegmund Czar and Black Flag; she was, however, not in shape, and we are told her American trip seems to have taken all the steel out of her. Then Breda Mixer, the Irish terrier, had to succumb to Treasurer in his class and for the championship. Mr. Brough brought out a new bloodhound that is well spoken of by the critics. The dog's name is Bullion. Sweet Home, the crack greyhound bitch, carried off the honors in her breed; she is seven years old but is said to be wonderfully clean throughout; she is by Greentick out of Sally Day and can show winning brackets in the field, too. Fox-terrier classes were well filled and judged by Mr. Doyle, who had an opportunity to set back some of the "four-in-hand" type. Chumleigh Topsy, Perseverance and Meiford Molly formed a fine trio from which to pick the winner of the open class; they were placed as named. Sporting classes were good as usual at this show and Mr. Lee's Richmond still seems to hold his own with the best in the English setter classes.

The Scottish terriers at Darlington show are specially commented upon by "W." in *Scottish Fancier*, and his remarks may prove of value to the breeders over here: "Cairn Dhu (the winner) is the type, smart, cobby, thick set, full of fire and action, while his coat is *par excellence*—in fact, the only perfect coat I saw. The second dog, Ronald, looked to me a bit dished in face, and I thought him lucky. Surely Strathesk is a better dog all round. I heard he was left out by some error. The reserve dog, Sporran, is neat and smart, but just a trifle too neat for me, and he wants more bone, muscle and substance. Lomond King was carrying too much coat. Gorst is too long from eye to nose, and his ears look feathery—not the right type. Croft Lad is too short in head and soft in coat, but has very neat ears. Pincher has bat ears, which disqualify, as they did here. Undercliff Jock I rather liked; he is all-round good, big in feet." Mr. Tom Swinburne was the superintendent, and his name recalls our earliest recollections of black and tans and smooth collies, and with whose winnings the name of George Wilson, now in Chicago, is inseparably connected. Mr. Swinburne does not show nowadays, but he is still alive to the delights of the fancy, and as a superintendent he is second to none when he can run off such a show, of 800 entries, in about six hours.

To the fact that dogs in the East go "mad" more frequently during the months of July and August than at any other season doubtless explains the popular idea that this circumstance has led to the term "dog days" being applied to the hot season. They are so called, however, because they occur at the time of the year when Sirius, known as the dog star, because it is in the constellation of Canis Major, the brightest star visible in the northern hemisphere, rises for several consecutive weeks at nearly the same time with the sun. The beginning of these days has been variously fixed by almanac makers from July 3 to 26 and their close from August 11 to September 7. Most English calendars now reckon the dog days from July 3 to August 11. An American authority places them between July 25 and September 5.

To the Welsh Terrier Club belongs the honor of giving some decided expression on the trimming question which the E. K. C. has always handled with the greatest delicacy and diplomacy short of taking an actual stand one way or the other. At a meeting of the club it was agreed that the removal of coat or hair by means of brush, comb, or fingers should be perfectly legitimate; but that scissors, singeing, and the use of artificial means for the purpose of hardening the coat, such as alum, starch and such like articles, should be disallowed, and mean instant disqualification. It was felt, however, that with regard to this latter, a difficulty would arise from the fact that many people always use certain powders for the sole purpose of cleaning the coat without having recourse to soap and water. This it was agreed was perfectly legitimate, but the meeting felt there would be a difficulty in drawing a hard and fast line.

Mr. Robinson says that the bulldog bitches Hucknall Gipsey, etc., sent over to the Woodlawn Park Kennels by Mr. Mortimer are more than good ones, and they expect to do well with them. Nothing has yet been decided about the proposed show at Saratoga and, no doubt, we are justified in calling it off.

Des Moines show committee has added a miscellaneous class (101) for dogs over 30lbs., with prizes of $5 and $3. Entries close Aug. 25.

We are informed that the challenge classes at the Pittsburgh show have been divided, and open bitch classes for the following breeds have been provided: American foxhounds, Gordon setters, collies, bulldogs, greyhounds, poodles and Italian greyhounds. A novice class for pugs has also been added, and a kennel prize of $10 will be given for foxhounds. It is unfortunate that the dates claimed will conflict with Toronto, and probably the latter show will now lose many Chicago and Western entries. A show under any circumstances is usually better than no show at all, and as the P. A. C. K. C. will have to shoulder the expense, one can scarcely blame them for holding their show at a date that seems to promise a reasonable success. Although A. K. C. rules will govern, the club has not applied for membership, and so wins will not count.

Mr. Mortimer attended one of the whippet race meetings now so popular in England, and from his remarks during a speech at a presentation of prizes afterward it is presumed he will take some steps on his return to bring this sport to a prominence which it does not at present enjoy in this country. If he does he should meet with every encouragement.

The latest fake in England is the changing of a dog's eyes from a light to a dark color by the aid of belladona. This dilates the pupil of the eye to such an extent that it is impossible to see the color of the eye the iris being totally paralyzed. The offender shielded himself behind "Ashmont" by stating he had only used that author's recipe containing colocynth, extract nux vomica and extract belladona in pill form, the dog being "a difficult one to keep in good health." Dr. Sewell knocked this plea on the head by saying that the two latter ingredients in the pill counteracted the action of the belladonna and therefore no such results as were noticed in the dog's eyes could have taken place through that recipe. The dog was disqualified and the owner will be attended to later. The case is certainly unique in the annals of dog showing and proves again that a "little knowledge is a dangerous thing."

Spratts Patent Dog and Puppy Foods and medicines scarcely require particular mention, though we can say that their puppy biscuits are unexcelled for bringing along the young stock. Among the new kennel specials B. Deacon offers two thoroughly trained Gordon and English setters; C. E. Bunn, fine litters of mastiffs; W. Payne, two well bred cocker spaniels; Wheatly, Skye terrier pups. A number of other breeds will also be found offered in these columns.

### The Trainers in Manitoba.

Field trial men, especially some of the principal handlers, are busy at work with their dogs in Manitoba, and their movements create quite an interest among the sportsmen of the Northwest. Most of the handlers who will take part in the coming Manitoba Field Trials are now located either at Winnipeg or within a few miles. D. E. Rose, who trains the Blue Ridge Kennels' setters is at the Somerset with twelve dogs. Will he repeat his run of 1891? Of course, J. M. Avent is calculating upon taking some of the money down South, and has brought fourteen dogs from his far away Tennessee home to accomplish that feat; among the noted dogs are Topsy's Rod and Chevalier. His quarters are at Manitou. Genial Capt. McMurdo, who presides over the destinies of the Charlottesville kennels of pointers, was to reach Winnipeg twelve days since. He will have four pointers for the All-Age stakes. John Armstrong, who has lately assumed charge of Mr. T. G. Davey's dogs, came on from London, Ont., and is located at Union Point with a dozen dogs. He is confident of making a creditable debut, but he will have to keep his eyes open for he is in pretty warm company. Mr. Frail, of Rosendale, Wis., is located on the Dakota boundary with four dogs, and will not come closer to the company until the trials. Last but not least that successful and conscientious trainer J. J. Spracklin, of Woodstock, Ont., went up to Dominion City, Man., in the early part of the month, as usual he has a mixed team; this time he has eleven with him. Among others is the noted Irish setter Fingaln, that made such a good record at the International Trials last year, and is owned by Mr. J. Welton, of Detroit. Fingaln will run in the All-Age Stake. Another noted animal which knows her way about is Cleopatra, which Spracklin is again handling for Mr. W. B. Wells, of Chatham, Ont., but debarred by her win at the International she will not take part in the Manitoba Trials, merely being put through her paces for the International Members' Stake, at Chatham. Mr. Welton also sent Mona Scully, and another dog in this team is Dash Antonio, owned by Mr. R. Bangham, of Windsor, Ont. This one and Mona Scully will try their luck in the Derby. The trials on chickens have evidently come as a pleasant interruption in the preparation for the more important trials down South, and with such well known kennels supporting their trials the Northwestern sportsmen should strain every nerve to bring them to a successful issue and insure their annual recurrence.

The "Education of a Beverwyck" is not on a well-known brew of that name, as we might surmise, but refers to a terrier in the Beverwyck Kennels, and no less a one than Royalist, the sweepstakes winner of the year. His education is depicted through the medium of one of Mr. Rathbone's characteristic combination photographs. In picture No. 1 we see Royalist as a three-months-old pup, on the lookout for what life may have in store for him. The "Junior Class in Vermin" is illustrated by three pictures; the first shows his introduction to a rat in a trap; next he is "caught" in the act of shaking its life out, and the third picture shows him panting and consequential, with the rat lying dead beside him. Then comes more serious business—the "Senior Class in Vermin," in which his first lesson is evidently a labor of love, for he is seen hugging a woodchuck with a good neck grip; this foe vanquished he is introduced in picture No. 6 to a coon, the *ultima thule* of a game fox-terrier's ambition, and that he accepts the challenge is shown by picture No. 7, where a quick snap depicts our Royalist friend having a pretty lively time with his "coonship," and a pail in the background shows that one or the other will be cleaned up when the "go" is over. The center picture, No. 8, shows the gentle side of his character—"Home from the Show," and for this picture he has adorned himself with a blue ribbon, which no one will gainsay he has rightfully earned. Such should be the life and experiences of all good terriers, but the tantalizing excitement of a sawdust ring is the only fun the majority experience.

The Mercer-Mills libel suit will come off in September and its merits will this time be decided upon by a jury. The trial is sure to prove interesting, if nothing else, especially as Mr. Little, the owner of Newcastle, will give his evidence in connection with the entry of that dog at Ottawa in 1891, and which eventually led to the alleged libel. It is to be hoped that this trial will settle the matter for good and all, as such affairs create a lot of ill-feeling all around and do not help dogs in any way.

### The American Kennel Club.

We have received an invitation to attend the quarterly meeting of the Executive Committee of the A. K. C., which will be held at Delmonico's in room 8, 212 Fifth ave., New York City, on Monday, Sept. 17, at 8 P. M. The date of this meeting will be the tenth anniversary of the organization of the club, and has been deemed appropriate by the officers to celebrate the completion of its first decade by more than the ordinary meeting and it they have fixed upon a programme that they believe will meet with approbation, and make the occasion a pleasant one for every delegate present. The business meeting will be held first and afterwards there will be a luncheon and speeches.

There are not many men active in kennel affairs at this date who were present at the first 1884 meeting in the Philadelphia Kennel Club's rooms. Mr. Elliott Smith was temporary chairman and Dr. S. G. Dixon was secretary. The committee on credentials was C. M. Munhall, G. N. Appold, and S. G. Dixon. The list of clubs to enter the new association and their delegates were as follows: Illinois Kennel Club, Major J. M. Taylor; St. Louis Gun Club, J. W. Munson; Philadelphia Kennel Club, Dr. Samuel G. Dixon; Cincinnati Sportsman's Association, Major J. M. Taylor; Westminster Kennel Club, Elliot Smith; Montreal Kennel Club, Mr. James Watson; New England Kennel Club, J. A. Nickerson; New Haven Kennel Club, G. Ed. Osborn; Louisville Kennel Club, Major J. M. Taylor; Baltimore Bench Show Ass'n, Geo. N. Appold; Cleveland Bench Show Ass'n, C. M. Munhall; New Brunswick Poultry and Pet Ass'n, St. John N. B., Elliot Smith; London Kennel Club, James Watson. Among others we remember seeing there were Thos. H. Terry, James Mortimer, Dr. Perry, Mr. Dudley and several others whose names we cannot call to mind but who are still to be seen around the shows. The meeting soon adjourned to meet again Oct. 22, during the non-sporting dog show at Madison Square Garden, when the first officers were elected as follows; President, Major J. M. Taylor; first vice-president, Elliot Smith; second vice-president, Samuel Coulson of Montreal; secretary Ed. S. Porter, and treasurer Geo. N. Appold. Major Taylor is the only officer on the list who is still an officer of the club or active in kennel affairs. At this meeting the name of the club was changed to the American Kennel Club; it commenced as the National Bench Show Association. The club's existence thenceforth was more or less a troubled one but on the occasion of its tenth anniversary it may review its past with serenity and gaze upon its present position with pardonable pride.

### Fox-Terrier Size.

Those who follow the prevailing English ideas in breeding fox-terriers for head and front and who may in their endeavors to get their dogs big enough have overstepped the mark and raised such terriers as may only be fit candidates for Mr. Doyle's "four-in-hand," may take heart of grace according to some *fin de-siecle* ideas and ask themselves, "Is he big enough?" Mr. Doyle, who seems just at present to be the minnow among the Tritons in that he is setting down the big ones in favor of the more workmanlike and "go to earth" smaller terriers, has an interesting letter in *Stock Keeper*, brought about by the remarks of it's reporter at the Darlington show. In the novice class he had two terriers, Douglas Driver and Barrowby Pilot, left in and he thought to himself. "Now this is really as it should be. Here are two workmanlike kennel terriers just the right size and full of character, able to go anywhere that a terrier has to go, and, as far as looks can tell one, fit to do anything that a terrier can do." By the way, how many terrier judges give rein to such thoughts these days? After it was all over he reads the report which says, "It is a pity that Pilot is not a size bigger." Mr. Doyle felt uneasy thinking he had perhaps looked through the wrong end of the telescope, but on inquiry of Pilot's owner he found that dog's weight to be 17lbs. Mr. Doyle says this reminded him of an instance that occurred at Manchester show when an exhibitor and judge asked him what he thought of Douglas Jostle. On his saying that he was a very nice puppy, the other answered "Yes, but will there be enough of him?" When he took the trouble to find out the dog's weight he found that Jostle, not 11 months old, weighed 17½lbs. Further he remarks that this dog when furnished will no doubt weigh 18lbs. and "This we are told is an undersized terrier." If this goes on the fox-terrier will soon be like many of the Irish terriers, too big for anything but watchdogs. We enter into this subject rather extensively, as we know several breeders who were on the fence as to what size and weight to breed for though their fancy, as a rule runs to the smaller build, and if they will keep a Bachanal or a Lucifer in their eye they should not go far wrong.

### Clashing of Dates.

*Editor Forest and Stream:*

That the Pittsburgh Athletic Club should jump in and announce their intention of holding a dog show on the dates (claimed months ago) of the time-honored fixture held by the Toronto Industrial Exhibition, is a step not likely to commend itself to fanciers and sportsmen. Dog shows, in the United States and Canada, are so few and the expense of holding them so great, that any clashing of dates should be most carefully avoided, and it behooves kennel clubs to stand shoulder to shoulder and advance everything pertaining to the interests of fanciers and thoroughbred dogs. The attention of the American Kennel Club has been called to the latest venture of the Pittsburgh Athletic Club, and it is impossible to see how the wins at Pittsburgh can be recognized, in the face of the agreement entered into between the A. K. C. and the C. K. C. at the last annual meeting of the American Kennel Club. The aforesaid agreement has since passed the executive of the C. K. C., and now only awaits ratification by the members of the C. K. C. at the annual meeting to be held during dog show week here. W. P. Fraser.

Toronto, Can.

### Gordon Setter Field Trials.

*Editor Forest and Stream:*

Mr. A. R. Sharp, the secretary, advises me that "at a meeting of the governors of the New England Field Trials Club it was voted to offer the Gordon Setter Club of America the use of our grounds at Assonet Neck, Mass., for their field trials."

A place now being provided where there are fair numbers of quail this year, Gordon setter men can at once proceed to get their dogs ready. The N. E. F. T. Club run their Members' Stakes on Tuesday, Oct. 23, and the Gordon setters follow the next day. Particulars will be given at an early date and it is to be hoped that there will be a goodly number of entries. I will guarantee three or furnish $30 (perhaps both) and would be pleased to receive subscriptions from those interested, so that the stakes can be made attractive. Fees will probably be $10 to enter and $10 to run.

James B. Blossom, Pres't G. S. C. of America.

938 Prospect Avenue, New York.

## KENNEL NOTES.

**Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.**

BRED.

☞ **Prepared Blanks sent free on application.**

*Whittle—Brittle.* H. T. Foote's (New Rochelle, N. Y.) fox-terrier bitch Whittle (Warren Rattler—Warren Daytime) to H. W. Smith's Brittle (Brick—Vamp), July 8.

*Meersbrook Maiden—Broomfield Sultan.* Rochelle Kennels' (New Rochelle, N. Y.) black and tan terrier bitch champion Meersbrook Maiden (Meersbrook Chance—Meersbrook Empress) to their champion Broomfield Sultan (Broomfield Turk—Broomfield Belle), June 18.

*Brittle Broom—Brittle Beaut.* H. T. Foote's (New Rochelle, N. Y.) wire fox-terrier bitch Brittle Broom (Brittle—Vic Brown) to his Brittle Beaut (Brittle—Whittle), July 4.

*Judy A.—Dad Monarch.* S. B. Allen's (Providence, R. I.) English setter bitch Judy A. (Gene—Lulu) to his Dad Monarch (Roy Monarch—Blue Jennie), July 28.

*Splintered Trixie—Driftwood Mixer.* Leinster Kennels' (New Orleans, La.) fox-terrier bitch Splintered Trixie (Ebor Splash—Raby Bell) to his Driftwood Mixer (Hillside Mixer—Lady Jess), March 23.

*Lady Verdant—Stanwood Rajah.* Leinster Kennels' (New Orleans, La.) fox-terrier bitch Lady Verdant (Troubler—Polly) to Stanwood Kennels' Stanwood Rajah (Blemton Marvel—Raby Nettle), April 2.

*Raby Nettle—Blemton Marvel.* Leinster Kennels' (New Orleans, La.) fox-terrier bitch Raby Nettle (Dominie—Blackwood Belle) to Standwood Kennels' Blemton Marvel (Blemton Victor—Spinster), April 7.

*Chicago—Driftwood Rambler.* Leinster Kennels' (New Orleans, La.) fox-terrier bitch Chicago (Max—Beverwyck Rhoda) to their Driftwood Rambler (Virgil—Lady Bess), May 26.

*Leinster Vic—Shelby New Forest.* Leinster Kennels' (New Orleans, La.) fox-terrier bitch Leinster Vic (Virgil—Lady Jess) to their Shelby New Forest (New Forest—Holcombe Jill), July 16.

*Shamrock—Shelby New Forest.* Leinster Kennels' (New Orlans, La.) fox-terrier bitch Shamrock (Beverwyck Trap—Julip) to their Shelby New Forest (New Forest—Holcombe Jill), Feb. 15.

*Chicago—Shelby New Forest.* Leinster Kennels' (New Orleans, La.) fox-terrier bitch Chicago (Max—Beverwyck Rhoda), to their Shelby New Forest (New Forest—Holcombe Jill), Nov. 3.

*Hotfoot Flurry—Shelby New Forest.* Hotfoot Kennels' (Chicago, Ill.) fox-terrier bitch Hotfoot Flurry to Leinster Kennels' Shelby New Forest (New Forest—Holcombe Jill), Jan. 26.

*Wilton Leah—Shelby New Forest.* Leinster Kennels' (New Orleans, La.) fox-terrier bitch Wilton Leah (Regent Vox—Royal Dart) to their Shelby New Forest (New Forest—Holcombe Jill), Feb. 2.

WHELPS.

☞ **Prepared Blanks sent free on application.**

*Hotfoot Flurry.* Hotfoot Kennels' (Chicago, Ill.) fox-terrier bitch Hotfoot Flurry, March 29, seven (four dogs), by Leinster Kennels' Shelby New Forest (New Forest—Holcome Jill).

*Chicago.* Leinster Kennels' (New Orleans, La.) fox-terrier bitch Chicago (Max—Beverwyck Rhoda), July 28, four (three dogs), by their Driftwood Rambler (Virgil—Lady Jess).

*Lady Verdant.* Leinster Kennels' (New Orleans, La.) fox-terrier bitch Lady Verdant (Troubler—Polly), Jan. 5, two (one dog), by Stanwood Kennels' Stanwood Rajah (Blemton Marvel—Raby Nettle).

*Chicago.* Leinster Kennels' (New Orleans, La.) fox-terrier bitch Chicago (Max—Beverwyck Rhoda), Jan. 6, three (two dogs), by their Shelby New Forest (New Forest—Holcombe Jill).

*Wilton Leah.* Leinster Kennels' (New Orleans, La.) fox-terrier bitch Wilton Leah (Regent Vox—Royal Dart), April 7, six (three dogs), by their Shelby New Forest (New Forest—Holcombe Jill).

*Galaxy.* Dr. T. Thurber's (Providence, R. I.) foxhound bitch Galaxy (Deacon—Daisy), Aug. 2, six (two dogs), by his Elite (Nemo—Galatia).

## ANSWERS TO CORRESPONDENTS.

A. B. K., Belvidere, N. J.—My puppy three months old, began moping around, would not eat and fell away in flesh. Two days after I gave him a tonic, and about two hours after he passed long whitish worms and a piece of corncob 1in. long. He would not eat anything and continued to mope. Made him beef tea and sweet milk, but he threw up the milk. To-day I gave him Horlick's Malted Milk, two teaspoonsful in four tablespoonsful of luke warm water. This remains on his stomach, but is very weak. I do not know whether he has distemper or not, he does not cough or run at the nose or eyes. He lies on his stomach with his head on his paws the greater part of the time. Is it distemper? Ans. It is possible that the pup is sickening for distemper, a few days or a week at the most will decide whether it is distemper or not. At present the pup has considerable irritation of the stomach and bowels. Give the following powder:

℞ Bismuth sub-nit.....ʒii.
Cerii oxalas.....gr. xii.
Salol.....gr. iii.
Morph. sulph.....gr. i.
M. et div. in pulv.....xii.

Give one every three hours shaken on the tongue.

Feed the pup entirely on raw meat juice, and a very little malted milk about twice a day. Give about half a teaspoonful of raw meat juice every two or three hours.

Cocker, Providence, R. I.—For some time my cocker spaniel pup's breath has been very bad and teeth coated, or discolored a dark yellow. Displays a fondness for carrion, etc. Appetite very good and has plenty of exercise. About two months ago I treated for worms successfully, using Santonine (Ashmont's worm medicine No. 2). Still he did not improve much and about a month afterward had a fit. I repeated the worm medicine without success. However, his condition improved, though his breath and teeth remained bad. Lately I have given bicarbonate of soda, thereby improving his breath. Can I do anything to make the teeth white (only the second teeth are discolored)? Ans. I presume the dog has not had distemper. Clean the teeth with a brush and chalk, and if necessary scrape them. With the bicarb of soda give half a grain of papoid. Also give five grains of albuminate of iron twice a day.

C. H. B., Silver City, Utah.—My dog is much troubled with a humor that appears about his hip and has troubled one of the eyelids a little. Licks himself constantly, and when one sore breaks that will dry up for a time and he is troubled at some other part. Ans. Try for worms. Then give the following mixture:

Mag. sulph.....ʒi.
Ferri. sulph.....ʒi.
Acid sulph., dil.....ʒi.
Aq. ad.....ʒviii.

Mist. One tablespoonful twice a day.

To the sores apply:

Picis meth 20%.....ʒi.
Liq. plumbi sub. acet.....ʒiv.
Aq. ad.....ʒviii.

Mist. Lotio. To be applied frequently.

J. S. F., Jasper, Ala.—My pointer dog has had innumerable little lumps over him for the past two months, which seem to worry him greatly. He is washed frequently with dog soap and I expect the trouble is in the blood. Ans. Treat for worms. Give following mixture.

Mag. sulph.....ʒiv.
Pot. bicarb.....ää ʒss.
Aq ad.....ʒviii.

Mist. One teaspoonful twice a day. When washing the dog add 4oz. hyposulphite of soda to the water.

J. H. P., Sistersville, W. Va.—My dog has a mucous discharge from his eyes which causes sores to form. What can I do for him? Ans. Try the following lotion:

Zinci. sulph.....gr. xx.
Acid boracic.....ʒi.
Aq. dist.....ʒviii.

Mist. Lotio. Apply to eyes three or four times a day.

F. C. H., New York.—Will you please inform me whether as to your knowledge collies are any good for the city or not. My present one is six months old, and begins to get very nervous at every unusual noise. Ans. The extreme nervousness is very probably the result of teething or worms. Treat for worms. Give 12grs. of urethane twice a day, or oftener if necessary. Keep the dog quiet for the present.

R. F. T., Boston, Mass.—You can whiten your bull-terrier's coat without washing by applying buttermilk and flour of sulphur mixed to the consistency of cream and brushing off when dry. The mixture dries very soon and is also a benefit to the skin of the dog and "good" for fleas. This applies of course equally to fox terriers, English terriers, etc.

C. E. S., Middletown, O.—My English setter has been shedding for about six months. Appetite poor. Is it proper for him to shed all summer? Ans. Treat for worms, using advertised remedies. Wash in a solution of creoline (1 to 60) once or twice a week. Give 5grs. of citrate of iron twice a day. Dogs often shed a good deal in summer.

F. G. B., Tarrytown, N. Y.—The fox-terrier Incognita's (6994) breeder and pedigree are not known. She was registered by Mr. Mortimer in the A. K. C. S. B. of 1887, but only one winning is given, first (selling class) Waverley, 1887.

A. F.—Do not cut the piece of eyelid, but instead remove an elliptical piece of skin immediately under the turned in part of eyelid. Get a veterinarian to do it.

J. G., Newark.—Please give me in your next issue a recipe for mange. Ans. Sublimed sulphur, 2lbs.; oil of tar, 8oz.; cottonseed oil, 1gal.

# Hunting and Coursing.

## FIXTURES.

FIELD TRIALS.

Oct. 23.—New England Beagle Club, at Oxford, Mass. W. S. Clark, Linden, Mass., Sec'y. Nominations close Oct. 1.
Oct. 29.—National Beagle Club. Geo. Lalck, Tarrytown, N.Y., Sec'y.
Nov. 5.—Brunswick Fur Club. Bradford S. Turpin, Dorchester, Mass., Sec'y.
Nov. 7.—Northwestern Beagle Club. Louis Steffen, Milwaukee, Wis., Sec'y.

COURSING

Oct. 1.—American Coursing Club's meeting at Huron, S. D. L. Zutaverne, secretary. E. H. Mulcaster, judge.
Oct. 8.—North Dakota Coursing Club, at Oakes, N. D. A. P. Slocum, secretary. E. H. Mulcaster, judge.
Oct. 16.—Kenmore Club's annual meeting at Goodland, Kan. C. F. Weber, secretary. E. H. Mulcaster, judge. R. Taylor, slipper.
Oct. 23.—Western Kansas Coursing Club's meeting at Leoti, Kan. W. O. Allphin, secretary. E. H. Mulcaster, judge. R. Taylor, slipper.
Nov. 6.—Altcar Coursing Club's autumn meeting at Holyoke, Col. S. W. Vidler, secretary. E. H. Mulcaster, judge. R. Taylor, slipper.
Nov. 14.—California State meeting at Merced, Cal. J. R. Dickson, secretary.

### The American Coursing Board.

*Editor Forest and Stream:*

In your issue of Aug. 11, I see an article from the pen o Mr. L. F. Bartels in which are statements not correct. At the time the addition to Rule 18 was submitted, Mr. Bartels was a member of the A. C. B. and he stated to me in Denver that at first thought he did not like the addition, but afte studying the question he became convinced that it was th correct thing to do for coursing on our prairies and ha voted for the addition. Will he please state why this change of mind as soon as he is out of the Board? As to his brother's motion of May 9, if he will refer to Mr. Watson's second he will there see a request to give a reasonable time for discussion before calling for a vote.

His assertion that this motion was pigeon-holed until some method could be devised to counteract it, Mr. Lowe must answer. I will make affidavit that the first intimation I had of the motion was June 30, when it reached me in the wilds of northern Michigan. It then took me just 30 minutes to write out the amendment and send it to Mr. Lowe, with request to have it published and with the statement that the amendment must be voted on first. All the voting being done by mail, will Mr. Bartels state to me by what rule of order he can ask a vote on an original motion to which an amendment has been offered, before the amendment has been voted on and either accepted or voted down. Mr. Lowe is getting himself into a fine position by accepting the chairmanship of the A. C. B. and working hard to help forward coursing in America. The organization of the A. C. B. was my individual scheme. No one knew anything about it until I submitted it in writing to the meeting at Goodland, Kan., in October last, and at once several of those present insisted on my becoming its first chairman. I declined.

Now as far as I having any desire to run the A. C. B., I will promise Mr. L. F. Bartels that if he will obtain a copy of "Robert's Rules of Order" and study it closely and agree to abide by said rules, and again become a member of the A. C. B., I will support him for president and he can name his own secretary as far as I am concerned. Then he can see how little chance the president will have to run the Board to suit himself. I don't think they will ever get Mr. Lowe to accept it again. I am hourly expecting a letter from him scoring me for inducing him to accept the presidency this year because it was only at my earnest solicitation that he was induced to take hold.

Another part of Mr. Bartels's article nearly escaped my attention. The point he makes is almost too ridiculous to give it any attention. He asks—"Why offer my amendment at all because it will leave the question of rules, constitution, etc., just as adopted last fall"? Why doesn't Mr. Bartels read up first and see what he is talking about before he submits such nonsense to the public. My amendment does not affect the motion at all where it relates to the constitution and by-laws. Such notions can only be attributed to the light air in the high altitude of Denver.

### Show Beagles as Practical Field Dogs.

*Editor Forest and Stream:*

In the eighth paragraph of my article which appeared in your issue of July 28 your compositor makes me say, "The only 'valuable' stock I can recall are imported Bannerman and Twintwo." It should read, "The only Valentine stock," etc.

The beagle men came out in goodly array in defense of their little hounds; I hope they will continue therein. The letters of "Agamak," "Rockaport" and "D. E. B. O'Nair" show their knowledge of hunting beagles, while the beginners may find some valuable suggestions from "Colombia's" letter, besides it has the true sportsman's ring to it. It is pleasant to find that every one is not seeking the extermination of poor bunny, and I hope some others will become converted. There certainly is little enough of any kind of name here in the East, but perhaps the rabbit can scarcely count as such, so that if we exterminate him, what will be left for the chase? If rabbits were so thick here as I have seen them in England, and it was number one one was after, a dog need not be used at all, as the less they are run, the easier it is to ferret or snare them; but if it is good dogs we want to breed and train, the fewer (of a scarce article) we kill, the more chance there will be to train the puppies. There certainly is no fear of the rabbits overstocking the country, as the English variety has done in Australia, or even as it formerly did in some parts of England.

Since this beagle correspondence has been going on, Mr. Editor, it has occurred to me that beagle men who live within a little distance of each other might meet in the evenings and run their dogs together for the good of the breed—not only the men who own a kennel, but those who own a single dog or a brace of dogs. There need be no rules or restrictions, but let each one bring one or two hounds—beagles—so that there be a friendly run not less than once a week, weather permitting. No doubt, Mr. Editor, you would enter into the spirit of the thing and give us a notice similar to the English "hunting fixtures." All the beagle men within meeting distance of the "Hub" hold up their right hands—some have promised. I am a poor man, but will help; and let us all put our hands to the wheel and try if we cannot "down" these "curtail" advocates; I am in it "for the love of the dog because he is a dog." "Glenrose," will you join us with a brace in September? Friends Parry, Clarke, Forest Kennels, only think of it, all these within five miles, besides many who only own a hound or two. Why, we might have a pack here sufficient to grace the Queen's taste.

Comedy.

Malden, Mass., Aug. 14.

## HUNTING AND COURSING NOTES.

The suggestion that "Comedy" makes in this issue is certainly worthy the serious attention of beagle breeders in his neighborhood, and in fact all lovers of this little hound. Nothing is easier, nothing simpler; it only requires one enthusiast who will assume the duty of whipper-in. A postal card to his friends giving date and rendezvous is all that is necessary to start the game. Like many other important reforms, it merely requires some one to take the lead. Suppose "Comedy" accepts this role and he will soon see who of his

fellow beagle breeders and friends are in it for the "love of the dog because it is a dog," or whether their breeding operations are merely carried on through financial interest. Friendly runs of this kind create a spirit of emulation that should constitute the charm of beagle ownership. There is probably no sport that gives more sport and costs less than rabbit hunting with beagles, and if the nature of the country hunted over and the habits of the game afford the opportunity, less attention should be given to the gun and more to the healthy action of following the little hounds, whose music supplies a stimulant that even the laziest hunter can scarcely withstand. Residents in the suburbs of our large cities have few amusements after business hours, and we can think of no more exhilarating and healthy exercise than the sport which "Comedy" suggests would afford them these moonlight nights. It matters not whether game is killed or not, the pleasurable excitement of the run is the same in either event, and the possession of a dead rabbit or two should be lost sight of in the main object of the sport—to see one's hounds at work; their cleverness in picking up the trail, casting at a check, and the joyous burst of music from the one that first hits it off again. To our mind even a kill is no prettier or self-satisfying termination of a sharp burst than the waving of sterns and musical chorus and excitement of the pack, that shows where bunny "went to earth," or "holed," in the vernacular of the rabbit hunter. Beagle trials are all very well in a way, but the business aspect and the monetary considerations involved often mar the charm, but such friendly meets as these would create local interest in beagles that no amount of field trials ever could do, while FOREST AND STREAM would be only too pleased to publish accounts of such runs and thus help the good cause.

• • • •

One of the donations received by the Northwestern Beagle Club for the coming field trials is an oil portrait of the winner of the champion class, donated by Mr. Edmund H. Osthaus, value $200. The portrait will represent the dog on trail, and should be a prize well worth striving for.

20. Cor. Phila., Club, Del. River.

SOCIAL AND BUSINESS.

Aug. 25.—Winthrop, Ladies' Day, Reception, Winthrop, Mass.

---

FOLLOWING up its researches into the Steers-Burgess-Herreshoff model which have already made it famous, the New York *Herald* has this week announced another discovery of equal importance, to wit, that "the gear of Vigilant was never meant for the frequent shifting of sails." So far as there is any difference in the rigs of modern single-stick vessels, the cutter rig being used on American as well as British, this difference has for some years been on the side of the American modification of the cutter, as used on Puritan and the later yachts. Last year the superiority of the Herreshoff over the Watson rig was freely acknowledged; as was the fact that the last Cup race was won by Vigilant through the bold and skillful manner in which she shook out a reef and set her clubtopsail. Britannia's rig this year is in some parts modeled directly after Vigilant's, and so far as the mere "gear" goes there is no material difference in favor of either.

THERE is one great advantage so far as Americans are concerned in having the races sailed in British rather than home waters. In the case of the Cup races off Sandy Hook last year, the first news, placing the boats in impossible positions, appeared on the bulletins about 2 P. M., and it was often nearly midnight before the corrected times were known. This year, with the races sailed off Cowes, the bulletins in New York display accurate times at the intermediate marks by 12 M., New York time, and the final results are in the afternoon papers by 1 or 2 o'clock.

---

ONE of the excuses most frequently advanced for Vigilant's defeats is that they are due to the fact that the races are sailed with no time limit, and that under the American system of a time limit, they would have been declared off and resailed in a stronger wind. This statement which in various high-colored forms is now going the rounds of American papers, is incorrect, both as to the existence of any such system and its supposed application to the present races. There is, in some clubs, a provision that if a regatta be not completed by a certain time, either so many hours from the start, or by a fixed time, such as sunset, it shall be resailed; but this provision is by no means universal, and even when used it is anything but a preventive of drifting matches. It not unfrequently happens that with a time limit of say six hours, over half of the time is wasted in a drifting match until the boats are widely separated, when an afternoon breeze springs up and drives a boat in just within the time, leaving the others astern. The merits and drawbacks of the time limit are standing subjects of discussion in the American clubs, and opinion is still divided.

The nominal end of the time limit is to make certain of an average speed of 5 knots, 30 nautical miles in 6 hours, and the table which we lately published will show that such a limit would have had no effect on Vigilant in races abroad. Out of the 17 races which she has sailed, just one was at a lower average speed than 5 knots (3.30 knots). Three others were sailed at speeds over 6 and under 7 knots; while no less than twelve were sailed at a speed of 8 knots or over. Of the races won by Vigilant, two were sailed at a speed of over 10 knots, one at a speed over 9 knots, one at 7 knots and one just over 6 knots. The races of the past fortnight have in most cases been sailed in strong winds.

---

THE question of type has been well settled in the smaller classes by the races of Madge, Clara, Bedouin on this side representing the keels; and at a more recent date in British waters by Wenonah, Wee Win and Dacotah, representing the extreme bulb fin; but in the largest class the battles have been very unsatisfactory to both sides from a technical standpoint, the only one which can lead to good results or teach any lessons of value. The racing of Puritan and Genesta proved that the new compromise, with cutter rig and lead keel, was faster in light weather than the narrow cutter produced by the Thames rule, the result in a blow being far from conclusive. The races of the following year found the same types involved, and were still less interesting through the challenging boat being inferior to her older predecessor of the year before, while just the reverse was the case with the defender. The trial of a year later between Volunteer and Thistle found the keel side represented by a new type, built without regard to the trammels of the old tonnage rule, but still so lacking in one vital element of draft as to rob the contest of its technical value as a test of the keel and centerboard as developed by two great yachting nations.

The contests of last year, those on this side in particular, were the most satisfactory that have thus far been seen in classes over 70ft., in that for the first time the keel side was represented by a yacht that was thoroughly effective to windward, and also far better suited for American waters than any of the other challengers. Even with this, the three races sailed were by no means enough for a thorough test, especially in view of the altered trim of the challenger and the closeness of the last race.

The contest of this season, transferred for the first time in many years to British waters, is attended by conditions that tend to make the results of far greater value to both sides than in most yacht races with their thousand varying factors.

In the first place the two champions may fairly claim this title by virtue of their past performances and not through the mere fact of being built for a certain purpose. Each has made an honorable record with her home fleet before meeting her adversary in an international contest; and each is presumably in better condition in her second than in her first season; at least she has profited by long and thorough trials.

That the conditions are strongly against the visiting yacht has long been maintained by British yachtsmen and is now fully conceded by Americans; and the fair-minded men of both nations are prepared to make a liberal allowance for this recognized drawback to Vigilant's success. Much has been said about winds and courses; but the former are quite up to the American average, and any extended series of races such as will offer a thorough test can only be made in the course of the regular club events and over local courses. It would be far more satisfactory if a dozen or so of races could be sailed on purely outside courses with good winds, but such a thing would be an impossibility on this side and quite as impossible on the other. Taken altogether, with the best vessels that the representative designers of the two nations can produce, sailed by men like Carter and Haff, for racing owners who are prepared to spend any amount of money to win, with skillful sailmakers constantly at work for each yacht; and with the many faults and crudities of a new yacht corrected by a previous season of racing; the conditions are the most favorable that have ever existed for a careful and thorough comparison of the merits and defects of each type which shall add materially to the yachting knowledge of both countries.

While there are not a few among American yachtsmen who are watching every race with the closest attention in the hope of discerning the true bearing of each incident; and of forming correct opinions on the great number of technical points involved, of centerboard and keel, of form of bow, methods of setting sails, working of crew, and other important questions in practical designing and racing; the attitude of the nation at large, so far as it can be judged from the newspapers, both in editorial opinions and in interviews real or alleged, with yachtsmen, is totally different. Hardly an effort is made to draw a fair comparison between the two yachts, or to deal with the technical side of the racing, but everything is subordinated to a boastful and exaggerated Americanism that is not only discreditable in itself, but which defeats the very object of such international contests, debasing them from their high position as scientific experiments of the greatest value, to a mere excuse for a display of ill-feeling toward another nation.

Last year, to say nothing of the defeats of Navahoe, the other American representative defeated her antagonist in three races, one by a very narrow margin, whereupon she was hailed as the champion of the seas. This year the same champion has sailed no less than seventeen races with a foreign yacht, many of them under fairer conditions than in the average yacht race; she has been beaten twelve times and yet there is hardly an American paper that will admit that this record of twelve to five bespeaks the victor the faster yacht. The winner in one, two or three races for the America's Cup, under conditions made to suit her, has been hailed throughout the country as the champion of the year; and now, when the record is overwhelmingly on the other side, no plea is too mean or too ridiculous to be put forward to belittle the winner.

Americans may still believe Vigilant to be the better boat, just as the Scotch did for a time in the case of Thistle, they may make any fair excuses for the adverse conditions which she voluntarily accepted in going across; but beyond all this is the cold hard fact that she has been beaten again and again, and in many cases fairly beaten, and yet Americans are not brave enough or fair enough to admit it. It is quite possible that she might still defeat Britannia on this side of the water, or even score a majority of the races on some open course in neutral waters under fitting conditions, but the fact that Britannia, always ready, sailing races day in and day out, has beaten her repeatedly in a long series of races is something which cannot be hidden or explained away.

We are quite well aware that that mischief-maker, the anonymous "prominent yachtsman," with his ally, the sensational reporter, is found in other places than New York, and that just now the precious pair are doing a rushing business at Cowes, and we look for an outburst on the other side in a short time which will compare in quality and quantity with the stuff that has appeared here since Vigilant sailed her first race on the Clyde; but this does not make matters any better.

The technical points, those of prime value to yachtsmen, which we have endeavored in the FOREST AND STREAM to present as fairly and fully as possible to our readers, at least without prejudice and with a patriotic interest in the American craft; have already been buried and obscured under a mass of mis-statements and distorted facts so far as Americans are concerned, and it only makes matters worse that the other side is at length preparing for a similar campaign. We regret sincerely, as friends of the noblest and most scientific of sports, as well as of American yachting interests, that such an opportunity for added knowledge and material progress in designing should have been largely lost to the country through the unfair and partisan attitude of the American press and of some American yachtsmen.

---

THE loss of Vigilant's centerboard is a commonplace accident which is new only because such boards are new, but which is likely to become quite common in the event of such yachts as Navahoe and Vigilant coming into more general use. The presence of a heavy weight loosely fitted in a vessel must always be an element of danger from the momentum imparted to the moving part by the motion of the sea; and in such a construction as seems necessary to a centerboard, with one end loosely suspended by a chain or line, another element of danger is introduced when the board rises through striking an obstruction and falls suddenly on the pendant when it goes clear, as in the case of Vigilant. There is nothing unexpected about this, and nothing unusual, though under the circumstances it is most unfortunate, as the accident is likely to be construed in two ways abroad. It is reported that some of the gossips about Cowes lay the loss of the board to the owners of the yacht, claiming that it was but an excuse to avoid meeting Britannia; a deduction too mean and absurd to be seriously considered. It is likely, however, that in addition the loss of her board under such conditions will be urged as additional evidence of the machine-like build of the American boat. We have realized ever since these heavy boards have been tried, especially in view of an accident to the 30-footer Hawk two seasons since, that the breaking of a pendant, leaving the heavy board still hanging by the pin at full length under the boat, where it could not be replaced in the trunk or even dropped entirely, would be a very serious matter, possibly leading to the loss of the vessel. The mere loss of the board, clear and clean, as in Vigilant, while fatal to her stability and windward power in a race, would leave her as staunch and seaworthy as before.

---

WHEN the Vigilant wins a race she invariably (according to press accounts) whips the English cutter "at her own game," in "just Britannia's weather," etc.; but when the Prince of Wales's flyer shows her heels to the American sloop we hear that "local knowledge helped the Englishman," or Britannia was "favored by flukes of wind," etc. Let us just eliminate these pardonable explanations and realize that two of the fastest yachts that ever slipped from a cradle have come together, and that the contest for mastery will be a ding dong fight every race they sail. They are so nearly matched that it is as uncertain as the toss of a sixpence which will win eventually.—*Hartford Telegram.*

---

EVERY once in a while a discussion arises over the use of the definite article before the name of a yacht, the omission of the article being often derided by Americans as an affectation peculiar to Anglomaniacs. In the report of a race which we republish from the London *Times*, it will be seen that the writer, we believe Mr. Harry Horn, the leading English yachting reporter, follows no definite plan, but speaks in one place of "Vigilant," and in another of "the Vigilant;" and the same lack of system is seen in other English papers, the article being employed in one line and omitted in the next. Looking at any vessel, much more such a yacht as Gloriana, Vigilant or Britannia, as something more than a mere mass of lead and wood, a something far more fully endowed than most other of man's creations with life and an individuality of her own, we have always preferred to use the simple name of the yacht, without the article, or quotation marks, a tribute to the higher qualities of a yacht which we believe she fully merits. There are some cases in which it seems natural to apply the article before the name of a working vessel, or even a steam yacht; but certainly the true sailing yacht is entitled to this much recognition of her superiority to a drydock or a scow.

---

ON Aug. 18 a meeting of the Yacht Racing Association was held at Ryde, at which a committee of four was appointed to consider the operation of the present rating rule, and to report to the Council at a meeting in October. So much has been said about the last abortive inquiry that it is probable that the present committee would not have been appointed had there not been a reasonable prospect of some action on the part of the Association should a change be recommended by the committee. The necessity for a thorough overhauling of the rules, and at least the adoption of a new classification, exists on this side at present, and if anything is to be done, some move must be made at once, in order that any changes may be made before the building season.

There is no general body in this country similar to the Y. R. A., much as one is needed; but, if any one of the larger clubs choses to take the initiative, it is more than likely that all the others will join with it in appointing representatives to consider the whole question. It would be an excellent thing if this work could be done as far as possible in conjunction with the British committee, as it might prove possible to devise a rule and classification that would be suitable to both parties, and that would greatly tend to the promotion of international racing. While any overtures toward such a committee and such mutual action with the Y. R. A. committee would have to be made informally in the first place, there are no serious obstacles to such a plan, and the feeling of yachtsmen on both sides is now so strongly in favor of at least a thorough inquiry into existing tendencies that an attempt would be likely to receive general support.

---

IN the course of a long fight for higher standards and more advanced methods in yachting, we have often had occasion to comment on the general lack of technical knowledge displayed by the daily press of the country in attempting to discuss yachting matters. Even after this long experience, however, the display of the present season is a surprise; the diffusion of knowledge of yachting has been so general and widespread of late years that it is wonderful how so much ignorance can still prevail among professional writers. The visit of Vigilant to foreign waters has offered a glorious opportunity for the American editorial writer, and he has availed himself of it in a way that is a disgrace to American journalism. The efforts of the American press, with so few exceptions that they are hardly worth noting, have been directed to the one end of proving that the American yacht is faster than her opponents, and in this attempt they have displayed a spirit of unfairness and injustice which we hesitate to believe is American; together with an utter ignorance of common racing usage on both sides of the Atlantic. Apart from the abuse of all connected with both the American and British yachts, who, with few if any exceptions are quite up to the high standard of gentlemen sportsmen which characterizes the keenest yachtsmen; every trivial incident of the racing is distorted and misrepresented to the detriment of British yachtsmen.

One excuse generally given for Vigilant's defeat in the first races is that the British rules were unfavorable to her, the fact that she has been accorded a most unusual privilege in being allowed to sail thirteen races without being measured, and at liberty to make any changes in ballast or crew, being passed unnoticed. Such a privilege is never accorded to a British yacht in her home waters. On the other hand, the fact that Britannia lessened her ballast when lately in dry dock, as she is allowed to do by all racing rules, has been

described as an underhand and surreptitious act, nothing being said of the fact that she is thus sailing on a somewhat larger measurement and thus receiving less allowance, than she is entitled to.

It is a matter of history that during his long career as a racing owner, the Prince of Wales has been regularly beaten by his subjects, even down to last year, when Valkyrie scored twelve wins to Britannia's nine. The following, however, from one of the thousand of the smaller papers which aspire to represent American opinions, is a good example of one of the favorite excuses for Vigilant's defeats:

It must be remembered that the boat which has been Vigilant's only rival belongs to the Prince of Wales, and, therefore, the sentiment of loyalty for which English people are so strongly distinguished is made an element of the contest. So rooted is that feeling that it may be doubted whether a British subject who owned a yacht would presume to take the liberty of beating the yacht of the Heir Apparent, if indeed he should attempt such a race. It may be doubted whether in the event of a commoner subjecting the Prince's boat to a defeat, the unfortunate victor would not receive a decided snubbing in society if he had any footing there. This particular sort of loyalty is not to us Americans a very creditable one, but our standpoint and education make us harsh critics in such matters.

---

The following is a typical editorial from the same class of local journals in the large cities, its caption being "Gould the Toady:"

The alleged contest yesterday between the American yacht Vigilant and the Prince of Wales' Britannia explains the whole plan of the races and reveals George Gould in the light of a man who is bartering honor, patriotism and self-respect for toadyism. There is no doubt from the result of yesterday's performance with others before, that Vigilant could beat Britannia in any water in any kind of race. Everybody knows that the Prince of Wales and the Emperor of Germany would not have gone on board Britannia had not they been sure that Vigilant would obligingly keep astern. The jockeying at the start and the run to the Warner boat prove that Vigilant could have run away from Britannia at any stage of the game.

If Gould were to give the management of his yacht to an able seaman who would sail her for all she is worth, Britannia would not have entered for one race in the series. All Gould's efforts were directed yesterday to prevent Vigilant getting ahead. She could have sailed around Britannia and beaten her out.

Gould went to England to represent America in yachting, and he was bound in honor to do the best he could. Instead of that he has acted the part of a miserable toady for the sake of the society scraps that may fall from the table of royalty.

It is these same papers, large and small, which have, whenever the occasion offered, come forward in defense of the new deed of gift, and that have worked first and last to foster all possible ill-feeling between the yachtsmen of the two nations.

---

It is not only the smaller papers throughout the country that are keeping up this agitation, but many larger ones as well, for whom the excuse of ignorance cannot be urged. The following, from the evening edition of the New York *Sun*, is an example:

In the race for the Ryde Town Cup yesterday the Satanita won with a ridiculous margin of 6m. 23s. to spare over the Britannia, and 7m. 50s. over the Vigilant. As a matter of fact, it was a walkover for the victor. Through the jockeying of the Prince of Wales's skipper the Vigilant was kept out of the race. At one time what should have been the real contestants were two miles off the course. It was clearly a case of beat the American at any cost. Mr. Clarke, the owner of the Satanita, was blackballed the other day when he tried to get into the Royal Yacht Club. He was not good enough to associate with in a club, but he was good enough to help in an honorable contest in a dishonorable way. No Englishman who ever came over here to take part in amateur sport can say that he did not find a fair field and no favor. Yesterday's affair may have been good business, but it was bad sport.

In making charges of this sort, the *Sun* is inviting comparisons that can only hurt its side of the question. Before making charges of foul play against the other yachts, although the racing rules were strictly observed by both, it should remember that a distinct charge of a violation of a rule recognized by all yacht clubs has been made against Vigilant in the match of Aug. 4, which, if true, would render her liable to disqualification; and yet no protest was made by her antagonist, the same yacht which is now accused by the *Sun* of making an underhand agreement to keep Vigilant from winning a less important race. The *Sun's* brag about a fair field and no favor will be taken for what it is worth by all familiar with the early races in defense of the America's Cup, as well as the disgraceful episode of the new deed of gift.

---

It is not to be expected of the daily press that it will discuss the technical aspect of a question with the same accuracy and knowledge as is looked for in strictly technical journals; but it is certainly not asking too much of those writers who profess to represent American opinions and ideas that they shall display a little of that fair play whose absence on the side of their opponents they so vigorously denounce.

---

In attempting to define a "rater" the Boston *Herald* falls into error in mixing up tons with rating, the two having nothing in common. There is no warrant for the expression "racing tons rating," and the use of the word "ton" only confuses a very simple matter.

---

A few weeks ago Mr. Gould was severely criticised by Americans for putting Vigilant into the Clyde races without more preparation. Just now he is being blamed by Englishmen because the yacht has failed to start in all the regular races, being laid up for several days for repairs.

Last fall the action of Capt. Cranfield in the final race in allowing Vigilant to go by without an attempt to stop her by luffing, was condemned by Americans as poor racing; this year Capt. Carter is accused of foul sailing because he engages in a luffing match with Capt. Haff. Just now the daily papers on each side are trying to prove that their respective champions were more than willing to sail in the gale of Aug. 15, and that the other party backed down.

The English papers are now accusing Mr. Gould of smashing his centerboard in order to avoid meeting Britannia. It is now in order for the American papers to accuse the Prince of Wales of going out at night in the royal yacht and dropping rocks for Vigilant to strike on.

---

## The Royal Victoria Gold Cup.

At a meeting of the Royal Victoria Y. C. on Aug. 18, the following resolution was adopted:

"That the Royal Victoria Yacht Club's international gold challenge cup be withdrawn from competition for one year from this date, Aug. 18, 1894."

The Boston *Herald* comments follow on this action of the club:

"Withdrawing the Victoria cup for a year means much to the American yachting public, who now see that the club is not willing to risk it in a match against their champion British yacht, built to sail in British waters, though both the Britannia and Vigilant were designed and built in the same year.

"The New York Yacht Club is favored by the decision, because it puts the club in a position not to allow it to be challenged for again by any of its members.

"There is room for doubt that, had the Wolverton cup race been sailed and resulted in a win for the Britannia, such a resolution would have been adopted.

"Young Gould evidently gave out that he was going to challenge for the cup, and the club anticipated his action by withdrawing a world's challenge cup from competition for one year.

"The withdrawal is all the more ridiculous, inasmuch as, if any one wished to build a new boat on this side this winter and sail for the cup next year, he could not do it, even if the club was given ten months' notice.

"The Royal Victoria cup is an international challenge cup with a vengeance."

So far as Vigilant is concerned, thus far her owner has given no intimation of a desire to challenge for the cup, and the holders have not been asked to waive ten months' notice and to accept a challenge a few days or weeks before the race.

## THE BRITISH RACES.

The second week of the Solent racing has been even worse than the first so far as further tests of Vigilant and Britannia are concerned, the results, in brief, being as follows: Monday, no race on; Tuesday, Royal Victoria Y. C., first day, Vigilant at anchor making repairs, Satanita wins from Britannia in a strong breeze; Wednesday, private match for the Wolverton cup, heavy gale and race postponed to Saturday; Thursday, R. V. Y. C. third day, Satanita beats Britannia by 5m. and Vigilant by 8m. in a fresh breeze; Friday, R. V. Y. C., fourth day, Vigilant at anchor repairing sails, a good race was sailed in a fresh breeze, the 40-rater Carina winning on allowance, while Britannia beat Satanita by 3m.; Saturday, postponed match, Wolverton cup, Vigilant damages centerboard before start and race declared off.

The work of preparation was continued on board of Vigilant on Monday, her headsails having been recut since the previous race, and her mainsail overhauled and fitted with three battens under Mr. Wilson's direction. The only incident of the day was the refitting of Satanita, that vessel having unbent her sails after the blackballing of Mr. Clarke last week. The first race of the R. V. Y. C. was for the commodore's prize, £83, with a second prize of £30; Britannia, Vigilant and Satanita being entered. The course was from off Ryde Pier westward around a markboat off Cowes, then eastward past a mark off the Spit Fort Light, then around the Nab Lightship and back to the line, passing north of the Noman Fort, two rounds making fifty miles. There was a strong west wind, making a very fast race, as it proved. Vigilant did not come up from her moorings, off Cowes, and at 11 A. M. the following telegram was announced by the sailing committee from Mr. Gould: "Vigilant is unable to start to-day as all her standing rigging has been taken off and has not yet been stretched properly."

The other two were started, Satanita leading over the entire course and winning by 2m. 58s. elapsed and 1m. 10s. corrected time. The failure of Vigilant to start was commented on very unfavorably ashore. The race was one of the best of the season, being sailed at a speed of 12 knots.

The match for the Wolverton cup, postponed from Saturday, was set for Wednesday, but the wind increased during the night, and at 6 A. M. the signal for a postponement was hoisted at the R. Y. S. station, the gale being too heavy for yacht racing, with a bad sea. Not understanding the signal, Capt. Carter made all preparations for a start, housing Britannia's topmast, reefing the mainsail and hoisting a No. 3 jib, but he was finally notified from the shore that the race had been postponed until Saturday.

The third race of the R. V. Y. C. took place on Aug. 16, the course being from off Ryde, around the Nab Light, then past the Spit Fort mark and around the West Middle Buoy, off Cowes and home, two rounds making 50 miles naut. The wind was still from the N.W., a good clubtopsail breeze, holding strong over the whole course, though varying in direction at times when some heavy rain squalls came up in the latter part. Vigilant was at the line in good form, with Britannia and Satanita; and Capt. Haff placed her well at the start, going over with good headway, while the other boats jibed just at the gun. The times were:

Satanita .....10 00 04 Britannia.....10 00 07 Vigilant.....10 00 09

The little difference in time was more than made up by Vigilant's extra speed. Early in the race she began to luff Britannia, and the two were soon heading far off their course for the Nab. Satanita was not slow to profit by all this, and her skipper hurried her away on a straight course, leaving the other two to fight it out. The luffing was continued sor several miles, so much time being lost that at the Nab Satanita had a lead of 4m., the times being:

Satanita .....11 05 15 Britannia.....11 09 20 Vigilant.....11 09 50

They now came on the wind for the Spit Fort mark, Vigilant gaining on Britannia, the times at this mark being:

Satanita .....11 54 35 Vigilant.....11 59 50 Britannia.....11 59 53

After a beat to the West Middle markboat, they were timed:

Satanita .....12 30 00 Vigilant.....12 36 09 Britannia.....12 36 55

They ran for the line with spinakers to port, the first round being timed:

Satanita .....12 57 25 Vigilant.....1 03 00 Britannia.....1 03 15

Britannia overhauled Vigilant in the balance of the run to the Nab, where they were timed:

Satanita.....1 41 03 Britannia.....1 44 45 Vigilant.....1 46 07

The reach to the Spit Fort was made with sheets well in, the times being:

Satanita.....2 32 15 Britannia.....2 39 15 Vigilaht.....2 41 25

The leg to the west mark was sailed in a rain squall, the times being:

Satanita.....3 14 45 Britannia.....3 20 20 Vigilant.....3 21 40

The finish was timed:

Satanita.....3 36 00 Britannia.....3 42 23 Vigilant.....3 43 05

Satanita beats Britannia by 4m. 17s. corrected, and Vigilant by 7m. 53s. Britannia beats Vigilant by 3m. 36s.

It is stated that the clew of Vigilant's jib pulled out when on the last windward tack for the West Middle mark, and also that "the mainsail parted with a loud report." It is not known whether any one was injured by the latter disaster. Complaint is also made that the board touched several times, the total draft being 22ft.

A great deal has been said in the American papers about the unfair action of Britannia, but on what grounds it is difficult to see. The despatch to the New York *Herald* stated that "Vigilant at once commenced to luff at Britannia;" and according to the European edition of the same paper, when Mr. Gould's attention was called to Satanita, sailing away on her course, he remarked, "Hang the Satanita; let her win the race, but let us beat Britannia." The plain fact seems to be that Vigilant and Britannia engaged in just such a hard luffing match as they have been in many times before since the Clyde races, regardless of the fact that there was now a third competitor, and that Capt. Cook Diaper, of Satanita, seeing his opportunity, made the most of it. The general allegations of a "put up job" made on this side against the skippers or owners of the two British boats are not supported by the facts, and on the other hand are contradicted by the keen rivalry between the two vessels; the skipper and crew of each sailing not only for glory, but for a more substantial reward in the shape of winning money.

The final race of the R. V. Y. C. on Aug. 17 was around the Isle of Wight, starting to the westward against a good breeze. Vigilant was busy with repairs to her sails and did not start, the starters being: Britannia, Satanita, Carina, Corsair and Namara, the latter a new Watson yawl. The day was cloudy and the breeze held strong. Carina won by allowance, Britannia giving her 33m. 39s.

On Saturday morning everything was in readiness aboard Vigilant, and as Atalanta had gone to Southampton to pick up Admiral Erben and the officers of the Chicago, the yacht started for the Needles under sail, with a light but freshening breeze from the west. Mr. George Gould boarded her near the Needles, with the two daughters of Lord Dunraven and Lieut.-Col. Paget, Britannia's representative. In passing the Needles, a locality noted for its many sunken rocks, Vigilant had her centerboard down, and it struck heavily on a rock, the full weight coming on the hoisting chain as soon as the board cleared the obstruction. The chain parted and the after end of the board fell clear of the trunk, the fore end in some unknown way unshipping from the pin on which it is hooked. The board is made of two plates of Tobin bronze, about 4in. apart, fastened by staybolts at short intervals, the space between being filled with lead and Portland cement. The weight is probably three tons. The lifting gear consists of a very powerful winch, specially made for the purpose, and a stout chain. The accident is one that is always liable to happen, and with serious consequences in case the centerboard is heavily weighted; on grounding, the board is lifted, but the slack of the chain is not taken in, then when the board clears and drops, it attains a strong momentum before the chain is again tightened.

Britannia had towed to the starting line and was already waiting the arrival of Vigilant, but there was nothing to do but to notify the sailing committee, who called the race off for the time. Mr. George Gould sent word to the Prince of Wales that he would sail the race without the centerboard if Britannia's owner desired to start, but the Prince declined. The course was on the open sea, the start being five miles from the Needles, and a strong wind was blowing. The royal yacht Osborne was present with the Queen on board, the Prince sailing on Britannia.

Arrangements were at once made to send down divers in hopes of recovering the board, as it will take several weeks to make a new one, the working drawings being in America and nothing exact being known as to the peculiar construction and fitting. Lord Wolverton the same evening withdrew the offered cup; so the prospects for the final sailing of the race are very indefinite.

Vigilant sailed back to Southampton, and when beating up took the ground below Hythe, and on clearing was carried by the tide across the bows of a Swedish bark, lying at anchor, to the serious risk of spars and sails on both vessels. A launch from the Chicago and two steam yachts, Dora and Growler, went to Vigilant's aid and towed her to a safe anchorage at the mouth of the Itchen. The regular racing continues this week about the Solent and then down the southwest coast.

The sailing committee's report is as follows:

"The two yachts were at the rendezvous in Totland Bay, according to directions, at 10:45 o'clock. Having each received instructions from the committee boat, they proceeded toward the starting point given, namely, five miles south of Atherfield Ledge. Vigilant hove to after passing outside the Needles.

"Subsequently Col. Paget and Mr. Gould came on board the Prince of Wales's yacht Osborne, and reported that Vigilant, in running the Needles, had bumped heavily on the outer Goose Rock, and that the centerboard became detached, dropped out and sank.

"Mr. Gould expressed willingness to sail without the centerboard if the Prince of Wales wished the match to go on, but His Royal Highness declined to take the advantage of racing with the Vigilant in such a disabled condition. The match is now off, Lord Wolvertou having withdrawn the cup."

Later reports, on Sunday and Monday, give an entirely different story of the accident. When the yacht was once more in smooth water the top of the trunk was removed and the board was discovered, jammed fast in the trunk. When at anchor off Southampton a diver was sent down, who reported that the board was partly down and jammed by the chain. A plank was placed on top of the board, with a spar from it to the boom, and the weight of the boom was allowed to bear on the board, forcing it down a little. Even with the crew on the boom it was impossible to get the board fully out of the trunk and down on to the mud bottom. The accounts of the accident are very confusing, but it would seem that the yacht was sailing in a very dangerous locality, among rocks, with her board down, this fact being unknown to Pilot Diaper. One story runs that the board was just being lowered when it struck. It is probable that the jerk when the board fell after passing one rock parted the chain and that she struck a second rock, forcing the board up into the trunk, the end of the chain jamming beside it. There is no telling how long the repairs will take. One report says that Vigilant will not sail again until she races for the Cape May cup on Sept. 9. Britannia and Satanita are sailing in the regular regattas, Satanita winning on Monday.

## Classification by Sailing Length.

At the time when the Forest and Stream, in concert with the committees of several of the large clubs, was working for the adoption of a classification by corrected instead of waterline length, one of our chief opponents among the New York papers was the *Times*. That journal, with the two Boston papers, opposed the change very strongly though offering no serious arguments against corrected length. In the course of the controversy we warned the *Times* that sooner or later it must change its opinion, and though the falling off of yacht building and racing shortly after has made the date later rather than sooner, we are glad to see that our advice has at last been acted on, and that the *Times* has declared for the new classification as follows:

"It does not seem fair to have the Elsiemarie in the fifth class when her racing measurement is greater than that of the Shamrock and the Dagmar in the fourth. The classification in the New York Y. C. is on waterline length, and the allowance is figured on sail area. Many think the classification should be on racing measurement, and there is likely to be some legislation in the matter. A classification on racing length would certainly be fair on this year's run. The Emerald and the Ariel would go in the same class. The Elsiemarie, Dagmar, Quickstep and Shamrock would be together, and in the fifth class would be the Loyal, Viator, Neaera and Gevalia. The contests then would be very close.

* * * * * * * * *

"This cruise has taught some lessons, if the racing has not been satisfactory. It is shown that the classification is wrong. It is hardly fair to class the yachts on waterline length and sail them on racing measurement. This is shown clearly in the fifth class of schooners. The Elsemarie, a boat rated as big as those in the fourth class, has won every run, with the exception of to-day's. The waterline length is just 2in. short of the limit."

All this is perfectly true, so true that the only wonder is that the *Times* did not see it plainly when it was pointed out by still more striking examples five years ago.

That the leaven then sown is still alive and working is further shown by the following from the *Sun*:

"The only drawback to the whole cruise, as has already been mentioned in the *Sun*, was the rather unequal manner in which some of the yachts were classified, which practically destroyed the interest in some of the best classes. Some years ago the New York Y. C. appointed a special committee on measurement and classification, which was headed by such well-known yachtsmen as John Hyslop and Harold A. Sanderson, but for some unknown reason their able report, upon which they had spent months of hard labor, was shelved at a meeting of the club, without its having been barely read, much less considered, by the majority of the members. Judging by last week's cruise, it might be a good thing for yachting in general and the New York Y. C. in particular, if they rescued that document from oblivion and adopted some of its recommendations, unless they wish to kill racing on their cruises altogether."

While there were some in 1889, like Mr. Burgess, who opposed the proposed classification because they honestly believed it to be wrong in principle; the strongest opposition came from that class of yachtsmen who are incapable of understanding such a report as that of the New York Y. C. special committee, and who make a practice of voting against everything which they do not understand. The great bulk of intelligent yacht owners at that time took but little interest in the matter, one way or the other, the fighting being done by a few ardent enthusiasts on the one side, and the conservative element and the daily papers on the other. Since then there have been many object lessons like those of the present cruise which were too plain to be disregarded; and the position of racing owners towards the proposed classification to day is very different from that in 1889. We believe it would be an easy matter to secure the adoption of a uniform system of classification by sailing length in the leading American clubs this fall; but there is other work to be done before the class limits are fixed. There is a general feeling that the present measurement rule may well be supplemented with some factor that will tend to increase displacement; and if there is any likelihood of this being done, there is no use in first adopting a classification which would have to be changed to meet any alteration of the rule.

---

## A Pilot's Duties.

Our amusing friend of the *Recorder* thus comments on our attempts of last week to define a pilot's duties:

"An expert who ably conducts the yachting department of a world-renowned sporting journal was asked the other day by an inquiring correspondent to expound and explain the duties of a pilot.

"The yachtsman appealed to acquiesced with his usual good-nature. He replied that the pilot's duties were of a purely advisory nature, to give information to the skipper as to courses, tides, wind, weather, etc.

"This is all very well. So far as our friend, the yachting expert, goes, he is just tiptop. But he might have gone further and pointed out that the chief duty of a pilot is hinged about the draft of water of the yacht and the depth of the water the yacht is sailing in. That is what the pilot is principally hired for.

"The writer of these notes remembers a yacht race he sailed on the old Kitten away back in 1853. It was on the Thames, from Gravesend to the Nore and back. Old Martin, a Gravesend pilot, was aboard. It was a race with lots of money in it, and we were out for blood. Martin was told that if the Kitten grounded he would be chucked overboard. He agreed. We were tacking in toward the Maplin sand, and suddenly we slid right up on the shoal.

"'Chuck the devil overboard!' cried the skipper, and we did. He was well ducked. Then a life buoy was thrown to him and he was hauled on deck. Next he was thawed out with rum, there being no malice.

"This is a true yarn, but there is a moral contained therein. The Vigilant need never have been forced on to the ground had her pilot understood his duty. He only needed to yell out: 'Water! we want water!' and Britannia must have tacked or been disgraced and disqualified, according to the rules of the Y. R. A."

Our first point, as to courses, was meant to include, of course, the available sailing weather over the course, the mere order of turning marks being given in the sailing directions for the race. While the pilot's first duty is to give information as to the depth of water and run of the tides, he is also chosen for his local knowledge of all wind and weather conditions.

The main thing we would point out, however, is the *Recorder's* error as to the right of a pilot to give orders. No such right is acknowledged aboard a racing yacht, the captain being the one to give orders, and above all, to hail another boat for room From the cabled accounts, the trouble in the match of Aug. 4 arose solely from Pilot Diaper hailing Britannia to tack, without the knowledge of Capt. Haff, though it is not stated where the pilot stood, or why he was not so close to the captain that his hail was not heard by the latter. It was exactly this unauthorized giving of orders by parties other than the captain (though not by Capt. Joe Ellsworth who was the pilot) which caused the inexcusable fouling of Genesta by Puritan when the latter was on port tack. The exact relations between captain and pilot, and the extent to which the latter is trusted on to advise outside of the special points of water, wind and weather, depend entirely on circumstances; sometimes a local pilot is hired for a day for a small sum, and in other cases an expert like Capt. Ellsworth goes practically as the guest of the owner.

---

## Lake Geneva Y. C.

A race was sailed Aug. 11. Weather fair. Wind very light:

| | Length. | Start. | Finish. | Elapsed. |
|---|---|---|---|---|
| Little Dipper, Miss Sturges | 15.00 | 11 31 08 | 1 39 41 | 2 08 33 |
| Ysabel, B. Carpenter | 14.11½ | 11 31 35 | 1 37 33 | 2 05 58 |
| Puckachee, Miss Ramsey | 14.11 | 11 31 53 | 1 34 58 | 2 03 05 |

## Vigilant's Races.

*From the London Times.*

The following account of the private match of Aug. 4 between Vigilant and Britannia is more detailed and accurate than any of the cabled reports. Considerable stress is laid on what would appear to be p serious breach of the rules on the part of Vigilant, a matter that has thus far been explained only by the cabled statement that pilot Diapes hailed Britannia to tack without Captain Haff's knowledge, the latter consequently failing to put Vigilant about at once. This explanation is anything but satisfactory, as such lax discipline could hardly prevail on Vigilant. It is quite unlikely that Captain Haff, even if he were not above such unfair practices, would do anything so foolish as to invite disqualification in an important race; and the breach of the rule was apparently a fair ground for protest on the part of Britannia. No details of the alleged fouling in the next race has yet been received on this side, but it is quite evident that the feeling over the incident here reported was at the bottom of the crowding by which both yachts were put against the rocks.

### The Vigilant and Britannia Match.

Saturday's breeze suited Vigilant to perfection, and she has never given a finer racing exhibition in this country. It was a plain-sailed and exceptionally uneventful race, and the excitement attendant on a close contest was wanting, the American cutter, in fact, getting the lead within ten minutes after the start and making a sure and steady gain to the finish. The amount of interest shown in the event was quite without parallel among the very many international races which have been started inside the Isle of Wight since the advent of the original Sappho 27 years ago, and such a numerous fleet of sailing yachts under way has never before been seen on the Solent, not even excepting any of the great naval reviews. It was a cheerless day with regard to weather, as, after a dismally gloomy morning, it became thick in the forenoon with misty rain and quite a low temperature. The match commenced with a short beat from off Cowes, to the East Buoy of Lepe, and the only particularly noteworthy incident in the match which followed was in the first board. This was one of ten minutes duration and both yachts stood across the flood tide towards the New Forest shore. The Vigilant, which was the leeward yacht, hailed the Britannia to tack for ground, which the latter at once did, but the Vigilant violated the Y. R. A. Rule 22, which is to the effect that if two yachts are standing close-hauled towards shore and the yacht to leeward is likely to run aground she may hail the yacht to windward to go about, but the leeward yacht shall be bound to tack at the same time. The Vigilant hailed Britannia to tack, but failed to go round herself until after reaching on for many lengths. No protest was made, and Vigilant simply found a cheap, easy, and speedy way of getting clear of her opponent in the tactics adopted. After the Lepe mark had been weathered they had 45 miles of reaching out of a 48 mile course. In the fresh breeze the Vigilant most unquestionably proved herself to be the faster vessel. The arrangements were as perfect as possible, and they were carried out by the sailing committee of the Royal Yacht Squadron. The umpire, Lord Dunraven, was accompanied on the official steamer by Mr. P. Percival, Jr., and Mr. W. H. Roberts, and the shore duties were in the hands of Mr. J. R. West, Captain Towers Clarke, and Mr. R. Grant, the secretary of the Royal Yacht Squadron. Racing details follow:

Match.—Britannia vs. Vigilant, for cup value £100. Queen's course namely, from a line made by bringing a mark vessel in Cowes Roads flying the British and American ensigns and the R. Y. S. flagstaff thence round the East Buoy of Lepe shoal, to the eastward round the Warner lightship, and back to the starting line. Yachts to pass to the northward of the Prince Consort buoy and the Noman Fort, and to the southward of all the Brambles buoys in all cases. Yacht Racing Association rules. Time allowance for a 48-mile course.

| Yacht. | Rig. | Rating. | Owner. |
|---|---|---|---|
| Vigilant | Cutter | 169 | Mr. G. J. Gould. |
| Britannia | Cutter | 153 | The Prince of Wales. |

The Vigilant allowed the Britannia 2 min. 4 sec.

A good breeze from the west-southwest was blowing up the west channel and smoothing down the spring flood tide when the start was made at 10:30. Both vessels had jibheaded topsails set over whole mainsails, and second jibs were on each when they came reaching along the line on the starboard tack, Britannia about a cable's length ahead of her opponent, and the Prince of Wales's cutter was stayed and had not filled on port tack when the smoke of the starting gun was carrying away. Vigilant came round with wind well clear under the lee bow of the Prince of Wales's cutter, and thus it would not have been possible for the match to have commenced under more even terms. Vigilant was screwed up close, and for a time the Britannia was ahead, racing the faster, but Vigilant was first to strike inside the tide rift, and she then began to settle up a little under the Britannia. Both headed boldly in toward the New Forest shore, and after having been for ten minutes on the port tack the Vigilant hailed for water and the Britannia's helm was promptly put down. The former at the time was under Britannia's lee bow, but she did not tack at the same time as hailing, and a protest might have been made. The outcome was that when the pair stood off into the Solent on starboard tack to cross the tide for the island shore the Vigilant had a high berth on the Britannia's weather quarter and a commanding lead of her adversary. They fetched into Gurnard Bay just east of the buoy, Britannia tacking first and Vigilant coming round fine under her lee bow, the latter not having been stood a length further than was required for a clean fetch of Lepe Buoy, while it could hardly be said that the Britannia had overstood. There was a race of tide going eastward on the Lepe Buoy, which was cleverly made, and bore round thus:

Vigilant.....10 53 50 Britannia.....10 54 43

Mainbooms were swung over to port, and Vigilant's jibtopsail was going up while Britannia's was set, after sheets had been trimmed all round. Heading straight on a tack southward of the Brambles the wind was brought on the starboard quarter, and although spinaker booms were dropped square running sails could not be carried with benefit. The tide was swinging along cheerily with them, and with a brave breeze they went along eastward, the Vigilant palpably extending her lead, and she was 61s. ahead on passing the fairway cage buoy in Cowes Roads. Britannia's flying jib [jibtopsail] was smaller than the Vigilant's, but she had her reaching staysail on while her opponent had only a working one. At 11:10 Osborne was abeam and Vigilant was but little further ahead than in Cowes Roads. The wind was felt fresher when they came on a straight course for the Noman Fort, and sheets had been hauled in a little, and the Vigilant at once began to tramp away very fast. At 11:30 the Vigilant had Ryde Pier abeam, and here she had just about double the lead she had held off Cowes. The weather was looking very dirty to windward, and as they raced along Ryde sands it came thick with rain. There was a breezing-up, too, and a southing which brought sheets in and set the vessels fairly foaming. Jibtopsails were carried out to the Warner, the tide being slack from the Noman out to the lightship, which was stayed round thus:

Vigilant.....11 50 45 Britannia.....11 53 32

They came back to the Noman on an easy bowline, and had sheets checked until above the buoy off Ryde Sand-head, when both were clean full and by with every prospect of fetching up through Cowes Roads. Both kept their luff along the island side and had a fair tide with them, but not so strong as it was in the middle. The wind came in hard puffs. Each took a regular heeler as they crossed the mouth of the Medina, and with a sweeping ebb they threaded close-hauled through the countless fleet of yachts riding at anchor in Cowes Roads, and completed the first round thus:

Vigilant.....12 38 28 Britannia.....12 42 22

It was thick with rain in the west channel, and the breeze southerned and came fresher. With the ebb soaking down and the wind freeing, the Lepe Buoy could be cleverly laid, and they went ploughing away very fast. The backing of the wind gave Britannia a lift and the timing when Lepe Buoy was bore round follows:

Vigilant.....12 49 50 Britannia.....12 53 35

Jibtopsails were pulled up and Britannia set reaching staysail. Vigilant opened the distance between the buoy and Cowes Roades, the leader being 4m. 14s. ahead when she passed the Castle. Going east they both had quite a lull under the high land off Norris, but it was not long before the wind came on smart again and they went past Osborne driving a big bow wave before them. The Scotch mist continued and they had the offshore wind puffy, the Vigilant getting a stinger. At 1:20 off the Peel Buoy she was roaring along and going from Britannia hand over hand. The Vigilant sailed in a fine breezy lane right down to Ryde, the wind keeping true broad off the island, but not steady in strength. At 1:33 the leader was off Ryde Pier, and she here had nearly 5m. lead and going away from Britannia. The weather had cleared a little by the time they had raced out to the Noman and after clearing the fort Vigilant got her jibtopsail down, but Britannia carried hers right out to the lightship, which was stayed round thus:

Vigilant.....1 55 23 Britannia.....2 01 17

With full sheets they came in to the Noman, and then got trimmed in for a reach clean full and by for home. The ebb stream was going fair with them and the breeze from south-south-west was bending them rail deep. The Vigilant came smoking along in style past Ryde, and without a falter in the wind the island side was raced along, both skimming close past the Peel. Britannia was getting dropped by the Rhode Islander, which stepped out in lively style to every heeling puff and, with wind lying right through, her victory was assured when she reached past Osborne. After passing Old Castle Point a lane had to be picked between the yachts at anchor, and it was not a very straight one. As on the first round, there was a rattling breeze coming out of the Medina, and the Vigilant reached through the line rail deep, a meritorious winner of a notable match. The official timing of the finish follows:

Vigilant (winner).....2 36 45 Britannia.....2 43 18

The winner having to allow Britannia 2m. 4s., thus won by 4m. 29s.

Mr Gould, the owner of the Vigilant, was one of the Prince of Wales's guests at dinner in the evening on board the Osborne.

The *Field* describes the race as follows:

"This match had been looked forward to with a varied kind of interest, in spite of the long list of defeats the American yacht had suffered at the hands of Britannia. The people who had closely watched the career of the American yacht in this country were confident she would win should there be a piping breeze; but, generally, it may be said that the Cowes folk were positive Britannia would sail home with a commanding lead, regardless of weather. The day and the breeze came, and it must be said at once that Vigilant got through the water faster than Britannia, led all round the course, and won with a comfortable amount of time in hand. It was a regular floorer for the Cowes people, but they are now looking forward to a match in Britannia weather. Nobody liked the way Vigilant shaped in the match; she was sailing on her uppers all round the course, while Britannia, by comparison, was as upright as a church steeple. Still, the American, when buried by the off-shore slammers, kept going, and was wonderfully full of life. However, to see a broad centerboard yacht sailing on her side like one of our old "plank-on-edge" yachts did not seem in accordance with the fitness of things, but Vigilant appears to have been designed to sail in any position it may please the wind to place her. One notable feature was the manner she weathered out on Britannia in the short flog to windward, and this in spite of the excessive heel she took. Barring this short beat from the start to Lepe, it was a very plainly sailed race, singularly devoid of interest, and it was not even a 'record' performance, as Satanita sailed the course in less time last year. Still, a speed of 11¾ knots was commendable, but Satanita's of 12 knots was better. It must, however, be said that Satanita, on Aug. 3 last year, had more wind to drive her than Vigilant had to-day.

"There were probably more sailing yachts, and steam yachts, and excursion steamers under way than had ever before been seen in the Isle of Wight, in spite of the wet, uncomfortable weather. Among the steamers was that which conveyed the referee, Lord Dunraven, and two members of the R. Y. S. sailing committee, Mr. Philip Percival and Mr. W. H. Roberts. The race went off without a hitch, although there was a 'cause for protest' at the end of the first board, when Vigilant hailed for water and failed to tack at the moment Britannia did. It was, however, subsequently explained that the sailing master of Vigilant did not know his pilot had hailed. This explanation would scarcely have availed had a protest been made."

## The Vigilant.

*From the Marine Journal.*

The match between the Vigilant and Britannia, sailed on the 9th inst. was a fair test of the speed of the two yachts over an inside course. There was a good share of windward work, and while the Vigilant gained a little on each run, she was fairly outsailed by the Britannia in turning to windward; there was plenty of steady wind and no flukes, and in some of the heavy gusts off the land both yachts had all the wind they wanted, and the race resulted in another win for the Britannia.

A good deal has been said about calms and drifting matches on the Clyde and at Bangor, and the defeat of the Vigilant has by some been mainly attributed to this cause.

No one, we presume, will say that the cup races won by the Puritan, Mayflower, Volunteer and Vigilant were drifting matches, the average speed of the winning boat in these nine matches being 7.41 knots, yet the first nine races between the Vigilant and Britannia were sailed by the winner at an average rate of 7.66 knots; these are both high averages when the windward work is considered.

It does not appear to be realized that the Vigilant is a considerably larger boat than the Britannia, and while the difference in size is made up by time allowance, the Britannia, when she has won, except in one instance, has done so without time allowance.

The Britannia is 5in. longer on the water line than the Vigilant, but against this the Vigilant has 2ft. 9in. more beam, and, in consequence, carries about ten per cent. more canvas than the Britannia.

It is an excellent and useful quality in any vessel, whether steam or sail, to be able to handle quickly under her helm, and in this respect the Britannia excels the Vigilant, though it should be remembered that the Vigilant gains a considerable advantage by her straight keel in getting her lead much lower than if her keel were cut away from the heel of the sternpost to the water line, as it is with the Britannia.

It appears that in the matches which have been sailed thus far the Britannia has won eleven by an average of 6 min. 31 sec., while the Vigilant has won four races by an average of 3 min. 13 sec., and one other match, in which the time of the Britannia was not taken.

The two yachts are very evenly matched, and no series of yacht races have ever afforded so much sport and instruction. Yachts, like dogs, have their day, and one who has sailed on board of racing yachts knows that the causes which affect the speed of a delicately balanced racer are so slight as to elude the utmost skill and experience.

Our sympathies and hopes are with the Vigilant, and we look forward to seeing her do some grand work over open sea courses; but facts and figures are too important to be ignored, and the patriotism which does not heed and profit by them is blind.

The Dacotah continues her triumphal march at the head of her class, and her plate locker, if she has one, will have to be enlarged to hold all the cups which she has won, and is still winning, this season.

### VIGILANT'S FITTINGS.

The comments of the *Field* on Vigilant's interior fitting up, as reported by cable, have given offense to Americans; it seems, however, that the criticism was not made by the editor, but was in the form of a letter from a correspondent as follows:

*Editor Field:*

Sir—Rule 15 of the Y. R. A. requires that all yachts exceeding a rating of ten shall be fitted below deck with the ordinary fittings of a yacht, including two transverse bulkheads of wood, the intention of the rule obviously being to prevent the entry of mere sailing machines on which their owners cannot live with any degree of comfort. All our English yachts are properly fitted according to the rule, including the Britannia; but, if I am rightly informed, her opponent, the Vigilant, is a mere shell, and is not in any way fitted as a yacht, according to our understanding of the expression. For example, it is said that she has no interior lining, that her partitions below are of canvas tacked on to light battens; that she has no covering for her centerboard machinery; that even the wash-basins and conveniences are not closed in; that she has no companion stairs, merely a rough, narrow deal ladder, and that she has no skylights, but only flat wood coverings for the hatches. If this statement is correct, can it be said she complies with the above-mentioned rule? But it may be asked by some who are not conversant with yachting matters, does she gain any advantage by the absence of the ordinary fitting of a yacht? Certainly, she saves tons of interior dead weight, useless for racing purposes, and is enabled to dispose all the weight she requires to carry in its most effective form as ballast, which is a very tangible advantage, and had she been owned on this side of the Atlantic, she would unquestionably have been disqualified. Let us hope that our friends on the other side will take note of the spirit in which we receive and treat a stranger, when the interests of sport are concerned; and that it may tend towards a reconsideration of the deed under which the America Cup is competed for, which we consider unfair to a challenger. I may add that in my humble judgment there has not yet been a contest for this cup on even terms. A Member of the Y. R. A.

In view of the comments of American yachtsmen last year on Vigilant and her steam tender, and of the feeling on the part of those interested in the other three cup defenders over the "cruising trim" in which she raced, there is no reason why Americans should feel specially aggrieved at the above letter. Captain Haff and his crew at the time of the cruise and trial races last year put the same ideas into still more forcible form.

The following from a letter to the New York *Sun*, presumably from Mate Clayton Haff, is interesting in this connection:

"It seems hard for the American press to understand just why the Vigilant does not win races right and left just as she did in American waters last year, especially in light winds. Last year, or the latter part, everything that was not actually needed in the working of the yacht was put on board of her tender. All the bedding, every dish, the range, anchors and chains were disposed of. The crew ate and slept on board of the tender. That cannot be done on this side, as it is against the racing rules of the Y. R. A. At least one anchor and chain must be carried on board. Bedding and cooking utensils and all such gear must be on board during the races. It will be remembered that when the Vigilant was fitted out for her ocean trip bilge stringers were put in her, to which were riveted the struts or deck supports. The struts were taken out, but to remove the stringers it would be necessary to remove all joiner work, and the owners have not as yet seen fit to do that. Besides adding more than a ton of weight to the vessel, these stringers serve to make the boat more rigid than she was intended to be.

"Thus it can be seen that the Vigilant is compelled to carry four tons of weight more than when she sailed in home waters. Any racing yachtsman can easily see that she is now sailing under a heavy handicap. Much has also been said of the 'green crew.' It is a fact that the crew were new to the boat, but they are racing men for all that; and I defy contradiction when I say that the Vigilant does not owe a single defeat to the management of the vessel or handling of sails."

On Board the Vigilant. Bob Stay.

The Providence *Journal* also published a letter from a Providence boy who was enabled to ship as a common sailor on board Vigilant, on July 20 and 21, in the regattas of the Royal St. George Y. C., off Kingstown:

"Capt. Hank Haff, of Volunteer fame, is in command of the bronze beauty. Capt. Jeffries, who sailed the craft across the ocean, is first mate, and a younger son of the captain second mate, while the crew, with three exceptions, Norwegians to a man, are old sailors from the Navahoe, Columbia, Ariel, Colonia and Vigilant of last year. There are also on board an English pilot, and in each harbor a local pilot, so all together there are, counting the Goulds and guests, about 55 men.

"There is not the slightest question that the Britisher is the better handled boat in these her home water. The fault with the American on this head at this date lies not in her splendid captain, than whom few are superior, but in the ill-training of the crew and the average quality of her under officers. The men worked with a will and lots of good will, but they didn't move as one man. Their force is badly wasted, for each one used too much of his own judgment. There is not the chaos on deck of last year, but less sharp work. But to compare—the British crew has been in training on the Britannia ever since the boat was built, in English waters in the summer and in the Mediterranean in the winter, each man knows his place at the right instant. Their spinnaker always is set first. Their head sails always are trimmed first. The whole mass of men moving as if under the immediate touch of the helmsman, do their work instantly and drop flat immediately. But look for a change. The Vigilant shortened her topmast and bowsprit, thereby saving over a minute of allowance. Her crew improves daily. She is moving south toward heavier breezes, and her men have not lost heart."

## The Next Cup Races.

*From the Boston Herald.*

It is now a little early to talk about the race for the America's Cup next year, but there are some conditions which governed the recent matches between the Britannia and the Vigilant which it will be well for the yachting public to now consider. In the matches sailed between the Britannia and the Vigilant, there was a clause in the agreement that the crew must be on board when the yacht was being measured. No stipulation is made as to the number of the crew, be it small or large, but whatever that number might be, the men should all be on board, and thus be taxed for their weight.

This is a proposition which is sure to be made by Lord Dunraven next year, and the request will be a just and fair one. This will place things where they should be, and will put a stop to 70 men marching off when the vessel is being measured in "racing trim" then only to march back again, thus giving their craft additional water line length and human shifting ballast, both of which are not paid for in the water line measurement of the boat.

There can be no honest opposition to such a request, for it is based on fair play. It would hardly be fair to stipulate the number of the crew, but there should be no loop-hole left for five tons of human weight to go on board to serve as shifting ballast, without paying for it.

Another request likely to be made in the Cup races, on account of the immense fleet of boats in New York waters and also the long distance that the starting point is from New York, necessitating a tow of 50 miles each day, that the matches be sailed off Newport. Here the boats could be easily towed out to the starting point inside an hour, and there is more likelihood of a better breeze off Newport than there is off Sandy Hook. In case of postponement of the race at the outer mark, there would only be a tow of 30 instead of 50 miles back to the anchorage. Some objection might be made to the want of drydocks about Newport, to haul out and prepare in, but the distance from either New York or Boston is not so great, but what a proper fit out could be had, in which neither boat would suffer.

As to the length of the challenger, that must be a mooted question, and there is sure to be considerable negotiation before the length can be decided on.

There is a general desire on the part of many yachtsmen here, that if Lord Dunraven challenges with a 70-footer, he should be met with one of that length, and it is well argued that the Cup would be safer with a 70-footer than a larger boat, because there would be more boats built, consequently more chances for experimenting. There is much in this' but the same argument would hold good on the other side, for there would be many 70-footers built over there as here, and beside, Watson has more data on 70-footers than any of our designers. On this side, we are strong in the larger class—85-footers—because of experiments in large ballast fins, keels and centerboards. Herreshoff is also stronger, and he is sure to improve on the Vigilant by minutes. He also has had the benefit of the ballast fins, the Pilgrim and the Jubilee, and where he overlooked the finer questions of wetted surface, etc., in his last year boats, he is sure to look after them more closely and carefully the coming year. Young John Paine also can easily improve the Jubilee, and make a new boat several minutes faster.

In the 70ft. class our present designers have had but little experience, and they have only two boats to look to for data—the Titania and the Katrina. Of course, the members of the New York Yacht Club will do that which think they is best for the protection of the Cup, and it will be hard to bar out the 85-footers, with the Jubilee to call on. The question whether it will be good judgment to accept a challenge from a 70-footer is a doubtful one, and will have to be carefully considered in all its bearings as to the best length on which to chance the defence of the Cup.

## Plymouth Y. C.

PLYMOUTH, MASS.

*Saturday, Aug. 11.*

Triangular course outside Plymouth Beach for all classes, distance 9 miles, weather fine, wind E. 3-knot breeze, low water at 1:30:

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| **FIRST CLASS.** | | | |
| Why Not, G. W. Sheverick | 20.00 | 2 16 20 | 1 41 45 |
| City of Chicago, V. D. Bacon | 25.06 | 2 10 07 | 1 41 44 |
| **SECOND CLASS.** | | | |
| Nancy Hanks, P. W. Maglathlin | 18.00 | 2 08 29 | 1 31 40 |
| **THIRD CLASS.** | | | |
| Vigilant, A. M. Watson, Jr. | 15.11 | 2 18 19 | 1 37 27 |
| Spray, C. F. Bradford | 16.05 | Withdrew, | |
| Lady May, M. MacDowell | 16.10 | 2 27 01 | 1 47 48 |
| Gypsy Girl, W. Steele | 15.02 | 2 33 37 | 1 51 22 |
| Major D., Seth Drew | 15.05 | 2 22 42 | 1 40 55 |
| **FOURTH CLASS.** | | | |
| Dolphin, N. Morton | 15.03 | 2 30 51 | 1 48 45 |
| Natalie, H. M. Jones | 14.08 | 2 31 53 | 1 48 38 |
| Nereid, A. E. Walker | 16.00 | 2 31 15 | 1 50 32 |
| Honest John, J. C. Dawes | 14.02 | 2 35 13 | 1 05 57 |
| Aphrodite, A. G. Fay | 16.02 | 2 24 26 | 1 44 01 |

Winners: Class 1, City of Chicago; Class 2, Nancy Hanks; Class 3, Vigilant first, Major D. second, Lady May third, Class 4, Aphrodite first, Natalie second, Dolphin third.

Regatta committee: A. O. Fay, A. T. Harlow, W. H. Sears.

## Bayswater Y. C.

BAYSWATER—JAMAICA BAY.

*Saturday, Aug. 11.*

Club race over the club course, distance 12 miles; weather, good, southerly wind; tide, high water:

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| **FIRST CLASS—SLOOPS.** | | | |
| Millie, E. H. Brinkerhoff | 25.10 | ..... | ..... |
| Toboggan, S. D. Babcock | 28.03 | 2 20 28 | 2 20 28 |
| **SECOND CLASS—CATBOATS.** | | | |
| Edith, Com. Armstrong | 23.04 | 2 22 11 | 2 22 10 |
| Alert, John Fallow | 22.03 | 2 25 27 | 2 24 22 |
| Bertha B., D. C. Bowker, Jr. | 21.00 | 2 23 08 | 2 20 48 |
| **THIRD CLASS—CATBOATS.** | | | |
| Meta, E. D. Pettit | 19.00 | 1 14 40 | 1 14 40 |
| Susie R., E. H. Roehr | 16.03 | 1 20 12 | 1 18 49 |
| **FOURTH CLASS—CATBOATS.** | | | |
| Jennie, Albert Walters | ..... | 1 30 10 | 1 30 10 |
| Maud, Charley Chaffer | 16.09 | 1 23 05 | 1 23 05 |

Winners: first class, Toboggan; second class, Bertha B.; third class, Meta; fourth class, Maud.

The Millie carried away rigging and did not finish.

The race was one of the monthly races for special cups to become the property of the boat winning three successive races.

Regatta committee and judges: B. J. Danklefsen, F. L. Richmond, Richard Mott, Jr.

## Owasco Y. C.

The second race was sailed Aug. 9 on Owasco Lake, from Dolphin Point north to Brinkerhoff Point, S.W. to Elm Point, S.E. to place of beginning; distance, 9 miles. Weather overcast. Wind northerly, 8 to 10 miles an hour:

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| El Chico | $25\frac{3}{10}$ | 2 10 56 | 2 10 56 |
| Nemadji | $25\frac{2}{10}$ | 2 13 54 | 2 13 49 |
| Asp | $24\frac{8}{10}$ | 2 16 44 | 2 16 19 |
| Gull | $17\frac{2}{10}$ | 2 31 57 | 2 22 54 |
| Mystery | $24\frac{6}{10}$ | 2 32 10 | 2 31 34 |

Winners: El Chico, first; Nemadji, second; Asp, third. Regatta committee—Chas. E. Thorne, D. Beardsley, N. B. Burr, W. E. Case. Referee, F. I. Allen.

## Sea Cliff Y. C.

SEA CLIFF—LONG ISLAND SOUND.

*Saturday, Aug. 11.*

The first annual regatta was sailed to-day. Course from line off club house to and around buoy off easterly end of Execution Reef, thence to and around buoy off Matinnicock Point, and for classes 1, 2 and 3 return over same course. Balance of classes from buoy off Matinnicock Point to starting line direct; distance 20 miles for classes 1, 2 and 3; 14 for others. Weather fair. Wind very high at start, then good steady breeze. Tide flood at start.

| | Length. | Elapsed. | Corrected. |

| Wahneta, F. M. Freeman | 23.20 | 5 19 04 | 5 12 42 |
| **SPECIAL—21FT. CLASS.** | | | |
| Minnetonka, Geo. Work | .... | 4 27 07 | 4 27 07 |
| Celia, C. A. Gould | .... | 4 39 47 | 4 39 47 |
| Skimmang, Thos. Clapham | .... | 4 48 08 | 4 48 08 |
| Maysie, Wm. Osborn | .... | 5 53 35 | . .. .. |

Winners—Class 1, Penguin; Class 2, Audax; Class 4, Nawha (walkover); Class 5, Onaway; Class 6, Kittie; Class 7, Gold Dust (walkover); Class 8, Fairy; Class 9, Terrapin; Class 10, Orinda; Class 11, Goblin; Class 12, Madrine; special class, Minnetonka.

The feature of the regatta was the phenomenal sailing of Minnetonka in the light wind, she starting last and leading the fleet from the first turn all the way home. Colleen capsized rounding first turn and her crew were picked up by the judge's boat, Oberon, H. F. Noyes. This regatta is the third largest held in the East this year, forty-eight boats starting. Larchmont was first and Indian Harbor second. The initial meet passed off without a hitch and the arrangements were perfect.

Regatta committee, S. C. Pirie (chairman), J. R. Coles, T. T. Taber. Judge, S. Stenson, Jr.

## Cohasset Y. C.

THIRD CHAMPIONSHIP RACE.

*Saturday, Aug. 4.*

A light westerly wind made a tame race, but very pretty to look at. The boats got away well together, Duster in the lead. It was a close reach to Atlantic House mark and required some pinching at the last. Winona rounded first, Duster second, Madge third; then Zig Zag, Grimalkin, Khedive, Trump and Heron. Down the wind to second mark Duster worked by Winona and rounded first, with Madge and Zig Zag following fast.

In second class Edith had the lead to second mark, but Jackdaw easily passed her in windward work.

The race in third class was close till the windward work began, when Escort, as usual, took the lead and won. The times were:

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| **FIRST CLASS.** | | | |
| Duster, Maple Bros., cat | 22.02 | 1 23 25 | 1 02 10 |

| Watermelon, H. M. Knowles, cat | 13.07 | Withdrew. | |

FOURTH CHAMPIONSHIP RACE.

*August 11.*

A good S.E. breeze and a beautiful day brought out a large attendance. The club shooner Daylight carried a company of thirty-eight ladies and a few gentlemen, and the beaches and cliffs of Jerusalem Road were well covered with spectators, with quite a gathering of visiting yachts. The course being in the open the S.E. wind made quite a jump of sea at the outer mark, and though fine sailing for the yachts, the ladies on the Daylight were very pale when they landed, and some required to be helped to their carriages. At the gun Trump crossed first, followed by Heron, with her crew of three young ladies, one being a member of the club. Madge crossed third, closely followed by Zig Zag and the rest in a bunch. Madge forged by the Heron, whose fair crew promptly blanketed the leader, but could not hold her back. At the mark off the Atlantic House Madge turned first, closely followed by Duster, Grimalkin, Khedive, Zig Zag and the rest, the run before the wind being close. At the second mark Madge luffed around first with Duster close by, followed by Grimalkin, Khedive, Zig Zag, Trump, Heron, Frances and Vacuna. It was a close reach to finish, and after a sharp luffing match Duster worked by Madge near the finish and crossed twenty seconds ahead. In second class Modoc took the lead and kept it to the finish, Jackdaw having split her deck at mast. The Escort won as usual in third class. The cup goes to Duster in first class and Escort in third class, second not decided yet. The remaining three races will be worked for as hard as ever. Dr. John Bryant photographed the first class as they finished.

FIFTH CHAMPIONSHIP RACE.

*Aug. 18.*

Sailed over the usual course in a single-reef breeze, with heavy puffs from S.W. The yawl Khedive led the first class all the way round, carrying whole sail, with the Grimalkin just within her allowance. At the second mark, when the windward work began, the Grimalkin carried away her bobstay, but was worked along, and, though finishing second, saved her time by 26s. on Khedive.

In the second class In It had an easy job and sailed a wonderful race, with but one reef in her great sail. Her corrected time is 52m. 4s., quicker than the first class over same course.

Dr. John Bryant showed them the way in the third class, and was first home with the smallest boat in the class.

The Duster sailed for Plymouth just before the start under two reefs, Khedive waiting to sail the race, when she left for the same place. Madge did not sail, as but one man could be obtained for crew.

QUAMINO.

## The End of the Cruise.

The final run of the New York Y. C. cruise was made on Aug. 14, from New Bedford to Newport, with a light N.E. wind, the start, at 9:30, being made in the rain, though the sun came out later in the day. The only incident was a collision between Ilderim and Merlin before the start, the former drifting down on the latter, to the detriment of her mainsail, which was pierced by Merlin's bowsprit. Ilderim was taken in tow by Electra and followed the fleet. The official times were:

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| **SCHOONERS—THIRD CLASS.** | | | | |
| Merlin | 9 35 00 | 1 57 19 | 4 22 19 | 4 22 19 |
| Mayflower | 9 34 43 | 1 43 32 | 4 08 49 | 4 07 04 |
| Emerald | 9 34 55 | 1 39 47 | 4 04 52 | 4 03 04 |
| Atlantic | 9 35 00 | 1 52 41 | 4 17 41 | 4 14 08 |
| **FOURTH CLASS.** | | | | |
| Ariel | 9 35 00 | 1 48 22 | 4 13 12 | 4 13 12 |
| Marguerite | 9 35 00 | 1 43 22 | 4 08 22 | 4 08 22 |
| Dagmar | 9 35 00 | 1 51 22 | 4 16 22 | 4 11 43 |
| Shamrock | 9 34 04 | 1 56 16 | 4 22 12 | 4 16 10 |
| **FIFTH CLASS.** | | | | |

| Gevalia | 9 34 30 | 2 05 55 | 4 31 25 | 4 21 37 |
| Neaera | 9 32 30 | 1 55 23 | 4 22 53 | 4 10 41 |
| **CUTTERS—SIXTH CLASS.** | | | | |
| Wasp | 9 26 44 | 1 37 55 | 4 11 11 | 4 11 11 |
| Gloriana | 9 28 43 | 1 37 59 | 4 09 16 | 4 08 28 |
| Jessica | 9 26 49 | 1 47 33 | 4 20 34 | 4 15 28 |
| **SEVENTH CLASS.** | | | | |
| Gossoon | 9 26 36 | 1 43 19 | 4 16 43 | 4 16 43 |
| Awa | 9 27 00 | 2 03 32 | 4 26 32 | 4 35 18 |
| Minerva | 9 30 00 | 1 59 34 | 4 29 34 | 4 26 37 |
| **EIGHTH CLASS—MIXED.** | | | | |
| Constellation | 9 32 10 | 1 35 57 | 4 03 47 | 4 03 47 |
| Katrina | 9 30 00 | 1 41 46 | 4 11 46 | 4 03 44 |
| Queen Mab | 9 29 57 | 1 39 05 | 4 09 08 | 3 52 08 |

The winners were: Emerald, Mayflower second; Marguerite, Dagmar second; Neaera, Elsemarie second; Floriana, Wasp second; Gossoon, Minerva second; Queen Mab, Katrina second.

On reaching Newport a meeting was held on the flagship, at which the fleet was formally disbanded.

## Racing Measurements.

The following official measurements of the yachts Britannia and Vigilant are given by the *London Times:*

| | Britannia. | Vigilant. |
|---|---|---|
| Length over all | 121.09ft. | 126.76ft. |
| Overhang forward | 13.60ft. | 17.43ft. |
| Overhang aft | 19.25ft. | 22.10ft. |
| Total overhang | 32.85ft. | 39.53ft. |
| Correct rating length | 88.24ft. | 87.25ft. |
| Length mainboom | 90.98ft. | 96.65ft. |
| Length of gaff | 54.85ft. | 53.50ft. |
| Length topsail yard | 46.00ft. | 39.80ft. |
| Height of perpendicular for the fore triangle from the deck | 113.70ft. | 123.00ft. |
| Length fore triangle from fore side of mast to foremost headsail on bowsprit | 66.50ft. | 71.50ft. |
| Length spinaker boom from fore and aft line of mast | 66.13ft. | 70.82ft. |
| Movable ballast inside | 8 tons | None |
| Number of persons on board when rating length was tested | 34 | 45 |
| Area of mainsail, square feet | 5,164.60 | 5,694.50 |
| Area of headsail, square feet | 3,780.50 | 4,397.20 |
| Area of topsail, square feet | 1,450.00 | 1,496.30 |
| Total sail area, square feet | 10,395.10 | 11,588.00 |
| | Rating. | Rating. |
| Yacht Racing Association rating | 152.87 | 168.50 |

The measurements of Vigilant and Valkyrie in the Cup races of 1893 were:

| | Valkyrie. Feet. | Vigilant. Feet. |
|---|---|---|
| Length, load waterline* | 85.50 | 86.19 |
| End of main boom to forward side of mast | 92.60 | 99.37 |
| Fore side of mast to jib stay | 66.16 | 73.80 |
| Foreside of mast to jibtopsail stay | 66.16 | 75.90 |
| Fore side of mast to forward point of measurement | 66.16 | 74.85 |
| Fore side of mast to outer end of spinaker boom | 72.00 | 74.62 |
| Deck to upper side of main boom | 3.03 | 3.08 |
| Deck to topsail halliard block | 114.86 | 125.96 |
| Deck to hounds | 63.30 | 69.08 |
| Length of topmast | 51.56 | 56.88 |
| Length of gaff | 55.57 | 54.76 |
| Sail area | 10,042 | 11,272 |
| Square root of sail area | 100.21 | 106.17 |
| Racing length | 93.11 | 96.78 |
| Allowance for 30 miles | 1m. 48s. | ..... |

Valkyrie is measured for 6ft. of excess of spinaker boom.
*Both yachts were measured without crews.

## Vigilant's Crew.

Here is a voice from the forehatch, a word from Jans and Neils and Yon in their own behalf in a letter to the New York *Herald:*

"*To the Editor of the New York Herald:* Queens town 22, July '94.—Dear Sir—The estatement wath was said about the Vigilants Crew in New York *Herald* for the 8 of July is not Quite Korect, so far as seaman Ship conseren, we can alway compare with the Britanias crew, on that point but that English Heartted Gentleman, that made such remarke must know but very litle, about any kin of seaman, Ship or boat are not fited out with that kine of gare as Britania to be running around the Cour three times but still we are doing well and that is more than they expected us to do in tos wathers with the Vigilant some times they beat us in Handling sailes and than the next time wee take that back." SAILORS OF THE VIGILANT.

## Southern Y. C.

WEST END—LAKE PONTCHARTRAIN.

The New Orleans sloops Nepenthe and Montauk sailed a match race for $500 a side on Aug. 5, the former winning by 24m. corrected time. The course was the Lake Pontchartrain 5-mile triangle, three times around, 15 miles in all. Nepenthe allowed Montauk 10m., double the regular time allowance. She took the lead at the start and continued to gain steadily. The wind was about 5 knots southwest at the start and increased to 15 knots on the last round. Many hundreds of dollars changed hands, as honors had been about even between the two heretofore, and it was an open question whether Nepenthe could save so much time from the smaller sloop. L. D. S.

## Conanicut Y. C.

JAMESTOWN, R. I.—NARRAGANSETT BAY.

*Saturday, Aug. 18.*

Open sweepstake. Courses for second class northward from club pier to Bishop's Can Buoy, to bell buoy off Castle Rock and return to club pier. Courses for fourth class from club pier to Bishop's Can Buoy, to buoy off North Dumpling and to club pier. Distance, 9½ miles for second class and 7 miles for fourth class. Weather, fine. Wind, fresh southwest. Tide, ebb. Summary:

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| **SECOND CLASS.** | | | |
| Mojave, Wm. N. Murray | 21.00 | 1 48 12 | 1 46 36 |
| Betsey, R. Wadworth | 21.00 | 1 59 57 | 1 58 21 |
| Ulula, A. Windship | 21.00 | 1 48 26 | 1 48 26 |
| We Two, B. Lyons | 21.00 | 2 10 30 | Disabled. |
| **FOURTH CLASS.** | | | |
| Vesper, G. S. Plummer | 15.01 | 1 11 20 | 1 10 31 |
| Teppoo | 14.10 | 1 20 12 | 1 19 11 |
| Violet | 15.11½ | 1 19 48 | 1 19 41 |
| Maud, G. C. Clapp | 16.01¼ | 1 19 46 | 1 19 46 |
| Shadow, Dr. Davis | 15.07 | Disabled. | |

Mojave wins first prize in second class and Ulula second. Vesper wins first prize in fourth class and Teppoo second.

Official judge, A. J. Murray.

## Bay Head Y. C.

BAY HEAD—BARNEGAT BAY.

*Saturday, Aug. 11.*

This was an open race over the Mantoloking course; distance 15 miles, weather clear, wind N.E., light.

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Gertie, John Stout and Geo. Loveland | 20.10 | 3 10 16 | 2 14 26 |
| Lilia, J. M. Dickinson | 21.07 | 3 09 00 | 2 14 42 |
| Olympia, Harold Binney | 22.10 | 3 06 38 | 2 14 46 |
| Ben. Hance, Ben. Hance | 23.06 | 3 05 57 | 2 15 16 |
| Barber Shop, W. H. Robinson | 15.08 | 2 29 20 | 2 30 28 |
| Vim, F. O. Bailey | 22.04 | 3 08 57 | 2 16 05 |
| Peggy, A. W. Howe | 19.00 | 3 19 44 | 2 19 50 |
| Mary E., W. P. Kirk | 22.05 | 3 13 21 | 2 20 40 |
| Nan, C. H. Clark, Jr. | 19.05 | 3 21 43 | 2 22 58 |
| Truant, C. Heiser | 18.01 | 3 27 13 | 2 25 04 |
| Gertie S., — Steel | 18.01 | 3 27 32 | 2 25 23 |
| Kate, H. W. Hazard | 13.05 | 3 45 27 | 2 29 07 |
| Cygnet, W. H. Curtiss | 15.08 | 2 51 06 | 2 42 14 |

Winners: Gertie first, Lilia second. Regatta committee: J. C. Egbert, J. M Dickinson, W. M. McCauley, chairman. Judges: Louis B. Bonnett, E. D. Cooke, James F. Dale.

## Pine Lake Y. C.

PINE LAKE—WAUKESHA COUNTY, WIS.

*Saturday, Aug. 17.*

Sloop race, regular club course, distance 6 miles, wind N.E. at first, light, later quite fresh.

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Arion, Robt. Nunnemacher | 21.03 | 1 07 33 | 1 05 44 |
| Nyack, Henry Niedecken | 18.03 | 1 11 25 | 1 06 33 |
| Nancris, Com. Rietbrock | 21.04 | 1 08 50 | 1 07 10 |
| Amalia, J. C. Iversen | 22.04 | 1 08 07 | 1 07 17 |
| Hildesia, A. C. Helmholz | 17.09 | 1 14 17 | 1 09 00 |
| Marvel, Robt. Nunnemacher | 23.04 | 1 09 59 | 1 09 59 |
| Martha, J. C. Koch | 19.09 | 1 14 05 | 1 10 56 |
| Ducky Daddles, Gen. Winkle | 17.06 | 1 20 03 | 1 14 21 |
| Louise, John Barth | 18.07 | 1 19 01 | 1 14 36 |
| Gladys, H. L. Atkins | 21.01 | 1 17 03 | 1 15 04 |

Winners—Nyack first, Nancris second.

Arion was ruled out upon protest as not being a sloop and because not sailed by a member of the club.

Regatta committee: Com. Rietbrock, Vice-Com. Jas. Barth, O. C. Hansen, H. L. Atkins, Henry Niedecken. Judges: Gen. F. C. Winkler, J. C. Koch, E. E. Chapin, O. C. Hansen.

## Lake Geneva Y. C., Aug. 18.

Distance twelve miles; wind fresh.

| | Length. | Start. | Finish. | Elapsed. |
|---|---|---|---|---|
| Rival, B. Carpenter | 21.00 | 11 12 56 | 1 28 49 | 2 15 53 |
| Maybe, H. H. Porter, Jr. | 20.11 | 11 11 08 | 1 34 41 | 2 23 33 |
| Mystery, B. Sturges | 21.00 | 11 09 30 | Disabled. | |
| Hallelujah, R. G. Winslow | 21.00 | 11 12 09 | Disabled. | |

First prize, Rival; second, Maybe.

## A Day's Cruise of the Knockabouts.

On Aug. 12, at 9:30 A.M., the knockabouts of the Hull Y. C., Santa Maria, Nike, Becky Sharp and Spinster, with the cats Idler and Madge, left the club house at Hull, Mass., and beat down to Cohasset on invitation of the Cohasset Y. C. to a chowder. There was ample opportunity to try the boats, as the strong S E. wind sweeping up the lighthouse channel against the ebb tide, made a steep, nasty sea that wet the boats down fore to aft, and brought out the oilskins. Off the Atlantic House the fleet was met by the C. Y. C. boats Grimalkin, Medea, Duster, Winona, Narayana, club schooner Daylight, and further down by Trump, Zig-Zag and others. Laying too off Hogshead Rock till all had arrived, the fleet sailed along the Glades shore, single file, preceded by the Grimalkin C. Y. C., to the anchorage of Sandy Cove. All hands boarded the Daylight, and in due time were turned to on a fish chowder which, though it received a hard rub, held out to the last round. About 3 P.M. the fleet got under way, and left for Hull, with a strong fair tide and fresh S E. breeze.

Aug. 26 was the date set by H. Y. C. boys, to square accounts with the C. Y. C. at their own club house. QUAMINO.

## Sailing Dories.

A correspondent asks the following questions abont sailing dories; we will be obliged to any of our readers familiar with these boats for information: Do dories work satisfactorily under sail? What sort of sail would make a 16ft. dory most handy? What are the most approved dimensions of a dory? How much camber has the bottom? How long should the centerboard be? To make a sail boat of a dory, would you deck her fore and aft, and put combings in, thus forming a cockpit? How does a rudder on such a boat get enough hold in the water, is it the extra depth a skag would give?

# Rifle Range and Gallery.

## Inter-County Shoot.

Ephrata, Pa., Aug. 18.—The first of the three inter-county rifle contests between marksmen of Chester and Lancaster counties was held last Thursday at Engleside range, Lancaster, and was won by Lancaster by a score of 926 to 907. The shoot was close and exciting from beginning to end, and was anybody's match until the last man had discharged his rifle. Mr. Thomas Andrews carried off the honors of the team representing Lancaster county, while for Chester county Pugh did the best shooting. Following are the scores in full:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| **Lancaster County.** | | | | | | | | | | |
| T Anderson | 7 | 7 | 7 | 8 | 9 | 9 | 10 | 9 | 8 | 10—84 |
| Wentzel | 6 | 8 | 8 | 8 | 9 | 9 | 10 | 8 | 9 | 8—83 |
| Obreiter | 8 | 7 | 8 | 7 | 9 | 9 | 9 | 7 | 10 | 8—82 |
| Franciscus | 5 | 8 | 8 | 8 | 7 | 5 | 7 | 6 | 8 | 7—69 |
| Weber | 7 | 8 | 9 | 7 | 8 | 10 | 8 | 6 | 6 | 8—77 |
| Biehl | 10 | 7 | 7 | 7 | 5 | 10 | 9 | 9 | 9 | 10—83 |
| Lefever | 8 | 8 | 7 | 7 | 8 | 6 | 8 | 8 | 9 | 10—79 |
| Winters | 7 | 8 | 6 | 4 | 10 | 9 | 19 | 7 | 8 | 10—79 |
| Wiest | 8 | 5 | 9 | 8 | 10 | 9 | 6 | 8 | 6 | 9—78 |
| Wolfer | 9 | 6 | 7 | 8 | 6 | 5 | 7 | 6 | 4 | 6—64 |
| Carpenter | 7 | 8 | 7 | 6 | 8 | 8 | 6 | 8 | 8 | 5—71 |
| Romig | 10 | 9 | 10 | 5 | 10 | 9 | 4 | 9 | 5 | 6—77—926 |
| **Chester County.** | | | | | | | | | | |
| Gardner | 8 | 6 | 7 | 8 | 10 | 8 | 10 | 7 | 9 | 9—82 |
| Thompson | 7 | 9 | 9 | 10 | 9 | 5 | 8 | 9 | 0 | 8—74 |
| Fairlamb | 8 | 6 | 4 | 5 | p | 9 | 9 | 10 | 8 | 7—70 |
| Entrekin | 9 | 10 | 8 | 0 | 5 | 9 | 7 | 5 | 6 | 7—69 |
| Gilbert | 7 | 10 | 9 | 8 | 5 | 8 | 9 | 10 | 8 | 6—70 |
| Brooks | 8 | 8 | 9 | 5 | 6 | 7 | 8 | 6 | 7 | 7—71 |
| Rodebaugh | 6 | 7 | 10 | 9 | 7 | 9 | 10 | 7 | 10 | 8—83 |
| Patterson | 7 | 8 | 6 | 9 | 6 | 6 | 6 | 5 | 9 | 8—70 |
| Kendig | 7 | 10 | 9 | 7 | 5 | 9 | 4 | 5 | 8 | 10—74 |
| Pugh | 9 | 9 | 8 | 8 | 8 | 8 | 10 | 7 | 10 | 9—86 |
| Thorne | 10 | 4 | 8 | 9 | 9 | 6 | 7 | 6 | 6 | 6—71 |
| Moore | 6 | 7 | 9 | 8 | 7 | 6 | 10 | 9 | 7 | 8—77—907 |

The second match will be held at Coatesville on Aug. 30, and in the event of a tie, the third will come off at Ephrata or Reading.

## Rifle Shooting at Ephrata.

EPHRATA, Pa., Aug. 13.—The members of the North End Rifle Club held their regular semi-monthly practice shoot on their range in Ephrata, last Friday afternoon, eight shooters joining in the sport. The practice was at 200yds, muzzle rest shooting, best out of a possible 100, standard American target being used. The following scores were the best made:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Winters | 10 | 9 | 8 | 9 | 10 | 10 | 9 | 9 | 10 | 8—92 |
| | 10 | 8 | 10 | 9 | 8 | 10 | 6 | 10 | 7 | 9—90 |

Thursday the North End and Schuetzen Verein clubs shoot against the Chester county marksmen at Engleside, Lancaster. All the North End boys will be present.

D. B. LEFEVER.

## The Boy Shooters.

CHICAGO, Aug. 9.—*Editor Forest and Stream:* At the Interstate Manufacturers' and Dealers' Association tournament last spring, Col. Alberger gave three prizes in gold coin for a live bird shoot for boys under 15 years of age, at the same time I presented a gold medal for an inanimate target shoot for boys under 16. After a good deal of wrangling with the management I had the medal shoot take place, but when I asked to let the boys shoot the live bird match, Mr. Myers, secretary of the Prairie Gun Club, gave me this answer, "We don't care about the boys, it is the *stuff* we are after."

It is nearly three months since the tournament took place. I wrote to the president, secretary and captain of the Prairie Gun Club and received no answer from either, still I do not think that the club needs the stuff so bad, to use Mr. Myers's expression, that they can't let the boys have what belongs to them.

If anybody can give me any information about this matter I will be pleased to hear about it.

C. H. BISSON.

CHICAGO, Aug. 10.—*Editor Forest and Stream:* I think Mr. J. E. Long is under the impression that the medal for the boys' rapid rifle shooting championship of the United States, won by my boy Alfred in the match between him and Master Clarence E. Long can be shot for in my last challenge. This is a mistake, as the present challenge is for all-around shooting. Mr. Long has had all the chances in the world, and time enough for many return matches for the rapid firing medal, and why he should wait until his boy is past 12 years of age (stated age limit at the time the challenge was issued) I do not understand.

The other medal Mr. Long refers to as the 12-year-old wing shot championship of U. S. I know nothing about, and if there is such a medal I would like to know who holds it.

I will put up a medal of the same value as the rapid firing medal against $50 for the present match.

I understand that Mr. J. E. Long owns and runs a shooting gallery in Lafayette, and that the match would most likely take place there. If such is the case I will ask that the trap-shooting take place before rifle shooting.

If Mr. J. E. Long wishes his boy to shoot for the boys' wing shot championship of the U. S., I will let Alfred shoot him a match at 100 inanimate targets and one at 50 live birds for a $50 medal in each match.

C. H. BISSON.

[The above letter of Mr. Bisson refers to a challenge which he issued recently, as follows: He would match his son Alfred against anyone, except a professional, to shoot 50 shots, 50ft., American standard target; 54 shots at running balls, 3 balls to be shot at while going away from the shooter, or 3 shots to count, each broken ball to count 10 points, rifle to be shouldered after the balls are in motion; 50 shots at swinging target, one shot to be fired at each swing of target or scored lost, each ball scored, 10 points; 50 shots rapid firing, 50ft., German ring target, series of 10 shots each inside of twelve seconds, and one point added for each one-fifth second under set time; 30 shots with shotgun, inanimate targets, known traps and angles, each break to score 10 points; 10 live birds, American rules, each dead bird to score 10 points; no coaching, instructing or interfering while the shooters are at the score.

Mr. J. E. Long, Lafayette, Ind., on behalf of his son Clarence, accepted the challenge, naming Aug. 22 and Lafayette, Ind., the time and place, but added the following, which was not in the challenge: "These matches being to decide the boy championship of the United States, I will put up the money to cover the value of the medals now in existence, proclaiming said boy championship, viz., champion boy quick shot of the United States under 12 years of age, and champion boy wing shot of the United States."

Mr. Bisson states that his last challenge did not particularly refer to boys, but to anyone not a professional.]

## Zettler Rifle Club.

CYPRESS HILLS PARK, Aug. 19.—The Zettler Rifle Club held its regular bi-monthly practice shoot in this park this morning. Ten members were in attendance and participated in the shoot. Fred Ross again gave an exhibition of his wonderful holding ability. In a series of 50 shots he made the following score: 220, 225, 233, 238, 228—1144; an average of 228.4.

There was the usual struggle over the man target, which resulted as follows: Holges 58, M. B. Engel 56, B. Walther 57, F. C. Ross 55, C. G. Zettler 53, R. Busse 53.

Bullseye target, 3 shots, 4in. center, possible 3: Engel 1, Zettler 1, Busse 1, Ross 1, Holges 1.

Ring target:

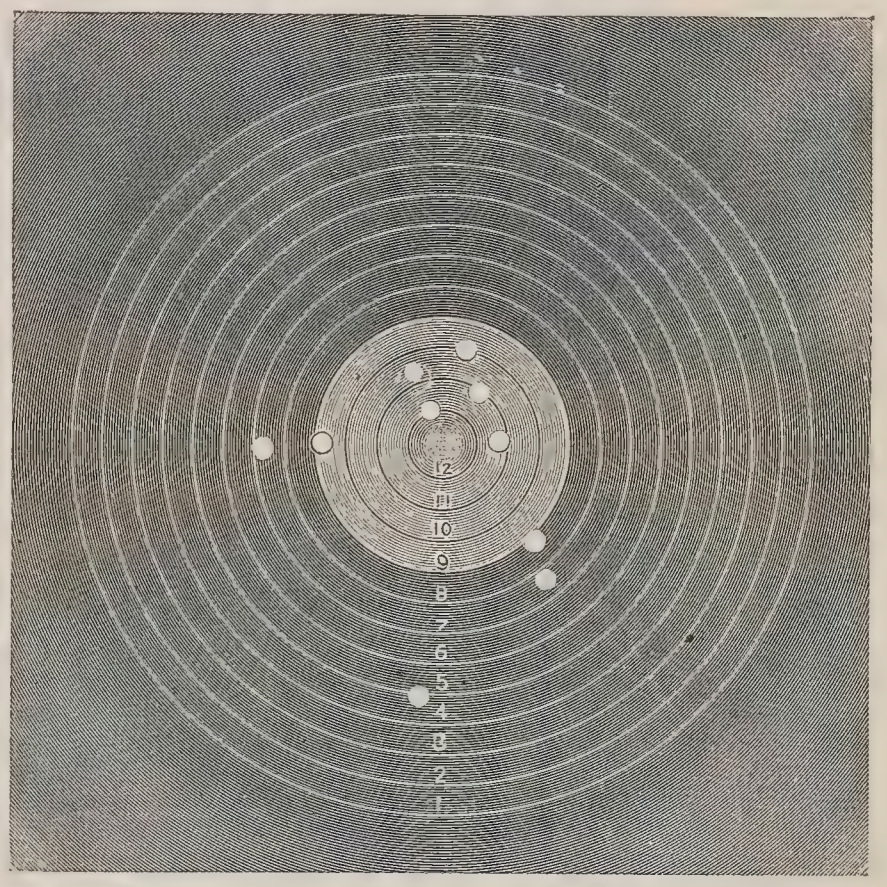
## Excelsior Rifle Club.



JERSEY CITY, Aug. 14.—The weekly gallery shoot of the Zettler Rifle Club, held at headquarters this evening, resulted in only six members filling out their scores in the handicap match. Scores: G. H. Ruhland 239, J. Hughes 233, Kustendick 226, C. Cohn 215, L. P. Hansen 241, Wm. Hughes 230.

GREENVILLE, N. J., Aug. 17.—The weekly practice shoot in the Schuetzen Park here this afternoon brought together only two members. The weather conditions were fine. Scores, 50 shots, German ring target:

| | | | | | |
|---|---|---|---|---|---|
| L P Hansen | 220 | 217 | 216 | 212 | 212—1077 |
| Jas Hughes | 181 | 208 | 202 | 193 | 193— 927 |

## A Good Target for Rapid Firing.

IN the July 28 number of the FOREST AND STREAM is set forth my system for rapid firing. In order to get the best results it is necessary to have good muzzle sights, and that these should contrast well with the target. I have found that a dark target (not deep black) with a light bullseye (not clear white) is excellent when using a large ivory muzzle sight. This score was made at the third trial, and although it is fairly good as regards ordinary count, the shooting was not rapid enough to count anything on the time scoring, as the ten shots were fired just within the time limit. For the hunter, a target of this color is of great value to practice on, as it is a more natural shade than the ordinary white target with black bullseye, for it is more like the game he shoots at.

Target ¼ size, 10 shots at 50yds., with a '92 Winchester, using .32-20 W. C. F. cartridges. Time 19½ seconds. Score 92.

WM. LYMAN.

## New York Rifle Club.

GREENVILLE, N. J., Aug. 18.—Five members met at the Greenville Schuetzen Park this afternoon for the weekly shoot. The weather was clear and warm until noon, when a storm threatened but was eventually dispersed by a brisk southwest wind. Major Shorkley was first to arrive and quickly commenced practicing with his "woodchuck gun," as he calls it, fitted with a telescope sight. Scores, 200yds., off-hand, standard American target:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Herrington | 6 | 11 | 12 | 12 | 12 | 7 | 7 | 8 | 8 | 6— 82 |
| Young | 10 | 7 | 8 | 9 | 12 | 7 | 8 | 6 | 8 | 6— 79 |
| Rest. | | | | | | | | | | |
| Barker | 12 | 12 | 10 | 9 | 8 | 9 | 11 | 11 | 9 | 10—101 |
| Duane | 12 | 9 | 12 | 9 | 5 | 9 | 9 | 12 | 7 | 7— 85 |

## Greenville Rifle Club.

FIFTEEN members of the Greenville Rifle Club assembled at headquarters Aug. 17, to participate in the weekly gallery shoot for class prizes. The scores: Collins 237, Plaisted 241, C. Boag 239, Robidoux 240, Purkess 245, J. Boag 235, Agneau 229, Gotthardt 220, Charlock 206, Chavant 230, Chase 228, Reuker 201, Graef 211, Holzapfel 219, Daniels 203.

## Schlicht Rifle Club.

WEST NEW YORK, Aug. 14.—At the weekly shoot of the Schlicht Rifle Club held in the Schlicht gallery this evening nine members were present and participated in the competition for class medals. Scores: G. Schlicht 240, W. Schlicht 234, J. Diehl 233, J. Schlicht 230, G. Dorr 228, G. Richert 227, A. Meyer 219, C. Schlicht 209, F. Lambrix 215.

## RIFLE NOTES.

Our local riflemen should not forget that the annual festival of the Zettler Club opens at Cypress Hills Park Aug. 26. The programme contains a prize list aggregating nearly $700. The festival will continue two days. The second day is visitors' or ladies' day, and, as in previous years, the park will no doubt be crowded with the friends of this famous club.

The California Schuetzen Club held its annual shooting festival at San Rafael, Aug. 19-20. The prize programme was liberal, the prizes on the target of honor alone aggregating $1,000.

The New York City Corps will hold its monthly shoot at Union Hill on Friday of this week.

In New York in July, 1895, will be held the great international shooting festival, during which there will be eight days' continuous shooting. There will be representative riflemen from all parts of America as well as Europe. The programme of the festival, which is about to be issued, we understand, has made no provision for team or individual championship matches other than the king target. We do not know the feeling of the fraternity on the subject, but our own idea is that one of the most interesting features of the coming festival would be to have one day devoted to a series of championship matches between teams and individuals representing the different States and countries. California will no doubt be well represented. Our Northwestern States will be out in force. Europe will, it is claimed, send many of its most expert marksmen to compete. It will be the one opportunity of a lifetime to bring such a gathering together. Why not have an extra day following the close of the festival, to be devoted to championship matches for teams and the individual experts? Let the friends of the rifle and those interested in the development of the sport pool their issues and put up the trophies that will be suitable for the occasion. Who seconds the motion?

## Cincinnati Rifle Shooting.

CINCINNATI, O., Aug. 11.—The Cincinnati Rifle Association held its regular practice shoot at its range to-day and made the scores appended. Conditions 200yds., off hand, at the standard target:

The regular practice shoot of this club will be postponed on Aug. 26 until Sept. 9, on account of the Corantiville Rifle Association's prize shoot occurring then, and which the Cincinnati Club will attend in a body:

| | | | | | | | | | | |

# Trap-Shooting.

## DRIVERS AND TWISTERS.

RIVERTON, Aug. 17.—The pigeon shooting match for the Hollywood Futurity Stakes, which, at the request of the New York crack shots, was transferred to the Riverton, N. J., ground this year, did not come off there to-day as scheduled. It was not the fault of the Philadelphians, however, that the event fell through, as all were on hand and ready to shoot, but the New York contingent did not put in an appearance. Of all the Gotham cracks, Capt. Money alone was present, and he had rheumatism so badly that he could not shoot. No word was received from Work, Hoey, Murphy, Thompson, Moore or the other New Yorkers who were counted on as sure entries. The crowd was somewhat disappointed, but the shooters present quickly arranged a handicap meet, $25 each man, and 25 birds apiece. In addition to standing at 27yds., Clarence Dolan was given 2 birds, but he never figured prominently. The birds were a fast lot, and the shooting throughout was excellent. McAlester gave a grand exhibition of skill, his birds being terrors. Finletter, who won first money, was favored by many easy hovering birds, while Ellis, who lost at the last moment, had 3 fall dead just out of bounds. Dando and McAlester tied for second and third money and shot off in a miss and out match, Dando winning.

At the August shoot of the Stock Yards Gun Club at Kansas City, each man shot at 10 live birds for the club medals. For Class A medal C. P. Baldwin, George Stockwell and R. K. Campbell tied on 9 kills each, Baldwin winning the shoot off. Class B medal went to J. Young and the Meyer medal to R. Overly. The scores:

| | | | |
|---|---|---|---|
| G Stockwell | 1012121111—9 | G M Waldon | 1202121202—8 |

NEW HAVEN, Conn., Aug. 16.—The sixth annual tournament of the Connecticut Trap-Shooters' League was held at the New Haven Gun Club grounds on West Chapel street yesterday. The prize of $150 in gold in the team race was won by New Haven. Following are the names of the members of the various teams and the scores of each in the championship contest: New Haven, first team: Sherman 24, Potter 18; total 42. New Haven, second team: Savage 22, Longdon 27; total 49. New Haven, third team: Bristol 21, Gould 18; total 38. Hartford: Burbridge 23, Wadson 16; total 39. Colt, first team: Tucker 24, Pitkins 19; total 42. Colt, second team: Goodwin 14, Collins 3; total 17. Colt, third team: Sleny 20, Risley 26; total 46. New London: Cowee 22, Penrose 24; total 46. Willimantic: Edgerton 24, Mac 24; total 48. Bristol, first team: Manross 22, Rickwell 19; total 41. Bristol, second team: Mills 22, Capious 24; total 46.

RED BANK, N. J., Aug. 17.—The regular live bird shoot of the River side Gun Club took place here to-day under good weather conditions and with a lively lot of birds. The shooting was governed by the A. S. A. rules, 5 traps being used. The summary: First event, club shoot, 7 birds: E. M. Cooper, E. Gardinsey and Jas. Cooper, Jr. 7 each, John Cooper and R. P. Thompson 6, J. B. Bergen 4. Second event, miss and out, entrance $3, one money: E. M. Cooper, J. B. Bergen, H. C. White and John Cooper 3 each, Jas. Cooper and Thompson 2. Third event, miss and out, same conditions: E. M. Cooper, Bergen, Jas. Cooper, White, John Cooper and Thomson 1 each, E. Cooper 0. Final event, same as above: E. M. Cooper and J. B. Bergen 4 each, Jas. Cooper, White and Thompson 8.

The following programme has been issued for the Labor Day tournament of the Endeavor Gun Club, to be held on Al Heritage's Marion grounds: Ten targets, $1 entry; 10 targets, $1; 15 targets, $1.50; 10 targets $1; 20 targets, $2; 10 targets, $1; 25 targets, $2.50; 15 targets, $1.50; 10 targets, $1; 20 targets, $2; 10 targets, $1, and 25 targets, $2.50. The fun will begin at 9:30 A. M. There will be plenty of ammunition and refreshments on the ground. The members of the club will all be on hand and take part in all the events. Events No. 3 and 8 will be known traps, unknown angles; No. 5 and 10 expert rules, use of both barrels allowed.

The Standard Keystone Company offers a very elaborate programme of events to be shot during its seventh annual tournament, to be held at New London, Conn., Sept. 4 to 7 inclusive. There will be the usual contests for the L. C. Smith trophy, Standard Keystone trophy, Peters Cartridge Co. trophy and the individual championship, as well as the State team race and the race between teams representing the East and West. Each day there will be a 25-target contest with a Lovell diamond safety, a Colt hammerless shotgun and a Winchester repeating shotgun added, one to each event.

The Myrtle Park Gun Club, of Irvington, N. J., announces that the next team shoot of the New Jersey Trap-Shooters' League will be held under their auspices at Hilton, N. J., on Thursday, Aug. 30. In conjunction with the 5-men team contest for the State championship, to begin at 2 o'clock, there will be a carefully arranged programme of tournament sweeps, to begin at 9:30 A. M. and continue until dark.

Col. A. G. Courtney is likely to have a lively time in capturing the A class diamond medal of the Onondaga County Sportsmen's Club, as several members are close after him in the race.

Jerseymen are awaiting anxiously the consolidation of the State Sportsmen's Association and the State Trap-Shooters' League. When will that meeting be held, Uncle Al?

At the August shoot of the Pelican Gun Club of Sacramento, Cal., J. M. Morrison won the club medal by scoring 19 out of 20 live birds.

On the first day at Memphis John Ruble averaged 94.37 per cent., and on the second day Harvey McMurchy averaged 95 per cent.

The Harrisburg (Pa.) Shooting Association will hold a tournament at both live birds and artificials on Sept. 27 and 28.

Al Heritage says the lunch counter will not be allowed to become empty on the day of the Endeavor tournament.

The West Jersey Gun Club, of Camden, N. J., will hold a tournament on Sept. 12 and 13.

C. H. TOWNSEND.

## Union Gun Club Shoot.

THE following scores were made at the August shoot of the Union Gun Club at Springfield, N. J., 30 singles per man:

Class A.

# JACK PARKER'S JOKE SHOOT.

## A Goose Fable.

DETROIT, Mich., Aug. 16.—History recounts that once upon a time that quaint and well-known shooter, Frank Parmalee, in company with three friends, was secreted in a goose pit on the Platte River. Each man was armed after his fancy, one with a 16-gauge, one with a 12, Parmalee himself with a 16lbs. 8-gauge. A solitary goose appeared on the horizon, and it became apparent finally that it was headed directly for the decoys.

"W-w-we won't do a thing to him!" murmured Frank, and all the others chuckled in assent. The goose sailed straight on, setting his wings for a close draw. Parmalee could hardly keep from laughing outright at the thought of the surprise the poor goose was going to have. He crouched close, and whispered to the others, "Oh, no! W-w-w-w, we, we, w-w-won't do a t-thing t-to *him!*" And the goose kept on coming in. At the proper moment each man delivered his fire, from the 16-bore up to the 8-bore not a feather was touched, and with a calm *ha-onk* the goose winged his way placidly across the river. Parmalee stood looking after the vanishing bird for some time, and at length turned to his silent companion with a sad smile on his face.

"W-w-w-w-we, we d-d-didn't, we did we didn't do a th-th-thing to him, neither, n-n-now did we, boys!"

## Moral.

When Jack Parker announced that he intended to throw away all attempts to handicap shooters at his shoot, and let all the shooters shoot against the management, giving each ten-straight score a large, crisp, new $5 note, and each fifteen straight ten large silver plunks of the realm, all the shooters of the land smiled generously. Tee-Kay Keller said, "Don't you do it, Jack. Don't start that. If you do I'll have to quit my job and follow your shoots. I ll break you." At Memphis, last week, McMurchy shook his head. "I'm afraid Jack won't make that go," said he. "He's a nice fellow and I'm sorry he's announced any such programme, because it will break him, sure." All the others of the gang at Memphis thought the same. They were sorry for Jack—so sorry that when they thought of it they would break out in a pleasant grin, and say:

"We won't do a thing to him."

And they didn't. Now did they, boys?

## The Conditions.

Jack Parker published and delivered broadcast the conditions under which the shoot was to be held, and the shooters all knew them when they came here. His programme read:

"First. Why should we use only one barrel in inanimate target shooting, when 99 per cent of the shooters use a double gun?

"Second. Why should we know where the target is coming from and where it is going, so we can stand with our gun glued to our shoulder, and pointed over the top of the screen where the target starts from? Trap shooting takes the place of game shooting during the close season, and we are supposed to emulate field shooting as near as possible; do we, by shooting as above?

"Third and last. Why shoot against one another? There has been no handicap devised yet which thoroughly equalizes shooters; the $1,000 added money given away at several of the large tournaments the last year or two has not helped matters much, as there are just as many losers as before.

"Now, I propose to try and revolutionize the present style of inanimate target shooting at this tournament, and whether it will be a success or not, remains to be seen. All the 10 and 15 bird races shall be shot at 15yds. rise, unknown traps and angles, use of both barrels, second barrel break to count same as first, four men in a squad, No. 1, 2 and 3 men standing in the center 6ft. apart, No. 4 man backing up No. 1 man, and will pay as follows:

"Ten-bird races—Every man breaking 10 straight receives $5; 9 out of 10, $3; 8 out of 10, $2; 7 out of 10, $1; 6 out of 10, $1.

"Fifteen-bird races—Every man breaking 15 straight receives $10; 14 out of 15, $7; 13 out of 15, $5; 12 out of 15, $3; 11 out of 15, $2; 10 out of 15, $1.50.

"Thus doing away with all necessity of a handicap, as the shooting of the expert does not hurt the interest of the amateur; everybody is shooting against the management. It also does away with all pooling, combinations and dropping for place, which has been the bane of shooting tournaments for years.

"Other rules and conditions:

"All the guaranteed purses shall be shot at 16yds. rise, one barrel, known traps and angles (except known experts shall shoot at unknown angles, known traps), and shall be divided 30, 25, 20, 15 and 10 per cent.

"The team and individual championship races shall be shot at 16yds. rise, everybody shooting at known traps and angles."

The above conditions are plain, though the premises on which they are based are by no means correct. For instance, trap-shooting is by no means intended to take the place of field-shooting and can not emulate it, because field shooting is a clean amateur sport, whereas modern tournament shooting is a corrupt professional sport. In the attempt to do away with the universally practiced system of dropping and pooling, which makes this sport dangerous and undesirable for the amateur shooting for pleasure, Jack Parker's idea was well enough. There was only one thing he forgot and that is that the shooters are wedded to the old ways. They want nothing but a sure thing game and they won't have it. They will go into a game so long as it is easy and sure, but when it turns against them they are not game. They pull out at once. The risk, the skill, the pleasure of a keen competition do not interest them. It is the money alone that draws them. So long as they win it all, very well. When they begin to lose it is quite a different story. So long as it had been Jack Parker losing, the boys would have been sorry, but they "wouldn't have done a thing to him."

The actual result of this latest attempt to equalize the shooters, to mix oil and water, to fix it up so that the paid professional shooter can continue unsuspected in his laudable avocation of shooting in with the unpaid amateur shooter and continue pleasantly to take all his money in a sure-thing game—this last attempt at the impossible resulted in just this way. The amateur, the young and inexperienced shooter liked it. A few of the really good shots did well at it, as see the scores. Jack Parker made money at it—$59 in about four hours. Then there arose a wild howl from one or two Cleveland shooters, who couldn't bear to see Jack Parker with all the money. Others joined in. At noon of the first day, it having been clearly established that they really weren't going to do anything to Jack, some of the shooters said the conditions would have to be fixed to suit them or they would get into their carriage and be pushed home. As he would lose money holding a shoot without shooters, of course Jack was forced to accede to the demands and drop his honest and well-intended plan to be square to all men who cared to come and pass a day at traps. Not to appear ungenerous or disposed to take the shooters' money too easily, he offered to put up the entire $59 he had won to be shot for again in purses under easier conditions. Some of the better class shooters would not hear to this, I am glad to say. The whole thing had been such a good joke that they were willing to pay for it. So at 1 o'clock of the first day the attempt of Jack Parker to elevate the trap was lying in ruins. By afternoon the old system was in swing, and everybody was happy. The amateur, the man who put up his own money, the young shooter, the man who wanted to learn to shoot, the man who wanted a day's fun out of doors, were all swiftly receiving the usual rebuke. The known and secret manufacturers' agents, the professionals, the rounders, the business shooters, were busy sawing wood, induced thereto by the medals, the diamonds, the guarantees, the added funds, the average moneys and the "plunder" obtained from citizens interested or not interested in the modern artificial system of tournament shooting. In other words, the tournament fell into the regular routine, lost its features, lost its news, lost its interest, thus being far below the big Memphis shoot of last week in point of intrinsic merit, though as a shoot it was carefully and of course skillfully conducted with Jack Parker at its head.

It was like a thousand other shoots. I submit that the above comment on these thousands of shoots, held in this the greatest of all trap-shooting years, may be felt unwelcome, but cannot be called unfair. I believe the time will come when such comment must be taken much more seriously, and the questions under it studied much more seriously. Then it will be found that the comment was made in the best sort of friendship, not with the first trace of harsh criticism or the first trace of an enmity which would be highly foolish. The real question is, what plan is best for trap-shooting? Will even the unique American love of gambling and love of being humbugged keep forever alive a sport entirely artificial and unfair? Fix it so we can gamble, and have a square game, with a proper per cent. to the dealer, so he can keep up the game, and I see no reason why this game should not live and grow unspeakably, but until we come nearer to that I am plenty scared for the future of trap-shooting, even if we do have three or four or five boom years of it.

Well, never mind. We will let it go at that. But wasn't it a good joke, how they didn't do a thing to Jack Parker?

## The Programme.

The programme I offer entire at this place, merely to show the extent of the merchandise prize system. I call attention to the gold-headed umbrella of Mr. Genicke, also to the stiff hat of Mr. Weiss. This reminds me of a shoot I once attended where one citizen "donated" two loaves of bread, and another a bottle of "black liniment." I do not deny that liniment, bread, a stiff hat and a gold-headed umbrella are all articles which possess merit and usefulness, and the shooter who has shown an inability to get liniment, bread, a stiff hat, a gold-headed umbrella in any other way, should have liniment, bread, a stiff hat and a gold-headed umbrella given to him, through the management. The items follow. But wasn't it a joke how they were going to do something to Jack?

First day, Tuesday, Aug. 14, commencing 9 A. M.—Events 1 and 2, 10 bluerocks, $1.50 entrance; No. 3, 15 bluerocks, $2.50; No. 4, 20 bluerocks, $100 guaranteed purse, $3.60; No. 5, 10 bluerocks, $1.50; No. 6, 15 bluerocks, $2 50. Team championship race, for two-man team; championship of United States and Canada. Any two men of the United States or any two men from Canada to comprise team, 25 targets to a man. No. 7, 25 bluerocks, 75 cents; first prize, two elegant diamond buttons, emblematic of team championship, to become property of winners; second, 12½lbs. of American wood powder, donated by American Wood Powder Co.; third, 500 nitro powder shells, by Cruttenden & Card; fourth, 500 nitro powder shells, by Peters Cartridge Co ; fifth, 500 Quick Shot shells, by Peters Cartridge Co.; sixth, 10lbs. of American E. C , by American E C. Powder Co.; seventh, one case of Joe White's best, by Jos. White; eighth, 6lbs. American E. C , by American E. C. Powder Co.; ninth, one box cigars, by Frank Girardot; tenth, 100 loaded nitro shells, by H. M. Levengston. No. 8, 10 bluerocks, $1.50; No. 9, 15 bluerocks, $2.50; No. 10, 10 bluerocks, $1.50.

Second day, Wednesday, Aug. 15, commencing 9 A. M., live bird day.—First event, 5 live birds, $5 entrance, 60 and 40%; No. 2, 7 birds, $7, 50, 30 and 20%; No. 3, 10 birds, $10, 40, 30, 20 and 10%. International race for international medal, value $150, emblematic of the international live bird championship of the United States and Canada; open to the world; $25 sweep in connection with medal race. No. 4, 25 birds; entrance for medal, price of birds; entrance for sweep, $25 and birds. No. 5, miss and out, $2.

Third day, Thursday, Aug. 16, commencing at 9 A. M.—Events 1 and 2, 10 bluerocks, entrance $1 50; No. 3, 15 bluerocks, $2.50; No. 4, 15 bluerocks, $2 50. Chamberlin Cartridge and Target Company's guaranteed purse of $100; No. 5, 20 bluerocks, $3.60; No. 6, 10 bluerocks, $1.50; No. 7, 15 bluerocks, $2.50, guaranteed purse $100; No. 8, 20 bluerocks, $3 60; Nos. 9 and 10, 10 bluerocks, $1.50 each.

Fourth day, Friday, Aug. 17, commencing at 9 A. M.—Events 1 and 2, 10 bluerocks, entrance $1.50 each; No. 3, 15 bluerocks, $2.50; No. 4, 20 bluerocks, $3.60, guaranteed purse $100; No. 5, 10 bluerocks, $1.50; No. 6. 15 bluerocks, $2.50; No. 7, individual international target championship, United States and Canada, for a diamond trophy, to be the property of the winner, 50 bluerocks, $1.50: First prize, diamond trophy; second, Wilkesbarre gun, donated by Wilkesbarre Gun Co.; third, fancy Colt repeating rifle, donated by Colt's Patent Fire Arms Co.; fourth, Devine fishing rod, donated by Fred D. Devine; fifth, 9lbs. E. C. powder, donated by American E. C. Powder Co.; sixth, 6¼lbs. Wood powder, donated by American Wood Powder Co.; seventh, same; eighth, gold-headed silk umbrella, donated by Wm. Genicke; ninth, .22cal. rifle, donated by Hodgson & Howard; tenth, stiff hat, donated by L. F. Weiss; eleventh, 200 nitro powder shells, donated by H, M. Levengston; twelfth, same. Event No. 8, 10 bluerocks, $1.50; No. 9, 15 bluerocks, $2.50; No. 10, 10 bluerocks, $1.50.

## The Grounds.

The island where the grounds are located is well known. It was named after old man Deschreeshoska, who used to live here before the war. The convenience to the hotel is a great feature. There could not be a pleasanter place or pleasanter arrangements for a shoot. Everything is easy and convenient. The hotel is good and we have it upon the word of no less an authority than Col. W. R. Hobart that while the lobsters of Lake Michigan are passing large and fat, and the yellow-leg chickens of Memphis fair to look upon, the frogs' legs furnished by the descendants of old man Deschreeshoska, who runs this hotel, surpass all previous gastronomic attractions whatsoever. In the middle of the big blue Detroit River, the island is always cool. The weather the first day was beautiful. The second day was so unpleasantly cold that the men just up from sweltering Memphis hastened to fish out their ducking sweaters and overcoats.

## In Attendance.

Well known names are on the register of the hotel. G. Harry Marlin, of the Marlin Repeating Arms Co.; C. E. Willard, of the Colts Patent Firearms Mfg. Co.; H. McMurchy, of the Hunter Arms Co.; Will K. Park, of the Wilkesbarre Gun Co.; Rollo Heikes, of the Winchester Repeating Firearms Co.; Geo. W. Collins, of the Fletcher Hardware Co., all mingled with the giddy throng and upheld the gun trade. Paul North was of course on hand from the Bluerock city. Almost everybody represented the ammunition trade. FOREST AND STREAM represented the newspaper trade. It is the only newspaper in the sporting news business nowadays. There are more copies of FOREST AND STREAM read in Michigan and Canada than of any two other sporting papers. FOREST AND STREAM has a bar'l. It can get news.

But wasn't it a joke about they were going to do something to Jack Parker?

*Tuesday, First Day, Aug. 14.*

As soon as the first boat had gotten down from the city the fun began at the traps and of course lasted till dark. The event of the day was the two-man team race for the target championship of the United States and Canada. It was won by Heikes and Young by a score of 47 out of a possible 50. Heikes broke 24, missing his 7th. Young, his partner, got 23, missing his 20th and 23d. The only other man besides Heikes to secure 24 was J Klein, of Detroit, who broke 21 straight, but his partner fell down. The contest was taken part in by 21 teams The nearest competitors to the medal winners were three 44s—Fry and Penberthy, Fulford and McMurchy, Kelsey and Hobart. Scores:

No. 1, 10 singles, $1.50: Hobart 4, Grimm 4, Fulford 7, Van Dyke 6, McMurchy 7, Brewer 7, Graham 7, Merrill 8, Penberthy 7, Fry 4, Redwing 3, Wayper 7, Holt 9, Heikes 6, Willard 6, Martin 7, North 2, Thomas 6, Young 6, Upson 6, Tippy 4.

No. 2, 10 singles. $1 50: Thomas 1, North 5, Tippy 9, Willard 5, Martin 5, Redwing 4, Young 7, Grimm 6, Hobart 4, Van Dyke 8, Fulford 4, McMurchy 8, Merrill 8, Brewer 4, Graham 4, Wayper 3, Penberthy 8, Holt 7, Heikes 7.

No. 3, 15 singles, $1.50: Fulford 11, Van Dyke 5, Grimm 7, Brewer 8, Graham 8, McMurchy 12, Merrill 7, Penberthy 8, Heikes 13, Holt 8, Hobart 5, Wayper 7, Young 9, Willard 8, Martin 7, Thomas 9, Tippy (withdrew) 4.

No. 4, 20 singles, $3.60, guaranteed purse of $100: Grimm 13, Van Dyke 18, Brewer 16, Upson 20, Graham 19, Heikes 17, Fulford 19, Hobart 16, Penberthy 17, McMurchy 18, Holt 17, North 16, Merrill 17 Young 20, Redwing 15, Fleischer 12, Willard 15, Parker 17, Easton 18, Kelsey 17, Wayper 10, White 18, Spross 16, W. S. King 19, Tippy 16, Thomas 13, Rich 17, Martin 13, Cicotte 10, Gerton 13, Lewis 14, A. H. King 15.

No. 5, 10 singles, $1.50: Brewer 5, Grimm 6, Tippy 7, Fulford 5, McMurchy 4, Van Dyke 5, Penberthy 8, Graham 7, Merrill 5. Heikes 8, Holt 7, Hobart 5, Martin 7. Willard 6, Young 7, Thomas 3, Rich 1, Weichers 4, Kelsey 7, Sandyes 1, White 5, Spross 7, Parker 6, Easton 6.

No. 6, 15 singles, $2.50: McMurchy 14, Graham 11, Fulford 13, Van Dyke 15, Heikes 14, Lewis 11, A. H. King 12, Spross 13, Brewer 12, W. S. King 11, Grimm 15, Upson 13, Merrill 13, Holt 10, North 14, Hobart 12, Young 13, Redwing 12, Fleischer 12, Cicotte 11, Penberthy 11, Martin 10, Thomas 12, Tippy 10, Easton 14, Rich 12, Parker 14, White 13, Kelsey 11, Gerton 12, Johnson 9.

No. 7, 25 singles, 75 cents, two-man championship team of America: Heikes 24, Young 23-47; Brewer 22, Van Dyke 20-42; Grimm 21, Merrill 22-43; Rich 15, Fleischer 16-31; White 17, Easton 17-34; Wayper 21, Donaldson 20-42; Holt 16, Spross 23-39; Redwing 20, Upson 23-43; Fry Penberthy 21-44; Willard 22, Martin 13-35; W. S. King 12, Lewis 17-29; A. H. King 14, Thomas 22-36; Fulford 22, McMurchy 22-44; Park 18, Gerton 14-32; North 21, Tippy 17-38; Graham 20, Parker 21-41; Kelsey 21, Hobart 23-44; Payson 22, Brown 14-36; Cicotte 14, Smith 19-33; Klein 24, Ford 17-41; Forrest 19, Purser 19-38.

No. 8, 10 singles, entrance $.50: Grimm 10, Heikes 8, Fulford 8, Van Dyke 9, McMurchy 8, Graham 10, Brown 10, Upson 8, Hall 8, Young 8, Merrill 9, Willard 9, Thomas 7, Park 6, Marlin 6, Penberthy 5, W. S. King 7, Redwing 8, Spross 8, A. H. King 8, Hobart 9, Wayper 5, Levis 9, Easton 6, Kelsey 5, White 8, Parker 7, Fletcher 7, Schmidt 4, Cicotte 9, Rich 6. Toppy 5, Gerton 5.

No. 9, 15 singles, entrance $2.50: Fulford 12, Van Dyke 11, Heikes 11, Grimm 11, Graham 13, Kelsey 12, Upson 14, Brewer 14, Willard 12, Holt 13, Young 14, McMurchy 10, Merrill 8, Levis 14, Martin 10, Redwing 13, Thomas 11, W. S. King 7, Penberthy 13, Spross 14, Hobart 10, A. H. King 12, Easton 12, Parker 11, Fleischer 13, Cicotte 7, White 13.

No. 10, 10 singles, $1 50: Fulford 9, Van Dyke 6, Grimm 6, Brewer 10, Young 8, Upson 10, Hobart 8, White 7, Kelsey 8, Graham 8, Rich 4, Cicotte 5, Fry 7, North 8, Holt 9, Easton 6, Parker 6, Thomas 6, McMurchy 8, Willard 7, Redwing 9, Marlin 8, Tippy 6, Wayper 5, Heikes 9, Merrill 5. Levis 8. W. S. King 4, Penberthy 8, Park 6, Spross 9, A. H. King 5, Ford 5, Schmidt 5, Fleicher 6, Mitchie 4, Gerton 8, Klein 9, Thompson 6.

Sweep, 15 singles, entrance $2: Grimm 14, Fulford 13, Graham 11, Van Dyke 14, Redwing 13, Brewer 11, Upson 14, Easton 13, Spross 15, Penberthy 11, Heikes 14, Young 14, White 12, Holt 10, Rich 11, Thompson 12, Wayper 10, Marlin 8, Willard 10, McMurchy 11, Merrill 10.

Sweep, 15 singles, entrance $2: Fulford 13, Van Dyke 13, Easton 13, Grimm 11, Redwing 10, Graham 10, Spross 13, Rich 11, Levis 10, W. S. King 12, White 10, Wayper 11.

Live bird sweep, 15 birds, known trap, $81.20 divided: McMurchy 15, Brewer 15, Kelsey 15, Fulford 15, Upson 15, Penberthy 14, Grimm 14, Parker 14, R. Merrill 14, A. H. King 14, Thompson 13, Graham 13, W King 12.

*Wednesday, Second Day, Aug. 15.*

The shooting progressed desultorily, as it must when live birds targets are shot at the same time, many men being entered at) scores at the same time. The wind was good, but the live birds flew very dufferish lot. They came packed altogether too many in each crate, and apparently not fitted up by a term of rest and food. The interest of the day centered in the international championship live bird contest. The winner of this event in the tournament of 1891 was L. T. Duryea, of Glen Cove, L. I.; 1892, Rolla Heikes, of Chicago; 1893, A. H. King, of Pittsburgh. Heikes and King were in the present contest. This championship carries with it one of the most beautiful medals now in open competition before the shooting public. Three wins are required to constitute individual ownership. A sweep was started to run with the medal; but all took down their money, the requisite number of ten entries not showing. Brewer started the trouble in this matter, after missing his first bird, which happened to be a screamer. At this Brewer drew down his money and was followed by the others. The event went on none the less, and was of such size that it could not have been concluded during the day. At night there were three straights left in at night, Parker with 19, Thompson with 18, and Merrill with 15. Some had finished their scores, but none had escaped the d o. b. bird except the three above. The completed scores of the day follow.

No. 1, 5 live birds, $5, two moneys:

| | | | |
|---|---|---|---|
| Parker | 01212—4 | Fulford | 11111—5 |
| *Holt | 10021—3 | Thompson | 11011—4 |
| A H King | 11120—4 | Merrill | 21111—5 |

No. 2, 7 live birds, $7, three moneys:

| | | | |
|---|---|---|---|
| Upson | 1211112—7 | Young | 1211222—7 |
| Heikes | 0121120—5 | *Park | 0112121—6 |
| Graham | 2112120—6 | Parker | 1110111—6 |
| Kelsey | 1111110—6 | A H King | 1101222—6 |
| W S King | 1121100—5 | Fulford | 1122112—7 |
| *Holt | 1111222—7 | Merrill | 2112122—7 |
| Thompson | 1112111—7 | Grimm | 1112102—6 |
| Van Dyke | 1111211—7 | McMurchy | 1121021—7 |

No. 3, 10 live birds, $10, four moneys:

| | | | |
|---|---|---|---|
| Fulford | 2122111222—10 | *Easton | 2120111111— 9 |
| A H King | 1121122021— 9 | Parker | 1112212111—10 |
| W S King | 2211102111— 9 | Merrel | 1221211212—10 |
| Kelsey | 1211211111—10 | Grimm | 2212212202— 9 |
| Thompson | 1111012112— 9 | McMurchy | 1221221212—10 |
| *Redwing | 2111212110— 9 | Holt | 1212102011— 9 |
| Upson | 1011111220— 8 | Young | 2102222200— 7 |

* Shot for birds only.

No. 4, 25 live birds, international championship (unfinished): A. H. King 15-1. Heikes 4-1, McMurchy 13-2, Parker 19, Thompson 18, Fulford 13-1, Brewer 1-1 (quit), W. S King 10-4, Holt 12-2, Merrill 15, Van Dyke 15-1, Upson 14-1, Redwing 17-1, Young 14-1, Spross 12-3, Grimm 13-2, Wayper 5-2, Butler 13-2, Levis 14-1, North 8-2, Warde 10-3. Penberthy 23-2, Graham 13-2, Easton 6-1, Weise 21-4, Walton 10-5, Marker 13-2, Tippy 13-2, Avery 18-2, Morris 9-3.

The $25 medal sweeps:

First sweep, 15 singles, $2: Northmore 6, Easton 11, Graham 6, Vallade 9, Spross 7, Chauvin 11, Kelsey 12, Heikes 15, Brewer 8, Walton 10, Gerton 8, Fulford 10, Redwing 11, Purser 11, Holt 6, North 9, White 9, Merrill 13, Young 12, Thomas 9, Hobart 12, W. S. King 9.

Second sweep, 15 singles, $2: Fulford 14, Northmore 11, Brewer 10, Heikes 14, Spross 12, Gerton 9, Vallade 8, Hobart 8, White 14, Kelsey 5, Wayper 11, Thomas 8, Easton 13, Avery 4. Purser 13, Ford 10.

Third sweep, 15 singles. $2: Brewer 10, Heikes 12, Fulford 10, Spross 11, Northmore 12, Kelsey 12, Avery 5, Walton 14, Marks 8, Wayper 9, DeWolf 7, Hobart 8, Dock 10, White 12, Thomas 7, Purser 12, Easton 15, Redwing 11.

Fourth sweep, 15 singles, $2: Fulford 15, Heikes 13, Kelsey 14, Upson 14.

*Third Day, Thursday, Aug. 16.*

The weather was overcast and cold in the morning, but by afternoon had become very pleasant. This was the banner day of the shoot. Large numbers of spectators from the hotel and the excursion boats crowded about the shooting stands all day, and the interest was lively throughout. Nothing marred the evenness of a very well conducted shoot, except the disreputable practice of "bushwhacking" behind the score. An occasional bird would escape from the traps and come back over the crowd toward the trees, and there was always a number of guns waiting for it, some shooters doing this sort of thing who should know better. Loaded guns were common, and I saw one man, more or less intoxicated, who had two loaded guns and was waiting for a shot. All this was close behind or in among the line of shooters and spectators, and although no accidents happened that fact was due to good luck. Parker did all he could at times to stop this, but it needed more absolute measures. Jack Brewer is especially careless with a gun in matters of this kind, and when he gets to shooting a half dozen shots at one object, or flourishing a loaded and full magazine Winchester behind the crowd he ought to be called down, at this or any other shoot. Shooters are all just alike, and the well-known rule about loaded guns anywhere but at the score applies to all alike and should be enforced for all alike.

During the day Mr. W. M. Thomas, of the U. M. C. Co., set up his elegant box of samples of loads, loading and loading ingredients on the grounds. Ferd Van Dyke's Winchester sample case was also in evidence and Billy Hobart was there also.

A pleasant little surprise for the management was offered by Mr. L. Gitschalk, a Detroit citizen, who in return for a little programme courtesy had manufactured three beautiful gold and diamond medals for competition. A special event was arranged by which these medals were offered in a three-men team championship contest, for the championship of Detroit and Windsor, and of counties Wayne, Monroe and Oakland. Parker, Klein and Renwick made the Detroit team which won the event.

The scores did not run high and straights were not numerous. Toward evening Heikes hit his old swing and won out $60 in a couple of hours, getting straights alone and a good place or two in other events. At 4 o'clock he said he had won enough to go fishing, so he quit shooting and went fishing for fun.

The main event of the entire shoot was concluded in the morning, the international live-bird championship race. The tall, slim, blonde youth from Milvowka known as Dickie Merrill won the great badge for 1894. Dickie has been East at the seasha'w this summer and came back with collars even a shade higher and with trousers bearing an even more alarming crease. He talks foreign idiom, speaks of golfing, tennis and such things, and shakes hands high up. But he has not forgotten how to shoot. The night before the finish he had 15 straight. It was my misfortune to be obliged to occupy the same room with him at the crowded hotel, and I can testify to his abounding cheerfulness and exuberance of spirits. He woke me up at 4 o'clock in the morning by a series of imitations of fowls, quacking like a mallard, laughing like the loon, purring like a bluebill and doing divers other things of the sort to indicate his content with life, all of which were well calculated to disturb the innocent slumbers of a newspaper man trying to help out his complexion by a beauty-sleep in the morning. The man who beats Dick will have to get up early in the morning, I can affirm. After his morning crow he went out and killed the other 10 straight. Jack Parker trotted him so close a heat that they had to go the tie, where Jack dropped two to Dick's one, the latter winning with the fine showing of 34 killed out of 35 total. It was a very popular first and second.

I should say, to avoid misunderstanding as to the readjusted conditions of the tournament, after the original platform was overthrown by the Cleveland kick, that the shooters were classified as at Memphis, experts and amateurs, the experts shooting unknown angles, the amateurs known angles. In the afternoon of to-day there were several shooters from Canadian towns near by, most of whom went to the amateur score.

In the evening the island of old man Deschreeshoska was at its best. The hotel was brilliantly lighted and the grounds were well filled with fair women and brave men. The great river with its continual caravan of craft of all sorts was a pretty sight with its thousand dancing lights. Item, one moon. Item, several stars. The crew of the yacht Josephine, otherwise known as the American Wood Powder Orchestra and Quartette, made plenty of good melody for the boys until so late that even the winners of the day wanted to go to sleep.

Following are the scores of the day:

No. 4, International championship, 25 live birds:

| | |
|---|---|
| Merrill | 2111211111221222122211212—25 |
| Parker | 1211111211112112111112121l—25 |
| Van Dyke | 1111210111122212222111211—24 |
| Upson | 1121212202111111121212111—24 |
| Thompson | 1121211111111211112101111—24 |
| Fulford | 1110112111122121111121111—24 |
| Redwing | 2111212110211121111112111—24 |
| A H King | 2122221222211102012121112—23 |
| Levis | 1111212220112111222201122—23 |
| Pemberthy | 1211122111112211111111110—23 |
| Holt | 1101202211112120211211211—22 |
| McMurchy | 1110111121111101111110122—22 |
| Young | 1212221212202221201122022—22 |
| Grimm | 1112201122102011112112l1—22 |
| Butler | 1111111115111012220211211—22 |
| Weise | 2211121112121210210011101—21 |

The score in the tie was as follows:

| | | | |
|---|---|---|---|
| R Merrill | 1112221012—9 | John Parker | 1201222201—8 |

Following are the scores of those who started in the above event but who did not shoot it out: Walton 10 killed, lost 5, Marks 13-2

Morris 9-3, Spross 12-3, Wayper 5-2, Brewer 1-1, W. S. King 9-4, Heikes 4-2, North 8-2, Waide 10-3, Graham 13-2, Easton 6-1.

Miss and out, live birds: Parker and Fulford 8 each; Upson, Barton, Merrill and Brewer, 4 each; Van Dyke, Ward and Clarke, 1 each; McMurchy, Redwing and Grimm, 0 each. Parker and Fulford agreed to split $24, the purse.

Special live bird race, 10 birds, for silver shaving set presented by John Parker, and silver card case, presented by W. F. Genicke: First prize won by Weise, second prize won by Avery in the shoot off. Weise 9, Holt, Avery, Butler, Walton, 7 each; Donaldson and Brady, 5 each.

No. 1, 10 singles, entrance $1.50: Brewer 5, Hobart 7, Kelsey 10, Heikes 7, Rex 8, Spross 7, Graham 8, Brewer 6, Fulford 8, Tippy 9, Thomas 6, McMurchy 9, Parker 7, Grimm 8, Young 7, Easton 8, Gerton 7.

No. 2, 10 singles, entrance $1.50: Heikes 8, Rex 9, Graham 9, Hobart 9, Kelsey 9, McMurchy 10, Grimm 9, Thomas 4, Fulford 9, Young 7, Gerton 7, Easton 6, Brewer 10, Spross 8, Tippy 7, North 8, Daniels 3.

No. 3, 15 singles, entrance $2.50: Fulford 11, Heikes 14, Hobart 8, Graham 13, Rex 12, Kelsey 10, McMurchy 12, Grimm 15, Daniels 7, Easton 10, Adams 6, Brewer 10, North 10, Thompson 9, Gerton 7, Holt 11, Van Dyke 12, Merrill 15, Parker 12, W. S. King 9, Upson 14, Young 14, A. H. King 11, White 10, Pemberthy 12, Redwing 13, Rich 7, Tippy 11, Thomas 12, Spross 12.

No. 4, 15 singles, entrance $2.50: Fulford 12, Hobart 9, Upson 13, McMurchy 13, Grimm 11, Rennick 13, Brewer 10, North 10, Van Dyke 12, Levis 5, Heikes 15, Holt 12, Rex 15, Young 10, Kelsey 12, Easton 9, Redwing 14, Thomas 11, Pemberthy 10, Graham 13, Rich 10, Gerton 13, Tippy 10, White 12, Spross 12. Parker 14, W. S. King 7, A. H. King 11.

No. 5. 20 singles, entrance $3 60, guaranteed purse $100: McMurchy 18, Fulford 18, Upson 20, Van Dyke 18, Grimm 17, Hobart 19, Levis 13, Holt 14, Young 17, North 12, Redwing 19, Brewer 15, Parker 13, Heikes 18, W. S. King 18, Merrill 18, Pemberthy 16, Graham 16, Rex 15, Easton 15, White 15, A. H. King 13, Clay 5, Thomas 17, Gerton 18, Rich 14, Tippy 17, Purser 16, Klein 15, Bangham 16, Woicle 12, Walton 16, Avery 17, Magoon 13, Daniels 9, Wood 18, Proctor 10, Donaldson 14, Druillard 15.

No. 6, 10 singles, entrance $1.50: Fulford 9, Van Dyke 8, Graham 4, Holt 7, Upson 8, McMurchy 6. Barton 7, Redwing 8, Heikes 10, Easton 8, Willard 8, Rex 7, Young 9, Rennick 7, Avery 5, Marlin 6, Watson 9, White 9, Hobart 6, Brewer 6, Grimm 9, Rich 8, Magoon 7, Gerton 8, Walton 8. Thomas 8, Tippy 9, Bangham 6, Daniels 6, Ford 6, Purser 6.

No. 7, 15 singles, entrance $2.40: Fulford 15, Barton 11, Upson 14, Van Dyke 12, McMurchy 12, Young 12 Merrill 13, White 13, Grimm 14, Hobart 12, Redwing 13, Martin 6, Heikes 15, Rex 13, Watson 12, Easton 11, Thomas 13, McWhorter 10, Gerton 13, Tippy 11, Purser 12, Rich 12.

No. 8, 20 singles, entrance $3 60, guaranteed purse $100: Fulford 15, Barton 17, Heikes 20, Upson 19, Van Dyke 16, Young 14, Grimm 16, Hobart 13, Merrill 18, Redwing 16, McMurchy 18, Watson 16, Easton 18, Rex 17, White 16, Willard 16, Holt 14, Thomas 15, McWhorter 12, Bruce 12, Tippy 18, Brown 6, Girton 5, Rich 18, Clark 15, Marks 15, Marsh 13, Rennick 17, Klein 18, Avery 8, Walton 18, Butler 12, Clay 14, Wood 13, Morris 7, Donaldson 12, Purser 16, Magoon 17, Brummitt 9, Webb 15, Huston 12.

Team race for Louis Gittschlag's diamond medals, 25 birds, 3 men per team: Detroit No. 1—Parker 18, Klein 20, Rennick 23; total 61. Windsor No. 1—Ford 19, Druillard 15, Bangham 12; total 46. Pontiac—Brummitt 16, North 16, Webb 12; total 44. Michigan Club—Wardle 7, Wood 17, Daniels 11; total 35. Detroit No. 2—Walton 15, Avery 9. Weise 15; total 39. Windsor No. 2—Purser 22, Donaldson 19, Payson 14; total 55. Detroit No. 3—Magoon 13, Mugs 15, Johnson 13; total 41. Windsor No. 3—Chauvan 16, Maillard 10, McNally 13; total 39. Grosse Pointe Club—Brady 16, McWhorter 16, Morris 11; total 43.

No. 9, 10 singles, entrance $1.50: Easton 6. Upson 10, Van Dyke 9, Heikes 8, Merrill 9, Redwing 8, McMurchy 8. Watson 8, Hobart 9, Barton 8, Millard 10, Marlin 7, Fulford 8, Tippy 6, Grimm 8, McWhorter 5, Purser 7, R. C. Yerkes 8, Harmon 3, W. S. Yerkes 5.

No. 10, 10 singles. entrance $1.50: Fulford 10, Upson 10, Van Dyke 8, McMurchy 8, Merrill 8, Redwing 9, Grimm 7, Barton 7, Watson 8, Holt 9.

*Friday, Fourth Day, Aug. 17.*

The attendance was of course lighter on the last day, but the weather was glorious, There is no better location for a summer shoot than this island. The shooters lingered late at the scores, and the last of Jack's live birds were shot out. In all about 1,600 live birds were shot, and about 17,000 targets. Reflect on the benefit to the target and ammunition trade in this, and reflect also on the fact that the little one-horse club wagon every morning carried down to the grounds a load of guns and paraphernalia worth between $15,000 and $20,000, and one can gain a fair idea as to the reason for existence of the trap tournament of to-day, and as to its value for the future, and of the necessity of handling the questions involved in trap-shooting in such way that the sport will be preserved and increased and made permanent.

This tournament, under Jack Parker's hands, could not fail of being admirably conducted, the management being as good as could be procured at any cost in America. Certainly the shooters could charge no neglect, no discourtesy and no illiberality. The prizes were abundant and valuable, and diamonds were common at the setting of the sun. It was a good tournament, as good as any modern tournament, run on the modern ideas, could be.

## They Kindly Consented.

By the kind consent of the two original kickers from Cleveland, the first event of the day was shot under the system which Jack had announced would rule the tournament. This was a 10-bird event, but was shot at 18yds. rise instead of 21yds. McMurchy hammered out 10 straight, at least showing what can be done at it by way of beating the hard game, provided one is willing to get out of the baby carriage of the old sure-thing game, and take the chances of his own actual skill. I can well remember the time when every one shot walk-around and known angles, and how the poor amateur got it then from the rounders. This paper was the first and only one to protest against that. To-day the handicap of the expert is universal. I hope to see the day when dropping, pooling and combining is punished by disbarment from shooting circles. I believe I will see that day. I hope to see the time when the great shooters who really make the success of a tournament—for the poor shooters never will make a tournament go—will be classified and set distinctly apart from the men who want to shoot for a little sport. I believe I will see that time.

## Mr. Merrill's Trousers Win Again.

At the beginning of this week it was not generally understood that the tournament was to be held for the benefit of any one man, but to-day it became evident that it was really a very one-sided affair. There was only one man in it, which the same was the youth from Milvowka, who speaks knowingly of golf and polo, and wears his cuffs around his neck. Dick Merrill won the international live bird championship, for the U. S. and Canada, and ordinarily speaking that ought to satisfy the most rapacious shooter. Yet to-day he calmly stepped into the international target championship contest, for U. S. and Canada, and he didn't do a thing, to use the prevalent idiom, but break 48 out of 50, and carry off that medal, too! What do you think of that? Evidently this was Dick's tournament. From close association with this youth—an association which, on account of his early rising and exuberant wildfowl imitations I fain would have broken off—I can inform the public of the system by which Mr. Merrill fits himself for a contest. Before going to his room he drinks a large glass of ginger ale, and upon retiring he carefully folds his trousers and puts them under the mattress. In this way the inimitable creases are preserved intact, and appear on the following morning radiant, resplendent and apparently indestructible in their glory. All sorts of odd systems are employed by shooters, but this of Mr. Merrill's is the only one of the kind I have ever met, and but for my unwilling association with him might never had been made public. Anyhow, there wasn't a soul on the grounds who grudged Dick either of his medals. "There are twenty fellows right here on these grounds now who could beat me for either of the medals," said he. "It's only luck." From this I am disposed to believe that Dick is a rare and desirable sort of "champion."

This evening Charlie Willard of the Colt gun, Harry Marlin, Rollo Heikes and a lot more of the cracks left for the West, and next week the shoot at the "Soo" will probably see them and many others of the shooters who met here shaking hands again for another session at the game of traps. The scores of to-day:

No. 1, 10 singles, entrance $1.50: Willard 3, Holt 6, McMurchy 10, Merrill 8, Fulford 4, Rex 5, Van Dyke 4, Hobart 7, Grimm 8, Graham 5, Redwing 6, Heikes 7, Tippy 6.

No. 2, 10 singles, entrance $1.50: Fulford 8, Van Dyke 7, Upson 8, Heikes 8, Grimm 9, Graham 9, Redwing 8, Rex 8, Young 7, Hobart 7, Easton 8, Merrill 9, Willard 8, Holt 7, McMurchy 9, Parker 7, Rich 9, Tippy 6, Harman 5, R. C. Yerkes 9, Fry 6, W. C. Yerkes 7, Gerton 9.

No. 3, 15 singles, entrance $2.50: Rich 13, R. C. Yerkes 13, Harmon 6, Gerton 13, Fry 11, Tippy 8, Fulford 12, Van Dyke 10, Upson 14, Heikes 10, Rex 11, Grimm 13, Holt 12, Redwing 11, Merrill 9, Hobart 9, Young 10, Easton 12, McMurchy 13, Barton 8, Willard 8, Graham 9.

No. 4, 20 singles, entrance $3 60, guaranteed $100 purse: Fulford 16, Van Dyke 17, Upson 19, Heikes 19, Holt 18, Grimm 17, Graham 17, Redwing 20, Hobart 9, Merrill 9, Young 10, Rex 16, Barton 15, McMurchy 17, Parker 13, Easton 16, Parker 13, White 19, W. G. Yerkes 15, Rich 16, Girton 15. Chauvin 11, R. C. Yerkes 10, Droullard 9, DeWolf 9, Harmon 10, Fry 15.

No. 5, 10 singles, entrance $1.50: Willard 10, Fulford 9, Van Dyke 9, Upson 9, Heikes 9, Holt 6, Graham 10, Redwing 7, White 8, Parker 6, Easton 5, Barton 7, McMurchy 8.

No. 6, 15 singles, entrance $2.50: Parker 11, Van Dyke 14, Upson 14, Grimm 14, Merrill 11, Walton 10, Magoon 10, Rennick 14, Klein 10, Rich 11, DeWolf 9, Redwing 10, Easton 13.

No. 7, 50 bluerocks, $1.50, individual international target championship, United States and Canada, for diamond trophy, trophy to be property of winner:

Merrill won the medal. One or two ties were shot down, and the "plunder" bought out, shot out or otherwise satisfactorily divided.

No. 8, 15 singles, $1.50: Weise 6, Redwing 9, Easton 10, Daniels 2, Holt 7, White 7, Van Dyke 7, Upson 9, Grimm 6, Merrill 8, DeWolf 3, Walton 5, Guiotte 7, Magoon 6, Rennick 3, Rich 5, Klein 9.

No. 9, 15 singles, $2.50: DeWolf 4, Redwing 15, Easton 10, Grimm 13, Van Dyke 10, Upson 13, Parker 11, Merrill 13, Holt 12, Rennick 11, Daniels 6, Wood 7, Walton 10, Magoon 11, Klein 8.

No. 10, 10 singles, $1.50: Van Dyke 6, Upson 10, Merrill 9, Grimm 6, Holt 7, Redwing 7.

Miss-and-out sweeps at live birds closed the shooting of the day and ended the tournament.

## Modern Definitions.

*Shooter*—Modern for a prince, a king; a fat fellow; one who lives high and is sought after; one pampered and made much of; *hence*, one who cannot stand alone, one who is afraid.

*Tournament*—Once meant for a contest of skill among men. Modern for a sure-thing game; a cinch, a moral, a lead-pipe system of certainty.

*Kicker*—Modern for a being possessed of long ears, powerful hindlegs and small sense of decency.

*Added Money*—Sugar. Pap. Sweet suckling for those young or weak.

*Guarantees*—Part of the lead-pipe.

*Average Money—V.* "Added money."

*Citizen*—One who is humble; one who is blind, subservient; one who can not see a load of hay; one who is easy, very easy, or dead easy. Sometimes syn. with chump, a foolish fellow, one too easily tickled

*Sport*—Once pleasure, fun, entertainment. Modern for hard work; close figuring; sawing wood.

*Dropping for Place*—Theft. Robbery. Dishonesty. A dishonorable practice; an ungentlemanly act; the act of stealing from a friend; picking pockets while engaging the victim in pleasant conversation. Crookedness. The act of a crook, a thief.

*Management*—Bureau of apology and propitiation.

*Trap Tournament*—An uncertainty; a thing with no future. A thing once good.

*Sand*—(Now obsolete).

*Pluck*—(Now obsolete).

*Champion*—Give it up.

E. Hough.

909 Security Building, Chicago.

## Knoxville May Tournament.

*Editor Forest and Stream:*

It is the desire of the Knoxville Gun Club to make its May, 1895, tournament excel any of the club's previous efforts. To accomplish this end the following scheme was thought of at the largely attended and exceedingly pleasant meeting of the Memphis Gun Club.

The Knoxville Gun Club will add to the purses the sum of $1,500, provided 100 shooters of the country will subscribe $10 each, making $1,000 additional money, or a total amount added money $2,500 to the purses. This being done, they call upon the dealers and manufacturers of the country to add $500, making grand total $3,000 added money to the purses.

Permit no one to contest but those who have entered their names upon the subscription list of $10 and who have paid same—in other words for the privilege of shooting for $3,000 added money and purses of each event (100 men, $3) $300, a shooter only puts in the pot the small sum of $10.

Now, boys, don't your mouths water? What say you? Shall we all pull together and have the biggest shoot ever held in this country? We can do it if you only send in your names, the $10 to be paid on or before April 1, 1895. The club's reputation for honesty and fair dealing to one and all is guarantee that this is no fake, but a sober, real good, sound scheme, to have the best meeting ever held among all the shooters of the country.

Now, what say you? Don't all tumble over one another in frantic efforts to get to the cashier's office. Any one who sends in his $10 will be given a certificate entitling him (or if in his absence his designated representative) to contest in the meeting. In the event he cannot come and has sent in his money it will not be refunded, because to make the shoot a go this amount if advertised must be put up, and it will be his pleasure to contribute to such a meeting even if it should be his misfortune to be absent and out of his $10. Remember only those who are on the list can or will be permitted to contest. At the Memphis meeting thirty-nine names were enrolled as follows: H. McMurchy, F. V. Van Dyke, R. Heikes, Paul North, J. L. Ward, E. L. Gilmer, John Brewer, Wm. Wagner, Joe Hunter*, Jim Elliott, J. T. Anthony, J. W. Todd, J. F. Jordon*, Fonda*, John T. Sumpter, Jr., J. T. Lloyd, Ed. Rike*, F. D. Alkire, L. R. Pinkston, J. A. Woodson, Wm. Rothwell*, F. C. Ethridge*, A. B. Troutman*, J. M. Girton, Shorty Bacon, F. Schuman, M. Holden, Dan Searles, H. L. Foote. C. A. Young, W. H. Skinner, A. W. DuBray, Andy Meaders, Thos. Callender, W. T. Allen, Thos. Irwin, Irby Bennett, W. B. Powell, Ralph Worthington. Those marked with an * were put on by request of friends present.

This is a good starter, and I hope to see the 100 names entered at once. If you have a friend whom you desire to put down, kindly notify him. Let us all enter into the scheme and make this meeting the one grand *finale*—if it is so desired. Send in your names and money at as early date as possible.

R. Van Gilder, Sec'y.

Knoxville, Tenn.

## Inside Uncle Sam's Picket Line.

Butte, Mont.—For some time past Butte has presented quite a military air, there being no less than 1,500 of Uncle Sam's boys quartered with us, sent here no doubt to soothe the disturbed feelings of Mr. Debs's followers. But Butte's reputation had evidently been besmirched. The soldiers came into town shoving two box cars ahead of the train, and in these cars were the best shots of the regiment prepared for business. Very much to their surprise, there was no commotion at all on account of their arrival. They encamped on the grounds used by the gun club, and when the day for the weekly shoot came around a picket line was found around the traps. A few words of explanation to the head officer soon fixed things, and it was not long until officers and soldiers were interested spectators. There was some great shooting done, Mr. Jaeger especially covering himself with glory, breaking 66 without a miss. Rueger was a close second, forcing Jaeger in one match to break 30 straight before winning the money. Below are the scores:

Ten birds:

| | | | |
|---|---|---|---|
| Cowan | 1110111110— 8 | Rueger | 0101110111— 8 |
| Naughton | 0101011100— 5 | Wright | 1111101100— 7 |
| Jaeger | 1111111111—10 | Smith | 0011101011— 6 |

Twenty-five singles, known traps, unknown angles:

Cowan.....1011110001101101111111111—19

## Weir City Trap Notes.

Weir City, Kan., Aug. 16.—I inclose herewith scores made by members of the Business Men's Gun Club, at this place, at their last regular medal contest. The day was pleasant, as a light shower in the morning made the air cool after a two weeks' drought. The usual handicap (of birds allowed) was arranged, and from the appended scores our handicap for this shoot was not very far wrong.

Regular medal contest, 25 singles:

| | |
|---|---|
| McIlhany (allowed 0) | 1111101111111111111101111—23 |
| Doan (4) | 0110001111110001101011111—20 |
| Franks (4) | 1011101111101000111010100—19 |
| Holmes (2) | 1110110101111011111111111—23 |
| *Allison (0) | 0010010111101101110001011—14 |
| Kirk (6) | 1011010101001000110011101—19 |
| *Price (0) | 0010111000111111001110110—15 |
| Morrison (5) | 0011111111101101110111111—25 |
| Calhoun (0) | 1101111101111111111111111—23 |
| Ayers (5) | 1101100100101010100100111—18 |
| *Morton | 1010111011111111100111001—18 |

*Visitors. Morrison won first gold medal.

Ties on second shot off on 25, as below:

| | |
|---|---|
| McIlhany | 1111111111111111101111111—24 |
| Holmes (2) | 1101101111010101011110111—20 |
| Calhoun | 1111011111111110111011111—22 |

McIlhany won second gold medal. After the medal contest several sweeps were shot off, the boys taking advantage of the pleasant day to practice up for the open shoot given at this place on Wednesday, the 22d inst. Our boys are all improving, and within another year the Business Men will be right in the front.

Mamaluke.

## "Trap-Shooter's Ready Reckoner."

There has just come from the Forest and Stream press an extremely useful pocket reference book for trap-shooters. Its full title reads: "Trap-Shooter's Ready Reckoner. A series of tables showing at a glance the division of purses under all conditions, simple and complex, with entries from one to fifty. For use by individuals, clubs, and tournaments. Compiled by J. C. Clark, Secretary Kansas State Sportsmen's Association." Price 25 cents, postpaid, by Forest and Stream Pub. Co.

## Last Personally-Conducted Tour to the North via the Pennsylvania Railroad.

On Tuesday, August the 21st, the last of the personally conducted tours to the North, via the Pennsylvania Railroad will be run. The party will leave Philadelphia in special Pullman cars, and the tour includes Watkins Glen, Niagara Falls, the Thousand Islands, the Rapids of the St Lawence, Montreal, Au Sable Chasm, Lakes Champlain and George, Saratoga, and down the Hudson River. The round-trip rate, including all necessary expenses, from New York Philadelphia, Newark, Trenton, Baltimore and Washington, is $90 00 Tickets will also be sold from other stations at proportionate rates Tourist Agent and Chaperon will conduct the party. For tickets, descriptive itineraries, and reservation of seats on the train, address Tourist Agent, Pennsylvania Railroad Company, Broad Street Station, Philadelphia. *Adv.*

# Answers to Correspondents.

**No notice taken of anonymous communications.**

A. E. H., Williamsport, Pa.—A brook trout has scales.

C. S.—The powder is suited for use in the gun. The manufacturers will supply full direction as to charges.

G. H., Toronto, Can.—Jack rabbits are true hares, as are also cottontails, the naturalists of the Ontario Legislature to the contrary notwithstanding. Jack rabbits when hotly pursued, and cottontails also, run into holes of other animals, or into stone fences, or into hollows in the rocks, but they are not in any sense burrowers as is the English rabbit. The jack rabbit of the Western plains is not a very distant relation of the varying hare which is a native of your own section. The history of the North American *Leporidæ* has been written by Dr. Coues and Dr. Allen in one of the folio volumes of the United States Geological Survey. Of course, the law which allows cottontails to be shot at all seasons of the year is a bad one.

## Half Rates to Washington, D. C., and Return, via Pennsylvania Railroad.

For the Biennial Encampment of the Supreme Lodge and Grand Encampment of the Knights of Pythias of the world, to be held at Washington, Aug. 27 to Sept. 5, inclusive, the Pennsylvania Railroad Company will sell, from Aug. 23 to 28, inclusive, round-trip tickets to Washington and return at rate of a *single fare for the round trip.* These tickets will be valid for return passage until Sept. 6, with a further extension of time until Sept. 15, obtainable by depositing tickets with joint agent at Washington on or before Sept. 6. This arrangement will afford a rare opportunity to all to visit the National Capital. Stop off at Philadelphia and Baltimore will be allowed on tickets through those points. Round trip tickets from Washington to Baltimore and return, limited to two days, including day of sale, can be purchased during this Encampment at rate of $1.25 each.—*Adv.*

The exquisite pictures of "Sport with Rod and Gun" that are sent this year as premiums with the old reliable Forest and Stream, the American sportsman's favorite journal, are gems of art worthy a place on the walls of any home Pictures of this class are a surprise to those who have been accustomed to the inferior and crude productions sent out as premiums by many publishers. People of artistic tastes will be quick to recognize and appreciate the vigorous treatment of the subjects and the exquisite coloring of the water colors, and sportsmen who have been fortunate enough to indulge in the fascinating sport of fishing for the gamy bass off Block Island will be delighted with the splendidly natural reproduction of the scenery and incidents of the sport at those famous old fishing grounds.—*Joplin (Mo.) Herald.*

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where we get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 Vesey Street, New York City

MARSTERS HAS WORMS

Sand Worms 12 and 15c. per doz. White or Blood Worms, 25c. per doz.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and not decreasing the quality, it increases my business every year.

One lot of Split Bamboo Fly and Bass Rods will be sold at $1.19 until all are sold. These rods are all nickel mounted, solid reel seats, silk wound, extra tip, complete in wood form and will give satisfaction.

Length and weight of the Fly Rods are: 9ft., 6oz.; 9½ft. 6½oz.; 10ft., 7oz.; 10½ft., 7½oz.; 11ft., 8oz. Reel seats below hand.

Length and weight of the bass rods are: 8½ft., 9oz.; 9ft., 10oz.; 9½ft., 11oz.; 10ft., 12oz., 10½ft., 14oz. Reel seats above hand.

No. H—A special lot of Hard Rubber and Nickel, Raised Pillar, Multiplying Reels with Balance Handle and Side Spring Click, 40yds., 63 cts.; 60yds., 78 cts.; 80yds., 88 cts.; 100yds., 98 cts. Any of the above reels sent by mail for price and 10 cts. extra for postage.

No. E—Special lot Hard Rubber and Nickel Raised Pillar Click Reels, 40yds., 38cts., 60yds., 48cts. Sent by mail 5cts. extra for postage.

No. C—Nickel-Plated, Raised Pillar Multiplying Reels, with click and drag and screen oil cup, 40yds., 58c.; 60yds., 68c.; 80yds., 78c.; 100yds., 83c.; 150yds., 98c. 10c. extra for postage.

Single Gut Leaders, mist color, 1yd., 20c. per doz.; 2yds., 40c. per doz.; 3yds., 60c. doz. Double Gut Leaders, mist color, 2yds., 75c. doz. Hand Twisted Gut Leaders, 10c. each, 90c. doz.

A special lot of Trout Flies at 25 cents per dozen assorted, sent by mail 1 cent per dozen extra for postage.

A special lot of Bass and Pickerel Spoons at 5 cents each sent by mail, 1 cent extra for postage.

All kinds of Hollow Point best quality Hooks snelled to single gut 10 cts. doz.; double gut, 15cts. doz.; treble, 20 cts. doz.; four ply, 25 cts. doz. 1 cent extra per dozen for postage.

300ft. Braided Linen Reel Line on Block, 41 cts.; 300ft. of Hand-Made Linen Reel Lines on Block, 9 thread, 38 cts., sent by mail 3 cts. extra for postage.

Brass Box Swivels, all sizes No. 1 to No. 12., 15 cts. per dozen, sent by mail 1 cent per dozen extra for postage.

Special lot of best quality 100ft. Linen Reel Lines, 8 cts., 200ft., 15 cts.: 300ft., 22 cts.; 3 cts. extra for postage.

Send 2-cent stamp for Illustrated Catalogue and Special List No. 3.

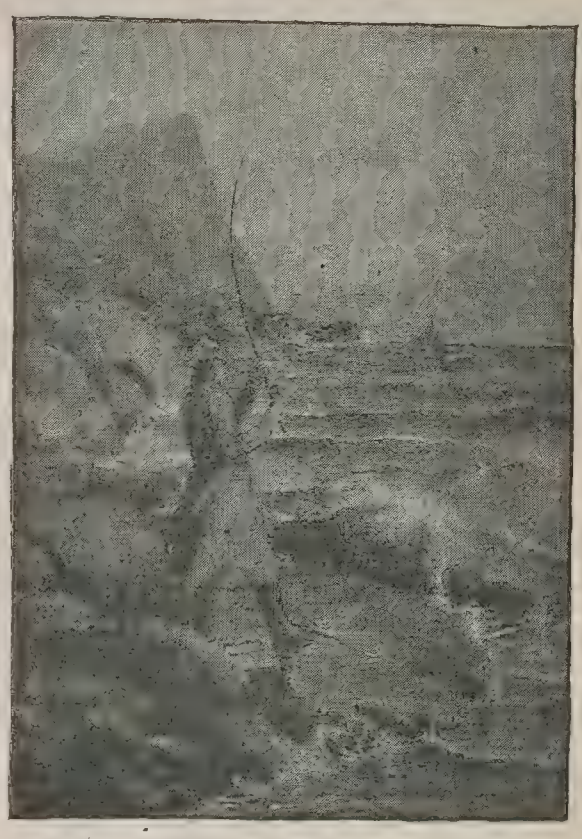
# Forest and Stream's Outdoor Scenes.

FROM ORIGINALS IN WATER COLOR AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

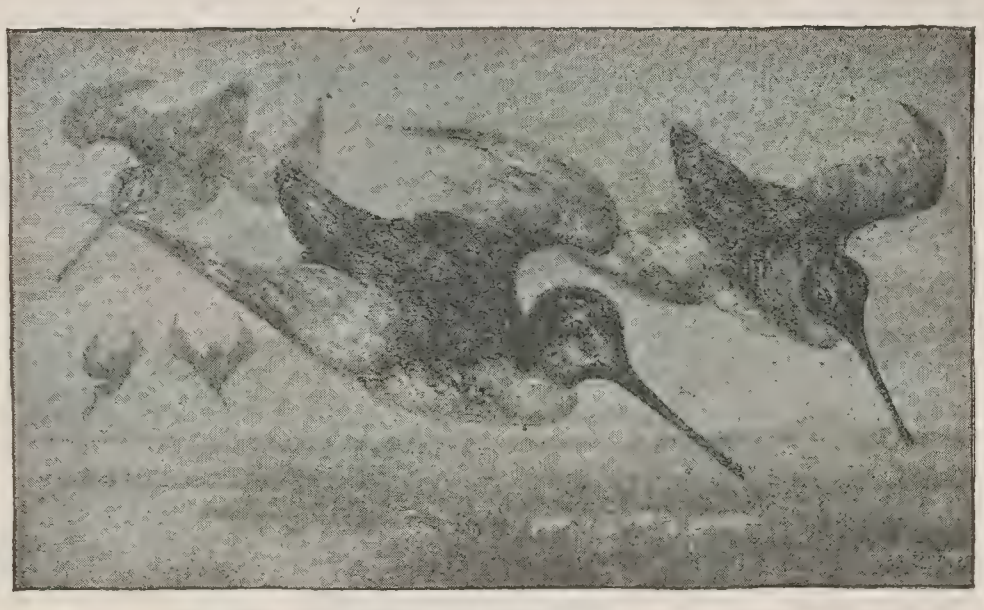
HE'S GOT THEM.

### AS PREMIUMS.



We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

**Forest and Stream** *one year and the four pictures*, **$5.**
**Forest and Stream** 6 *months and any two pictures*, **$3.**



If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.

Copies of them may be seen at this office, and inspection is invited.

JACKSNIPE COMING IN.

VIGILANT AND VALKYRIE.

## Mr. Grinnell's Indian Books.

## BLACKFOOT AND PAWNEE.

These two volumes treating of two different tribes of Indians are full of fascination for lovers of outdoor life. Each contains a number of the stories current in the tribe to which it relates, and these are followed by a series of graphic pictures of the old wild life which is now only a memory. The stories deal with hunting, war, love, ghosts, magic and natural phenomena. They are given just as related by the old men who told them to the author, and show Indian life from the Indian point of view.

# FISHERMEN, ATTENTION!

# $225 in Gold Given Away!

## THE NATCHAUG SILK CO.

**will give nine big cash prizes for the following catches of fish taken during the season 1894, viz.: From the 1st day of April to the 1st day of November inclusive, with the NATCHAUG SILK FISHING LINE:**

FIRST PRIZE— $25 in Gold for the heaviest Muskallonge.
SECOND PRIZE— $25 in Gold for the heaviest small-mouth Bass.
THIRD PRIZE— $25 in Gold for the heaviest large-mouth Bass.
FOURTH PRIZE— $25 in Gold for the heaviest Lake Trout.
FIFTH PRIZE— $25 in Gold for the heaviest Brook or Mountain Trout caught in other waters than in the State of Maine.
SIXTH PRIZE— $25 in Gold for the greatest variety and largest number of fresh water fish caught in one day by one person.
SEVENTH PRIZE—$25 in Gold for the greatest weight of any kind of fresh water fish caught in one day by one person.
EIGHTH PRIZE— $25 in Gold for the heaviest fish of any kind caught with the Natchaug Silk Line in fresh or salt water.
NINTH PRIZE— (SPECIAL) $25 in Gold for the heaviest Brook Trout caught in the State of Maine.

As the Trout caught in the lakes of Maine are acknowledged to be genuine Brook Trout, on account of the size of these fish we bar them from our Fifth Prize, and offer this as a special prize for these waters.

A sample card of our Lines sent free on application.

## CONDITIONS:

All these fish must be caught with the Natchaug Silk Fishing Line in fresh water (except Prize 8) and by fair angling.

Competitors must forward to us their full name, P. O. address, together with the description and weight of fish caught, and name of dealer from whom line was purchased, together with the name of one reputable witness affixed. On November 7th, 1894, the award will be made, and the list of succes-ful competitors announced in the FOREST AND STREAM and the *American Field.*

All successful competitors before receiving their prizes will be required to send an affidavit as to their statement of fish caught.

If your dealer does not keep the Natchaug Silk Fishing Lines, order direct from

THE NATCHAUG SILK CO., Willimantic, Conn.,
Or 213--215 Fifth Avenue Chicago.

## Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

**Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.**

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

**Forest and Stream** *one year and the set of four pictures*, **$5.**
**Forest and Stream** *6 months and any two of the pictures*, **$3.**
**Price of the pictures alone, $1.50 each; $5 for the set.**

Remit by express money order or postal money order Make orders payable to

**FOREST AND STREAM PUB. CO., New York.**

### *MONGOLIAN PHEASANTS FOR MIDDLESEX FELLS*

SOME years ago, ten perhaps, we noted the case of a crusty old fellow living not far from the chief city of western Massachusetts, who in pique over the law forbidding the trapping of partridges posted his farm and vowed that if he could not trap the birds no "city sports" should shoot them. Certain of the town sportsmen, who had marked many a grouse in those covers, took this turn of affairs sadly to heart; but one of them more sagacious than his fellows exhorted the old man to steadfastness in his resolution and strong nails in his trespass signs, for he had discovered the beautiful truth that a well posted farm meant a game refuge, and a game refuge meant an overflow into neighboring covers. In this particular case the exclusion of shooters from the forbidden premises actually did supply good near-by shooting for the several seasons during the interregnum of the dog-in-the-manger. The experience has been repeated again and again elsewhere. In many a district where game is scarce, to take down the signs which read "No shooting here," would mean in practical effect to erect others proclaiming "No shooting anywhere." What is true of protected private lands is true in a larger sense of protected public lands.

---

We have taken occasion before this to direct attention to the admirable system of public reservations adopted in Massachusetts, under which extensive tracts of wild land have been set apart for the public. There are already, in the neighborhood of Boston, four such reservations, the Middlesex Fells of 3,200 acres, the Lynn woods of 2,000 acres, the Stony Brook woods of 600 acres, and the Blue Hills reserve of 4,000 acres. A fifth park is to be added in Waltham.

An editorial writer in the Boston *Herald* points out that one highly valuable service which may be rendered by these protected domains will be to constitute preserves for feathered game. Under the rules firearms are strictly excluded from the reservations. The covers are naturally adapted to the support of the native birds; grouse and quail and woodcock will resort to these harbors, and there unmolested increase and thrive and overflow into adjacent territory. Here, too, exotic species will flourish. The Lynn woods have already been stocked by the Massachusetts Fish and Game Protective Association with Western grouse; and now there is a project of establishing a colony of Mongolian pheasants in the Middlesex Fells.

These Massachusetts reservations will prove to be sources of game supply for all the country around about. There should be just such game refuges in every State in the Union. They should have been set apart years ago. They may be established now.

### *NEIGHBORLINESS.*

THE youngster at school considers it unmanly to peach on another. Grown to manhood he scorns to inform on the neighbor who gobbles his game or hooks the fish out of his stream. Read the letter written by a farmer to Secretary Banks of the Pennsylvania State Sportsmen's Association. It pictures precisely the dilemma in which many have found themselves when imposed upon by their neighbors of pot-hunting proclivities.

The remedy is not difficult. Organize a local protective society, town or county. Employ an attorney for the society. Let the club as a club institute suits against offenders, and assume responsibility for them. Employ an attorney for the society. Have him in his official and professional capacity conduct the prosecution. The club as a club can bear responsibility from which an individual would shrink. The attorney, if a good lawyer and worth his fee, will be so devoted to his profession that he will not hesitate to teach even his next door neighbor that the law must be observed.

This is not theory. It is in brief a statement of the practical mode of work adopted by the clubs which have been most successful in accomplishing something and making their mark. Try it. It is a neighborly way of getting the better of an unneighborly neighbor.

### *CONCERNING A BREED OF SWINE.*

"FISH-HOG" and "game-hog"—here are two terms which are neither euphonious nor refined. There is in them none of the art of conveying an unpleasant suggestion clothed in alluring guise. They are direct, blunt, harsh, homely—vulgar, if you will. Each stands for something that cannot be designated in polite terms. A hog is a hog the world over; and always has been. There is no expression more apt, to describe the selfish, gluttonous, wantonly wasteful, hoggish destroyer of game or fish than to call him what he is—a hog. The application of the term has come naturally into common acceptance. It is terse, expressive and not to be mistaken. It has been adopted as filling a long-felt want, fits admirably into the colloquial speech of the day, and has come to be a part of the language of field and stream. Call a man a game-hog or a fish-hog, and you have said more in the one word than could be told in a column.

That we must go to the swine for a name to apply to some of those who use rod and gun is not a creditable commentary on the field manners of the times; and it is a tremendous pity that there should be so many fishermen and so many shooters to whom the ignoble terms may be applied with a propriety and deserving beyond cavil. For in truth there are game-hogs and fish-hogs galore. They go in droves. The woods are full of them.

---

There are some shooters and some fishermen, who, judged by their works and words, are possessed by an indecent mania for killing. They appear to kill purely and simply for the sake of doing to death the greatest possible number of victims in the shortest possible interval of time. They joy in the zest of what they are wont to term in language grotesquely bombastic, a "battle-royal" with their prey. A battle-royal as described by them is discovered to be a fray in which the hazard is unequally shared, and the odds are wholly on one side. To return from a fishing trip besmeared with blood and staggering under a heavier burden of fish than was lugged in by the last battler-royal preceding them is the height—or the disgusting depth—of their ambition. To out-score in gross weight or number the record holder of the hotel piazza is the goal on which is fixed the gaze of their piggish vision. Once their inordinate "catch" has been spread out for the admiration of foolish men and silly women, they have no further concern as to the disposition of the fish; hotel kitchen or garden compost heap, it is all one to them. They have made their record, and rest on their laurels, proud and content, until some other fisherman of the same low aims outdoes them in slaughter, when envy bids them again fall to. No theory to account for the number and greed of the fish-hogs abroad in the land would be well founded, which did not take into full reckoning the emulation created and stimulated by the hotel piazza and office fish scores. No true account of the fish-hog can be given—when some one shall write his natural history—which shall fail to note that the creature is not an angler by instinct, nor belongs to the anglers' guild, but is an imitator, a pretender, one who practices the craft but lacks the spirit, and because wanting in that spirit debases and abuses the practice of fishing and brings it into contempt and bad odor.

---

We talk and write of the beauties of nature as revealed to him who goes afield, of the inspiration one may find in the forest and by the stream, of the message whispered by the pines, sung by the dashing brook, intoned by the mighty sea. But speak of these things to some men and you speak to dulled unheeding ears. As well tell it to the squealing, grunting hog. Such folk hear never the pipe of Pan, but ever the song of Circe; and hearing they become as swine.

---

Fish-hog is a term which has but recently come into the colloquialisms of the language; it was unknown in the boyhood days of older anglers who are still casting their flies. Not that none of the species were abroad then; but those were the days of plenty. Fish were many and fishermen few. Little heed was given to fostering a store which no one dreamed would ever be abated. It is only of late years, when the problem of maintaining the fish supply has been presented so clearly and so imperatively, that much consideration has been given to the ravages of the wasteful fisherman. No one is ever accused of selfishness so long as there is enough and to spare for all.

The designation of hog is growing in frequency. This is an indication that the public is alive not only to the existence of the wanton fisherman, but to the fact as well that his fishing practice is selfish, greedy and unfair to the rest of the community. When you call a man a hog, it means that you do not like his way. And that means that he is not to have his way; but must conform to the ways of men. Blunt and homely as it is, then, neither euphonious nor refined, the name of the fish-hog is full of promise. He has been found out, recognized, identified, named; and having been found out he will not be tolerated.

---

There are restrictions in the fish and game laws of many States limiting the number or amount of fish and game one may take in a given time. Such laws are wise and necessary, and are growing to be effective. They are intended to curb the gluttonous proclivities of the fish and game hogs. They are not required for the restraint of sportsmen. In such matters your sportsman at heart is a law unto himself; no statute limits his practice afield; he is guided and governed by the great unwritten rule of taking only what can be used; of sparing, and wasting not; of regard for others than himself.

### *THE SPORTSMAN'S EXPOSITION.*

THE enterprise of an exposition of sportsmen's supplies, appurtenances and belongings is taking shape. It will be held in the Madison Square Garden of this city some time in the early months of next year.

An informal meeting of those interested was held last Monday, to discuss the forming of an association to carry the project through. Temporary officers were elected as follows: President, Charles Tatham; Secretary, Alfred Stetson; Executive Committee, J. A. H Dressel, F. S. Webster, Charles Daly, J. von Lengerke, Charles Tatham. A meeting for formal organization and election of officers will be held in this city Sept. 18.

The affair is in the hands of responsible people, who will carry it through with credit to all interests concerned.

---

CELIA THAXTER, who died last Monday, was a poet of nature. She loved the wild creatures about her home on the Isle of Shoals, studied their ways closely, and wrote of them as of familiar friends. Many of her poems relate to the wildfowl, the sea birds and the shore birds. When the Audubon Society undertook its work, Mrs. Thaxter was one of the first to respond to the call.

# The Sportsman Tourist.

## CAMPING AND TRAMPING IN MEXICO.

There was no mistake about it. I had a severe attack this time. For days I thought I could recognize the symptoms, and tried to avert the "spell" by thoughts of hard times, pressure of business, obligations to be met, etc., but it was of no use. Every breeze came to me laden with the odor of the woods and suggestions of the campfire. My diseased imagination distorted the sounds of the air into the quack of the duck, the honk of the goose, and the whistle of the buck. As I walked along at nightfall the peepers and myriads of unclassified little things which make the sounds of the night, whispered of the mott and the arroyo. I could stand it no longer. I recognized the disease, and I knew the sole remedy. Quickly gathering together a few congenial spirits, who had been similarly affected, preparations were made for a ten days' outing in the Republic of Mexico. There were Jay, a disciple of St. John, of Prohibition fame; two Texas sportsmen, a Chicago "tenderfoot," and one who can best be described as a "dude," and the writer.

The State of Coahuila was selected as the sanitarium to which our pilgrimage was to be made, and where we expected to be restored to our normal conditions. This State is separated from Texas on the north by the Rio Grande River, and perhaps no section of the North American continent affords a greater variety or abundance of game and fishes. The time was about the middle of January of this year, and we were soon on a west-bound train rapidly leaving San Antonio and our "dumps" behind us.

We left the train at Del Rio, a Texas border town, where we were met by our guide, the genial and always reliable Señor Eduardo Dignonity. We had telegraphed to him in the morning, and he had procured for us a complete camping outfit, a mule team, an ambulance, a cart, provisions for two weeks, and a Mexican, who was to perform the important duties of *chef* and mule driver. Our duffle was quickly transferred from the baggage car to the conveyances, and before the last good-by of our fellow passengers had died away our Mexican shouted "*Huia milos,*" and away we went over a smooth and well kept road.

A soft southern breeze blew into six radiant and expectant faces. The sky was cloudless, the air balmy. Afar off in the west, enveloped in a veil of deep blue, could be seen the majestic Sierra Del Carmen Mountains, at whose feet our guide informed us we were to pitch our tent. Ah, me, what a change in twenty-four hours! Yesterday moping, going about our daily grind in a half-hearted and perfunctory manner, irritable and fault finding. To-day, as we filled our lungs with the soft air of this glorious climate, we became new beings, radiant and hopeful. Everything had taken on a new color. We were *con amore* with nature and with each other.

CAMP ON THE SAN DIEGO RIVER, MEXICO.

Just as the sun was touching the horizon we reached the banks of the Rio Grande River. The thought of crossing this wide stream of muddy water, with its swift current and treacherous holes, was not an inspiring one. But our self-reliant guide plunged boldly in with his frail cart, calling to us to follow. With bated breath and hearts in throats we followed him, and soon were on Mexican soil with our belongings uninjured. On this side we found many quail, and ducks were flying in such numbers that we could not resist the temptation to stop long enough to take some of both. We climbed a steep hill and entered the village of Las Vacas through an old gate and archway. At this point we were halted by the cordados (rangers), who demanded our passports. Through the kindness of Juan Maria Munos, Jefe de la Aduana (lieutenant-general of the rangers and collector of the customs on the Rio Grande), we were permitted to hunt and fish in the State of Coahuila, and our teams, arms and luggage were admitted free of duty. While talking to these dark-featured men of the border, and curiously noting their wide-brimmed sombreros, trimmed with gold and silver, and their blankets of gorgeous colors, we saw our guide coming from a low one-story adobe building concealing something under his coat. There was an unusual expression in his eye which aroused our curiosity. Thinking that he was playing one of his border jokes, smuggling, we did not question his strange actions until we had left the village, when he informed us (out of the hearing of Jay, however) that he had a jug of muscal.

After leaving Las Vacas the night became very dark, the roads rough and our pace necessarily slower. For several miles we followed along the foot of a low range of mountains, and then crossed over into what seemed a broad valley, and by 10 o'clock we entered a thick "mott" where we pitched our tent. In a very short time we had an ideal camp-fire, dead and dry wood being abundant, and by the time the tea kettle had begun its vesper hymn, the tent was up and staked down. After a hearty supper we wrapped ourselves in the blankets, and rolling in under the canvas were soon enjoying the sleep which comes from healthful fatigue. Before daybreak the following morning all were up, some preparing to hunt turkey in the adjoining live oak motts, others to go into the valley among the musquite and chaparral for deer, while others would follow along the arroyo for ducks. Throughout the morning could be heard the report of the shotgun and rifle, and each one was speculating as to what the others would bring into camp. By noon all had straggled in, tired and hungry, but well laden with game. The result of our initial hunt was two buck deer, five turkeys and many ducks.

The term "mott" in this country is applied to a clump of live oak trees, varying from one to forty acres in extent. It is derived from the Spanish word *mata*. These motts are usually found along the streams and are as a rule long and narrow. As many as a half dozen varieties of trees are found in them, such as the live oak, pecan, hackberry and walnut, the live oak predominating. The oak remains green throughout the year and affords unsurpassed cover for all kinds of game.

The wild turkey roosts in the motts, usually near a stream, and feeds in the adjoining chaparral. Our method of hunting the turkey was either to locate their roosts and shoot them in their roosting places by moonlight or daybreak, or to select an opening in the motts and shoot them on the wing as they flew to or from the trees, either at sun-up or sun-down. We found that at this season of the year there was some evidence of domestic infelicity in the *Meleagris* family. The gobblers and the hens were in different flocks and roosted apart from each other. While Mexico has no game laws, we made it our invariable rule not to kill any but males of both turkeys and deer. We found the gobblers in fine condition, some of them weighing as much as 25lbs. Wherever we went we found the motts full of these magnificent birds. All that was necessary to do to bag a brace of them was to find some high point overlooking the mott about sun-up and mark their roosting places. By going there cautiously the same night or by daybreak the following morning one could get several shots at them in the trees.

In this country still-hunting is followed for deer. The most successful way we found was to mount a mule and ride through the valley, looking out for clumps of brush or trees and small ravines. Before going very far from camp we would invariably "jump" a buck or two while they were feeding. When we came upon them unexpectedly they would trot off, and when 100 to 200yds. away turn around and face us. If you were simply an average shot the moment you saw them you should dismount, getting off on the far side of your mule, resting your rifle on your saddle, and the instant the deer stopped and turned toward you you should shoot at his shoulder. If your aim were true he would drop within 100yds. If you missed him he would trot off another 100yds. and repeat his first performance. If you missed him the second time he would gallop away, leaving you in disgust. A good shot would shoot out of the saddle on sight, and bring his quarry down before he had time to stop. Our buckboard was found very serviceable in getting in our game, especially the big bucks. It proved to be almost impossible to put a heavy buck on a mule and keep him there until we reached camp. Frequently while waiting in the motts for wild turkeys to come to roost we would see deer within 75 or 100yds., and a charge of turkey shot would cause them to shake their tails and gallop off.

When our level-headed guide saw the amount of game we had killed the first morning he said, "Boys, this will never do, you will drive us out of camp with all this meat." The fact that we were compelled to leave some of our game for the wolves and coyotes to devour, marred what was otherwise an ideal outing. During our entire stay the weather resembled that of June in the Northern and Eastern States, and game would keep sweet no longer than three or four days.

In the afternoon our guide and counselor called our attention to the fact that the arroyo was full of fish, and before the sun had gone down several fine strings of bass had been caught. As a sort of moral agony a pair of scales was kept in camp, and when the piscatorial liar began his big story he was at once steered against the unsympathetic scales. Mendacity did not flourish in this camp.

For our supper, Vincente, our *chef*, prepared a feast, the memory of which still produces an aqueous condition of the mouth and a tickling of the palate. Would you hear our woodland bill of fare? Venison, turkey, duck, squirrel, quail, trout and bass, all done to a turn and served with consummate skill. Vincente looked upon the rapidly disappearing food in amazement, and no doubt felt some alarm as to the future of the camp, when we should have become convalescent.

The next morning we broke camp and continued our course toward the Sierra Del Carmen Mountains, the headwaters of the San Diego River. It was my pleasant lot to ride with the guide in the buckboard, and I found him in a communicative mood. During the ride of twenty miles he related many experiences of border life, in hunting big game and Indian fights. He was a native Texan, his parents having come to Texas from one of the Northern States when Texas was a Republic. He had associated so much with the Mexicans that he could speak their language better than he could his own tongue. With my usual delicacy I refrained from asking the usual question put to border men, as to how many men he had prepared for the undertaker, but I felt some curiosity on this point. He showed me a very handsome hunting suit, with breast plate made of polished bones, perfectly round, about the size of a lead pencil, and about 1in. in length. There were perhaps one hundred of these, linked together with buckskin cords passed through a small hole bored in the center of each bone. On this unique garment was inscribed the following, evidently written many years ago: "Taken from an Apache chief, whom I killed in a hand to hand fight, while guiding the U. S. troops in 1867, E. D." One of his remarkable hunting stories was this: Some years ago while out after deer, he came upon two large bucks with their horns locked together so securely that they could not separate them, and they were unable to run. He killed them both, and found the antlers so interlocked that he could not get them apart. On my return from this trip I verified this story. At a certain border saloon I found the identical horns, among hundreds of other trophies which adorned the walls of the place.

In the afternoon we reached the banks of the beautiful San Diego River, and set our tent near a high bluff at the edge of a mott and on the banks of the stream. The San Diego is a bold and swiftly flowing river. The waters are cool and very clear. It is fed by many never failing springs, and remains almost stationary. This is an ideal stream for the fisherman. Within 50ft. of our tent was a huge boulder, which in some glacial period had been placed in the river. Around this rock, within a radius of 20ft., could be seen hundreds of trout and bass, from 1 to 3lbs. in weight. If one would creep up unobserved and cast a fly or live minnow into this pool a bass would strike it the moment it touched the water. Jay was the scientific fisherman of the party. He used a spoon hook and 12in. leader. On these clear waters we found that a leader made quite a difference in the catch. Our best bass fishing was in still water, in bayous, around boulders and water lilies, and not in the ripples and rapids.

In the deep waterholes, where the water was from 15 to 25ft. deep, could be seen many buffalo fish of great size. Jay determined one morning to catch one of these. He attached several hooks to his bass line and prepared to hook one as it passed over the line. After several unsuccessful attempts he got a fair hold on one, which proved to be an 18-pounder (by the scales). When the fish felt the hook this loafing member of the sucker family made a surprisingly game fight, which lasted thirty minutes. After exhausting ourselves we got it close to the bank and shot it through the head with a rifle. We caught several in this manner, when Jay finally hooked the "daddy" of all buffalo, and the reel having gotten caught we quit with a broken rod and line. Great was the astonishment and loud the comments of camp when we came in with these big fish strung on a pole carried on our shoulders.

What proved to be the most useful as well as the most thoroughly enjoyed of our paraphernalia was the canvas boat. It was convenient in crossing and recrossing the river for ducks killed, and in many ways was indispensable. I was never before in a canvas boat, and felt somewhat timid about the use of this one, but I never before saw a boat get such rough usage and come out with so little injury. It positively refused to upset. We ran into reefs, over rocks and shot the rapids, and although our frail craft was knocked hither and thither it always bobbed up serenely without a leak.

After remaining several days at our second camp we continued down the river three or four miles to our third camp. After a great deal of persuasion our Dude was induced to walk, carrying with him his English hunting suit, big knife, horse pistol and Winchester. Up to date he had failed to kill any game, and had insisted that there was no game in the "blasted country." The cook quietly told us that he never had been known to get out of sight of the camp. One morning, however, he came into camp with a large gobbler, showing a bullet hole in its breast. Some unkindly hinted that the turkey had been dead several days, and suggestively held their noses whenever in its neighborhood, while others said something about the

use of salt on its caudal extremity. The manner in which that bird came to its death will always be an open question. I think it was a case of old age, as it had lost its spurs in many a hard fought battle.

When our champion from the city of the World's Fair discovered what his rival had done, he fell into a morbid and dejected mood. Had he not the latest and most improved firearms? Had he not centered the bullseye many a time at the Chicago shooting galleries? Did not his small brother regard him as invincible? And yet no turkey, bear, deer or duck had fallen to his gun. He complained bitterly of his fate. He spoke of how delighted his old father would be if he could write home and tell him that he had killed a deer. He was willing to give ten dollars in American money to kill even a turkey. These pathetic lamentations touched our guide, and when he had called to his aid his limited knowledge of mental arithmetic, and had estimated the amount of mescal which the ten dollars would buy, he said, "Never mind, my boy, you too will have game." Just as the sun was setting he went into the clearing and sniffed the air like a well-trained hound, looking up and down the river. When he came back he said, "Will you get up in the morning when I call you?" "Yes," was the eager reply.

Before daylight the next morning the two left camp, the guide without weapon, Chicago armed to the teeth with knife, pistol, shotgun and rifle. In a short time we were aroused by the report of a shotgun twice in succession and within five minutes the guide came in breathless. "What did you uns bring that feller with you for?" he said. "Why I tuck him right up to a turkey roost and got within forty feet of them ere turkeys, and when it got light sez I, 'See thet un on thet low branch? Shoot him first,' and he banged away, and what do think fell? Nuthin'. Then I sez, 'See thet big gobbler with his head stickin' out? Give it to him,' and he banged away, an' what do you suppose fell? Nuthin' but leaves. En I sez, 'Look yander and yander;' and bang, bang, went his gun, an' what do you suppose fell? Nuthin' but shot." We implored our guide for the sake of the young man's family to say nothing more about the matter. It is probable that the smaller brother's idol is still unshattered.

For several days we led a lazy, care-free life. We lounged around camp, reading such literature as we had with us, smoking our pipes, listening to the thrilling stories of border life related by the guide; and each in his way, following his own taste, extracting the most pleasure from life in the woods. Vincente proved to be a good cook, and our oppetites increased in an alarming ratio. Part of every day was spent in an exploring tour around the adjacent country. We took our camera with us, and made snap shots at such bits of scenery as we wished to perpetuate. During one of my morning rambles I discovered a most remarkable spring of water. It was about 2ft. long, 3ft. wide and 4ft. deep, and it was quite a distance from the river, at the base of a cliff. The water was clear as crystal, and growing along the margin were hundreds of water lilies in bloom. At the bottom of the spring and along its sides were growing the most beautiful vines and flowers I ever saw. They were of every tint, from dark green to bright scarlet, and were so interwoven and their colors so arranged as to produce a most charming effect. I called my companions to enjoy with me this striking work of nature. Even Vincente, who had never been accused of entertaining a sentiment, exclaimed "*Esta bonita.*"

One morning while we were out gathering the nuts of the pecan tree, there rode up two Mexican cowboys—*vaqueros*, in their language. Their attire alone would indicate their calling. They were dressed in the typical leather suits, and had expended small fortunes in the purchase of sombreros. The average Mexican applies all his spare money to the purchase of a hat. It is jealously guarded and taken care of, and it is the last article of apparel that finds its way to the pawnbroker. Jay had seen the same *vaqueros* while out fishing, and came into camp somewhat out of breath and alarmed about their appearance in our neighborhood. They proved very friendly, however, and gave us much valuable information about the habits and methods of taking the large game in this country. The Mexican cowboy seldom uses his rifle for any other purpose than to kill the animals which prey on his stock. They expressed great surprise at our hammerless guns, never having seen any before. With the instinct of a Connecticut Yankee they offered to trade for them. When they learned that we had a canvas boat on the river they put spurs to their ponies and galloped off to see a boat that would fold up like a hat. We learned from them that sheep and goat herders (*pastores*) were paid from $6 to $8 per month. These were the only human beings we had seen since we crossed the Rio Grande.

After spending another day in boating and fishing we moved down the river to our fourth and last camp. From this we expected to kill such game as we wished to take home or send to friends. One day was set aside for turkeys and another for deer, and both were marked with remarkable success. While Jay was a successful turkey hunter and fishermen, he had never killed a deer. He must have this experience before we broke camp finally. One day he saddled a gentle mule, and taking his lunch went off for deer. All day long from over the ranges came the crack of the rifle. In the evening he came in with nothing but a very noticeable expression of disgust on his face. He had shot at seven deer, some of them at close range, and had missed them all. He is a good shot at other game, but has never succeeded in overcoming the "buck ague."

After spending four days at the camp we packed our duffle, and turned our mules' head towards the Rio Grande. The following is the result of our hunt: Eight deer, 20 turkeys, 50 ducks, 2 Mexican eagles, quail, no account kept, squirrels, no account kept, bass and trout 150lbs., other fish 100lbs. Had we left the river and gone into the mountains we could have found Mexican lions and an abundance of black bear.

On our homeward trip we came unexpectedly upon the old deserted mission of Santa Maria, on a small tributary of the San Diego River. It was built many years ago by the Jesuits. The church is now in ruins, but the walls around the mission forming an inclosure of about five acres, seem to be as good as the day they were built. The walls are of limestone and about 12ft. high. We drove into the inclosure through an opening or gateway, and turning a sharp angle brought up before the dwelling of a Mexican family. We came upon them suddenly, and the moment they saw us they scattered like a covey of quail. Both the guide and the cook attempted to get them out of their hiding places, telling them that he wanted to take their photographs, and insisted that we would do them no harm, but they kept out of sight and remained as still as death. As we were about to leave, a middle-aged woman was seen approaching the house from a spring near by. She came up to us without hesitation, and was very friendly. She seemed to have more than the average intelligence prevailing in this isolated section. She induced her husband and the rest of the family to come from their hiding places—the group, including the pigs, dogs, goats and chickens—for they all live together on terms of perfect equality. There were fifteen of them, and she assured us that they were all her children; but this statement was a tax on our credulity, for they showed a variety of colors and features. Some showed Spanish blood, others pure Indian. Two of the senoritas were quite pretty, but were so shy that it was with the greatest difficulty that we induced them to remove their shawls from their heads and faces that we might take their pictures. This was a new experience for them, and they imagined that the camera was some deadly weapon. We explained its functions, and promised to send them several of the views, which will afford them subjects for conversation for many days.

L. C. B.

"JACKAL" WITHIN THE WALLS OF SANTA MARIA MISSION.

---

### Vermont Quail and Sharp-tail Grouse.

ST. JOHNSBURY, Vt., Aug. 23.—A covey of quail was recently seen in Harvey's Woods in the town of West Caston. Their origin is not known. The Rutland Fish and Game Club have several times put out quail in the county, but without any apparent results.

The seven sharp-tail grouse which Commissioner John W. Titcomb put out in the woods near St. Johnsbury have been heard from. One covey of young ones was seen last Monday, and another covey has been reported, although the witness to the last covey was not positive but what they might have been ruffed grouse. WHEELOCK.

---

### Sage Hens and Coyotes.

FORT BIDWELL, Modoc County, Cal., Aug. 14.—If any of your sportsmen want practice send them here. The country is alive with sage hens. I was out a few hours one day last week with another gunner. We shot away our ammunition and brought in 48 birds, which was probably not one-tenth of what we saw. California offers a bounty of $5 per scalp for coyotes, and thousands have been killed in this section, hence the marked increase in sage hens.

L.

## FLANNEL SHIRT DAYS.

NOONDAY—and pretty warm at that. I am sitting on the porch of the camp enjoying the comforts of a pipe and a flannel shirt simultaneously. In the dazzling sunlight which compels me to half close my eyes I see the surface of the lake, slightly ruffled by a soft southern breeze. The wind rustling in the leaves of bush and treetops wafts the sweet scent of balsam and fir from the hillside and mingles their aroma with that of the tobacco in my pipe. The birch barks are lying unused in the shade of the brush. They seem to share the general languor which has taken possession of the camp and its surroundings. Even the distant roaring of the falls at the foot of the lake sounds faint in the noonday air.

A solitary Indian is at work on a new birch canoe, and the languid air with which he mops his brow and draws his knife across the cedar strips looks as if he too had fallen a victim to the universal *dolce far niente.* The craft shows no signs of progress. Who would blame him? Not I, who am enjoying my ease, my pipe, the breeze, the scent of the woods and last, but not least, the freedom from restraint of stiff collars, cuffs and boiled shirts, and all the other paraphernalia of modern civilized attire. These are flannel shirt days and I am enjoying them to my heart's content.

Ah, how clear the air, how fresh the verdant hillsides, how blue and limpid the lakes, now mirror-like showing again the outlines of the hills, the rocks, the dark spruce and the gleaming birches, and then again, when a breeze ruffles the waters, reflecting the azure above dancing and gleaming in the sunlight.

I know a small lake, or rather pond, beyond that hardwood ridge yonder, clustered among the hills, shaded by the forests, whose child it is. In its crystal depths, all along the wooded shores, under the old logs and around the sunlit rocks, there dwells many a noble trout; and if you succeed in enticing them from their lair, I warrant you some sport. But, alas! they are changeable in their moods and appetites, and there are times when, offer them the choicest tidbits your fly-book and bait-box afford, and few and far between will be the flashing rises and the vicious tugs which so delight the sportsman's heart. But then we are not fish-hogs, you and I, and there will always be trout enough after a forenoon's fishing to grace the birch bark plates on the log table, up there on the point, where the pines stand sentinel over the lake and the cedars stretch their boughs lovingly across the waters.

We were up there the other day, my wife and I. There had been thunder showers the night before, and the air was crisp and cool. The sunlit woods faintly rustled in the morning breeze that bore us along through the narrow stretch of water separating this part of the lake from the larger portion beyond. A pair of kingbirds have built their nest here on an old log, away out in the water. They do not seem to fear any foes, nor the rain and the storm. As the canoe passed within a few feet of their dwelling, we see three little heads stretched out above the nest. One of the parents is perched upon a branch near by, pouring forth his morning song and keeping watch, while the other no doubt is in the bushes looking for food for their brood. We pass by them swiftly. The canoe glides along, propelled by the measured stroke of the blades, past the swampy mouth of the brook from Lake La Roche, whose waters we near tumbling down over the rocks in the deep woods; past headlands of birches and spruce; past little islands clad in the dark green of cedars and bordered by bright patches of rushes, that look like slender spears thrust through the bosom of the lake; past white, glistening water lilies; on again over the ruffled surface of the lake, which now sends its ripples toward the bow of our craft. The cry of a loon sounds across the water; we look up, and there, not fifty yards away, he swims, turning his head to and fro. For a moment we see his white breast gleaming in the sunlight; and then, frightened by our approach, he dives down to come up again away out of reach. His fears are unfounded; we would not harm him.

We leave on our right the outlet of Lake Au Sable and the bay where the old beaver dam bears witness of the sagacity of its builders—who now, alas, have all found their way to the furrier's benches—and cross straight over the lake, where the lilypads and alder bushes mark the entrance to the river. We pass on between the four ponds which flank its mouth, into a small pond-like widening of the stream, almost entirely covered with rushes, white and yellow lilies and their broad round leaves, save for a narrow channel on the left. The channel is crooked, and to save time we head our craft straight through the lilypads and bulrushes. The paddles touch bottom here, and using them as push-poles we plunge through the aquatic vegetation. Splash, splash, it sounds right and left. The quiet repose which reigned here a moment ago is rudely broken by our intruding. On all sides before the bow leap a small army of bullfrogs, which until now had been resting on the leaves, enjoying the warm morning air and stupidly blinking at the sun. The blue heron had as quietly enjoyed his breakfast here and

thought himself quite safe from all intrusion, but he too starts up with a cry, and with outstretched beak and legs flaps his wings and beats a hasty retreat over the tree-tops. We pass on, and in a few seconds the quiet spot is left behind, the kingfisher, the white, spotless lily and the sunny air.

Cool, balsamic shade now receives us, as we enter between the banks. The alders that fringe the shores form an impenetrable thicket on both sides; and as they stretch their arms over the water's edge obscure the dividing line between river and shore. White gleaming birches mingle with the spruce, pine and cedar. They stretch their limbs far, far up into the sky, waving and nodding toward one another from either shore, and joining their crowns way above our heads. The river now flows faster beneath our canoes, we see the ripples where the alders touch its surface, the long aquatic grasses are waving in the current underneath; but the surface remains unruffled; and down in the depths we see again the gleaming birches, the swaying pines and the azure heaven above.

A bend in the river and another opening like the first partly overgrown. Turning the point we see the broad wake of a muskrat as he swims across. We speed on to have a closer view of him, but as he perceives us he dives in an instant and is seen no more. A large rock comes in view now as the river narrows again. A short distance below it the water shows in white ripples, giving evidence of the strong current. We ply the paddles vigorously, and pressing them hard against the rocky bottom climb up the rapids. The rocky, moss-grown giant is soon left behind, another rapid follows, then a bend in the river and we are at the foot of a third, too steep and too rocky to be passed by the canoe. It is beached a little below, behind a projecting point, which breaks the current and forms a safe anchorage.

Taking up our rods we start ahead over the short portage, while the guide follows with the canoe on his shoulders. The end of the carry is soon reached, and a small lake surrounded by brushy hills lies before us in the morning sun. Lake Number Two, they call it, as it is probably considered too insignificant for a more euphonious name. Hark! what is the noise that falls on our ears as we enter the river again? Like distant thunder it sounds. The canoe shoots around an island that divides the river at this point and there, right before us, shades of Izaak Walton, what a glorious pool! Large, slanting rocks rise on the right, making a safe and convenient landing place for our craft. From out of the depths of the forest vaults leaps a wild mountain brook. Gigantic bowlders and rocky ledges lie in its pathway, forming a natural dam over which the stream rushes, a boiling, seething mass of white foam, falling into a wide basin below. The projecting rocks divide the current into several channels and thus nature has formed one of the most tempting pools an angler's eyes ever beheld.

But we do not fish here to-day. The canoe is quickly pulled ashore, lifted on the strong shoulders of our guide and we climb the steep incline of the rocky ledge. For a few minutes our path lies through low brushes and second growth trees We stop to slake our thirst at a little spring which trickles under the roof of an old spruce, and in another minute the shade of the big silent woods closes around us, silent save for the sound of the rushing stream which is our companion part of the way. Over slippery logs, over mossy stones, over windfalls, bare roots and through swampy stretches lies our path. The sun sends his rays slanting through the green network of foliage overhead. They dance upon the carpet of brown leaves and turf under our feet, and play at hide and seek around the rocks and mossgrown tree-trunks, until they seem to lose themselves in the dark recesses of the shadowy forest. The morning is cool and we march on buoyantly, chatting on the way. After some twenty minutes of arduous working the woods grow lighter, the blue sky shows again amid the slender columns ahead. We quicken our pace and there before our eyes under the arching branches stretches the silvery surface of Lake William. The end of our journey is reached. The canoe is put into the water, the rods are strung, hooks and flies adjusted, and now for the sport which we have come such a long way to obtain.

As we float out amid the rocky shores through a small bay, I begin casting my flies while Mrs. B. puts on her sinkers and worm and trolls her bait far astern. A large rock shows above the water to the right; I lengthen my cast to reach it and in another moment my flies play around its base. One—two splashes—a flash of gold in the water—I strike, the rod bends and sways, while my reel buzzes its ever welcome song into my ear. Two half-pounders hardly lie in the canoe at the feet of George, when Mrs. B. with a fierce expression on her face, jerks her rod forward and fastens a fish that had made too free with the bait. She handles him skillfully and he is soon deposited with the others. He seems an ounce or two heavier than they. We proceed along the wooded shores, casting into every likely nook and corner, over sunken logs and rocks, under overhanging cedars, and once in a while into the deeper water on the other side. But only an occasional fish is caught, until we reach a small bay, deeply shaded by the dense forest. Casting around an old stump, that rises out of the water here like the broken mast of a sunken vessel, I hook another double, while my companion strikes at the same moment, and bends her rod almost double. George has his hands full for a few moments, and the landing net is kept busy. The place seems alive with fish for several minutes. I score a few misses, while Mrs. B. is more fortunate or, as she thinks, cleverer than I—let us give her the benefit of the doubt—and has four trout to her credit before I catch another. The fish are rising and biting freely now, and sport is good. But the large ones are not out to-day, one of a little over three-quarters being the heaviest caught. All fish of a quarter of a pound and under are carefully removed and returned to their element. Black-hackle and Parmachene-belle are the flies that have the call; in fact, I have found these two the best taking flies in this region.

The sun rises higher and higher, and as the heat of the day increases the fish cease biting. With double-edged appetites we head our canoe for the small peninsula which commands a beautiful view of the lake and the woodlands. We step ashore; and the blue smoke of our campfire rises up through the crowns of the pines. Potatoes are peeled and sliced, the fish dressed, and the smell of coffee and frying bacon give evidence that preparations for luncheon are in progress. Have you ever tasted a meal equal to the one now spread before us on the birch bark plates? Was there ever a banqueting hall grander, were ever columns loftier, or arches more graceful than these that support the eternal roof over our heads! Where is your dyspepsia now or that tired feeling you complained of? All have departed after a few weeks' sojourn here among the lakes and hills, a short time of close communion with Mother Nature, of return to the pristine condition of life. The meal is over, and now follows sweet repose upon the mossy ground. The embers of the fire are burning low; and while the smoke from the pipe curls up and is blown away by the faint breeze, we lie and feast our eyes upon the beauties of the landscape.

The sun is low in the west, when, after the afternoon's fishing, we finally prepare for the homeward trip. It is hard to tear ourselves away while the trout are still rising, even though our creel is filled and it costs great strength of mind not to let our awakened fishing propensities get the better of us. Every rise causes us to stop for just another cast—we halt again and again until at last the lengthening shadows of trees and mountains command our return to camp. I do not know the number of trout we caught that day, but I do know that after George had cut a long twig and began to string the beauties on it, it grew longer and longer before our admiring eyes as if the treasure were inexhaustible; and I also know that after I had lugged those trout over the portage and emerged with them upon the rock by the pool I could have taken my solemn oath at that moment that to the best of my knowledge and belief that string of fish weighed 100lbs. at least.

Which, however, did not deter me from toying a few parting casts at the pool. I caught two fish which I did not add to the rest, but returned them for another day or another angler.

Our descent down the river was naturally swifter and easier than our ascent in the morning. Nevertheless the sun had long disappeared behind the hills when we shot the last rapid and soon after entered Lake Seymour. Like glass lay its surface before us. Deep shades of blue and purple rested upon hill and ridge, standing out in bold relief against the pale evening sky. Hazy darkness enveloped valley and bay and inlet, while clear and distinct in the waning light stood every rock, point and island in the beautiful sheet of water.

The pale, placid moon peeped out over the eastern hills, and clouds of mist rose from the water, as our craft shot out of the narrows and Camp Mastigouche hove in sight. The tinkling of cowbells sounded a cheery welcome, while from the windows bright, shifting lights told of the crackling logs in the fireplace, sending their promise of warmth and comfort through the chilly night air.

ALBERT BRUNING.

MASTIGOUCHE LAKE, Quebec, 1894.

# Natural History.

## BEAVER CHIPPINGS.

BY THOMAS CHESTER.

THE beaver, in its structure, customs and habits, is highly interesting to all who like to study the ways of the lesser animals. Many stories have been told, many anecdotes and traditions have been related, illustrating its sagacity and instinct. And though part of these beliefs may be ascribed to the overflow of an exuberant imagination, still enough remains true to place the beaver at the head of all the fur-bearing animals in downright sagacity and in the possession of that mystic quality which we call instinct, that reaches out to the verge of reason and brings about results by the adoption of means.

The beaver is strongly and compactly built. In form it very much resembles the muskrat, though it is much larger. The forward feet and legs are very small as compared with the size of the animal; the hind legs are larger and very strong and muscular. The hind feet are fully webbed and on the second digit of each is a very curious growth or formation. This is a horny scale which grows out over the nail of the toe, but is not attached to it, forming, as it were, a second nail over the first one. These dew claws are used by the beaver in scratching himself, and in picking the particles of bark and other matter from between his teeth. The body of the beaver, when fully grown, is 24 to 30in. long; the tail is from 12 to 15in. long and 6 to 8in. wide in the middle, and shaped much like a mason's trowel. A continuation of the backbone runs centrally through it, to the extreme end. It tapers from about 2in. thick at the root to ¼in. thick at the end, and it also tapers from the central bone on each side to the outer edge and to about the same thinness; the whole is covered with a thick, hard, scaly-like skin, of a dark brown color. A full-grown beaver weighs from 40 to 50lbs. And in years gone by they have been taken weighing 70 or 80lbs.; but of late it is rare to get one weighing more than 45 or 50lbs. The fur is extremely fine and is waterproof. The inner coat, or fur proper, varies in color from a gray to a very dark brown on the upper parts. Below on the flanks it is from light to dark gray. The outer coat of long hair which covers the inner fur varies from a light to a dark brown.

The skull is of a heavy structure and is from 5 to 6in. long, from 3 to 4in. wide, with a circumference over the eyes of 11 or 12in. The under jaw is very thick and strong. The upper part of the skull is broad and flat, with a slight rise from nose to top of head, but being somewhat depressed between the eyes. The ears are short and nearly hidden by the fur, but their interior is large and they are attached to the skull by a hollow, hard, gristly substance of a bony nature. This attachment undoubtedly quickens the hearing, and seems to be common to most wild animals. The eyes are small and not especially quick-sighted.

The nose is medium-sized and wonderfully quick-scented. To guard against this nose taxes to the utmost the ingenuity of the best trapper. The beaver has twenty teeth; two incisors, or cutting teeth, at the extreme front end of each jaw, four grinders on each side of upper jaw and four on each side of the under one. The upper incisors curve a little inward and the lower ones, which are a little the longer, curve outward. They are from 1¼ to 1½in. long. The outer surfaces are covered by a hard enamel, which forms the cutting edges. These teeth are gouge-shaped, and convex on the face, or outer side, and are sharpened by a concave slant on the inner side. The grinders are placed well back in the mouth. The upper ones slant backward, the under ones forward.

The beaver lives to be twenty or twenty-five years old, and has been found all over the wooded parts of the northern hemisphere, existing to-day in many of the States of the Union and across the continent from Labrador to Mexico.

---

The beaver lives a busy life and a varied one. They commence building their dams in the early fall while the streams are low, this condition enabling them to work with greater ease and facility. They build on streams, ponds, thoroughfares between ponds, or near the mouths of small brooks emptying into larger waters. The main condition sought in choosing a location for the dam is that the water be slack, of a springy nature, not too far from wood, and having some natural formation tending to the lessening of labor—such as the narrows at the foot of an expansion in the stream, or some place where there is one or more small islands in the stream, or some other obstruction.

These conditions are sought for and adopted by the beaver in a general way. But when hard pushed it will build almost anywhere that it can find wood and water, for it has a wonderful facility in adapting itself to a change of conditions.

In commencing their dam they cut alders, willows and other bushes which may be growing in the near vicinity, and float them down to the location; then they take one at a time, place it slanting—butt up stream, top down stream—cover the butt end with mud, stones, grass roots and such other matter as may be near by; and so proceed until they have a row placed across the stream. Then they fill in the face of the inclined row with sticks, mud and any debris which may be handy by; frequently they go up stream above the site of the dam and cut wild grass and bushes, put them in the water and float them down against the dam, then go down and place them where needed. They repeat these operations until they have the dam as high as they want it, which may be from two to six or eight feet. Finally then, to make it tight, they carry up mud and muck in their mouths and by aid of their paws, on their chests, and spread it over the face of the wall; then in traveling over it, their large webbed hindfeet press it down and make it compact. As the dam settles, it is leveled up, so that when full the water runs over it in one unbroken sheet.

After the dams are finished they commence work on their houses. They usually select a place to build up toward the head of the flowage on the bank of the stream in shoal water. In such cases they dig tunnels underground from the bed of the stream to their houses. The houses are cone-shaped, having a diameter at the base of from 3 to 7ft. or more, and a slant height of from 5 to 15ft., according to the number of the family. The houses are built up of alders, willows, grass tussocks and mud mixed in and interlaced much in the same manner as is the material in the dams; then a coating of mud and muck is spread over the outer surface save a space on top, which is left unplastered for ventilation. This plastering is not finished up until late in the fall, when the cold nights freeze the layers as they are put on, making a hard strong wall, which is proof against all depredations of animals which might try to break in. The interior of the houses is lined with mosses, grass and leaves, making a comfortable room for the beaver to live in. Sometimes there are two compartments, one above the other. The upper one is to be used in case of very high water, which may flow them out of the lower one. From these compartments, passage-ways are cut leading into the water near the bottom of the stream, and being below the frost line, they are consequently free and open all winter for egress and ingress between the house and the water.

Usually a house is occupied by only one family; but sometimes two or more families will live in it, having separate passage-ways to go in and out as they may see fit. It is seldom they form these gregarious communities now. In old times, when beaver were plenty, they did so. Some of the Hudson's Bay Co.'s trappers in British America found as many as twenty-seven beaver in one house, which were probably of three or four families. A family may be only two old ones, or the two old ones and all their progeny which may be with them, and may vary from two in number to a dozen or more.

Sometimes beaver do not build regular houses to live in through the winter, but tunnel into the banks of streams, commencing well down in the water, inclining upward as they proceed, till they get far enough above the surface level of the water to insure them against an overflow, which may occur by heavy rains. At the end of the tunnel they form a circular room to live in, lining it with grass and leaves, making it dry and comfortable. At the end of the tunnel they break a hole through to the surface of the ground. Then they go down through the passage-way and up to the land, where the break is, and cover it over loosely with sticks, twigs and leaves. This breaking through the surface is frequently charged against the beaver as a mistake on its part, a miscalculation in its plans; but the charge is ill-considered, hastily made and is not true; they do this to ventilate their apartment. To sustain life, they must have pure air to breathe, as must all other animals; this can be obtained in sufficient quantity in the present instance only by this opening overhead. The sticks and other matter with which they cover the opening hide it from view, but still leave space sufficient for the passage of air.

Sometimes a beaver will not provide any kind of a place to stay in, but wanders about disconsolate and alone. This is caused by some misfortune, by some accident which has happened to it, usually the loss of a toe or a foot, the tribute paid to some amateur trapper. It fails to mate up with any other beaver. No beaver of the opposite sex will have anything to do with it, but passes it by, gives it the cold shoulder, seeming instinctively to know that it is incapable of supplying the winter's subsistence; and the unfortunate one seems to know this, too, for it loses all ambition, all desire to labor, and goes about from place to place in a hopeless, dejected condition. Sometimes it will take up its abode in an old vacated house, which has been wrecked and torn by the elements—the winds and the waters. Here it may stay till cold and hunger drive it out; then it will enter some occupied house and try to make friends with the inmates. But they don't want it, won't keep it, so drive it out. If it shows resistance the whole family will unite in forcing it to leave; but it usually goes without this rigorous persuasion, knowing their teeth are long and sharp. Should

manage to live until spring, which it usually does—in some way—it is all right; the green herbage and warm weather recuperate its system, its wounds heal up, its strength and ambition return, and when the fall of the year again rolls round it succeeds in mating with another beaver, and together they commence the toils of preparing for another winter and for the rearing of a family.

After they get their dams and houses built, the beaver commence cutting up wood and drawing and floating it to their houses for their winter's supply of food; or at least enough to last them through the first half of the winter, as that is the time when the streams are frozen over the closest and hardest. They do not eat the wood, but only the bark which they gnaw and scrape off. They feed on the bark of almost all the deciduous trees, but they prefer to use that of the softer woods, such as the poplar, white birch, mountain ash, willow, alder and such like, as the trees are easy to cut down, and the bark, being fine grained, is easy of digestion. But when they find these favorite trees scarce, they will cut down trees of almost any kind—even the spruce and fir—and eat their bark. Indeed, I have frequently known them to eat the bark of the fir from choice. I say from choice, because plenty of deciduous trees were growing close by. I think there is some medicinal quality in the balsam which the beaver instinctively knows is beneficial to its system.

They commence to fell a tree by cutting a groove around it as high as they can conveniently work, and another one two or three inches from it, then biting and splitting off with their teeth the section of wood between the grooves, and repeating the operation until the tree falls. Sometimes a single beaver will do the work, but usually two or more labor together. They cut trees of any and every size up to two and three feet in diameter. When the tree is felled they lop off the limbs and tops, cut them into sections two, three, four or more feet long, according to size of the sticks and such as they may be able to draw into the water and float down to their houses. The bodies of the larger trees which they fell are not cut up; they eat the bark off them as they lie. This supplies them with food while they are gathering the lesser parts for future use. The smaller trees up to six or eight inches in diameter they cut up and float off; the larger of these they cut into very short pieces and roll them into the water down a path previously cleared of obstructions. They seem to know that the greater the diameter the heavier the stick, and that to be able to handle it it must be cut very short. As fast as they get any wood to their winter quarters they take it, a stick at a time, to the bottom of the pool formed in front of the house, and push it down on to the muck or mud; this forms a vacuum between the stick and the ground, and the pressure of the water from above holds it in place. They frequently place a little mud on the end of the stick which is hardest pressed down, to keep it in position. The other end of the stick may incline upward at any angle; and so they proceed till they have pieces placed all over the bottom. Then they bring down some smaller and much longer woods, such as alder, willow and little poplars, sinking them over the first layer and sticking the butt ends into the mud of the banks, thereby helping to keep the first sticks in place; then more larger sticks are brought and stuck in between the lower and upper tiers, and so continued and repeated until they get all they want, and have a pile so interlaced and mixed together that it is difficult to pull it apart. The woods of this pile, being naturally heavy, soon become so saturated with the water that it will remain long submerged of its own specific gravity.

The beaver cannot and, indeed, does not keep under water all the wood which it gathers for winter use. When its favorite trees are scarce it has to take up with some of the lighter kinds, such as small cedar, pine and spruce; these they cannot hold in the water except in so far as they may be able to interlace them with the heavier woods. Neither can they keep their wood submerged where the bottom of the stream is of a gravelly nature, simply because they cannot produce a vacuum between the wood and the gravel; but it is seldom that they build a house in such a location. Sometimes their burrows in the banks will be from such a bottom; in that case they draw whole bushes to their home and stick their butt ends in under the banks, thus holding them in place, and then poke some larger and heavier wood under their bushy parts. This art which the beavers have of submerging their wood is very simple. It is the same principle as that on which some scientific toys such as the sucker are made and used, the same which enables a person suspended head down to walk on a smooth surface with properly constructed "shoes." The two flat, smooth surfaces coming together force the air from between them, and the exterior air pressing on the "shoes" is sufficient to hold the person in position. Of course, the beaver in its rude way, and with rough, uneven surfaces to work on, can achieve success in this line only to a limited extent. Still it does well, does all that its needs require, and I'm not sure that we should not give to the beaver the honor of the discovery of the principle, for it is very probable that the beaver made practical application of it long before man did. Simple and elementary as the foregoing remarks are, and as plainly understood as they are by most people, yet there are many erroneous opinions prevailing respecting the whys and wherefores of the beaver sinking its wood; and perhaps the most popular of them all and the most widespread, reaching from Maine to Mexico, is that the beaver takes one end of the stick in its mouth and sucks the air out of it, thereby causing the wood to become heavier, partly by water taking the place of air, and partly by the collapse or shrinkage of the stick. It is very evident that in order to have the beaver do this it must produce a vacuum in its mouth; it might not succeed then, but to succeed at all this condition must exist and be present. Now when the beaver puts its mouth over the end of the stick, in order to produce a vacuum it is necessary to exclude the outside air, and the only way in which it would be possible to do this would be for the beaver to press its lips so tightly about the wood about the exterior of its mouth as to exclude all air from the outside; this it is impossible for it to do, as, practically speaking, the beaver has no lips. The mouth is, to some extent, always open; the incisors are always bare, uncovered; the lips grow up to their bases and no further. So it is impossible for the beaver to have its mouth air tight, even when empty. Still, nothwithstanding all this, many people hold the opinion that the beaver sinks its wood by sucking the air out of them, and the only excuse I can give for this is that on its face it seems very plausible and has some truths mixed in with its fallacies.

By the time the beaver gets its wood cut and yarded up in front of its house, the streams and ponds commence to freeze and soon they are closely sealed over. Now it is that it has a season of rest from its weary labor and surely it deserves it, for it has worked and fared hard during the last two or three months. Now it is that they can sport about in their ponds, under the ice, and when they feel hungry can take a stick from the pile, draw it up the inclined plane to their house, eat the bark off at their leisure, then draw it out to the water and push it out of their way. They don't take all the wood into their houses, but only the smaller and medium-sized pieces; the larger sticks are piled where they lie in the water or on the edge of the shore. I have often stood on the ice near the house and heard them scraping off the bark at the pile under the ice.

For a while after the streams are frozen over the beaver don't come out on the ice much, as there are not many holes open, but later on, when the snows come and cover the ice, they seem to thaw it out in the springy places. Through these holes, in soft weather, the beaver come out on top of the ice and go back to the timber, a distance frequently of fifty or sixty rods. There they cut the smaller woods, such as alders and willows, draw them down to the holes, get them under the ice and gnaw the bark off. This they will do when they have plenty of wood at the house. They seem to like the new, fresh bark best.

The beaver stay in their houses till the late spring or early summer, bringing forth their young there, and teaching them to swim in the ponds and take care of themselves. They have young once a year, in May, and produce from two to four at a litter; usually two or three, rarely four. In the warmer climates they are more prolific. They nourish their young with milk from the breast, the milk glands being placed well forward on the breast as are those of the bear and some other animals. The young stay with the old ones till they are three years old; then in the fourth year they push out for themselves, mate up with other beaver and form new families.

When the little ones become strong enough to endure the journey the old ones move down with them to larger and more open waters, where they spend the summer roaming about the streams and ponds as fancy leads them, living on such herbage and berries as may come in their way, and, as some trappers say, eating the fresh-water mussels, and which they may do, for the muskrat eats them and is very fond of them. But as to the beaver eating them I cannot say, as I have never seen any proof it.

The beaver's tail is very fine eating; it is neither fish nor flesh but a white, nameless substance, intermediate between the two. It is greatly relished by hunters and trappers and indeed by many others. Boiling is perhaps the best way of cooking it; then the hard white skin may be peeled off and the inner or eatable substance scraped from the bone. When properly seasoned it is delicious on bread or toast. The carcass too is very good eating, especially the hind quarters. The meat is of a bright red color, very much resembling beef, and has somewhat the flavor of both duck and mutton. The Indian is very fond of it, as he is of muskrat meat. It is a question which he likes best, but I think the greater quantity of meat in the carcass of a beaver will tip the scale in its favor. It is surprising how tenaciously he will stick to a beaver or muskrat till he captures it. Time counts as nothing to him, hunger, cold and exposure are endured without complaint—not so much on account of any value which he may place on the pelt as because he wants something to eat. If an Indian were paddling his canoe along a stream and should see a mink sitting on one end of a log and a muskrat sitting on the other end, he would shoot the muskrat in preference to the mink, the pelt of the rat might be worth fifteen cents, that of the mink a dollar; but he could realize nothing on the mink till he went down river to the settlements and sold the pelt; that would look to him away off in the happy future, and the Indian is not provident of the future. What he wants is something he can realize to-day, now, something tangible, something he can eat, something he can place between his teeth and feel conscious that he is bringing a pressure to bear upon it. In fact he wants the muskrat meat and wants it as soon as he can get it.

### Telegraph Wires as Game Destroyers.

OUR native wild game birds are evidently fighting a losing fight against ultimate extermination. Especially is this true of that beautiful shy bird the American woodcock. Had he to contend only against the thinning of his ranks by the sportsman's piece, he could easily hold his own; but when to the chance of getting shot as he flits up before the dog is added, year after year, the constant curtailing of his breeding and feeding area by the destruction of swamps and swales in the ceaseless march of improvement and by the spreading forest fires, his chances for keeping ahead of the annual losses are growing less and less.

Who that has seen his fiftieth year and will make a comparison in the number of birds he could flush in an average day's hunt thirty years ago, with the meagre few that he can bring to bag in these degenerate days, needs any one to assure him that this noble bird is, more or less slowly it is true, yet surely passing away.

Now in these later days is added still another pitfall which the march of civilization has set for the wing of this noble bird—the wire. Almost every sportsman has seen its work; twice in as many years have I, within a mile of my house at Islip, L. I., picked up a dead woodcock that had flown the previous night against the stretched telegraph wire. This same thing is occurring constantly all over the land; and with every mother bird thus killed, having a young brood, is involved the destruction of her four little ones as well. Alas, however, I see no way to prevent it and I suppose there is no alternative but to accept the inevitable extermination when it comes, and pray that its coming may be long delayed.

Who can tell me why there are no tree toads this year? I have not heard a single one this whole summer long. Some say "the drought," but I have seen it quite as dry at times before this; but then the toads were always "calling for water" as the boys say. No, I think they too are disappearing from our trees; and if so may not their disappearance have something to do with the apparent yearly increase of moths, worms and tree pests?

ISLIP, Long Island, Aug. 13. A. HUNTINGTON, M.D.

### Siberian Reindeer in Alaska.

MR. CHARLES HALLOCK has favored us with the following letter from Mr. Hamilton, assistant to Rev. Sheldon Jackson, the General Agent of Education in Alaska, dated at Washington, Aug. 20. It contains very gratifying news about Dr. Jackson's efforts to introduce the Siberian reindeer into Alaska, and reads:

"A letter from the Doctor, dated at Port Clarence, July 9, and received here on Aug. 18, brings the good news that, although the past winter had been unusually severe, the herd had passed through it in good condition. This spring 150 fawns were born. The employees were all in good health and spirits. Up to the time of writing 48 deer had been procured from Siberia. The Laps had not yet arrived. They did not sail from San Francisco until June 17."

We learn that Mr. Hallock is preparing an exhaustive monograph on the *Rangifer* family, which will be printed in connection with Dr. Jackson's forthcoming report on the Alaska reindeer.

### Turkey Buzzards in New York.

A FLOCK of eight turkey buzzards was seen in Mountainville, Orange county, N. Y., Aug. 19. They were circling over the eastern slope of Schunemunk Mountains and were flying south. Mountainville is five miles west of Newburg, and not far north of the New Jersey line, so that this record of the unusual occurrence of the buzzards in New York will probably hold for New Jersey as well. Two of the birds passed within a stone's throw and were clearly identified. CHAS. B. REYNOLDS.

[Though this species has been recorded from points in New England—Connecticut, Massachusetts and Maine—and commonly occurs as far north as Ontario and the Saskatchewan in the west, this observation is worth recording. We have heard that two specimens were recently shot near Blooming Grove, Orange county, N.Y., where they excited interest as being unknown birds.

## Game Bag and Gun.

### SOUTH DAKOTA PRAIRIE CHICKENS.

MITCHELL, S. D., Aug. 22.—The count sportsman—butcher or game hog a more appropriate title. His performance is regarded as worthy of note, and luck better than average. The fewer of them who visit this State now the greater the cause for congratulation. The gun clubs and State are paying heavy premiums on the capture of this class, and, thanks to the movement, there are fewer of them each year.

The notion that the prairie chicken is extinct in the Dakotas is a fallacy. The last year or two being drier than usual, they have bred by the thousands in the sloughs, where years before they drowned; and the reports made by hunters from all directions over the State during the past two weeks are that the prairie chicken has not been so plentiful for years.

The 15th of August was celebrated here by several Chicago, Milwaukee and other Eastern city hunters, as well as by all local sportsmen, except those who believe the game law to be closed until Sept. 1, and they are few and hard to find.

The season has been favorable, as since Aug. 16 the days have been damp, thus enabling the dogs to work well. But as a matter of fact the best shooting is over soon after the season opens, and the rest of the fall affords shooting that depends for its quality a good deal on luck, an intelligent dog and a good shot.

From daylight until 9 or 10 o'clock the game is plentiful in the stubble fields. The rest of the day it will be found in the dry runs or sloughs nearest the stubbles.

Two or three parties of four or five each from here have planned to make extensive hunts through North Dakota as soon as the birds begin to pack here.

One pot-hunter claimed to have killed yesterday 148 birds, and 12 of them at one shot, by pouring both barrels into them while on the ground. NOMINATOR.

### The Kickapoo Opening.

CIMARRON, Kan., Aug. 20.—*Editor Forest and Stream:* I see by the papers that the Kickapoo Reservation is going to open in about six weeks. An Indian opening is one of the finest things I ever saw. It is the old, wild, woolly West right over again. Any one who loves to hunt, who loves to see an exciting free show that will last a month and be amusing all the time, and who at the same time wants to make a little money, had better come to Guthrie, Okla., and go in with the rush.

The country to be opened is about twenty-three miles square, and is almost all good farm land, with plenty of timber, good water, good climate, and more quail to the acre than I ever saw anywhere else. Deer and turkeys, fish and squirrels, lots of them. It is about thirty miles southeast of Guthrie, which is the nearest good outfitting point on the railroad. I have been to every opening for six years, and for a sportsman who loves hunting and excitement, it is too good to talk about. I am hardening my horses and getting ready to drive down there and go in; and will tell you all about it when I get the first rush over, or at any rate after I come home again.

Brethren of the quail button, if you want the best time that is left on earth, that I know of, come down to the opening. W. J. DIXON.

### Rail Found Inland.

STOCKTON, Cal., Aug. 10.—In connection with my renewal, I give you a little experience I had a few days ago, and would like to know if any of your readers ever me with like one. While I and my boy Earle were out dove shooting, the dog started up a bird, which I took to be a rail. It flew 20 or 30yds. and dropped in some dry grass. I told the boy to go and see if he could get it. Much to my surprise, he killed it on the wing, he being only 13 years old and this his first season with a shotgun. When he brought the bird to me it proved, as I thought, a rail. What seems strange to me, that he was up in that sandy, dry country, 15 miles from any marsh or wet ground of any kind. While there are plenty of them in the tules along the San Joaquin River, this is the first I have ever met on dry ground. S. N. C.

[Instances like this have been recorded in our columns before.]

## THE FOUR BEARS OF BALD MOUNTAIN.

"Speaking of bears," said Frank Walker, the local story teller, "you ought to hear Lon Bishop tell how he and Waite Hager killed four bears on Bald Mountain five years ago. Just you drive up to Lon's sometime and ask him to tell you the story; it's worth the ride."

Frank had been telling how he caught three beaver last winter, and I asked for a bear story. His reply brought to my mind the four bears I had seen in the hotel office about five winters ago, and of reading in the local paper something about how they were killed. My wife and I drove up over the mountains to Lon Bishop's home. The house was little more than a few boards nailed together in any shape to form a roof and four sides. Lon is a gummer, that is, he gathers spruce gum for our girls to chew, and makes a good living at it. He is a short, solidly-built man, with a face like an Indian's and the straight, long black hair peculiar to this race. He sells his hair for $12 every year, he told me.

When night finds him too far from home to return he takes his two straps and hangs himself from a limb of a tree and says he sleeps most soundly, and no "bars" trouble him. Lon is odd, but he is honest and brave, as the story will show.

"Come into the house, Ed, and you too, Mrs. Parmenter, and I will tell you about the four bears and the skins of two of them to boot."

We went in and to our surprise found that the room was cool and clean. Lon brought out two bear skins and told us they were taken from two of the bears that I am to tell you of. They were very fine skins and worth $20 each, Lon said. After we had drank a cup of tea, to satisfy Lon, he filled his pipe, after asking permission of my wife, threw himself down on the bear skins on the floor and told us his story.

"It was along about Thanksgiving time, and there had been a pretty heavy snowstorm the day before. I had been chopping up wood up here along with Waite Hager, and as I had to go eight miles to our chopping ground and didn't carry any rifle with me, I always had my two-headed axe, though, and didn't dream of being afraid of anything. On this particular morning I started out the same as usual, but looked at my rifle and came near taking it with me. I knew it was the finest day of the season to track bears and came near letting the chopping go and having a hunt. I gave it up, though, and left the rifle at home.

"Waite and I chopped all day, and until about 5 o'clock in the afternoon. It gets dark early up there in the mountains; we could just see to chop when we quit work. Our path took us through the thickest kind of woods, and we were hurrying along as fast as we could, so as to get on the main road before dark, when out from the right of the path came four bears—a mother, a yearling and two pretty well grown cubs.

"We didn't think of running, or anything but getting those bears, for the bounty on a bear is $15, and the hide and meat are worth from $20 to $30. I grabbed my axe and started for the yearling, and Waite went for the old she one. I brought my bear a clip side of the head that killed him dead in his tracks, but Waite did not have so good luck. The old bear did not delay to be hit, but with her cubs took up the path mightily smart. We chased them for 40 or 50 rods, and our yelling scared them, I guess. Anyway, the cubs switched off and went up two trees, and when the old bear saw them going up, she took to a big birch and got up in the branches in no time.

"What to do we did not know. It was getting dark and we were five miles from a gun. We didn't want to chop the trees down for fear of the bears getting away and we could not drive them down anyway. At last we decided that one of us would go for a rifle and it fell to me. I made Waite promise to stick to the bears anyway and started as fast as I could walk for home.

"It took me about three hours to go and return, for the road was rough, and when I got into the wood coming back it was mighty dark and slippery. When I got near the place I had left Waite I smelled smoke and knew that he had been making himself as comfortable as he could. I came to the fire but Waite was not there. I had brought a lantern and commenced to look around for him. I didn't know but what the bears had come down and done him up.

"In an instant I saw how it was. The cubs had started to come down and Waite had killed them with his axe before they got to the ground. I found a splash of blood on the tree that the old bear went up, and after looking around found her track and alongside of it was Waite's. He had hit the old bear when she came down, but did not kill her, and so was following her over the mountain.

"I started on a trot after him, but did not see him again until long after daylight next morning. The track led over the mountain there and down through the valley, then they went north and came pretty near to the Deerfield River, then back southeast again and over Bald Mountain. When I got to Bald Mountain it was light enough for me to see the track without the lantern. At three places along the road I saw where the bear had stopped and dug up moss to put in the wound Waite's axe had given her. She had bled pretty hard, and I thought I would come on to Waite and the bear every minute. I did not, though, and up over the mountain I went. Now the track led toward the village, and I knew Waite would have her anyway. Down the mountain went the track and at last followed the main road. Pretty soon I heard a rifle, and knew that somebody had shot at the bear. A quarter of a mile further I came upon Waite and another man. The bear was lying in the road stone dead. Waite had come up just in time to see the man shoot her. The man was soaking strips of wood for barrel staves in the brook beside the road, and had seen the bear coming. He had run to his house and got his rifle and killed her within a few steps of where he was at work. She weighed 395lbs., and I never saw a bigger one.

"Waite said that the cubs had come down about an hour and a half after I started for the gun and he killed each one with one blow of the axe. The old bear got down before he could finish the second cub, and he had to fight her on the ground. His first blow took her in the neck and only made her mad. He aimed a second blow at her but she struck the axe and sent it off into the woods. Before he could find it again she had started off through the woods. He could hear her crashing through the bushes and followed her by the noise she made. He thought she would bleed to death before she got very far."

"How far was it you followed that bear, Lon?" I asked.

"Well, Ed, as near as we could figure it was twelve or fifteen miles, and the woods were awful thick, I can tell you. Waite had a harder time of it than I had, for he had to keep close enough to the bear to hear her crashing through the bushes and had to run some of the way. At other times the bear would stop and then he would keep perfectly still so she would not start until he got his wind. He didn't want to fight her again until it got light, for he knew he had made her ugly.

"We gave the man that shot her the $15 bounty and took the bear to the village. Next day we brought in the yearling and two cubs and got our bounty and the money for the meat."

He did not seem to think it was a bold, fearless thing to do to follow a wounded bear for twelve miles through the mountains on a dark night, or to kill another with an axe; but I do, and would rather have a rifle and daylight when I go hunting.

After a trout supper Lon harnessed our horse for us. I gave him my fly-book and reel, and he said there was enough tackle to last him five years.

His stories of bear hunts and gunning expeditions are as interesting as any I have ever heard, and the best part of it is I know they are true. E. S. Parmenter.

## TWO GREENHORNS AFLOAT.

At Hathorn's camp in the Adirondacks, I made acquaintance, among several others who were stopping there, with a young man, a medical student, whose health had broken down, and who in consequence had, as he said, been banished here for the summer to live in the open air and rough it. He had been in the woods several weeks, had regained to all appearance his health, and looked strong and vigorous. In the way of amusement he had become tired of fishing and taken to paddling—an art which he sedulously cultivated. His medical knowledge had been of benefit to several guides round the lake, among others to old Sutton, and the latter had in return taken him on several expeditions deer floating, and inspired him with the fancy for paddling. He would spend hours on the lake by himself in the stern of his boat practicing, and in the long summer evenings we could frequently hear his song from far out on the water—for like the Canadian voyageur, he loved to accompany his stroke "with the music of his voice."

The Doctor and I soon became fast friends, for with diversity of taste in some respects, there was that natural affinity which attracts even different dispositions.

One night while chatting round the camp-fire, we were discussing the requisites indispensable for a tramp in the woods away from hotels and stores. My ideas on that subject I have generally found to be more severe than the average, and I suppose I had stated them on this occasion, probably with the air of one who expected to find no sympathizers. What was my surprise when the Doctor went over my list, and brief though I thought it was, pronounced nearly one-half superfluous. His simple traveling kit would have done credit to an Indian.

I have forgotten now the details, but I recollect he dispensed with plate, spoon, knife and fork, declaring he could find on any spruce tree a piece of bark which would answer for the first, and besides require no washing, as wherever he happened to stop he could procure a fresh strip, clean and sweet. His pocket-knife would supply the others out of any chance chip or branch.

I felt myself outdone by the austerity of my new friend, acknowledged my inferiority and expressed pleasure at finding a man after my own heart.

The upshot was we entered into an alliance to make trips together, he showing me such places as he had visited, but with which I was unacquainted, and I reciprocating.

Our first excursion was made to two ponds, the headwaters of Brown's Tract Inlet. We started some time in the forenoon, intending to row straight down the lake, and after reaching the quiet water of the inlet, paddle leisurely along, trying any trout holes we might pass, and using no more diligence than was necessary to get to our destination by sundown. The distance up the stream to the carry is only about four miles, and from the carry to the ponds not over three-quarters of a mile, so that it was no very arduous undertaking.

Of incidents on the way there were none that remain in my memory, except that at a point on the creek—I can see it now as I write, clear almost as if before me—in a nook of the bank where a large tamarack tree hung its spreading branches over the water, so as to make a deep, cool shade, there was a dark pool. The Doctor silently paddled up to it, and indicated that there was a good place for a cast. It needed no such hint, however, for any one who had ever seen a trout hole before could see at a glance that here was one certain. I shall not attempt a description of what followed. Fish stories are proverbially suspicious. Let it suffice to say that we left that hole with enough trout for our dinner and that it has retained a grateful place in my recollection to this day. Other places we found also, and by the time we reached the carry we had enough for our meal and some to spare.

At the carry we landed, made a fire, cooked our fish in the frying pan, warmed some coffee, and with the bread we had brought made a hearty meal, the Doctor's substitute for plate, knife and fork being adopted and approved.

After a long rest we started for the ponds. Instead of crossing the carry, which at this point leaves the inlet and runs over to Eighth Lake, we followed up the stream, which now becomes narrow, shallow and rocky. We soon found it impracticable to paddle, and had to get out and wade, one in front pulling and the other behind shoving the boat. The stream was so overgrown with alder and other bushes, it was difficult work to force our way through, and though the distance, as I have mentioned, was only about three-quarters of a mile, it appeared to us a good deal more. Finally we reached the clear sandy bar at the head of the creek and saw the pond open in front of us. Compared with the gloom under the bushes, it was bright and cheerful; and we felt like men emerging from the darkness of a forest into a clearing where the light of day prevails.

The pond is of small extent, with an island in the middle formed of a steep, stern-looking mass of granite. On every side surrounded by the primeval woods, it lay there silent, serene and solitary, seemingly never profaned by the presence of man. We rowed around feeling like intruders in a sylvan sanctuary. The shores were low and damp, and I could see no place dry enough to build a camp. The Doctor, however, knew the spot, and shooting the boat ashore pointed out a lightly trodden path, which he said led over to the adjoining pond. Pursuing this a short distance we reached the dilapidated remains of a rude bark shelter, which he told me Sutton and he had built on a previous visit. Our first work was to renovate this shelter, which was easily accomplished, and then to cut some wood for our night's fire. This done, we shouldered the boat and followed the path. Between the ponds there was a steep ascent, and when we had surmounted it we could see the water lying in a longish narrow basin, with a sandy beach at one end and under us a steep bluff. We carried the boat down to the edge, and launching her took a cautious turn round the shores, the Doctor noting all the more prominent features, for he now disclosed to me that this was a great resort for deer, and as the night would be dark he proposed floating. I had noticed his gun in the boat when we left Hathorn's, but attributed no special significance to it. Though I had no particular fancy for this sport I had to assent, and when we returned he got some birch bark and constructed a lantern such as he had seen Sutton use on similar occasions, put a piece of tallow candle in it, fixed it on a stick in the prow of the skiff, and having satisfied himself it was all right we left for our camp to get supper and make ready for the night.

The preparation and consumption of our meal was an affair that did not require much time, and when we had finished and smoked our pipes it was still too early to make a start. With such important business on our minds, waiting became tedious. To take a nap under the circumstances was out of the question. Our impatience soon drove us to make a move. Extinguishing our fire and fixing the wood so as to be ready at hand to build a new one when we came back—we left.

Away from the smoke we had noticed that the mosquitoes were rather thick; and as the darkness came on they seemed to get worse. The Doctor had brought in his pocket a phial with some kind of lotion for anointing the face and hands, whose virtues he commended. I tried it and found at any rate temporary benefit. On reaching the lake we stopped at the top of the bluff to reconnoiter. It was still too light, and we had to remain concealed among the bushes for a while longer. Here the mosquitoes seemed to be more numerous than before, and in spite of our lotion gave us a great deal of annoyance. Without them to pester us, I would have enjoyed such a situation. There were several elements that commended themselves to my taste. The night was, as I have said, quiet and clear, we were alone in a forest miles distant from any human habitation, perhaps from any human being; the deep silence that reigned was broken only by an occasional ripple of the water on the beach below us, or the light splash of some diminutive fish and rustle of insects in the leaves. It was so quiet, we feared even to whisper to each other, lest perhaps the keen-eared deer we hoped were down at the bottom of the pond, might hear and take alarm. So we sat down in silence, lit our pipes and waited.

At last when the darkness had settled down so completely that we could scarcely discern anything beyond arm's length, the Doctor got up, and motioning me to follow led the way to the boat. The candle in the lantern was lit, I took my seat in the front, my face directed to the prow, with my limbs cramped up in a position which, at the time, I thought endurable enough, but which later I found otherwise, and with gun in hand I was ready for the fray. The Docter shoved the boat gently off the sand, leaped into the stern and I could soon perceive the influence of his paddle in her motions.

The art of paddling lies in propelling the boat without taking the paddle out of the water and so quietly that no noise, not even of a ripple, is perceptible to the ear. The Doctor had practiced sedulously and appeared to have acquired considerable proficiency. I felt the motion of the boat, but it was so dark I could not make out the direction in which he was steering, and how he managed not to get lost I do not know. Doubtless he had taken a direction on starting and continued it as near as possible until some object was encountered that could be an indication. The first I perceived was the rubbing against some reeds in the darkness, caused, no doubt, by the trees on the shore, which we had approached. Backing out from among the reeds a little, the boat now appeared to change her course and to creep parallel to the shore for a while. By and by she ran in again among the reeds and some lilypads, and began to back and fill, as if trying to work closer shoreward. I began now to strain my eyes and peered eagerly into the darkness while I listened intently to catch any sounds.

This continued a long time—how long I could not guess, and did not try—but the impression of length was very decided and was not lessened by the irksomeness of my cramped position, which began to be unbearable. The mosquitoes also were peppering me badly. After some time I thought I detected the sound as of something moving among the brush on shore—the crackling of branches and by and by the impatient stamp of a hoof. The boat was now evidently being urged closer in, and I felt the moment of action had arrived, and that there really was something alive in front of us. I did my best to peer into the gloom. The sounds increased in distinctness and nearness. The Doctor gave the boat a slight jerk, I supposed as a hint either that he saw something, or to stimulate me to look. But all in vain. I could make out nothing, and if he did, he could not dare to speak. How long this lasted I know not—it seemed almost a year to me—when suddenly there was a start, and an excited snort, followed by a crash of snapping bushes as of some scared animal in rapid retreat. It was doubtless the deer, and it or they were off. The Doctor uttered a sigh of disappointment, listened a while, and then said aloud: "It's all up. They are gone. Didn't you see them?" I had to acknowledge that I had not, and—neither had he.

There was no occasion to tarry longer. We paddled slowly back to the beach, disappointed and disgusted.

This was my first experience at floating, and whether our failure was to be attributed to my want of knowledge or not, I cannot say. The Doctor himself had been rowed up to deer by Sutton, and had shot at least one; but to my knowledge had never before paddled anybody up to one himself. We were both greenhorns at the business, and as is usually the result in such cases, had only our labor for our pains.

We returned to our shelter, kindled our fire, took some

refreshments and a smoke, then rolled up in our blankets and went to sleep.

The following forenoon we loitered round the two ponds, examined the signs of hoof marks on the ground of the previous night's adventure, speculated over the same and drew such lessons for future benefit as the occurrences seemed to teach. Later in the day we started stream downward and in the evening were back at Hathorn's, ashamed of our want of luck, and therefore preserving silence with regard to it. NEW JERSEY.

## CHICAGO AND THE WEST.

*[From a Staff Correspondent.]*

### A Tennessee Dove Shoot.

CHICAGO, Ill., Aug. 25.—In most of the Northern States it is unlawful to shoot doves (the bird commonly known as the "mourning dove," or "turtle dove") at any season of the year, there being a sort of superstitious belief that this bird is too sorrowful to want to die, or something of that sort, because it sits around and grieves for its absent mate. My own personal belief, which I do not advance as scientific, is that if the average turtle dove had lost its mate it would not be grieved beyond the point of consolation, and I believe it hollers because it can't hold a peck of stolen wheat instead of half of peck. But *n'importe*, as we say in Chicago.

In the South the touching legends which have long enshrouded this able-bodied wheat thief with an unusual forbearance have not been retained in full force. In some of the Southern States the dove is not protected at all. In others it has a regular close season like any other game bird. These protective laws are usually local or county special laws, of the sort which make the editor of the *Game Laws in Brief* grow gray. When you want to go shooting in Tennessee, Maryland or some other of the Southern States, you should take the advice of the long-suffering individual above mentioned and carry along a copy of the statutes in brief, also a county map, an indexed gazetteer and a theodolite adjusted to the local dip of the magnetic needle and the chronological variation of the longitude. In this way you may be safe, provided you can prove whether or not the turtle dove is a song bird, an insectivorous bird, a game bird, or that sort so generally and generously mentioned by legislative enactments as "other bird." If it isn't one bird, of that same sort or another sort, then probably, or perhaps, it is an "other bird." And there you are. The actual shooter knows very well that, all sentiment aside, the dove is a game bird of no mean sort. It cannot be worked to dogs, but it has sagacity, caution, toughness, courage and speed locked up in its person enough to make it one of the hardest of flying things to bring to bag. In this it is altogether different from the robin, the thrush, the lark, etc., which naturally need and deserve protection. The dove should be called a game bird, if for no other reason than that pass shooting at doves is three-to-one harder shooting than any sort of duck shooting. As to the dove being a song bird, it is not so much a song bird as Bob White, and goodness knows Bob White could pose forever as a prima donna and not be safe from the final farewell tour which at length corrals all sweet singing things.

Anyhow, at Memphis, in early August, I was informed that it was then legal to shoot doves, and though I have since been unable to find any law protecting that bird there at any season, I saw my way clear to accepting the invitation to go out and kill all the doves in West Tennessee. Mr. Irby Bennett was the immediate instigator of this nefarious project of depopulation, and he included in the conspiracy Mr. Ferd. Van Dyke and Mr. W. R. Hobart, also beside himself, representatives of the Winchester Repeating Arms Co. I think I was to go along and tell the story of how not one dove escaped to tell the tale.

### The Cedars.

Along in the early 60s, when there were two kinds of money in Tennessee, of which you could take your choice, and of which everybody had two or three trunks full, the owner of a certain fine plantation came to Mr. Edmund Orgill, of Memphis, and offered to sell it in exchange for a certain sum of money of the kind marked C. S. A., in contradistinction to the sort marked U. S. A. I don't know how much the amount was, maybe $50,000, maybe $500,000, but anyhow Mr. Orgill opened a trunk or two of money and bought the place, which lies only sixteen miles from Memphis. Upon it he built a vast plantation house, with lofty pillars and wide halls, and rooms whose ceiling are high as those of the dining hall of any city club house. He improved the 3,000 acres in every way, cut wide avenues through the woods, and made of it a place partly Southern plantation house and partly English country house, for Mr. Orgill is of English descent. The beautiful place is now known far and wide as "The Cedars."

Each summer Mr. Orgill takes his wife and some members of his family to England, thus escaping the heat of a long warm season. This summer Mr. Joe Orgill and Mr. Will Orgill were left alone at home on the great place, with no feminine hand to engineer the Lares, the Penates, and the nigroes. Such being the case, Mr. Irby Bennett, his wife and mother moved out to the Cedars and were installed as part of the family. In Tennessee, if you like another man's house better than your own, you just go over there and live, and it's all right. Mr. Bennett is building a new house. When he gets it done, if Mr. Orgill likes it better than his own, he will just move over in there and live with Mr. Bennett, and it will be all right. We all having discovered that we liked the Cedars pretty well, we just moved in one evening, and for a day or so owned the place, including the eight or ten drags, carts, wagonettes, etc., all the trotting and thoroughbred horses, the Jersey herd, the beagles, the fox-terriers, the bird dogs, the Berkshires and the nigroes. There isn't an animal (excepting the nigroes) allowed on the place which isn't a thoroughbred of its kind and which hasn't a pedigree running back to the Conquest. Even the doves, of which there are thousands, are thoroughbreds, as we will testify.

### The Beginning of the Holocaust.

In the South, when a guest arrives at the house, the immediate presumption is that he is hungry, and nothing affords the real Southerner more pleasure than to see his guest eating something. On this basis, I feel sure that we Northern men pleased our host perfectly, for we did full credit to the hearty luncheon which was instituted as the initiatory to the programme. After that we climbed into the wagonette, and with two negroes on the driver's seat started off through the old woods to the wheat fields, where we were to make the holocaust which should complete the extermination of the dove family in West Tennessee. There were six guns of us, Mr. Bennett, Mr. Will Orgill, their young friend Mr. Frank Murphy, Mr. Van Dyke, Mr. Hobart and myself. The more guns the better on a dove shoot, as it keeps the birds moving.

In the middle of the day the doves take to the shade of the woods. They feed in the early morning and late evening, using on wheat stubble for that purpose when they can find it. At sundown they go to water. Water-hole shooting is the commonest sort in dry localities. Sometimes a fly-way or pass can be found along a hedge. In our case we were to take stands at different points about the wheat fields to get our shooting as the birds came in to feed. No blinds were used. We simply crouched down low under the trees or stood close up to the shrubs which made our stands. Mr. Bennett assigned each his station, and unselfishly assigned to himself the unwelcome task of walking about the neighboring fields and stirring up the birds. We could see some bunches of birds flying about as we crossed the fence, and it was predicted we would have some sport.

### The Holocaust Continues.

Mr. Hobart was to take a tree near the middle of the field, and Mr. Van Dyke and I were to go to the apple trees on the far side of it. As I walked on, opposite to Hobart and abreast of Van Dyke, I saw the latter cut down two birds which rose from the cornfield at his left, and also saw Hobart hit a bird hard which was quartering toward me. As this bird was about to get away I fired at it, and managed to worry it down with a very poor shot, though we could never find it in the stubble. Then all at once the firing became general, like that of a skirmish line. We were putting up some birds on the stubble, and they circled about, giving all of us long chances, out of which only a bird or so materialized. I found in about three seconds that I wasn't going to kill every bird I shot at, by several. Hobart marked down two birds on the stubble, and walking them up got a handsome double on them, but the rest of us had not one chance of that kind, and were shooting at the blue streaks which were whizzing this way and that in singles, whisps and bunches.

It transpired that Van Dyke and I had the best end of the game, over by the apple trees, as the birds drew in best at that point. As we first went in Van Dyke had several shots, most of which he improved handsomely. I missed an easy double with a swiftness and precision which startled me, and then repeated the thing with *sang froid* and *aplomb*. This gave me misgivings about my gun, which was a brand new Parker just out of the tissue paper. As it only weighed 6¾lbs. it was a baby gun. I thought it should do baby shooting, but it wouldn't. After a while I learned that its idiosyncrasy was for birds about 50yds. away, and that it couldn't begin to shoot much under 40yds. After that I regularly killed all the hard birds, and missed all the easy ones, never killing a close cross shot, and not killing one bird with the left barrel. The right barrel was a "cylinder," about as much as a milk funnel is a cylinder. I haven't any idea what the left barrel was, but it was a lot too good for me. I killed 5 doves straight at about a quarter of a mile, which made my highest run and half my bag. If the pesky things hadn't kept on coming so close up to me, I'd have killed about a million of them, and so helped on our proposition of exterminating the supply. As it is, there are several thousand left down there.

Meantime Ferd Van Dyke, he of the long legs and quiet habits, was doing some very beautiful shooting a little further down into the field, and making the record of the day. Van Dyke's bag was sixteen birds, and he got them very clean and regularly, using his old Smith gun. Of course Mr. Bennett could shoot nothing but a Winchester repeater, and we could hear him slap in three or four barrels every once in a while in the cornfield back of us. Mr. Hobart moved over to the edge of the corn, and got a number of shots, but mostly long and hard ones. Our other friends had less shooting, but still enough to keep them busy. I presume the six of us fired nearly 200 shots, say 150. We brought in just thirty-five doves! No one need be sure that he can do a great deal better than this until he has shot doves under just such conditions. We found the game very swift and wild, and at long range they made a hard mark, and were, moreover, demons to carry off shot.

### The Holocaust Has Conditions.

As we saw it, dove shooting was a pleasant, companionable sport, easy in its environments, but difficult in its execution. I should call the dove, flying at full speed and well under way, a harder bird to hit than a wild duck, and proportionately harder to kill. I would rather kill two quail over points than one dove flying full tilt over a wheat field. One does not shoot all day at doves, but he has furious sport for a couple of hours or so, provided he be as fortunate as we were at the Cedars. One does not walk. He puts his shells conveniently near, makes himself comfortable and waits for the birds to come. When he knocks down a bird the attendant colored boy goes out and picks it up, and says, "Golly! dat was a mighty good shoot, sah." Then you give the boy a quarter. It is worth a quarter to be told you are shooting well, when you know you aren't. A man's conceit in himself is something he will not willingly let die.

After we had shot for a time in our wheat field, until the birds were pretty well scattered, Mr. Bennett thought we would better go over to a pond hole where sometimes the birds came to water in numbers in the late evening. We piled into the wagonette again and Jim, the driver, soon had us over. We deployed as skirmishers and waited till dense dusk, but the birds had changed their minds and we got only a very few shots. The last shot of the day was also the most spectacular one, Ferd. Van Dyke folding up nicely a rocketing bird that came in over the pool at a great distance from him. This we voted good enough for a finisher, and so went in for dinner.

### Dove Shooting as a Sport.

I never had so good a dove shoot before and cannot hope to have another so delightful in every way. We did not kill quite all the doves we shot at, and left the extermination incomplete, but under the circumstances I felt as though we had had a fair sort of sport at a fair game bird. I don't know that I ever got tangled up at any harder sort of shooting in my life.

By this I would not seem to advise Northern men to shoot this bird to any general extent. In the North bird life of any sort is not so prolific. Moreover, the dove is absolutely protected by law in most of the Northern States. It is protected thus in Illinois, and can not be shot at any season. Perhaps, as our game shooting diminishes we shall some day come to give this bird a season. It is very generally shot illegally in Illinois. In the central and lower part of the State it is very numerous. Along the latitude of northern Illinois it is not numerous and should not be shot. In the South it exists in such numbers that I know of no reason why it should not be considered proper game of the field.

In no other sort of shooting, unless one excepts snipe shooting or good duck shooting, does one get so much shooting to the square inch as in dove shooting under proper conditions. Bags of 50, 60, and even 75 are sometimes made, and I don't know of any man on earth I would back to kill that many on a stand out of twice or three times that many shells. In the dryer West and Southwest, in Texas, New Mexico, Arizona and I believe California, the water-hole shooting is the usual form of the sport, and the shooting is sometimes prodigious. In New Mexico I have seen a little wet tank in the mountains visited by thousands of these birds in an evening. They probably came from over a great strip of country. We never shot them there, as the rifle was the only arm used, except the six-shooter. In Tennessee the best way of getting sport was formerly to go to some wheatfield, which was pretty sure to be visited every day by numbers of birds. Lately more wheat has been sowed in that State, and as the fields become more numerous, the birds scatter more and so afford less shooting, though we luckily found a good flight at the Cedars.

Every Western chicken shooter will remember that he usually puts up a dove or so on every piece of stubble he crosses. Perhaps if we had fewer wheat fields we would see more doves on each, and so come to hold the dove as a game bird, which indeed it should be on quality. In a country like the North the habits of the bird scatter it in such way that it can rarely be pursued in any systematic form of sport. In the South its habits are such that it becomes a game bird, capable of sportsmanlike pursuit. I can't quite agree that anybody ever ought to kill a fox with a shotgun, but that is because I am sectionally prejudiced. I can, however, see that it might possibly be sportsmanly wrong to shoot doves in the North, while it remained quite right, on the other hand, to shoot them under the widely different conditions of the South.

At least, we had no qualms of conscience over our dove shoot at the Cedars, because we deliberately set out to kill all the doves of west Tennessee, and only brought in 35 of them. This grieved us a good deal, but did not spoil our appetites. E. HOUGH.

909 SECURITY BUILDING, Chicago.

### California Doves and Quail.

LOS ANGELES, Aug. 4.—*Editor Forest and Stream:* The dove season for this county opened on Aug. 1, and all day on the first and for several days thereafter, there was a continual booming of big and little guns from the grain fields and "waterholes" of the San Fernando Valley.

During July the doves were very plentiful, more so than they had been for some years, but there have been complaints from many sportsmen that the season opened too late, as a great many of the birds had flocked up. This is no doubt owing to the extremely dry year, there being no late rains to destroy the young ones or the eggs.

Some very fair bags have been made. Two parties bagged thirty-nine dozen in the first four days. They were market-hunters, and I sincerely hope that by next dove season their occupation will be gone so far as market-shooting is concerned.

Messrs. Ed. Tufts and E. K. Benchley, of this city, bagged 72 and 90 respectively on the first. Other parties report bags of from three to six dozen birds.

Dove shooting on a "flight" affords good sport and taxes the skill of the best of them.

The quail this season are more fully grown at this date than they were when the season opened last September. This also is due to the exceptionally dry season. For some reason a great many quail did not nest this year, but have remained banded in flocks all summer.

CULPEPPER.

STOCKTON, Cal., Aug. 15.—The dove shooting has been something grand this season, and many large bags have been made. My two boys, Earle and LaRue, age eleven and thirteen years, bagged sixty in two hours. This is the first year the boys have had shotguns, and they did some fine shooting. I anticipate much sport with them this fall and winter goose shooting. I have just received an invitation from "Billy" Mershon, of the Saginaw Crowd, to join them on their annual pilgrimage to the Bad Lands. Business prevents my accepting, much to my sorrow. Mershon and Briggs, of that Crowd, are old hunting friends of mine, and I have been with them on two or three of their annual trips to Dakota.

Trout fishing in our mountain streams has been unusually good this season. At the Big Trees Mr. Simpson, a fishing friend of mine, caught fifty one morning weighing ¾ to 1½lbs. and one or two of 2lbs.

I have taken the FOREST AND STREAM almost continually since 1874, and will probably do so until I am too old to shoot or fish or cannot see to read. S. N. C.

### Miss Delaney Shoots a Bear.

SARATOGA SPRINGS, N.Y., Aug. 23.—Miss Alice Delaney, while at Saratoga Lake this morning with a party of friends, shot a bear. The people at the lake say it is six years since one was killed there before. D. J.

## TEXAS AND THE SOUTHWEST.

A COPIOUS and life-giving rain fell and rejuvenated thirty-one counties, comprising the extreme southwest of Texas, and put an end to the parching drouth of three years' duration. From numbers of localities once famous for quail, and from which the birds migrated during the dry period, comes the word that the cheery cry of Bob White is once more heard in the land. A well-known San Antonio sportsman stated last week that he never saw so many quail as he did in what is called the black-jack district, ten miles south of town. The birds are much more plentiful at present writing than for years past, and sportsmen of the section are anticipating a good time in the field.

### Texas Deer.

The writer has just returned from a pleasant piscatorial journey in the mountain spring streams tributary to the Guadalupe River, forty miles northwest of San Antonio. Deer were sighted nearly every day, and more than once the bamboo was pointed and an imaginary trigger pressed. They are very plentiful, an old resident of the mountain stating that they "are thicker than for fifteen years past." There is plenty of grass and mast, and all the springs are doing a lively business, thus assuring an abundant water supply for the winter.

### Mitchell's Lake,

Nine miles south of San Antonio, which has been as dry as a prohibition orator, is now full of water, and good bags of bluewings and yellowlegs are made every day by the members of the Mitchell's Lake Club (about 75 members). Plover and all kinds of shore birds are beginning the initial boring on the coast, and everything points to the end of a hot summer and the immediate inauguration of a glorious fall.

### Grouse.

On the flat prairies between Houston and Eagle Lake there has been rare sport on young chickens. The Houston boys tried hard to prevent the killing of birds out of season, but the country is so large and sparsely settled that it is a hard matter to catch the pot-hunting violator of the law. Victoria also sends word that chickens are plentiful.

### Black Bass.

The fishing in the Nueces River at Uvalde, Green Lake at Victoria, Eagle Lake and the lagoons on the coast near Velasco is at its height and bass are captured in large numbers.

### Tarpon.

Everybody catches his or her tarpon this year. Girls, boys, men and women, Senators and hoodlums who were fortunate enough to go to Corpus Christi, Rockford or Aransas Pass and cast lines in the bay were rewarded with captures of tarpon, jewfish, stingarees and other denizens of the deep, the tarpon fishing particularly being better than ever before, everybody landing one or more. It is said to be "dead easy" now. Some not fortunate enough to catch the high-toned fish with costly apparatus "slung" clotheslines armed with the commonest hooks and hauled the silver king ashore like sacks of potatoes. In fact the fishing is so good that the Greek fishermen of the coast are in despair, for the sportsmen and sportswomen don't buy of them this year. They all catch their own tarpon.

Five gentlemen asked me to-day why "my friend Hough" didn't come after a tarpon. Everybody seeming particularly anxious that FOREST AND STREAM be placed in possession of facts concerning the good fishing of the coast.

### A Sad Spectacle.

Speaking of the idiotic game laws of our State—the greatest game State in the Union—which legalizes the murder of deer on August 1, a Mr. Aue of San Antonio sends a communication to one of our dailies wherein he states that one of his boys went for deer shortly after the 1st of August and that he returned with a doe whose teats were still wet from the suckling of her fawn. The father asked the boy to go out in the vicinity of the killing and secure the poor little orphan, which he did. He found the half eaten carcass of the little fellow. Its piteous bleating for the motherly breast had attracted a hungry wolf who lost no time to tear it to pieces. What a picture to place before our tender-hearted legislators. What a spectacle for the pot-hunting scroundel to contemplate. Can such men sleep in peace? A. C. G.

---

SAN ANTONIO, Texas, Aug. 9.—This is written for the benefit of brother sportsmen who visit the South and Southwest during the fall, winter and spring, especially those who visit Texas and as far as San Antonio. If they really want a good time with plenty of good shooting and fine fishing they can have it here within a few miles of this city on the Gulf shores. Quail are more plentiful than we have had them in the last three years. Of plover I have never seen so many within ten years. One party this week at Sinton on the Aransas Pass R. R., a few miles from this city, killed in one afternoon 73 fat plover. Dr. Buel, of Denver, says he killed plover the other day and thinks they must weigh nearly a pound each. Deer are killed from eight to fifteen miles out. But for a real sportsman's paradise let me tell you where to go for turkey, deer, wild hog, quail, plover, curlew, golden plover, snipe, geese, brant and all kinds of duck, where you can catch all the fish you want. This is Alazan Bay, forty to sixty miles west of Corpus Christi. Come to San Antonio, from there you can run down on the Aransas Pass R. R. to Alice; there you hire a team to take you via King's Ranch to the bay, which is thirty-five to forty miles from Alice station. There you can have all the sport you want; and you are not bothered by market-hunters and game butchers, as they cannot get their spoils to market. This is a section that has never been shot, and a good one at that, and the expense is nothing to go there. You can get accommodations at a good many of the ranches there or camp out. The people are kind and hospitable and will do anything that is right for you. At San Antonio you will find plenty of good, true brother sportsmen who are always ready to go with you and do all in their power to make it pleasant for you. I write this for the benefit of those who spend their winter South and in this section—to them I say bring your rod and gun. We have had splendid rains here this season, and that means plenty of game. Every mother's son of us believes in the FOREST AND STREAM platform—stop the sale of game. M.

### Pennsylvania Game Interests.

DILLINGERSVILLE, Lehigh County, Pa.—*Editor Forest and Stream:* In looking over the act for the protection of game reported in the House of Representatives of Pennsylvania March 10, 1893, I find in Sec. 15 the keynote of the entire act, in fact, the very keystone of all the acts now in force or pending:

*Section 15.*—No person, company, firm or corporation shall at any time kill or expose for sale or have in possession except while alive any of the game herein enumerated, or any part of the same with the intention of sending or transporting, or having the same sent or transported beyond the limits of the State," etc., etc.

The professional market-hunter is the worst enemy of sport and game, and this act does not reach him at all, for after game is shipped once within the limits of the State, say to Philadelphia or any large city, what is there to hinder to have it reshipped out of the State? Who can follow and trace the numerous shipments of game? It is an utter impossibility to stop the wholesale slaughter or rapid extinction of game in this country except by the prohibition not only of the sale or transportation of game beyond the limits of this State, but also within the limits of the State. This may seem like a very heroic measure, but it aims at the very root of the trouble, and it is the only remedy that can be applied that will prevent the entire extinction of game in the more thickly settled parts of the country, and the once numerous game birds will soon again be plentiful, instead of being a relic of the past, if such an act can be passed, and the professional market-hunter will cease to exist, as "Othello's occupation will be gone," and the true sportsman, who only finds keen pleasure and health in this manly pastime, will rise up as one man and call the act blessed. L. W. M.

---

### "On St. Lawrence Marshes."

ONTARIO GAME AND FISH COMMISSION.—Hamilton, Aug. 25.—*Editor Forest and Stream:* In your issue of Aug. 25 there appears an article from the pen of Frank Lawrence Donohue, under the heading, "On St. Lawrence Marshes."

I have no doubt by this time Mr. Donohue has already regretted the publication of the article in question. Presumably, Mr. Donohue poses as a sportsman, and therefore a gentleman, but his article must place him in a sorry light in the eyes of respectable men since he stands self-confessed as a violator of the laws which were made to protect the game and fish in this Province.

Mr. Donohue's moral vision must be distorted indeed when it causes him glory in his position as a law breaker. It is just such disreputable cases as this that tarnish the name of the true American sportsmen who visit our Province, and if our game wardens appear to be unnecessarily severe in their dealings with foreign sportsmen, these gentlemen must thank such men as Mr. Donohue for it.

If Mr. Donohue intends repeating his visit this fall, and will notify me of the time of his arrival, it will afford me very great pleasure to teach him a lesson that he will not readily forget.

It is always a pleasure to us to see American sportsmen enjoying themselves in our country, but these gentlemen must not be confounded with such persons as are represented in the person of Mr. Frank Lawrence Donohue.

A. D. STEWART, Chief Warden for Ontario.

---

The country mentioned in their advertisement by Messrs. Schultz & Jackson is a good one for sheep, goats and bears. Elk and moose, while not so abundant as sheep and goats, occur in fair numbers.—*Adv.*

# Sea and River Fishing.

## NEW JERSEY COAST FISHING.

ASBURY PARK, N. J., Aug. 24.—Fishing on our coast is better than at any period during the past three years. September promises all that the angler could wish for in the way of weakfish and snappers. Striped bass and kingfish are very scarce owing to the ubiquitous pound nets; but six bass have beon taken in this vicinity during the two weeks just past and but three kingfish. These two varieties are regarded as practically extinct in these waters.

I have just returned from a run down to Barnegat Bay, where I completed arrangements for a week's cruise, taking in Forked River, Sunken Ledge Island, Somer's Point and Anglesea. While there I fished the night tide and took fourteen very fine tide-runners, the heaviest 4¼lbs. Now that the season for snapper fishing is here, I would advise anglers who have never tried the sport to keep their trout rods out for a while yet and have a go at these superbly game little fellows. With the following tackle they furnish excellent sport: A 2-0 ringed Carlisle hook with an 8in. section of hair wire which they cannot bite off, this fastened to a very small brass swivel, which in turn is secured to the line, which should be not heavier than 9-thread in linen or F in silk.

A small, free-running multiplying reel and a trout rod with sufficient backbone to meet the rush with which they always take the bait; a 2in. barrel float and a split T shot fastened to the wire close to the swivel, complete the outfit which in the hands of experience proves deadly to the quarry and furnishes exhilarating sport. One word as to bait. When possible always procure the spearing, or sperling, familiarly known as white bait; pass the point of the hook through the mouth out the gill opening and back to within half an inch of the tail, then through the body. As the snapper always strikes at the tail of his prey this gives the greatest certainty of capture. As they are a very nomadic fish each school covers a wide range. A slick prepared as follows proves a strong attraction: Take four or five full size mossbunkers or menhaden, pound them to a mass, inclose in a muslin bag and hang them from the side of the boat, occasionally agitating, or squeezing, the bag. The exuding oil produces a slick on the water which passes out with the tide, and when met by a school of snappers it will be followed to its source, no matter how great the distance, and once around the boat they will remain until frightened or pursued by larger fish. To the angler who has never indulged this pastime and to him who is skeptical I have one word. Try it. LEONARD HULIT.

## MICHIGAN'S FAVORED WATERS.

NESTLING within a radius of eight miles of one of the most beautiful and picturesque sheets of water in Michigan, lie twenty-five other sparkling lakes from whose pellucid depths the disciple of Izaak Walton may gratify his love for pleasures to his heart's content.

Crooked Lake, aptly named on account of its peculiar shape, is three miles long and one mile wide, the forest foliage with its deep green fringe skirting along the shore in masses of almost tropical luxuriance. This is the center gem so to speak, from which, if a bird's eye view were taken, a succession of lovely sheets of water, jewel-like in their quiet crystal beauty, would greet the eye in every direction. The center of this cluster of lakes lies sixty miles west of Saginaw, in the territory tributary to the Flint and Pere Marquette railroad, easily accessible to those who wish to lay aside the carking cares of this prosaic work-a-day world and affording unlimited gratification to the enthusiastic angler in the indulgence of his favorite pursuit.

Impressed with the idea that Crooked Lake was a spot peculiarly favored by nature in many respects, a party of Saginaw gentlemen organized what was afterward christened the Tchoupitoulac Fishing Club, with a membership limited to twenty, purchasing an extreme tract of land on the shore of the lake, after which they erected a large and commodious club house for members and their families. The house is on the east bank of the lake, upon a beautiful bluff overlooking the sparkling waters 30ft. below; and is only a few minutes, walk from the F. & P. M. station, which is a quarter of a mile distant. It is open the year round.

It is the intention of the club to work in harmony with the game warden and lend all the aid in its power toward enforcing the game laws. The lake will be stocked with black bass, and wall-eyed pike, other choice fish such as pickerel and bluegill already existing in great quantities. Shooting in that territory is excellent in its season, and hunters report game as plentiful without having to stray far away from civilization.

The F. & P. M. have expended considerable money in stocking the lakes and streams referred to with fish, and the good work has begun to bear fruit. They planted large numbers of fish in the Tobacco, Muskegon and Pere Marquette rivers and their branches, all of which contained originally no trout whatever. This work was done with the aid of the United States Fish Commission and under the auspices of the State government, extensive plants being made every year, transforming the waters into the present magnificent trout streams. Two of these rivers were natural grayling streams, and the report of the United States Fish Commission for 1887, shows that the F. & P. M. R. R. Co. conveyed United States fish cars free, respectively 1,622 and 2,087 miles.

The officials of the road have also used their best efforts to have the game laws observed by everybody, and in this work they have been greatly assisted by the Pere Marquette Fishing Club, an organization recently formed, whose members are principally residents of this city. This club purchased a tract of land at Wingleton of 1,600 acres, and erected a fish hatchery with its own funds. The first year there were hatched over 50,000 trout with a very small percentage of loss. Of course, these fish are planted by the club, not only on its own domain, but in all streams in that territory. G.

---

## CANADIAN ANGLING NOTES.

*Editor Forest and Stream:*

There has been during the last few days quite a rush of anglers to the Fifth Falls of the Mistassini. Among others who recently started for the camping ground there are Messrs. Robert M. Lawrence and J. Arthur Beebe of Boston. As an instance of the abundance of ouananiche in the Lake St. John waters this season, Mr. Garrie H. Haulenbeek of New York, who recently spent some days at Roberval, and is to return here next month, relates that one of the guests at the hotel recently went out trolling in a boat in the bay in front of the house, though told even by the hotel people that he would take no fish there. To everybody's surprise he came back in a couple of hours, having caught 20lbs. of ouananiche.

In the Grande Discharge the fish have been taken unusually large, especially low down the rapids. Mr. Davis of New York recently spent an afternoon fishing off Isle Maligne and took 13 good fish in about two hours, five of which weighed 20lbs.

There promises to be a great rush of American anglers to our Northern trout waters during the month of September.

Mr. Bailey, formerly of the Bank of British North America here, and now its manager in New York, a very ardent and old-time angler at Lake St. John, has gone up the Ashuapmouchouan River to Lac à Jim and will return by the Mistassini.

Rev. Dr. Booth of New York, and other parties, have not only had good ouananiche fishing in the Grande Discharge, but have ascended the Ouiatchouaniche, some twenty miles from Lake St. John, to Lake Ouiatchouaniche, where they have enjoyed magnificent sport with the trout. Several of 2lbs. weight and upward have been captured there this summer, and one of 4lbs. Rev. Dr. Van Dyck, the well known Presbyterian divine of New York, accompanied by his brother, Rev. Mr. Van Dyck of Philadelphia, and Dr. Ledieux of New York, are enjoying a very extended outing in the Lake St. John district. They ascended a small stream running into the Grande Discharge, until by a few portages they reached Lake Tschotogama by way of the River Blanche. In the lake they took a large lot of ouananiche up to 5½lbs. in weight and descended to Roberval by way of the Peribonca River. They have now gone trout fishing to La Belle Riviere, and later will ascend the Mistassini River to the Fifth Falls.

American anglers should bear in mind that the close season for ouananiche commences on Sept. 15.

E. T. D. CHAMBERS.

QUEBEC, Aug. 23.

---

### Maine Trout.

TIM POND (via Eustis, Me.), Aug. 23.—Catch of trout made by Percy McElrath, of New York, at Tim Pond, Maine, for week ending Aug. 19: 35, 31, 42, 115, 40, 125, 46; total for the week, 434; largest fish taken on a Montreal fly Aug. 19, weight 2lbs. J. K. VILES.

## A DAY ON THE MOOSUP.

ALL things being favorable for a day's sport, I took down the old rod and made an early start for a favorite stream in the wilds of Moosup. After leaving the train at Plainfield on the N. W. R. R., it is a pleasant drive of three miles, the route leading across the crest of Stone Hill, from the summit of which can be had a magnificent view of the surrounding country, down to the left under the brow of grand old Sterling Hill runs the stream. Knowing that a warm rain of the previous day had put the trout in fine condition for sport, I was eager for the fun.

I began in the little meadow just west of the turnpike; here the stream takes on a crooked, winding course (as is usual in all meadows), each bend forming a splendid little eddy, the very place to cast a fly. This meadow always gives grand fishing, and I kept busy adding fish after fish to my creel. In the woods below these meadows the land forms a gradual incline, down which the stream dashes in a series of cascades and foaming eddies, forming a picture lovely to look upon—a picture fit for an artist's brush. At the foot of the rapids the stream bends sharply to the left, forming a swishing eddy under an overhanging ledge, where I had an exciting time with a pound trout. The crafty rascal, after seizing the fly, made a dash among the branching roots of an old tree that had fallen athwart the stream. Oh, what a mess he did make of my line as he twisted in and out among those roots! Well, the whole thing ended by my wading in and bringing both line and fish ashore in my hands. As the stream leaves these woods it passes among huge rocks and boulders, forming numerous falls and foam-flecked pools, making a picture of grand rugged beauty. From the largest of these pools I took two trout of 1lb. 4oz. and ¾lbs. respectively.

Beyond the ledges, where the stream runs on the level again, is a pool of two or three rods in diameter, but of no great depth. Wading in knee-deep, I took several small trout. When making a longer cast than usual, well out near a large rock, as the red-ibis settled upon the still water, there was a bulge 'neath the fly, a vicious yank, a fleeting glimpse of a broad black tail fanning the air, and I began walking slowly backward to land, reeling in at the same time. Now, I was using a line of rather inferior quality, and as I had some misgivings as to its strength, it fairly made my hair stand on end as I considered the possibility of its breaking. Well, there was no help for it, so I handled him as gingerly as possible as I backed slowly to land; but no use, luck was against me, for my feet slipped upon a smooth shelving rock, a heavy surge upon the already overtaxed line, which parted at the leader, and I sat squarely down waist deep in the pool. As I went to grass I obtained one good look at the cause of all the trouble as he came rushing to the surface, impelled by that last yank—one, yes, nearer 2lbs., and a beauty. Now, I am usually of a patient disposition, but we will omit what was said on that occasion; perhaps some brother angler knows how it is himself. Well, being naturally of buoyant spirits, I did not mourn long over my mishap, but changing my line and emptying my boots, Richard was himself again.

Down in the swamp below the pool, the water being shallow, I was wading the stream, letting the flies float from ripple to ripple some thirty feet in advance, when, zip! up came a fine trout with a rush. Hungry! Well, I should say he was. He pounced upon the fly as a famished cat upon a mouse. With a turn of the wrist I hooked him solid, and as he felt the cruel barb enter his flesh, he made one blind rush straight up toward me, passing squarely between my legs; as I turned quickly, reeling in the slack line, I realized that my chances were slim to save that fish. The brush gave me no show here; it was all luck and chance. As he took up the slack the line twanged like a violin string; but as the hook was in a vital spot, he soon weakened, and I drew him end over end to my feet and transferred him to my creel.

By this time Old Sol was approaching the meridian, and his rays becoming warm, I sought the welcome shade of a giant elm at the side of a lovely little meadow and threw myself on the greensward to enjoy an hour's siesta. As I lay with head pillowed upon my arm, gazing dreamily out upon the blue hills, then on the deep green foliage of the distant forest, then again on the little meadow, one of nature's gems nestling among the surrounding hills; as I listened to the musical murmur of the stream, to the twitter of the birds in the old elm, and the lazy drone of the bees among the flowers, I closed my eyes with a feeling of contentment and perfect rest.

Now, I am a fervent admirer of nature in all its form, but am also a lover of one of the grandest sports that nature provides, and that is trouting. So, I soon roused myself and sought the stream once more. Just below the old elm where the water was held in check by the litter and débris of an old rail fence, I took a ½lb. trout. I would not have risked my tackle but for the fact of having seen the fish rise several times after flies. Cautiously dropping in among the old rails, he had it in an instant and I yanked him to land at the risk of smashing my tip—not very scientific, but surely the best I could do under the circumstances, for this was no place for fancy work.

Crossing the meadow to a little pool which was thickly interspersed with boulders which had fallen from the ledge above, among which the water foamed and fretted, my nerves began to tingle as I saw a large trout rise, seize a fluttering miller that had fallen in the stream and as quietly settle back into the depths again. Quickly changing my fly for a white-miller, I sent it sweeping down into the pool. Mr. Trout was ready, and as the miller settled upon the water I saw a yellow gleam in among the water foam and, in my haste, struck to soon and the empty hook came back. Quite chagrined, I made another cast; again he rose and this time I hooked him. He made a desperate rush down stream and I followed slowly, keeping him well under control, and as he slipped over a little fall and swung around into view, I saw he was a whopper. Well, he fought nobly, but I soon had him exhausted and lifted him from the stream and laid him quivering on the bank; he weighed 1lb. 4oz. by the pocket scales. Wasn't he a beauty? Every line and curve perfect in contour and the crimson spots upon his golden sides bright and glowing, fresh from his native element.

Now, I do not want the whole earth, but all the same, a June day upon a pleasant trout stream and the fish biting well comes to a close all too soon, and with regretful feelings I saw the night approach and was compelled to leave such glorious sport. E. M. BROWN.

## AN ALLIGATOR GAR.

HANNIBAL, Mo., Aug. 20.—*Editor Forest and Stream:* I take pleasure in inclosing you an excellent "snap shot," taken by Mr. Will Dulany, a young amateur here, of the largest fish of any kind, to my knowledge, ever captured in the Mississippi River above its lower waters.

This alligator gar was caught last Friday on a hook by our veteran fisherman, Nate Saunders, whose genial face appears in the photograph. It required the united strength of himself and two other powerful men an hour and a half to land him.

I measured the fish carefully with the following results: Length 7ft. 4in., girth 40in., weight 274½lbs., although in a very lanky condition. In good order I have no doubt it would easily have turned the scales at 300lbs.

From its general appearance and the condition of the teeth I am of the opinion that it is in the neighborhood of 100 years old. It is now on exhibition and parties propose to have it mounted.

This has been a poor season for game fishing, owing to the fact that the Mississippi River, which usually restocks our waters during its early spring rise, has been extremely low this year; and now it is so low that navigation has been entirely suspended above St. Louis.

Early in the season the crappie and black bass were biting pretty well and a few exceptionally large bass were taken, but recently both have nearly deserted us.

By hard work I am generally able to catch a string for breakfast during the evening at our Deep Lake, which is only a long mile from my office.

There has been no sport at the big Sni E'Carte preserve, for the past two months, so the members have been obliged to put a piano in their handsome club house and

MR. WILL DULANY AND HIS MIGHTY MONSTER FROM THE MUDDY MISSISSIPPI.

make it a pleasure resort for their families to keep up the attraction.

My friend Dr. B. Q. Stevens and I had some luck down at "James Break," ten miles south of here, last Tuesday, when we caught seventy bass, crappie and large sunfish. I struck a bunch of the latter while the Doctor was taking an after-dinner nap, and although it was very hot I enjoyed it hugely for an hour, during which I witnessed a surprising instance of the wonderful agility of these active fish, one of which jumped and caught a "snake feeder" flying along at least six inches above the water.

I know our Eastern sportsmen claim the brook trout to be the gamiest fish, but weight for weight, from my experience in the Rocky Mountains, I am satisfied that our "goggle eyes" will "pull them backward" and make two turns to the trout's one.

Last month I saw Ben Williams, one of our ardent fishermen, pull out a crappie measuring 13¼in., which beats the record here for a number of years.

S. E. WORRELL.

### Black Bass in Washington.

IT is reported from Silver Lake, Washington, that black bass fishing is now very fine in that beautiful sheet of water. The lake is cold and so clear that the fish can be seen taking the minnow and the angler need not be in doubt as to the proper moment to strike. Bass are caught among the lily pads from a bridge or from boats. The lake is about five miles long and from one-fourth to three-eights of a mile wide.

The original stock is credited to the U. S. Fish Commission, and dates back five years, during the first three of which no fishing was allowed. Inquiry at the Fish Commission office shows some mistake about the report as there is no record of a deposit of bass in Silver Lake, but 10,000 whitefish were placed there Feb. 6, 1889. Bass were sent to Clear Lake Sept. 17 and Oct. 23, 1892, also Sept. 26, 1893. Spotted catfish were delivered there Oct. 23, 1892. The report, however, is explicit to the effect that one angler caught sixty black bass in Silver Lake, Aug. 10, averaging ¾lb. in weight, the largest having been a 3lbs. fish. The capture of a bass of 4lbs. is also claimed. The mystery of the origin of those bass can probably be explained by some one who is familiar with the grounds. T H. B.

## TROUTING ON UPPER MAGALLOWAY.

ONE of the least advertised, and at the same time best fishing chances in this part of the country, may be found on the Upper Magalloway River, in the State of Maine. You can leave the hotel—where you will find all the accommodations of a first-class house, combined with the comforts of home—and after fifteen minutes' walk find yourself in the dense forest, where it is hard to realize yourself within many miles of civilization, except as you occasionally come across a wood road, or small clearing, where some lumbermen have been camped years ago, but which still retains the marks of their axes. These "works," as they are called by the natives, and which are found all through the forests, are used during the winter by the "jobbers," so-called, who move into the woods at the first signs of winter, taking with them from ten to sixty men and six to a dozen pairs of horses, and in some cases oxen, for getting out lumber. The logs are hauled on to the river and when the ice breaks up in the spring are driven down river, fifty or a hundred miles, to the mills, where they are sawed into all kinds of lumber and from there shipped to all parts of the country. During the summer these camps are unoccupied, except by an occasional hunter or fisherman, and as a rule they are free to all who wish to avail themselves of the shelter they afford; all that is required is that they shall be left as they are found. They nearly all contain cooking utensils and dishes, and one can spend the night very comfortably in them.

Following the carry for about two miles we reached the head of the falls, which is a very wild spot. A steamboat usually makes daily trips up the river and you can save considerable hard rowing and several hours in time by taking passage.

About two miles above, we reached Beaver Brook, a small stream emptying into the river from the east. We went up the brook for about a mile and commenced fishing. There were plenty of trout but they were of small size, none of them weighing over a half pound. We fished down to the mouth of the brook, where our canoes were tied up. One of us who had cast out into the river just where the channel of the brook makes in, called out that he had "got a good one." Our tape line and scales were ready; he measured just 18in. and brought the marker to 3¼lbs. The next rise was a good one, I should judge larger than the one already taken, but before he could be landed he broke away. However, we managed to take six more, weighing 1¼, 1⅝, 2, 2¼, 2⅝ and 3lbs. each.

Then we went into camp at the Narrows; and I believe I never sat down to a meal that I relished as I did the one we had of trout then and there.

That evening, just as the sun had touched the tops of the trees on the mountain, which were shadowed on the pools below the ledges, I went down to a large boulder in the stream and prepared for a cast. I had three flies on the leader, a royal-coachman, a white-miller and a silver-doctor. I made a cast over across the pool and drew the flies across a spot where there was a little eddy. The upper fly had no sooner reached this little patch of smooth water than it was taken by a trout, so anxious to get it that he jumped clear of the water, showing his handsome speckled sides; and as the sun shone through the trees just at that instant he looked like a flashing rainbow. But it lasted only for an instant; the next my line was spinning out at a fearful rate. I let him run for a moment, then I began to check him a little. He was a good one, and I wanted to secure him, so after playing for about ten minutes I tired out and succeeded in landing him—6¼lbs.

Another cast in the same place. A splash, and striking quick I hooked another beauty. After a short struggle he gave up the fight and lay beside his companion on the bank. This one tipped the scales at 4¾lbs. I fished for half an hour and caught eight trout, weighing from 2lbs. to 6¼lbs. My companions had caught twenty-six in all, weighing from ¼lb. to 2lbs. They all agree that I had won the medal for big fish that day. We had a trout supper that night, and all were satisfied that we had come to the right place.

On we went up to the Little Magalloway, where we concluded that the best fishing point was at the dam at the foot of the lake. It is a wild place, the river a succession of rapids and falls, which make excellent pools and eddies for trout. Although the fish were not as large as those we took at the narrows, they were more numerous and afforded us more sport, for they would bite as fast as we could take them in, and in an hour and a half caught all we wanted.

We decided to camp at the forks. Hauling the canoes up on the bank under a couple of spruce trees, we turned them bottom up, first having laid a couple of skids about 3ft. from the ground, so that when the canoes were placed on these it gave us plenty of room underneath. We next spread down some spruce boughs on the ground, and our blankets on top of these, which made a very comfortable bed.

On the last day of our fishing one of the party had a strange experience in hooking a trout. He had made a cast, when a trout in his eagerness to take the fly leaped clear out of the water, catching the "tail" fly, and as he struck the water on the way down caught the upper fly also, having both flies in his jaw, securely hooking himself on both hooks. He was taken in and found to weigh 2lbs.

If any contemplate a fishing excursion I can recommend this country as one of the best places for real sport, easy to get to, and good accommodations after you are there. In my estimation it is all that can be desired.

SEWES.

### Bass in the Delaware River.

*Editor Forest and Stream:*

You may safely advise the brethren of the reel to go to Hancock, Delaware county, for bass. They are abundant now in both the east and west branches of the river, and take the minnow eagerly. Last Sunday my wife and I killed sixteen in one hour and twenty minutes, and on another occasion I landed eleven between 5 and 6:30 P. M., ranging from one to three pounds, and all small-mouths. The hotel at the station is excellent, and the absence of mosquitoes and the delicious coolness of the evenings among those balsam-scented hills are no small pleasures after the day's sport. Fly-fishing is over, but with young eels or bullheads the fisherman's luck is assured.

HENRY GUY CARLETON.

## ANGLING NOTES.

### Big Pike.

A CORRESPONDENT asks if I can, "without going back to mythological times," give the weight of the largest "great northern pike" caught with hook and line.

I do not for a moment imagine that my friend means to imply that the weights of the great pike of the books, those with collars and rings, and pedigree on parchment folded under the pectoral fin, were incorrectly weighed, or that the weights were tampered with in the handing down process, but that he simply wishes something that is not moss-grown and lichen-covered.

I am not quite sure whether he means pike of this country or Europe, or both, but the term "great northern pike" has such an American flavor that it would appear that he means pike caught in this country.

I have a photograph of a pike caught in a lake in Pennsylvania and its weight is given as 35lbs. I can give such particulars as I have of this fish if it is desired. This is the largest fish of this species of which I have any record in this country and it was caught within the last ten years I should say, without looking for the photograph which I have somewhere, containing on its back the name of lake, time of capture and name of captor.

Mr. Alfred Jardine, who is famous the world over for literature upon the pike and pike fishing, is recorded as having caught a pike of 37lbs. in England on Nov. 4, 1879. He also caught one of 36lbs. in 1877.

The largest pike of which I have any record as taken in modern times is mentioned in a clipping in my scrap book which I think, from the type, I cut from *Land and Water*. However this may be, credit is given in the clipping to the Belfast *Evening Telegraph* for the item. It relates that a pike of 56lbs. was caught "in the lake beside Drum," County Monaghan, Ireland. It was caught in April of this year by a blacksmith named Bogan, with a bait worked from the bank. This fish was 5ft. long. The editor says in a foot note that no waters in the United Kingdom can approach the Irish loughs as far as the size of these monsters of the genus *Esox lucius* are concerned. That is about all that I can now say of the largest pike known to have been taken in modern times.

In 1879 a pike of 25¾lbs. was caught in Lake George, New York, by Will Taylor, a boatman of Bolton, and Mr. G. O. Eddy, of Bristol, R. I. This fish was chiefly remarkable for being taken on a gang of single gut while Mr. Eddy was trolling for lake trout.

### Sizes of Hooks.

An elaborate article in a recent issue of one of the New York daily papers, which purported to give plain directions for black bass fishing, said among other things that flies for casting for black bass should be tied on No. 3 hooks, but on occasion larger hooks were desirable, and then the flies should be tied on No. 4 hooks. As No. 4 is smaller than No. 3 I fail to understand the force of this direction. I say No. 4 is smaller than No. 3, because I assume that the Redditch scale is meant to be understood, and I must be right in my assumption because Nos. 3 and 4 of the Redditch scale are about right for black bass casting flies as ordinarily accepted. It is true that in the "new scale" No. 4 is larger than No. 3, but as a No. 4 new scale is equal to No. 11 old, or Redditch scale, it is certainly not intended for black bass. Not very long ago I gave the old and new scales of numbering hooks in FOREST AND STREAM, so that they could be compared one with another, but did not give the figures of the hooks. I have perhaps a dozen charts showing the figures of the hooks, and giving with each the number by the old and the new scale. If any one wishes one of these charts I will mail them free, until they are gone, by request to do so on a postal card addressed to me at FOREST AND STREAM office. In addition to the diagrams showing sizes and scales of hooks, the charts illustrate how to attach flies to the leader by jam knots, and double slip knot when eyed hooks are used. It also shows the half-hitch jam knot. They are convenient to have in one's tackle box to refer to when ordering hooks or flies, and they will also teach one the various knots I have mentioned.

### Tarpon in Texas.

Florida waters are generally supposed to be the home of the tarpon, but once upon a time I was invited to breakfast by the Capitol City Press Club in Washington, and some four or five hours after sitting down to the table, Col. Sterritt, of the Dallas (Texas) *News*, told of an encounter he had with a tarpon in Texas waters. The fish escaped and the Colonel managed to save his boat, or a man, and not a woman, would now hold the pennant for the largest tarpon ever captured in fair angling, for I imagine the Colonel's tarpon must have weighed about 417lbs. Then Col. Belo, owner of the Dallas and Galveston *News*, once when we were fishing in the Saranac Lake for trout, told me about tarpon in Texas waters, and later was kind enough to have hunted up for me a lot of information about the fish, particularly about its name. From that time to this I have heard more or less about tarpon in Texas; more especially in the vicinity of Corpus Christi, and I once received some documentary evidence about the silver king having been taken with rod and reel. Now, at this very moment, Mr. Wm. D. Cleveland, of Houston, Texas, is sitting on the other side of my desk smoking a cigar and telling me at the same time about the tarpon of Texas. As near as I can make out, nothing but small tarpon are taken in Florida, and when they get to be of a respectable size they at once "pike off" for the coast of Texas.

I learn that a man can get a bite from a tarpon each hour in the day from sun-up to sun-down, "although what you are going to do with them after they bite is an entirely different matter, and something you must answer for yourself."

Bites of tarpon are furnished in profusion in Texas, but no one will undertake to guarantee that you get the tarpon after he bites; "in fact, the chances are that the tarpon will get you if you hold fast to your rod, for you must understand these Texas tarpon are full grown and not the little fish bearing this name which are found in Florida."

Upon second thought I feel sure that Col. Sterritt's tarpon must have weighed more than 417lbs., for it was a Texas tarpon sure enough, and the more I learn about these fish the more I am convinced I used the right word when I said encounter with a tarpon. Mr. Cleveland has promised me a chapter for FOREST AND STREAM about the Texas tarpon at a later date after he returns home and can confer with persons and refer to papers.

### Black Bass Planting in Lake George.

Recently I spent a little time at Lake George and had a long visit with Gen. Robert Lenox Banks, president of the Lake George Association for the Protection of Fish and Game, who has done so much to restock Lake George with game fish. For a number of years he has procured annually about 500,000 lake trout fry for planting in the lake, until it has become about the best fishing water for this species of fish that I know about. More recently he has turned his attention to restocking the lake with black bass. Last year he procured a number of adult black bass and planted them in the lake. This year he procured and planted 5,000 fry, fish perhaps a year old, but he tells me that he feels his work is almost useless. I think that if a law was passed that limited the number of bass to be taken in one day by one rod it would do much to restore the black bass fishing for the general public. I am told that big catches of bass are made by owners of steam yachts, and then the fish are given to the guides, who sell them. This is one way not to restore the bass fishing.

A. N. CHENEY.

## IN NOVA SCOTIA WILDS.

HARVEY and I were camped in the small house within a stone's throw of Murphy's mill—that welcome half-way station between the road and Armstrong Lake. We had been exploring the Black Brook deadwaters for trout with but meagre results. I had instinctively pointed my rod at individual members of a large flock of partridges as they scattered in all directions from our advance. Richard offered his "kingdom for a horse," I on the first impulse would have given mine (if I had one) for a gun. Then I remembered that the birds at this season (August) were valued at $20 each, and my inability to purchase a feather at that price.

We had followed the windings of the dark water for miles into the great forest, and had walked beneath the gloomy shade of gigantic pines and hemlocks, had admired the grandeur and sublimity of nature's handiwork, and had finished by returning to camp feeling very small indeed, but also very hungry. Having satisfied voracious appetites we filled pipes, found a soft log for a pillow, stretched tired limbs upon the dry moss and lazily watched the stars peep out one by one from the darkening vault above the forest.

Suddenly the guide, Charlie Murphy, electrified us by exclaiming, "If they's any trout anywheres you'll git 'em in Stoney Brook, where the deadwaters empties into Panook Lakes." A moment's pause and then, "It aint more nor two miles and a half from the head of Armstrong Lakes to there, and sir, I tell you you kin drag 'em out just as fast as you kin throw in your hook. Yes, sir, I mind the time last spring—why, sir, I jist stood on a bunch of tamerack clost to the bank and ketched five dozen; yes, sir." And the old man stooped over the fire, scooped up a pipeful of ashes and cinders, puffed vigorously a moment to make sure of his light and then lay back comfortably in his place and relapsed into silence.

That settled it. We would go to Panook next morning at daylight, walk sharp, and by breakfast time be on the ground where Murphy "ketched" his dozens. We started bright and early, determined to deprive ourselves of nothing since the distance was so short—only two and one-half miles, we carried full loads. We went up Armstrong Lakes in a boat and then struck into the "howling wilderness," and a howling wilderness it was. We went on, now plunging knee-deep through a swamp—now disappearing headlong into a hole in the hard-hack, now climbing slowly and heavily a densely wooded hill, clogged with huge granite boulders and interlaced in every direction by windfalls. It was heart-breaking. At noon we came to a lake—on the wrong side, of course, and after taking a rest and a lunch, very much needed by all, we struggled wearily to our feet and continued our terrible march—tramp, tramp, stumble, crash, bang. And all this time that tireless old guide, Murphy, moved serenely on and on, as though he were a walking machine, wound up for the day. I began to be fascinated by him. I mentally compared him to "the old man of the sea," "Sinbad"—"the wandering Jew," and found myself speculating whether I ought not to strangle him and turn back. What material was he made of, anyway? Thin, shaggy as an old wolf, with an eye like that of a hawk—straight as a rush—active as a cat—tough as leather—merry as a cricket, and absolutely tireless. "Mr. Murphy," said I, "how old are you?" "Seventy-two last March. Let me see, March 12. Seventy-two." I subsided.

On and on, hour after hour we went, until at length we halted on the brink of Stony Brook deadwater, and immediately set about making a camp for the night. That finished, we boiled the kettle, made tea, and ate like wolves, and yet we had tramped only two and a half miles. I at once decided that Murphy's miles were Dutch miles, which would make the distance about right, that is, ten miles, and the longest ten I had ever tramped in my life. Presently the old man pointed out some skids near the camp, rotten now and covered thickly with moss, and then calmly, between long-drawn whiffs from his stout black clay, which, from his want of teeth, had an absurd fashion of describing an arc of about 60° between his chin and nose, "Them's the skids where I brought out the first stick of timber for the St. Croix railroad bridge. That there stick squared 15in. and was 30 or 40ft. long; I forget which." A pause and a column of smoke. "It was just thirty-six years ago, and them's the very skids. Yes, sir, I mind it like it was last winter. Me and Lance put $2,000 worth of timber into the Windsor & Annapolis Railroad, and I've not been here sence, but, sir, them's the skids."

He mused a moment and continued in a dreamy voice, in which a far-away tone was plainly distinguishable: "Yes, sir; fifty years ago they was any amount of moose and caribou about here on the barrens, and many's the night that I've called right over yonder, and many's the one I've coaxed up within reach of the old gun. Them was the times for sport. And bears! Yes, sir; slashin's of bears. I mind one mornin' one set up on his rump and watched me milk two cows in the field right by the house. I took the milk in and ramposed high and low, but there weren't a blamed ball in the house. So the bear walked off to the woo s and I never set eyes on him sence."

A few more whiffs and more meditation, "Down here below there's what they call 'frothy hole,' where the brook empties into a deadwater; and, sir, I mind the time I stood at the mouth of that there place and throwed 'em out just as long as I wanted to, and the flies a-chawin' me all the time, and they was smashers. Yes, sir; I stood right there in my tracks and ketched a bar'l—and it weren't a rale good day for fishin' nuther."

Said Harvey, "How far is it down to that place?"

"About three miles."

Three miles, and we had been all day doing two miles and a half. Harvey looked at me in a dazed, helpless sort of way. Shortly after this I turned in for the night; but, tired as I was, I could only get short snatches of sleep before some horrible nightmare seized me and directly I would wake up trembling and bathed in perspiration. I finally gave it up and for the next two hours sat before the fire, listening to every whisper of the night breeze and every movement in the giant sombre forest around us.

But there were fish there, and we got them. NEMO.

A FIGURE TOO FAMILIAR.

Drawing by H. W. D. L.

### Boston Anglers.

BOSTON, Mass., Aug. 25.—Mr. Patrick Kelley has recently returned from Florida. He says that the fishing in Florida is tame and insipid, and that the fishermen cannot cast a fly. Mr. Kelley also fished the lakes at Niagara for bass, and again he was disappointed at the poor game qualities of the bass of that region. "They are nothing like our small-mouthed bass," he says: "Hereafter the Rangeley Lakes are good enough for me! I would rather catch one trout a day."

Mr. E. L. Pickard is just starting for his second trip this season to the home of the Oquossoc Angling Association, at Indian Rock, Me. He will be accompanied this time by Mrs. Pickard and Miss Plummer. He is one of the most enthusiastic lovers of that region, which he has generally visited annually for years. He is a patient fisherman, but more of a lover of nature. The air of that region is his particular delight. Col. E. B. Haskell, with Mrs. Haskell and a grand child, will make a very desirable part of Mr. Pickart's party. In the party will also be Mrs. H. H. Roelofs, with four others from Philadelphia, Pa. Mr. F. A. Turner will take up a party to the Oquossoc Angling Association's camps a little later. Mr. Henry Whitmore starts this week, with Mrs. Whitmore, for a two weeks' trip to the Rangeleys. They will probably spend some time at the Birches and Bemis. They are also invited to Allerton Lodge, as the guests of Mr. Hal. Haskell, son of Col. E. B. Haskell, who is spending some weeks in camp with friends. Ex-Gov. John B. Long has been at the Birches and Bemis with members of his family, for their usual summer fishing trip. SPECIAL.

### Moosehead Lake.

KINEO, Me., Aug. 15.—We forward a few items to show that the trout fishing is now excellent. The following fish have been taken within the past few days: One trout weighing 3lbs., by Chas. H. Phelps; two 6¼lbs., by J. H. Lewis; one 3⅛lbs., by J. H. Lewis; two 6¼lbs., by Judge J. E. Ingersoll; one 3¼lbs., by Wm. Ziegler; one 4⅛lbs., by A. S. Jerome; nine 10lbs., by H. G. Campell; seventeen 8lbs., by Master R. H. Cox; 114 trout by Lewis P. Tibbals and Dr. J. J. Kilbride; while 523, weighing from ¼ to ¾lb. each, have been taken by Mr. Lyman T. Goff, of Providence, R. I., from the streams near Mt. Kineo House, and all caught in less than eight days fishing. All the above fish mentioned were caught by fly hooks. The Mt. Kineo House is full of men from all parts of the country. The thermometer has been as high as 78° in the shade but once during the past three weeks. O. A. DENNEN.

### Tuckerton Bay.

TUCKERTON, N. J.—Everett House.—Fishing in the Tuckerton Bay (or Little Egg Harbor) is better than it has been in years. All the boats are getting big hauls. Several sheepshead have been caught this week, and rockfish (striped bass) have put in their appearance. Weakfish are the staple article and are now running very large. The writer caught twenty-two to-day and twenty-nine on Monday, in about one hour and a half; all large fish. School or channel weakfish (small) are biting briskly for those who fish for numbers. W. N. VREELAND.

### Susquehanna Bass.

BINGHAMTON, N. Y., Aug. 28.—The Canadian law taxing Americans for fishing within their borders need give the anglers of this section but little concern, when it is known that one day last week N. W. Waldron, the sporting goods dealer of this place, took from the waters of the Susquehanna 15 black bass, the largest weighing 5lbs. 1oz., the five largest 22½lbs. They were on exhibition in a Court street window. Mr. Waldron has been very successful this season, having made several large catches. WINFIELD.

### A Wyalusing Bass.

WE believe the heavy-weight black bass record has been broken for Wyalusing and vicinity. Last Thursday, Aug. 10, the Rev. Henry Chamberlaine, rector of St. Matthew's Episcopal Church, New York, caught a bass weighing 6½lbs. after it had been out of the water for some time. The fish was taken out of the river opposite Theodore Brown's place, at Brownstown, where the Rev. Chamberlaine is staying.—*Wyalusing (Pa.) Rocket, Aug. 16.*

# Fishculture and Fish Protection.

### States Owning Their Tide-Waters.

*Editor Forest and Stream:*

The Buzzard's Bay decision by the U. S. Supreme Court does not appear to be the only one where the court held that the tide-water of a State belongs to that State.

In Smith *vs.* State of Maryland (18 How. 71) the United States Supreme Court said: "Whatever soil below low-water mark is the subject of exclusive propriety and ownership, belongs to the State on whose maritime border, and within whose territory it lies, subject to any lawful grants of that soil by the State, or the sovereign power which governed its territory before the Declaration of Independence. But this soil is held by the State not only subject to, but in some sense, in trust for, the enjoyment of certain public rights, among which is the common liberty of taking fish, as well shell-fish as floating fish. The State has a right to protect this fishery by making it unlawful to take or catch oysters with a scoop or drag, and to inflict the penalty of forfeiture upon the vessel in this pursuit. Such a law is not repugnant to the Constitution of the United States, although the vessel which is forfeited is enrolled and licensed for the coasting trade under an act of Congress. Neither is it repugnant to the constitution, as interfering with the admiralty and maritime jurisdiction of the judicial power of the United States. Nor is the law liable to an objection that no oath is required before issuing a warrant to arrest the vessel. That clause of the constitution refers only to process issued under the authority of the United States."

Associate Justice Benjamin R. Curtis delivered the opinion of the court in this case, and among other things said; "The State holds the propriety of this soil for the conservation of the public rights of fishery thereon, and may regulate the modes of that enjoyment so as to prevent the destruction of the fishery. In other words, it may forbid all such acts as would render the public right less valuable, or destroy it altogether."

In McCready *vs.* Virginia (94 U. S. 394) the United States Supreme Court said: "The principle has long been settled in this court, that each State owns the beds of all tide-waters within its jurisdiction unless they have granted away.

"In like manner, the States own the tide-waters themselves, and the fish in them so far as they are capable of ownership while running.

"For this purpose the State represents its people, and the ownership that of the in their united sovereignty.

"The power over the fisheries remain under the exclusive control of the State, which has consequently the right, in its discretion, to appropriate its tide-waters and their beds to be used by its people as a common for taking and cultivating fish, so far as it may be done without obstructing navigation."

In Pollard's Lesse *vs.* Hagan (3 Howard 212) the United States Supreme Court said: "This right of eminent domain over the shores and the soils under the navigable waters, for all municipal purposes, belongs exclusively to the States within their territorial jurisdiction, and they, and they only, have the constitutional power to exercise it."

In Martin *vs.* Waddell (16 Peters 410) the United States Supreme Court said: "When the Revolution took place, the people of each State became themselves sovereign; and in that character hold the absolute right to all navigable waters, and the soils under them."

A. C. COLLINS.

HARTFORD, Conn.

### The Melbourne Aquarium.

AN illustrated official handbook to the aquarium, picture galleries and museum collections under the control of the exhibition trustees, Melbourne, has been compiled by Mr. James E. Sherrard. The Melbourne Exhibition Aquarium was opened in 1885 and was the first established in Australia. Some useful experiments have been carried out by workers in it, pointing the way to further developments of the fishing industries of the colony. Mr. Sherrard's little handbook contains a large amount of information about the fish of Victoria and the aquarium equipment. He has made a number of experiments with a view to keeping fish alive in artificial sea water, but only with partial success. In sea water, prepared according to chemical analysis, the fish became blind and only lived a few days. In water brought up to a standard strength with refined salt made from sea water, the more hardy kinds of fish did very well, and in water made with Southall's sea salt the fish seemed quite as much at home as in their natural element. —*Nature.*

## FIXTURES.

### DOG SHOWS.

Sept. 4 to 7.—Des Moines Kennel Club, at Des Moines, Iowa. M. Bruce, Sec'y.

Sept. 10 to 14.—Toronto Industrial Exhibition Association, at Toronto. C. A. Stone, Sec'y.

Sept. 10 to 14.—Pittsburgh A. C. Kennels, at Pittsburgh, Pa. A. A. Batchelor, Sec'y.

Sept. 18 to 21.—Rhode Island State Fair Association, at Cranston, R. I. W. W. Dexter, Sec'y.

Sept. 18 to 21.—Orange County Agricultural Society, at Newburgh, N. Y. D. A. Morrison, Sec'y.

Sept. 19 to 22.—Orange County Fair, at Newburgh, N. Y.

Sept. 26 to 30.—Stockton Kennel Club, at Stockton, Cal. John Hefferman, Sec'y.

Oct. 2 to 5.—Danbury Agricultural Society, at Danbury, Conn. C. M. Rundle, Sec'y.

Oct. 30 to Nov. 2.—Terrier Show, by New England Kennel Club, at Country Club, Brookline, Mass. D. E. Loveland, Sec'y, 128 Tremont street, Boston.

### FIELD TRIALS.

Sept. 5.—Manitoba Field Trials Club, at Morris, Man. R. J. Gallaugher, Winnipeg, Sec'y.

Oct. 23.—New England Field Trial Club, Members' Sweepstake. A. R. Sharp, Sec'y, Taunton, Mass.

Nov. 5.—United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 6.—International Field Trials, at Chatham, Ont. W. B. Wells. Sec'y.

Nov. 23.—Eastern Field Trials Club, at Newton, N. C. W. A. Coster, Saratoga, N. Y., Sec'y.

**Toronto entries close Aug. 29, with C. A. Stone, 82 King street, Toronto, Canada.**

**Pittsburgh entries close Sept. 3, with A. A. Batchellor, Box 357, Pittsburgh, Pa.**

**Rhode Island State Fair Show entries close Sept. 3, with W. W. Dexter, Sec'y, Cranston, R. I.**

### Specialty Club Secretaries.

A PROMINENT officer of the A. K. C., and also secretary of the Pointer Club, writes as follows in regard to our remarks on the duties and responsibilities of club secretaries:

"I think you have rung a good sharp bell, the tinkling of which can not fail to call some one to his duty. Mr. Watson's article in the July *Kennel Gazette* to which you so sensibly allude in last week's FOREST AND STREAM, is certainly excellent advice and worthy of adoption by us all. It is unfortunate that members of organizations in general usually consider their election to an office as honorary recognition; a sort of a tribute to superior merit, rather than one of responsibility and care. They don't consider they were selected to do something for the welfare of their club, its membership and the advancement of its objects. As for the position of a secretary, it is always accompanied with considerable clerical work, and if the duties of the office are comprehended, oftentimes with much self denial. When the office of secretary of the Pointer Club was shouldered by me I had made up my mind that I would do just what you and Mr. Watson have pointed out as the duty of specialty clubs' secretaries.

"In order to accomplish something in the right direction, the Pointer Club not only intends to keep the public posted as to its doings but will do more—keep its members informed of the executive meetings of the board of governors. There will be sent each member a copy of the minutes of all meetings. In this way all the legislation of the board of governors will be on record before every club member, and in this way every plan and the intent of the board for advancing the purpose for which the club was organized, will be as generally known as if each member was present. This plan is very necessary where the membership of the club is scattered all over the country.

"I have so often heard the comment of persons when asked why they did not join a specialty club, or why they had dropped out, "Why what do we get out of it? We pay our dues, never hear of you, can't vote, never have anything to say, and it don't pay." Quite right. This state of feeling, which is not altogether mistaken, must be remedied in some way. What could be more perplexing and embarrassing to a thoroughly good dog man than to be placed in a position where he could not have an opportunity to say anything?

"You will see that we realize that such a state of affairs is rather discouraging to the active success of a club, and so far as we can, intend to give all a chance to express their views, and play as well as pay.

"There is no club, no matter how enterprising, that can afford to lock up its success in the councils of a few of its members, without a periodical exchange of views and the enlargement of the scope of the club and the interests of its members."

This is the feeling that we have striven to generate, and if only one-half of the clubs respond, that half will reap the benefit that publicity of their doings is sure to bring them and the breed they represent. The Collie Club recently issued a brochure containing the adopted standard, etc., but only one kennel journal has been favored with a copy of it for review. This club, which represents a pretty lively sort of dog, is evidently far behind the breed it seeks to help in making its presence known.

### Kicking and Kickers at Field Trials.

*Editor Forest and Stream:*

There are so many kickers and the entries promise to be so small this year, the clubs may have to go down in their pockets to pay losses, which is causing the field trial clubs to think holding field trials is like Jordan, "a hard road to travel." The handler who never ran a dog before is kicking, claiming the clubs ought to give him "protection" against the old experienced handlers, who take advantage of their ignorance and do not give them all the tips in handling the older "artists" in that line know and have been years in finding out, and for which experience they paid dearly.

The small kennel owners are kicking, claiming they can not compete with a few dogs against the large kennel with many dogs. The big kennels claim they purchase the best dogs of the small kennels to prevent the latter from beating them; the small kennels then win more money at the trials than they do. One large kennel owner said to me, "I offered a small kennel owner $250 for an unbroken puppy last spring. This large price did not purchase it. Through bad training and handling this puppy was unplaced. Now this owner is doing the most kicking against the big kennels."

Owners protest when their dogs get sick and ask that the races be postponed until their dogs get well. If these owners but thought a moment what the consequences of establishing such a precedent would be, we think they would withdraw such request, as it was made, no doubt, in the "heat of passion." Adopt such a precedent and every defeated dog would have some one claiming it was sick and "they wanted a show for their money." The owners of dogs that strained their legs jumping a fence or ditch or were stepped on by a horse or ran into a wire fence or got too much to eat would come up with a protest and "a show for their money," claiming a postponement of the trials until their dogs recovered. At the present rate, these demands are growing on the clubs, you will soon see purchasers demanding the clubs put a price on all puppies for sale, or what owners must charge for the stud services of noted sires. We already have volumes of protests coming before the clubs from owners asking the clubs to put a price on training and adjust differences between some owner and trainer, or what part some owner is to have of the dog's winnings. Under a cry of "a show for their money" coming from owners, clubs have been forced to allow bitches in season to start in the trials. We now see an owner claims his dog was "smuggled in" and allowed to start in one of the trials. This dog's nomination was paid in regular order, his starting fee voluntarily paid and the dog took his chance on winning. The clubs had no power to prevent the dog starting after its starting money was paid, as stated. Neither was it a bitch in season. A demand was made on the club, after the dog ran and lost, for the return of the money paid, which the club very justly had to decline. The owner claims he "wanted a show for his money," basing his claim that he knew his dog had no chance in said club on general grounds. If we are to accept said owner's own statement claiming he knew two years before he had no show, etc., and then his dog starts and he "squeals" after he loses and demands his money back, we leave each reader to draw his own conclusions. This is the same owner whose dog won in other trials and we see in the papers the flaming stud card of this dog beating such and such noted dogs at the field trials. This owner jumps on the field trial club. His agent or himself could not make a mistake and pay for the dog's starting; it was the club that smuggled his dog in and paid the dog's entrance. The club is not demanding the dog's entrance money, it is the owner demanding a refund of this money. We hear of no field trial club advertising for winners to come and get their money. Those getting the most benefits out of field trials are doing the most kicking. Perhaps these kickers, after they have throttled the field trials by their tirades against the clubs and, like Othello, find their occupation gone, will repent and say they did not mean anything, their kicks were made in the "heat of passion."

Your staff correspondent states—"There are many who are gentlemanly, whether they win or lose." The winners, he says, think themselves "indispensable." The gentlemanly losers are getting fewer each year, judging by the amount of kicking indulged in; many have come to the conclusion field trial clubs are simply targets set up for them to kick at and furnish the "indispensable" ones with big money. I never heard of a field trial club declaring a dividend. I have known several that went down in their pockets to make good the losses on their stakes to pay the "indispensables" their winnings. Field trial clubs are getting very tired of being a target for every disgruntled and defeated individual to kick at. Some may wonder at the decadence of field trials. Those conducting the trials, giving their time and money freely to the cause for bettering the field dogs of the United States, can read "the hand-writing on the wall" and explain it, too.

P. H. BRYSON.

MEMPHIS, Aug. 18.

## POINTS AND FLUSHES.

*[By a Staff Correspondent.]*

### The High-Class Dog.

No expression used in field trial parlance is more abused than the term "high class." Its misuse has brought odium on the field trial dog. The trials having nearly all become almost entirely commercial or mercenary, there was a strong tendency to have a dog appear as high class for the sake of a sale, and if he had a few of the more apparent qualities, such as nimble heels and a dashing carriage, with a little sprinkling of bird work, there were some trainers whose claim of high class was sure to be forthcoming.

As the field trials begin next month, a brief consideration of the high-class dog and his imitator or spurious brother, may be opportune.

It has been held that, by some vague distinction, there is a wide difference between the "plug shooting dog" and the "high-class" field dog. A good field dog should possess the qualities of a high-class dog, and the latter should possess the qualities of a good field dog.

It has been held that a field trial demonstrates the qualities which are desirable for breeding purposes and which breeders seek. As trials have been conducted, they do not do so, for they put the stamp of approval on too many bogus high-class dogs. Of course the query naturally arises as to what constitutes the pretender.

To make the distinction more readily apparent, a few remarks on the genuine high-class dog will be helpful. He is, first of all, what is commonly called "level-headed," which is but another term for intelligence and ready good will and steady nerves in working to the gun. In actual work, when trained, he needs no prompting or helping in doing it, for he has a knowledge of all the details and how his own efforts should fit with those of the shooter and make a joint success in bringing the game to bag. He has a keen perception at all times of what is required, and is diligent and skillful in executing it. Instead of doing his work in a set mechanical manner, he intelligently conducts his efforts to conform with advantage to the ever-changing conditions of wind, ground, etc. He chooses his range and beats out his ground with quite as much judgment as if his handler planned it for him—often better. He approaches likely places so as to give his nose the widest possible advantage of the wind, and at the same time approach the birds without alarming them. When going from one likely place to another he does not stop using his nose while increasing the use of his heels, but takes such a course as will cover the intermediate and less promising places, and works diligently with his nose always. He locates his birds with quickness, accuracy and self-confidence, a result of a knowledge of how to take advantage of the opportunities; and a good brain, an essential in which many field trial dogs and modern dogs are lacking, as shown by excessive nervousness and what is commonly termed "rattle-headed."

Of course, the functional powers of the nose of the high-class dog are perfect. In pointing he stands neither too far from his birds nor too close to them. It may or may not be a credit to a dog's nose to point a bevy one hundred yards or more away—sometimes they appear to be pointing the bevy when they really are pointing the footscent—but such pointing is no credit to the dog's judgment. However, the act may be due to a loss of self-reliance following ill-considered punishment.

The bogus high-class dog has a nimble set of heels and generally a wide range which he conducts in an ill-regulated manner, for in most instances he is shallow mentally. His handler gives him a deal of prompting and it is laborious to handle him. In fact, such dogs owe their fame to the supplementary efforts of their handlers in glossing over their weak intelligence and imperfect work.

In our trials a handler is allowed every liberty in handling his dog, and whether the dog did the work or the dog and the handler jointly did it it is generally credited to the effort of the dog.

No dog should be permitted to receive unreasonable assistance from his handler, or, if the handler can not be restrained, the value of the work should be rated at its true worth. For while it is impossible to conduct field trials in the manner of an ordinary day's shooting, it is not impossible to require a dog to do the details of his work as would be best for actual sport afield.

As before mentioned, the imitation dog is always speedy and nearly always of shallow intelligence, though he may be intelligent but a willful, self-hunter, requiring most distressing effort on the part of his handler to keep him within proper limits and control, while trying to make a good showing. When such dogs are sold, after a high-class (?) performance at a field trial, the new owners, not being familiar with all the peculiarities and natural deficiencies of the dog on the one hand, and on the other the many makeshifts, physical effort and uncertainties in handling him, obtains most unsatisfactory results, and a highly unsatisfactory opinion of field trial dogs of the "high-class" degree.

The skillful trainer, or rather one who knows how to make the greatest favorable showing out of such defective material as he may have in charge, can so direct the dog's range and gloss over his deficiences that no one but an expert can discover all the little attempts to patch over errors and covert efforts to help the dog in the details of his faulty work. In ranging, the dog goes out boldly and swiftly, but the handler must keep his eye on him constantly, and direct him, by whistle and signal, from one likely point to another. The dog may be using his nose part of the time. Most of his work is mechanical. He may have a comprehension of some of the commoner details, but he relies almost wholly on his handler for help in the general management. On birds, in most instances, his work is imperfect. If he happens to come on a bevy with all the conditions favorable, he may make a dashing show, and if his attitude is spirited and stylish, it is sure to be called a high-class piece of work, and many condone a number of blunders afterward. But if he happens to hit the trail of the bevy and makes a rigid point on foot-scent, the handler, who can tell by the dog's eyes and attitude that he is not on a true point, gives him a quiet cluck and the two walk on together. The dog may stop and make a number of points, going on when prompted; but when he at last points more rigidly, feathers more, and his eyes become intensely full and glistening, the handler knows then that the dog has the body scent, is near the birds, and that it will be safe to go forward to flush. On single birds, if the handler has been careful in marking them down, and if the dog points near them, the handler is almost sure to flush a single bird. Many dogs, owing to shallow brains, are defective in their work on birds.

In short, the patched-up field trial dog, often apparently half broken—finished training would spoil him since he would become wholly mechanical and inefficient—or the self-hunter, which, owing to his peculiar disposition, works to the gun under compulsion, has lowered the prestige of the true high-class working dog, and has done more damage thereby to his reputation as a desirable performer, than years of proper effort can mend. The desire for revenue has stimulated the effort to make a "high-class" dog out of what are really the plug dogs whose deficiencies have been plugged by the efforts of his handler and the lax system which permits the joint work of handler and dog to score.

B. WATERS.

909 SECURITY BUILDING, Chicago.

*The* FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

### Gordon Setter Trials.

*Editor Forest and Stream:*

I have been asked whether the Gordon Setter Field Trials Club intend holding field trials this year.

In reply I would say that Mr. E. K. Sperry, president of the above named club wrote me some months ago advising me to apply for the use of the grounds of the New England Field Trials Club at Assonet Neck, Mass., saying, also, that "I would be glad to aid you all in my power if your club decides to run."

He also informed me that Mr. Chas. R. Taylor, the secretary of the same club, had written him that "as on account of business calls he found it impossible to do more toward getting up a second field trials than to enter some Gordons, he supposed it was useless to longer remain as secretary of the G. S. F. T. Club, etc., etc," Mr. Sperry adds, "From this I suppose that Mr. Taylor considers the G. S. F. T. Club dead."

In regard to our field trials to be run at Assonet, Mass., on Oct. 24, entry blanks will soon be ready, and will be sent on application. The names of the judges will be announced later on. Fees will be $5 to nominate and $10 to start; trials open to any Gordon setter whether owned by a member of our club or not. Quite probably additional prizes will be offered to winning dogs owned by our members.

Since writing the above I have just received a letter from Mr. Sperry, dated this morning, saying: "By the papers I see that the good work goes bravely on. Now, I think it will have a tendency to make it understood that your club has no opposition, but instead the support of all, if I should offer, through you, the same amount and in the same way that you have; *i. e.*, that you guarantee $30, in form of entrance fees or donation, which I hereby do. And you can make use of the information herein contained as you may think best for the good of all, as well as my former proposition to unite all interested in the noble Gordon."

Subscriptions need not wait. I shall be glad to add a good many to Mr. Sperry's and mine. It is to be hoped that Gordon men will come up well, join our club, make entries of their dogs, and help the Gordon cause. We cannot expect to advance the Gordon in public estimation until they do.

JAMES B. BLOSSOM,
President Gordon Setter Club of America.

### The Paucity of Bench Show Judges.

*Editor Forest and Stream:*

As Mr. Waters has shot so hard and often at field trial abuses, why don't you make up the other horse on the pole and show us where reformation is needed in bench show circles? In quite a good many points the troubles are identical, as professionalism, monopolism and "bluffism" is as much *en evidence* at bench shows as at any trial, and its bearing has as much importance, as bench shows are the recruiting fields, to a certain extent, for field trial enthusiasts.

I would like to know why is it not just as bad for a show as a field trial if there is not the absolute conviction that every one has just as much chance to win as a big owner? and you know this is an every-day remark at our shows. Not that I say it is so; no. I merely want to repeat the fact; but what I wish to do is to criticise the average bench show committee, with whom the blame chiefly lies.

The scarcity of competent judges is more to blame for this and similar remarks, and also the cause of small entries and interest at many shows, excepting always the Westminster Kennel Club shows. There the case is different, because it is the first prominent show of the season and everybody risks a try at it if he has something promising. But after New York how do the entries fall off? So much so that more shows have gone to the wall than field trials, and why? Of course local causes have something to do with this, but would you or I be foolish enough to send a dog around the circuit after he has been beaten at his first attempt, when we know that the very same judge is officiating at seven out of ten shows following. Really we are a very slow people in this wide, big land of ours, for we have in reality, in all these many years, only developed about three prominent judges. Here and there some local specialty judges are sandwiched in to avoid absolute stereotyped judges' lists—and the three judge at each and every show of any consequence.

With due respect and admiration for these gentlemen, who are certainly on top of the ladder or they would not be in constant demand, it is very detrimental to the general interests of bench shows to have judging brought down to such a narrow gauge. No matter how excellent the judging of these gentlemen on the average may be, as it stands now it is "one-dog judgment" as a rule, and no matter how good and capable these gentlemen may all be, to err is human, but retraction is not. The possibility of an error by any one of these judges is no disgrace, considering the great amount of judging they have to do at every show, but rather the more possible. Take one of the English sporting papers and run over the bench show reports, and you will find a dozen or two prominent and capable men as judges to one of ours, while any single State in America, though scarcely able to support one show a year, or only half a one, could swallow up, territorially, the whole of England. In the face of this, our bench show committees labor straight along in the old path, being afraid to take any others but the ever-popular trio. They are certainly good judges, but why should exhibitors be generous to foolishness and swell the show coffers with entry fees, when almost positive that they cannot win, as none of these judges would be likely to change their judgment from one show to another? But if other, of course capable, judges officiate at different shows, the element of uncertainty, which is the very essence of the sport of showing—except for the money-making element, who of course don't want any chance work, only cut and dried certainty—would induce many more men to exhibit at our shows.

We are all human and do not want to accept one man's judgment alone, no matter how good. The timidity of bench show committees in not fostering new men is killing the shows, and has done so for some years back, and will do more harm yet before this fact is plain to them. Then there is that great authority—the press, and its autocratic power to make or kill a new man, to be reckoned with; and how often is a new man and sometimes an old one, who has the courage to go from the beaten track if he has the honest belief that he is in the wrong and has not a very strong backing, pressed to the wall before he can demonstrate whether he is right or not? Some authority will say the judge is dead wrong, because he does not agree with him, and we are very great "authority" worshippers in this land, and so the cry goes forth without proof, pro or con, simply because the "authority" must be right. Generally when such a case can be sifted thoroughly, it comes to no more than a personal difference of opinion, which will always exist; even with the "know it alls." And just in this difference of opinion of capable judges lies the sport of bringing out dogs and showing them, which is entirely absent under the present state of the dog show world.

Everybody tries to make showing too much of a dead sure thing, but the only dead sure thing I can see in it is the killing of the general healthy interest in the sport. So and So has a string of dogs which have beaten mine here, so he is bound to beat mine there, the same judges officiating; therefore I would be an idiot to go there, consequently that show loses my entries. Besides, owing to this state of affairs, it pays big kennels to gobble up all good dogs, as it is quite a safe speculation under the present circumstances, for they can almost accurately calculate just how much money they can pull off at each show. What are the beaten ones expected to do? Next time they will stay at home, of course, as there is no chance for them, and so exhibiting simmers down to a dead sure thing for the large exhibitor or circuit handler. Of course I don't wish to imply that the better dogs get beaten, far from it, but we seldom believe one man's judgment conclusive, and to this natural weakness dog show committees should cater for their own interest, otherwise they will die, as so many have already, a lingering death from lack of general and amateur interest.

This humiliating lack of more prominent men in the ring and consequent tameness of judging is the principal reason for the falling off of the amateur fancier, it being too safe an investment for large show kennels, and there are too many odds against the periodical, yet principally supporting, amateur exhibitor. Another drawback is professional handling, which is a necessity in these days if you wish to win, even with a good dog. The man who disdains to resort to dog-jockeying is called a fool because he has the temerity to think a good dog should win regardless of tricks or favors!

Now jump on me gentlemen, you are welcome, though these views are merely the expression of my personal opinion, but if those who have reiterated these or like opinions verbally so often would indorse me you would see an avalanche of adverse criticism on the present lack of bench show judges.

G. MUSS-ARNOLT.

TUCKAHOE, N. Y.

### The Pittsburgh Show.

*Editor Forest and Stream:*

Mr. W. P. Fraser has thought it his duty to jump on the Pittsburgh Athletic Club. Mr. Fraser seems to forget that this is a world of competition, and that if we offer better inducements, and have better railroad facilities and the advantage of more central location, it is not the fault of the P. A. C. Kennel Club if some of the best kennels in the country come here. The P. A. C. is run on business principles, and I suppose always will be while the present management have hold. The club grew out of a mere nothing, and it was this latter principle which has made it the third largest athletic club in the country.

We recognize the fact that the Canadian fanciers are among the best dogmen we have, and we are very sorry to conflict with them, but it is a show in Pittsburgh now, or none for a long time to come. The last one was a financial disaster to the members of the Duquesne Kennel Club and we don't propose to have ours fall in the same straits, although our members are willing to put up the cash if it does.

Mr. Fraser must not forget that we are not under the yoke of the Queen down here, and we propose to give a show when we please. As the Toronto entries will have closed by the time of the publication of this, it will not hurt their show to announce that we have made formal application for membership in the American Kennel Club, which will be acted upon soon. A class has been added for corded poodles and a challenge class for Italian greyhound.

ALF. R HAMILTON, Cor. Sec'y.

PITTSBURGH, Pa.

### American Fox-Terrier Club Stakes.

*Editor Forest and Stream:*

The following stakes of the American Fox-Terrier Club will be competed for at the Rhode Island State Fair Show, Sept 17 to 21, T. S. Berlin judge.

The Grand Challenge cup (value $300), for the best fox-terrier in the show (rough or smooth). The second division of the Produce Stakes of 1894. The Yankee Stakes of 1894. The Tomboy Stakes of 1894:

The following specials have been offered by different members of the board of governors: $25 for the best kennel of four wire-haired fox terriers; $25 for the best kennel of four American bred foxterriers; $25 for the best wire-haird fox-terrier dog; $25 for the best wire-haired fox-terrier bitch; $25 for the best fox-terrier sired by "Starden's King."

Please make nominations for the Produce, Yankee and Tomboy Stakes to the secretary, on or before the date of closing of entries for the Rhode Island State Fair Show, Sept. 3.

H. W. SMITH, Sec'y and Treas.

WORCESTER, Mass., Aug. 25.

## DOG CHAT.

Some time since we drew attention to the fact that a show would be given by the Orange County Agricultural Society at Newburgh, Sept. 18 to 21. Mr. Johnston, the superintendent, now informs us that their show is to be a good one, and to that end have engaged Spratts Company to bench and feed. Dr. H. Clay Glover will judge all classes.

A new fox-terrier kennel has just been started at Harriston, Ind., under the name of the Cloverleaf Kennels. A company has been organized with W. W. Stevens, Salem, Ind., as the president; Enoch Parr, treasurer, and G. G. Davis, secretary, both of Harriston. The stud dogs already in the kennel are Ford Venio (Venio Grantock—Ford), imported recently, and Von K. Parr (Beverwyck Roy—Beverwick Blundaze) from the Beverwyck Kennels.

Our contemporaries are just giving the "news" that Mr. Huntington sold the wolfhound Nagrajdai, which was contained in FOREST AND STREAM of March 2.

Off the coast of Siberia the Ainus of Sakhalim train packs of dogs to assist them in their occupation as fishermen. One of these packs of dogs, when out for a fishing excursion, will swim out to sea, and then spread out to form a semicircle, in order to head the shoals of fish and drive them towards the shore and into the nets of these rude and primitive people. The dogs not only perform this work with singular skill, but, when they have reached the shallow water, some of them seize the largest fish in the mouth and carry them to land. On some parts of the Devonshire coast powerful dogs are bred and trained to swim through the surf and bring back in their teeth the ends of ropes thrown from the incoming boats, without which aid it would often be impossible to land the boats safely. These dogs are exempted from the dog tax, on account of their useful labor.—*British Fancier.*

There have been many rumors afloat among the dog men of Boston and vicinity to the effect that an open air terrier show would be held in or near Boston this Fall, but when traced to their origin were found to have nothing tangible to rest upon. That something of the kind would be well received by the public as well as fanciers has long held a place in the minds of many of the leading breeders in that section, but their absence from town at the time of year necessary to prepare for such an event has no doubt been the primary cause of the idea never having been carried out. The New England Kennel Club has been quietly at work the past two months endeavoring to secure a suitable place to hold such a show and they have at last succeeded. On Friday last they made an arrangement with the Country Club, one of the leading social clubs, whereby such a show will be held under canvas on their extensive grounds at Clyde Park, Brookline, a suburb of Boston. It will be confined strictly to terriers, and as such, the first to be held in this country, we believe. They have claimed the dates of Oct. 30 to Nov. 9. Mr. Loveland writes us: "It is the intention to make it a gala week, and a suitable ending of the country season for this year. There are to be many other attractions in addition to the dogs. Arrangements have been made to have whippet racing, now so popular in England, polo and golf matches, trap shooting and other sports. Exhibitors who attend may be assured that time will not drag heavily on their hands. Premium lists will be ready in due season."

The Seminole Kennels are hard at work getting their dogs in shape for the fall shows. Champion Tim and Laura B. are ready for another "farewell" campaign; in fact, they are veritable "Pattis" in this respect. And we are glad to hear that at present they are in prime condition. The collie Golddust, as we remarked at the Specialty show, is improving with age and now is in better coat than he has been since his arrival in this country, so his owner is confident that he will hold his own with the best. Good accounts also come of their little pug Attraction, winner of the challenge prize at New York last spring. His son, Attraction, Jr., was sold to a Louisville fancier at a long price, and is expected to account for some ribbons very soon, even if he does not beat his sire. He is the best that the kennel has yet bred and reflects great credit on his sire, who is making his mark as a stock dog. Seminole Kennels will show a strong kennel of Irish setters and collies and the pug Attraction, at the Des Moines and Pittsburgh shows under the able generalship of Ben Lewis and they hope that the hard times will not affect the shows, but that the "regulars" will come out in force and make the glory of winning all the brighter.

Mr. John Davidson, while he breaks his average at Toronto, will, however, not be allowed to remain idle next month. He will judge at Pittsburgh, as already announced, and from there judges at Providence. Then he will leave, as soon as possible after judging, for Stockton, Cal., where he judges all classes, the show having been postponed till Sept. 26 to 30, to allow of him making the long trip across the continent. It is a wonder to all his friends how this veteran manages to stand the amount of traveling he does during the year.

Mr. C. E. Bunn, of Peoria, Ill., has purchased the mastiff dog Ealderman from Mr. W. Wade, Hulton, Pa. Ealderman is by Beaufort out of Emma.

Mr. W. Tulk, Jr., assistant secretary of the Hamilton Kennel Club, Ontario, Canada, called upon us on Monday last. He reports kennel affairs in Toronto and Hamilton as being on edge waiting for the Toronto show to open. Hamilton will hold a local show about the beginning of October confined to residents in Wentworth county. As their one-day local show last year secured an entry of 208 dogs and was such a success even a larger entry is expected this time. Mr. Tulk is on a still hunt for wolfhounds and we may have more to say before going to press.

The Terra Cotta Kennels, in which Messrs. J. G. Kent, of Toronto, and W. Tulk, Jr., are partners, have just purchased Mr. Purbeck's crack greyhound bitch Southern Beauty. By many good judges this bitch is considered the best greyhound on the bench to-day; at any rate, she is the best of her sex yet seen in public. By this purchase the kennel can now show a team that will be found hard to beat with Gem of the Season, Wild Rose and Southern Beauty the leaders. Dallas, which they have also just purchased, from Mr. H. W. Huntington, will, no doubt, also prove a useful dog.

The Pittsburgh show promises to be a good one, as many Philadelphia and Chicago exhibitors will enter there. If a show is given by responsible people and run on business principles, as this one of the P. A. C. seems to be, there is no earthly reason why it should not be supported, whether it sails under the banner of the A. K. C. or not. Pittsburgh has always been a good show town, though handicapped by insufficient space to bench the dogs, but unless shows are continually given the local interest soon dies out and for this reason alone the venture of the P. A. C. should meet with support and approbation. There are many of our best exhibitors and breeders who would welcome outside shows as they are not all imbued with that insane idea of scrambling for wins that count.

Mr. J. Otis Fellows judges at the Binghamton show, which takes places next week in connection with the fair, Sept. 6 to 13. The fanciers of Binghamton intend forming a kennel club, and will join the A. K. C. with the view of holding a larger show next year.

The Meadowmere Kennel of poodles will show a strong team at Toronto.

The Marlborough Kennels have sold two Argoss—Modjeska pups to Mr. Virtue, of Montreal.

Mr Stone sends us a circular drawing attention to the fact that wins at Pittsburgh would not be recognized by the A. K. C. As the FOREST AND STREAM explained this fact, exclusively, last week, there has probably been no harm done to the Toronto show through any misapprehension on this point.

Mr. Winchell has been keeping quiet lately, but a letter to-day (Tuesday) informs us that he has never known such a demand for bloodhound pups, everything he has had to offer has been taken with prices no object. He has just imported another fine dog pup called Jason and the bitch Blameless, in whelp. This bitch is said to be the most accurate and fastest man trailer in England. These two bloodhounds are from Mr. Brough's kennel, Yorkshire, England, and left the other side Aug. 16, on the Tauric of the White Star Line. The Brampton Beauty litter, by champion Black Prince, have come on well, the dog pups being especially promising.

### N. E. F. T. Club.

The New England Field Trial Club, through its secretary, Mr. A. R. Sharp of Taunton, Mass., sends us the entry forms and rules for its Members' Stake to be run Oct. 23. The stake is open to all pointers and setters owned by members of the club, with no restriction as to handlers in good standing. Entries close Sept. 15, with $5 to nominate, $10 to fill. Ten per cent. of this goes to the club, and the balance is divided into prizes of 50% to first, 30% to second and 20% to third. While the rules are in the main similar to other field trial club rules, the note at the bottom of Rule XI. strikes one as being quite to the point in these days of half-trained dogs that are in many instances misnamed "high class." "The N. E. F. T. C. feel that the foundation of success in field trials, and the development of the shooting dog to the highest standard of excellence, depend upon the sportsman of the country, and for that reason they wish to have the owners and handlers of dogs bring their dogs on the field thoroughly broken, and under such control that they can be handled quietly and without confusion. Dogs that are disobedient, wilful and careless in their work, will not be tolerated."

The club rules call for retrieving, but the dogs will not be asked to retrieve in this stake on account of the close season, which extends to Oct. 15.

From Providence we hear that entries have already come in very satisfactorily, and a large show is expected. The Fox-Terrier Club will have the "Yankee" Stakes and "Futurity" Stake judged there, and it is reported that a new $400 cup will be competed for at this show for the first time

Other specialty clubs have done well by the show. The pointer class for bitches which leads at 55lbs. in premium list is merely a printer's error, the class being for 50lb. bitches as usual. Those who intend going to the show from New York by boat will be charged 75 cents per dog either in crate or on chain.

Students of our business columns will not fail to notice the new stud card of the Mount Vernon Kennels, of Boston, Mass, owned by that genial and veteran exhibitor, Dr. C. A. Lougest. His mastiffs are Ingleside Maximilian, of the ultra fashionable head, and whose merits as a sire are known to all mastiff breeders; Emperor William and Emperor Maximilian are worthy sons of Maximilian out of that well known mother of winners Gerda II. In getting short-faced, large-sized and good-boned mastiffs these dogs are very valuable. In bloodhounds these kennels place the well known Alchymist, Belhus and Berry's Bradshaw, all winners; Alchymist especially being prized for his superb bloodhound character and almost faultless form of body. Champion Commodore, the American foxhound that has made such a record at the shows, is also placed at the service of the public. This addition to our list of stud dogs is quite an important one.

If straws show which way the wind blows the Pittsburgh show will be a success. The rivalry among local fanciers is intense, and some of the largest kennels in the country will be there. In addition to the changes announced last week, classes have been made for Gordon setters, greyhound and pug puppies; challenge classes for black and tan and Skye terriers; separate classes, both dogs and bitches, for Irish, Scotch, Dandie Dinmont, Boston and Bedlington terriers and cocker spaniels, and a separate bitch class for both rough and smooth-coated St. Bernards. Mr. Hamilton, corresponding secretary, advises all exhibitors to come over the B. & O. R. R., which will not only give one-half rates or better, but will carry three dogs free and the rest at excess baggage rates—about 25 cents per hundred. Other railroads will give concessions and the one-half rate fare. The express companies return dogs to their owners free. Over $100 in money, together with a number of merchandise and other prizes have been received by the club as special prizes. These and what are received the coming week will be as equally distributed as possible among the classes. Entries close Sept. 3, and only those bearing a post mark not later than that date will be received. Mr. W. Wade will judge mastiffs. The Allegheny Valley R. R. will carry dogs free.

The Chestnut Hill Kennels, over whose destinies Mr. Henry "Nonchalant" Jarrett presides, report that sales have been good this season, though prices, except for the best stock, have scarcely been so large as usual. Mr. Jarrett is particularly enthusiastic over the litters he has by Christopher ex Modesta and Dorcas, the latter beautiful bitch being a litter sister to Dorothy, that sweet morsel of collie flesh whom the gods loved too well. The Chestnut Hill Kennels, feeling that they have enough dogs in challenge classes, and that they would like to show without risking the honorable penalties of an A. K. C. show, will bench a team at the Pittsburgh show. They will also show at Providence.

The Chesterford Park Kennels, of Maywood, Ill., will show at Des Moines with a good team, and probably at Pittsburgh; so it looks very much as if there will be quite a gathering of the clans at the Western shows.

English setter breeders, and field dog breeders especially, should read the announcement which places Mr. Diffenderffer's Count Beaufort at public service. If you cannot procure the real article get the best you can. The merits of the Count Noble blood on Gladstone and Druid—Ruby bitches has been pointed out recently in these columns, and here is an opportunity for breeders to get the next best remove from Count Noble, the blood of his brother Moss Wind 'em's son. The fee is within the reach of any breeder and for good looks and bird sense Count Beaufort is hard to beat.

Mount Pleasant Kennels offer Gordon setter pups for sale; J. B. Brainerd, English setters, old and young stock; Breeder, Yorkshire terrier pups; James Wrinkle, English setter. Attention is also called to the card of Harry Reeder & Co., who have house pets and hunting dogs for sale.

Mr. F. C. Nims, who is now taking a rest at Saratoga Springs, N. Y., informs us that his crack bitch Haughty Madge, that won all before her last spring, whelped July 24 a litter of six to his imported dog Finsbury Dong; they are doing well and promise to be worthy of their blood. The Rookery Kennels will not show this fall, the nearby show at Pittsburgh being tabooed on account of the five days the dogs will be required to be benched.

Mr. R. Leslie of Lynn, Mass., has sold his pointer bitch Kathleen Kent (champion King of Kent—champion Belle Randolph) to Mr. C. H. Alden, North Middleboro, Mass. Mr. Alden has been trying to purchase her since Boston show but it was not until Saturday last that he came within the limit and this good bitch will now probably retire from the bench as she will be kept as a family pet. She was an improving sort and could probably have done even still better than her record of Reserve open class Boston, 2d Providence and vhc. Danbury 1893; 4th New York, and 2d Boston this year. In the latter competition Mr. Leslie says "she was robbed of first by a light weight bitch in the class that did not belong there." Mr. Leslie's King of Lynn, now in trainer John Lewis's hands being prepared for the coming trials, is showing up very well and has the southern requisites of speed and range in a large degree. Kentwood, a litter brother of Kathleen Kent, has been returned from Mr. Burke C. Miller's kennel at Little Rock, Ark., where he has been handled for the last two seasons, and will be shown at Providence.

Since the above was written, Mr. Leslie has sold his pointer bitch Tempest Queen (Tempest—Nadji of Naso), litter sister to champion Duke of Kent II., to Mr. Thos. H. Hall of Florida, who will use her for private shooting. This bitch divided first with one of Mr. Lovell's dogs at the Pawtucket show of 1892. This leaves Mr. Leslie with only the pointer bitch old champion Belle Randolph.

Where is the crockery? My cocker Romeo while feeding snatched a piece of crockery from my fingers, it was about 1½in. square, I suppose he took it for a piece of bread. I gave him an emetic at once and locked him up, everything came up but the crockery. I then fed him on potatoes for about a week and kept him where I could examine passages, he bled quite a lot but did not pass the piece. I tried injections and searched the bowel but of no avail. This happened three months since and after the first week he has not been troubled in any way. Now where is the crockery?—*Ubique in Canadian Kennel Gazette.* Encysted probably.

We have heard from Mr. Morris, the only member now acting on the A. K. C. committee deputed to arrange for better transportation facilities for dogs to shows and learned that he has asked for the appointment of others on the committee or the taking over of the petitions that he had signed at the shows, by the secretary of the A. K. C. at the last executive meeting. But nothing has been done so far. He is now taking the same view of the matter that was expressed in these columns some time since that the railroads as common carriers should carry dogs at reasonable rates whenever offered for transportation, and especially dogs for exhibition purposes, instead of turning all such business over to the express companies. With this end in view he has been in correspondence with the secretary of the Inter-State Commerce Committee, and if the appeal fails further action will be taken in the matter.

Mr. James Mortimer sailed for America last Wednesday, Aug. 29. Mr. Oldham sailed Aug. 25.

## KENNEL NOTES.

**Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.**

### NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

*Moughlow, Jr., Black Boy, Lord Moughlow, Lady Moughlow, Golden Queen and Jessica.* By Eberhart Pug Kennels, Cincinnati, O., for black French poodles, three dogs and three bitches, whelped June 4, 1894, by Moughlow (Carlo—Frenchie) out of Queen Zip (Carlo—Frenchie).

*Brother Jonathan.* By St. Patrick Kennels, Denver, Col., for blue greyhound dog, whelped February, 1893, by Dingwall out of Novenry.

*Billy for Short.* By St. Patrick Kennels, Denver, Col., for red greyhound dog, whelped September, 1893, by Miller's Rab out of Comedy.

*Blister.* By St. Patrick Kennels, Denver, Col., for red greyhound bitch, whelped August, 1893, by Glenkirk out of Innocence.

*Bert Blood and Boomering.* By St. Patrick Kennels, Denver, Col., for black and white greyhound dog and white and black bitch, whelped May 7, 1894, by Boomerang out of Pearl of Pekin.

*Blitzen and Brevity.* By St. Patrick Kennels, Denver, Col., for white and brindle bitches, whelped May 7, 1894, by Boomerang out of Pearl of Pekin.

*Argus, My Gem and Hope Noble.* By Miss S. A. Nickerson, Providence, R. I., for Gordon setters, two dogs and a bitch, whelped June 8, 1894, by Count Noble (Ben Butler—Belle) out of champion Janet (Beaumont—Belle Stephens).

*Startle.* By Dr. L. Breisacher, New York city, for white bull-terrier dog, whelped April 14, 1894, by Gully the Great (Gladstone—Florrie) out of Starletta (Hinks—champion Starlight).

*Earl of Warwick.* By T. D. Demming, Warwick, R. I., for black and tan Gordon setter dog, whelped March 15, 1894, by Count Noble (Ben Butler—Belle) out of Josephine II. (Leatherstocking—Josephine).

### BRED.

☞ **Prepared Blanks sent free on application.**

*Topsy Wagg—Pontiac.* W. H. McQuaid's (Middletown, N. Y.) pointer bitch Topsy Wagg to G. H. Thompson's champion Pontiac, July 25.

*Mabel E—Happy Toby.* Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Mabel E. (champion Kash—Lady Thurman) to their Happy Toby (Spokane—Nellie T.), Aug. 3.

*Venus—Boomerang.* J. G. Massey's (Rawlins, Wyo.) greyhound bitch Venus (Brabazoun—Brun) to St. Patrick Kennels' Boomerang, July 26.

*Pansy Noble—Count Noble.* T. M. Dean's (Providence, R. I.) Gordon setter bitch Pansy Noble (Kiffer—Lady Noble) to Miss S. A. Nickerson's Count Noble (Ben Butler—Belle), June 25.

*Nancy Hanks—Christopher.* F. C. Carswell's (Wilmington, Del.) collie bitch Nancy Hanks to Chestnut Hill Kennels' champion Christopher, July 5.

*Mavis III.—Christopher.* P. Mullen's (Branchtown, Pa.) collie bitch Mavis III. to Chestnut Hill Kennels' champion Christopher, July 26.

*Lady Moll—Christopher* F. R. Carswell's (Wilmington, Del.) collie bitch Lady Moll to Chestnut Hill Kennels' champion Christopher, Aug. 3.

*Lassie—Christopher.* M. Leslie's (Mount Airy, Pa.) collie bitch Lassie to Chestnut Hill Kennels' champion Christopher, July 26.

*Goldie—Christopher.* Mrs. R. Konoven's (Holmesburg, Pa.) collie bitch Goldie to Chestnut Hill Kennels' champion Christopher, Aug. 13.

*Viola—Wellesbourne Charlie.* Chestnut Hill Kennels' (Chestnut Hill, Pa.) collie bitch Viola to their champion Wellesbourne Charlie, July 23.

*Charm II.—Wellesbourne Charlie.* P. Mullen's (Branchtown, Pa.) collie bitch Charm II. to Chestnut Hill Kennels' champion Wellesbourne Charlie, July 29.

*Ursa—Nabob.* W. Wade's (Hulton, Pa.) bobtail sheepdog bitch Ursa to Chestnut Hill Kennels' imported Nabob, July 26.

### WHELPS.

☞ **Prepared Blanks sent free on application.**

*Bellmont.* J. B. Blossom's (New York) Gordon setter bitch champion Bellmont, Aug. 2, nine (two dogs), by W. S. Lee's Doc (champion Beaumont—Bessie III).

*Psyche.* J. B. Blossom's (New York) Gordon setter bitch Psyche, Aug. 10, eleven (four dogs), by his Heather York (Heather Harold—champion Bellmont).

——. Geo. Nordloh's greyhound bitch ——, July 31, seven (four dogs), by St. Patrick Kennels' Boomerang.

*Bradford Daisy.* U. G. Scott's (Portland, Ore.) Yorkshire terrier bitch Bradford Daisy (Charlie—Daisy), Aug. 14, three (two dogs), by his Wallace (Teddy—Farley's Pepper).

*Starletta.* Dr. L. Breisacher's (New York city) bull-terrier bitch Starletta (Hinks—champion Starlight), April 14, seven (four dogs), by F. F. Dole's Gully the Great (Gladstone—Florrie).

*Linden Princess.* Dr. C. A. Lougest's (Franklin, Mass.) mastiff bitch Linden Princess (champion Ilford Caution—Lady Dorothy), Aug. 14, seven (three dogs), by his Emperor William (Ingleside Maximilian—Gerda II.).

*Nellie.* Dr. Caldwell's (Philadelphia, Pa.) collie bitch Nellie, Aug. 1, five (three dogs), by his champion Wellesbourne Charlie.

*Dorcas.* Chestnut Hill Kennels' (Chestnut Hill, Pa.) collie bitch Dorcas, June 14, nine (five dogs), by their champion Christopher.

*Modest.* Chestnut Hill Kennels' (Chestnut Hill, Pa.) collie bitch Modest, July —, nine (five dogs), by their champion Christopher.

### SALES.

☞ **Prepared Blanks sent free on application.**

*Toby.* Brindle and white bulldog, by Eberhart Pug Kennels, Cincinnati, O., to F. Hassurack, same place.

*Pearl of Pekin II.* White and blue greyhound bitch, whelped May 7, 1894, by Boomerang out of Pearl of Pekin, by St. Patrick Kennels, Denver, Col., to P. Fisher, Rawlins, Wyo.

*Boomerang—Pearl of Pekin whelps.* Greyhounds, whelped May 7, 1894, by St. Patrick Kennels, Denver, Col., a white and black dog to J. G. Massey, Rawlins, Wyo.; a white and brindle dog and bitch to E. A. von Winkler, Sedalia, Col.; a white and black dog to H. Allen, Denver, Col.; a white and black bitch to A. E. Getling, Texas, and a white and brindle bitch to P. J. Donahue, Cripple Creek, Col.

*Dash Noble.* Black and tan Gordon setter dog, whelped June 8, 1893, by Count Noble out of Lady Noble, by Miss S. A. Nickerson, Providence, R. I., to Mrs. F. A. Wilson, Bangor, Me.

*Starbeam.* White bull-terrier bitch, whelped April 14, 1894, by Gully the Great out of Starletta, by Dr. L. Breisacher, New York city, to Dr. J. Fintzmann, Philadelphia, Pa.

*Gully the Great—Starletta whelps.* White bull-terriers, whelped April 14, 1894, by Dr. L. Breisacher, New York city, a dog and bitch to Dr. A. E. Taylor, Alden, Ia.; a dog to Dr. L. Pearson, Philadelphia, Pa., and a bitch to Mr. Chamberlin, Danville, Pa.

*Clyde—Wake whelp.* White, black and tan beagle dog, whelped April 30, 1894, by A. D. Fiske, Worcester, Mass., to H. E. Partridge, same place.

## ANSWERS TO CORRESPONDENTS.

W. L. S., Boston, Mass.—Will you kindly prescribe for my bull-terrier dog, fifteen months old. He has acted very mopish and languid for a long while, has no life and is sometimes troubled with vomiting; he is fed once a day—at evening. His breath is bad and his nose turns very red. About two months ago he and another dog were bitten on the lips by some poisonous insect, as I suppose, and both their lips swelled hard; the other dog recovered and is all right and chipper. The bull-terrier after the swelling went down had the glands of his throat swollen to an enormous size, but finally that went away. Since this bite he seems worse than ever and he seems o have rheumatic pains which stiffen him up. Ans. Give the following mixture:

| | |
|---|---|
| Pot. bicarb. | ʒ i. |
| Papoid | gr. xii. |
| Tr. gent. co. | ʒ i. |
| Aq. ad. | ʒ vi. |

Mist. Give one dessertspoonful three times a day.

DOCTOR, Dover, N. J.—1. Your query as to the best hunter is too ambiguous. If you will give us some idea of the game you wish to hunt we can better answer you. 2. This you can only do by dealing with responsible trainers, and before you purchase see the dog at work or have some one else, on whose judgment you can rely, do so for you.

W. T., Reading, Pa.—I have an Irish setter dog, 1½ years old, over distemper, that has a tape worm. How shall I rid him of it? Ans. Use any of the remedies advertised in our business columns, paying particular attention to the directions for administering them.

# Hunting and Coursing.

## FIXTURES.

### FIELD TRIALS.

Oct. 23.—New England Beagle Club, at Oxford, Mass. W. S. Clark, Linden, Mass., Sec'y. Nominations close Oct. 1.
Oct. 29.—National Beagle Club. Geo. Laick, Tarrytown, N.Y.. Sec'y.
Nov. 5.—Brunswick Fur Club. Bradford S. Turpin, Dorchester, Mass., Sec'y.
Nov. 7.—Northwestern Beagle Club. Louis Steffen, Milwaukee, Wis., Sec'y.

### COURSING

Oct. 1.—American Coursing Club's meeting at Huron, S. D. L. Zutaverne, secretary. E. H. Mulcaster, judge.
Oct. 8.—North Dakota Coursing Club, at Oakes, N. D. A. P. Slocum, secretary. E. H. Mulcaster, judge.
Oct. 16.—Kenmore Club's annual meeting at Goodland, Kan. C. F. Weber, secretary. E. H. Mulcaster, judge. R. Taylor, slipper.
Oct. 23.—Western Kansas Coursing Club's meeting at Leoti, Kan. W. O. Allphin, secretary. E. H. Mulcaster, judge. R. Taylor, slipper.
Oct. 30.—Cheyenne Coursing Club, at Great Bend, Kan. Ira D. Brougher, Sec'y.
Nov. 6.—Altcar Coursing Club's autumn meeting at Holyoke, Col. S. W. Vidler, secretary. E. H. Mulcaster, judge. R. Taylor, slipper.
Nov. 14.—California State meeting at Merced, Cal. J. R. Dickson, secretary.

### New England Beagle Club Trials.

*Editor Forest and Stream:*

At the meeting of the field trial committee of the N. E. B. C. held in Worcester, May 25, it was voted that the selection of judges for the field trials be left with the club members, and the secretary was instructed to send a list of eligible judges to each member entitled to vote, two judges to be selected. The two gentlemen selected to judge this year's trials are Mr. Charles Quynn, of Frederick, Md., and Mr. F. H. Biddell of Newport, Vt. The first-named gentleman needs no introduction to a large majority of the beagle men, as he attended the trials at Nanuet last year, and made a very favorable impression on all present. It is almost needless to state that there are very few men in this country who understand what a field beagle should be better than Mr. Quynn.

Mr. Biddell, with a few exceptions, is a stranger to us all. He comes highly recommended as an honorable sportsman, and has had considerable experience with beagles. The trials will be held on the same grounds as last year, Oxford, Mass, and begin Tuesday, Oct. 23. The presents prospects are that rabbits will be more plentiful than last year. Hotel accomodations are good and charges very reasonable.

The following classes will be run: Class A, All-Age class, for dogs and bitches 15in. and over 13in., that have not won first in the All-Age class at any recognized field trial. Class B, All-Age class, for dogs and bitches 13in. and under, same conditions as Class A. Class C, Derby, for dogs and bitches 15in. and under, whelped on or after Jan. 1, 1893. This class will be divided by size should a sufficient number of entries be obtained. Class D, champion class for dogs and bitches 15in. and over 13in., having won first in the All-Age class at any recognized field trial. Class E, champion class for dogs and bitches 13in. and under, same conditions as Class D. Class F, for bassett hounds and dachshunds, all ages.

Nominations close Oct. 1 in all classes except champion class, which close just before starting the class. Entry fee in all classes, except champion class, is $3 to nominate and $5 additional to start, the nomination fee to be paid at time of entry and the balance before the dogs are started. Entry fee in the champion class is $10, which must be paid before class is started. Prize money in all classes, except champion class, will be 40% of entire entry fee to first, 30% to second and 20% to third. In the champion class 80% of the entire entry fee goes to the winner and also the title of field trial Champion.

Other classes, such as Brace Stakes and Pack Stakes, will be arranged at the trials. From the present outlook the N. E. B. C. trials of 1894 will be the largest and most successful trials ever held in America, and the competition will no doubt be keener than ever before in the history of the beagle. Entry blanks and running rules are all ready and will be sent to all known beagle men, but should any one be overlooked, the same will be forwarded at once on application. Any information in regard to reaching the grounds, or in fact anything connected with the trials will be cheerfully given by the secretary.

W. S. CLARK, Sec'y.

LINDEN, Mass.

### Show Beagles as Practical Field Dogs.

*Editor Forest and Stream:*

I notice a number of replies in your paper, to the articles of both Mr. Ellis and myself. Now, if my dear friends think that I do not know what a good dog is I wish they would look to my record and see if I have not handled as many beagles and other dogs as most men in this State, and further, to see if I have not met with as good success with breaking dogs as the common run of kennel men. Of course I do not pretend to be a professional, but I can call together as nice a set of dogs as the next one.

When our friend said in last week's issue that neither Messrs. Ellis or Robinson ever saw a good beagle, he made a big mistake in regards to myself, for I can say I have seen a good beagle, but when I wrote the letter in FOREST AND STREAM I merely said, or meant to say, that you can take the majority of beagles and they do not amount to much and I can bring a great many proofs to that effect.

D. W. Phillips and I owned at one time the Fairview Kennel, in which, I can safely say, there were as many good and well bred dogs raised and trained as in any other kennel in this State.

I do not blame my sportsmen friends for protecting their favorite dog, but I think after they have handled a great many beagles they will come to the conclusion that what I have said will have a little truth in it.

If my friends that own beagles have got good dogs, I say that it has been more like a lottery in getting them. I know of a great many men who have bought beagles, at the same time where one would prove good the others would fail.

I owned at one time a thoroughbred beagle bitch and blue blooded at that, and raised a litter of pups from her by a registered dog and sold every one of the pups for a good price, and out of eight pups there was but one that amounted to much, so I think I have pretty good reason for not taking a beagle when I have the choice.

I have now a pup which I think will make a good dog which came from good stock, owned by Dr. M. L. Chamber; of course the pup is a beagle, but a different kind from what most men would call a beagle; it is not one of the bow-legged kind, but it is a beagle just the same.

Perhaps I never mentioned in the letter that I wrote in the FOREST AND STREAM in reply to Mr. Ellis's letter on beagles, that I meant the short bow-legged and long-bodied beagle. If I did not I wish to correct myself.

I can plainly see that Mr. Ellis and myself have raised the hair of a few men through our views, and at the same time angered them, which was not my intention at all, but I am glad to see men come to the front and protect their favorite stock.

If any of my friends come to Long Island this fall with their dogs, I wish they would call and try my dog and see if they will not say just the same as I have.

When any man says he only goes out rabbit hunting just to see and hear the dogs run, I think that is a pretty bitter pill to swallow; I never saw a man in my life that went hunting rabbits with a dog but that he had a gun with him.

Now, if he goes to hear the dogs what does he take a gun for? and if he doesn't get any game, what does he go to the expense of buying some for? and then if he can not buy game he goes home with a long face and so disappointed that he won't go again for a long time.

If a dog runs more rabbits than another and holds to the track and does not lose it, and the man gets more rabbits, does it not prove that the dog has a good nose and knows how to handle it? Hoping to hear more from my friends.

F. B. ROBINSON.

• • • •

*Editor Forest and Stream:*

The field trial judge who asks "What's the use?" has evidently had considerable experience in this world, and knows that it is a waste of time to argue with men who have not had enough experience in beagle matters to cite more than two instances. However, I am of a more hopeful turn of mind, and, though they remind me of the man from "Muzouri," who said, "Stranger, you kaint prove nothin' to me; yers got to show me," I hope, by appealing to their common sense, to convince them that beagle hounds are first-class rabbit dogs.

Their proof that beagle hounds are not good rabbit dogs by saying that they once had a cross-bred dog that was a better rabbit dog than a certain beagle hound they or some one else owned, is about as rich as a statement I once heard, that a certain man hadn't a tooth in his head and yet he could beat a bass drum as well as any man. Do not these beagle critics know that a large class of sportsmen and hunters in this country are using beagle hounds for hunting rabbits, coons, foxes and deer in preference to any other dogs? Is not the knowledge of such a fact enough to convince them that beagle hounds are good hunters and useful dogs? If it does not, why it would be a waste of time to take them afield with the best beagle hounds in the country, for they would simply think they were good dogs in spite of their being beagles. I don't remember of seeing but one Chesapeake Bay dog asked to do work, and you might as well have asked a pug dog to retrieve from the water; he was simply worthless, yet I have no doubt whatever that they, as a breed, are one of the best, if not the best, retrievers we have.

I am not arguing with pot-hunters or meat-hunters, but with sportsmen who want to be informed. If you are after numbers, get a ferret and a net, as has already been suggested by some correspondent, and don't fool with a dog at all. If you want keen, high-grade sport, get some beagles. The fact that you have already owned one or two or three that were timid, gun-shy or otherwise useless does not cut any figure. If you have been buying bird dogs or foxhounds, you have no doubt had just as many failures. I have. I now own a beautiful beagle bitch that is a good rabbit hunter, yet she will quit the woods, go home and crawl under the barn at the sight of a gun. She has the ambition and ability of a good rabbit dog, but has been frightened out of being useful. A dog that has no nerves and cannot be frightened, is not finely enough constituted to ever amount to much. A timid, nervous dog, once field and gun-broken, is a "hummer." And I like to hunt behind such a dog, be it a hound or bird dog. Mr. Editor, I now feel like your private correspondent—"what's the use?"—and have a mind to tear this letter up, but remember I started out in a hopeful frame of mind, and will let it go.

### Beagle Meets.

*Editor Forest and Stream:*

Noting in your last issue the suggestion by "Comedy" to beagle owners to have a meet not less than once a week and run their beagles for the good of the breed, I feel that I want to say a word. "Comedy," you have hit the nail on the head, but you have not hit it quite hard enough.

If all owners of beagles knew of the benefit that would accrue to the breed from this, I think they would one and all enter into it, only they should run three times a week instead of once. The good would come not only from giving the little hound a better standing among sporting people, but the hounds' health would be improved.

You can ruin the health of the best hound that ever lived by too much confinement; exercise they need and must have to be good dogs. If they do not have proper exercise their bowels become inactive and what should pass from them flows back into the system and affects the liver and kidneys, and your hound will be afflicted with weak back, weak legs, and even the voice will be affected.

Then again, when they take food into the stomach, especially of a greasy nature, they will vomit, and anything like milk will curdle in their stomachs and cause vomiting. The flesh grows very soft, and when you take them out to run they soon heat and tire, this also often causing large tumors to grow on the neck. Their feet also become tender, and if they heat them and cause them to be sore, will probably always suffer from this.

Now I run my little beagle about four hours a day, five days in a week, during the coolest part of the day, and her flesh is solid, feet are tough, nails well worn down, and her health is so good that when she comes in from a run she will jump a cane held hip high until you tire of it.

Give the beagle a chance and you will find he is all there, and there will be no complaints such as brothers Ellis and Robinson made. I was all foxhound once, I did not know any better; they are good, but the beagle is better, and I love them. Some day I will write my experience with different breeds, and some of my hunts.

## HUNTING AND COURSING NOTES.

Mr. Ira D. Brougher, the secretary, writes that they have organized the Cheyenne Coursing Club at Great Bend, Kan., and will hold their annual meeting on the Cheyenne bottoms, near Great Bend, Oct. 30, with Mr. E H. Mulcaster as judge and Wm. Airhart as slipper. There will be a liberal stake, making all entries $5, and all puppies whelped after Jan. 1, 1893, are eligible to the Puppy Stake.

• • • •

"Nominator" writes from Mitchell, S. D.: "I am in receipt of a letter from J. Harvey Rew, of Artesian, stating that Delsarte gave birth to seven fine, healthy-looking greyhound puppies by Sir Hugo. If breeding tells these ought to make 'good ones.' He no doubt will have a demand for this strain. Large purses in the Derbys of '95 will bring to the front a goodly number of young dogs and all hard to knock out. I am glad to see that this subject is already being agitated by greyhound breeders and coursers."

• • • •

Mr. Mitchell Harrison's two greyhounds, Boundaway and Bird, which have been taking it easy all summer at the Chestnut Hill Kennels, have been shipped to Colorado Springs, and under Mr. Vidler's care will be trained for the Altcar meeting.

There seems to be quite a ruffling of the newspaper mind in Great Britain over the statement that the centerboard of the Vigilant was not lost the other day, as at first supposed, but "jammed in the trunk" of the famous yacht. The *Times* especially wants an "explanation of the affair." Certainly the officers of the Vigilant should have been more careful in packing the trunk aforesaid. Everybody who has ever had one to pack for any purpose knows the aggravating habit that things have of slipping in "unbeknownst," and having to be searched for in great worriment of mind. But to misplace any thing as valuable as a centerboard in this way really is unpardonable! No wonder the *Times* which is nothing if not orderly in all matters of red tape, is disgusted.—*Scranton Truth.*

## FIXTURES.

SEPTEMBER.

1. Seacliff, Ladies' Day, L. I. S'd.
1. Beverly, Sweeps, Mon. Beach.
1. Larchmont, Fall, L. I. Sound.
1. Squantum, Club Run, Squantum, Mass.
1. Hull Cor., Open, Hull.
1. New Bedford, Club Sail, Buzzard's Bay.
1. Rochester, Cruising Race to Oswego.
3. So. Boston, Open, City Point.
3. New York Y. R. A., Ann., N.Y.
3. Fall River, Club.
3. Cleveland, Ann., Lake Erie.
3. Lynn, Open, Nahant.
3. Plymouth, Club, Plym. Harbor
3. Plymouth, Club, Plymouth, Mass.
3. Indian Harbor, 21ft., L.I.Sound
3. Brooklyn, fall race, Gravesend Bay.
6. Rochester, Club Sail, Charlotte. Lake Ontario.
8. Sea Cliff, Ladies' Day.
8. New York Bay, Club, N.Y. Bay
8. Atlantic City Cor., Club Cup, Atlantic City.
8. San Francisco Cor., Cruise to Pacific Y. C. Regatta.
8. Philadelphia, Delaware River.
8. Cor. Phila., Wilkinson Cup, Delaware River.
8. Columbia, Club, Chicago, Lake Michigan.
10. Schoodic, Sail-off for Cup.
12. Hempstead Bay, Club, Hempstead Bay.
13. Miramichi, Race, Newcastle.
13. Rochester, Ladies' Day and Closing Review, Charlotte, Lake Ontario.
15. Winthrop, Club, Boston Harbor
15. Larchmont, Larchmont Cup, Long Island Sound.
15. Beverly, Club Cham., Monument Beach.
15. Phila., Pen., Mos. Boats, Delaware River.
15 16. San Francisco Cor., Cruise, Vallejo.
20. Plymouth, Club, Plymouth, Mass.

22. Squantum, Cham, Squantum, Mass.
22. American, Seaver Cup, Newburyport.
22. Atlantic City Cor., Trophy Race, Atlantic City.
22. San Francisco Cor., Sail to Sausalito.
22. New York Bay, Club, N.Y. Bay
22. Knickerbocker, Ladies' Day, Long Island Sound.
22. Cor. Phila., Jeanes Prize, Delaware River.
22. Phila., Final Race, Classes 1, 2 and 3, Delaware River.
23. San Francisco Cor., Sail Outside.
29. Miramichi, Race, Chatham to Newcastle.
29-30. San Francisco Cor., Cruise to McNear's.

OCTOBER.

6. Cor. Phila., Sweeps, Del. River
13. San Francisco Cor., Final Sail.
20. Cor. Phila., Club, Del. River.

### Vigilant.

As to the record which Vigilant has so far made abroad the writer must confess that it is not as good as even his conservative estimate of a majority of wins, made when the trip was decided upon and her chances were fully discussed. Taking out, however, the six Clyde races in which the Vigilant was admittedly in poor trim, the record is not so far from an even one as it might be. Vigilant has won five out eleven races in Ireland and the south of England, and in all except one of these races has done about as was expected. The exception was the race of Aug. 9, when she was beaten by Britannia in a working topsail breeze. The ragged condition of her keel from grounding on the Isle of Wight, and the poor fit of her head sails will in part account for the defeat.

But in spite of the record already made, the writer will not give up his position that in the open-ocean racing, for which she was designed, Vigilant is the superior boat, nor will he be convinced to the contrary until Britannia shall have beaten her under such conditions.

Britannia is a fast boat, a much faster one than Americans believed, and in light airs she is undoubtedly faster than Vigilant. She has the advantage, too, of working quickly in stays, an advantage in narrow waters which an American designer would not overlook in designing a boat to race over the British racing circuit. She is also admirably handled by a trained crew, which work together as one man, and in a way which Vigilant's crew, good as the men are, could not be expected to equal in the comparatively short time they have been together.

The result has been a series of most interesting and hotly contested races, when the least slip or mishandling on one side meant victory for the other. Defeat under such circumstances is no discredit, and Americans have more reason to feel proud of Vigilant and her archievements than as if she had met a boat vastly her inferior and scored a series of uninterrupted victories.—*Boston Globe.*

Since our last issue the Vigilant has sailed in only one match, in a fresh breeze and some sea and was outsailed by the Satanita and Britannia.

We gave some figures last week relating to the average speed of the matches sailed in British waters, and a correspondent writes to ask whether the time of the Scotch races would not be affected in some degree by the strong currents that generally prevail in Scotch lochs. We do not think that it would, as these matches were sailed over short courses, requiring to be sailed over twice in order to make the distance, and the tide under these circumstances would probably not help a yacht more on one leg than it would hold her back on another. The rise and fall of tide in the Clyde where these matches were sailed is only 8½ft. neap and 10ft. spring, which does not indicate an unusually strong current. The same correspondent suggests that a comparison of the time of the Volunteer and Vigilant only be taken in the cup matches, as these two yachts undoubtedly outclassed their predecessors.

Our object in giving the comparative averages between the cup races and the races sailed in British waters by the Vigilant was not so much to draw a comparison of speed as to dispose of the misleading statements which have appeared to the effect that the races won by the Britannia were mere drifting matches, and we took the first nine matches sailed in British waters because they corresponded in number with the cup races sailed in these waters, but a further comparison shows that if the five matches sailed by the Volunteer and Vigilant only are taken, the average speed is 7.94 knots, while, if the fastest averages of the nine matches sailed in British waters to which we referred are taken, the average is 8.98 knots. We think these points well worthy of consideration, and thank our correspondent for calling our attention to them.

It is stated that Britannia is sailing much faster this season than last, and this is probably true, as a racing yacht usually sails faster her second year than during her first, and it is quite certain that the Vigilant is sailing much faster than she did last year, her best averages in the cup matches being 8.80 and 8.82 knots, when there was a good breeze and everything favorable for fast sailing. She has, however, greatly exceeded this speed on several occasions in British waters this year, among which may be mentioned her average record of 10.33 knots at Bangor, 9.33 knots at Cork and 11.70 at Cowes.

The recent episode of the centerboard is certainly mortifying, and calls for further explanation. Mr. Gould has proved himself a true sportsman. He purchased the Vigilant, the fastest yacht in the country, and engaged the best sailing master, officers and crew obtainable; he retained the designer and builder of the yacht together with her sailmaker, to accompany her abroad, to put her in the best shape for racing on the other side; indeed, no racing yacht has ever been equipped with so much care and liberality as the Vigilant has been this season. Mr. Gould has paid for the best, and if the best has not been good enough, surely it is no fault of his.

No one would think of building a yacht like the Vigilant or Britannia except for racing purposes, and neither of these yachts embody any principle of naval architecture which is of any use or can be applied to the man-of-war, merchantman, pilot boat or fisherman.

It is fortunate that we are represented abroad by a yachtsmen who has won respect under the most trying circumstances, for yachting is a sport where the only vital principle involved is fair play and gentlemanly conduct.—*Marine Journal.*

The Goulds continue to furnish the chroniclers of small beer with material for a particularly cheap and nasty article of froth. When the Goulds first went over on the other side, the gifted persons who do "society" and "gossip" for our great dailies, metropolitan and otherwise, confidently predicted that George Gould's object was to ingratiate himself with the Prince of Wales by having the Vigilant beaten by the Britannia on all occasions. It occurred to these remarkable minds that the Prince could be captured by that kind of flunkeyism and that George Gould was just the sort of flunkey to do the trick. The aforesaid writers, therefore, fell over each other in their haste to picture Mr. Gould as a miserable toady, anxious to barter his manhood and his honor for a royal smile. He was described in the contemptible manner of a lickspittle who had reduced servility to a fine art and was about to make the most of his acquirements.

Of course this pretty and commendable theory was discredited by the subsequent performances of the Vigilant and the demonstration on the part of Mr. Gould to the effect that his yacht could sail when it had any wind to sail with. Two or three notable victories achieved by the Yankee racer arrested for the moment the flow of this nauseous gush. The check was only temporary, however (for the scandal monger never really dies), and now, owing to the accident that befell the Vigilant's centerboard a few days ago, we have the cackle in full force again. Now we are told that that dinner with the Prince of Wales and the Emperor of Germany did the business for Gould and that, whatever honorable and sportsmanlike impulses he may have yielded to on previous occasions, the effect of such august and glittering festivities was fatal. Gould finally concluded that he could not requite the Prince's condescension by beating his yacht any more and so, as the day promised a stiff breeze and those conditions under which the Vigilant is invincible, George deliberately jammed his centerboard and withdrew from the contest.

If our society mud-flingers, however, were really artistic, they would not overlook the Battenberg incident as a means of corroborating their agreeable and high-minded theories concerning the Gould family. It appears that one of the younger princes of that royal but poverty-stricken family has been casting a frugal and far-seeing eye upon Miss Anna Gould, now with her brother George's party. Why not complete the picture of George Gould's degradation by adding the statement that he has an additional motive in playing toady to the Prince of Wales—the desire to palm off his sister on this royal pauper. It is a pity to ignore such an opportunity as that.

Meanwhile, we fancy that the Goulds are paying about as much attention to the society reporters as they have hitherto paid to society itself. It is not likely that, having failed to bow down to Ward McAllister, they have suddenly become solicitous as to the opinions of his smaller satellites. It is a tremendous if not a pretty how de-doo, all the same—a shining exhibition of the possibilities of American journalism.—*Washington Post.*

### The Improvement of Measurement Rules.

*Editor Forest and Stream:*

I have read with much interest your excellent remarks as quoted in the *Yachtsman* of Aug. 2, and am delighted to see that you agree with the proposal I made in the *Field* some months since, that there should be a limit of measurement (either American corrected length or Y. R. A. rating, it matters not which) to rule both the challenger for and the defender of the America Cup. It is simply barbarity to continue to race under a length of hull classification and no maximum limit of measurement. The length of hull should not be mentioned at all. The challenge should be a single sentence: I hereby challenge for the America Cup, and will race for it with a yacht not exceeding (such and such) corrected length, by American rule, which is not to be exceeded by the defender.

But I write more especially to ask you to ventilate the following proposal which I have made in some of the English yachting papers, viz.: If in any racing yacht the maximum depth of hull from deck to floors be less than half extreme beam, the difference shall be added to the length on waterline before computing either American corrected length or Y. R. A. rating.

I have worked diligently at the question of improving the existing rules of rating for a long time, as may be gathered from Chapter VII. in the Badminton series on yachting, but it has only occurred to me recently that the rules might be improved by the above proposed proviso. It is very simple and is easily applied. It would not affect the large yachts to any appreciable extent, and it would adversely handicap the extreme raft-like structures which are being developed in the small classes and which promise to sweep the sea of any boats of more moderate type.

I hope you will give me and your readers the benefit of a critical examination of the proposal. You will observe that boats having a depth equal to or exceeding their half beam would not be affected by it, and those affected would not be wrecked. They would simply have to clip some sail to keep within their classification and would still win in strong breezes, which appears to be the weather in which they are most successful.

THALASSA.

The features which are generally recognized as undesirable in the latest racing yachts are, as we understand the case, two in number; first, a lack of displacement on a given length; and second, even in cases where the displacement is ample in amount, the employment of extreme dimensions of beam and draft, giving a form that is essentially weak in construction and of a minimum of internal capacity.

If this statement of the case is a correct one, we fear that our correspondent's proposal, though in the right direction, would by no means go far enough to effect a complete cure; besides which it is open to a serious objection as to its detail.

If there is a gain of speed by adhering to the fin type, the proposed penalty on beam and premium on depth might be made imperative by substituting for the simple fin of Dilemma and Wenonah, fastened outside the keel of a canoe-shaped hull, a construction similar to that of Jubilee, the fin being made of two plates instead of one, with a space between; the steel angles being bent down to give a fictitious depth to the hull where measured, though the actual midship section would show no more head room than in Wenonah and Dacotah. Such a construction would be more difficult and expensive in a wooden hull, but not in a steel one, and we believe that it would be quite possible to evade the proposed measurement to a serious extent, and yet to produce the same type of machine.

Apart from this, there is a serious objection to the employment of any measure that is not derived solely from the outside of the hull, the actual skin of the vessel, regardless of the construction. The recognized commercial standards of measurement, such as the various tonnage dimensions and measurements of different governments, and Lloyds measurements, are entirely out of the question in yacht racing formulas, for the two reasons that such measurements are at best inaccurate and indeterminate, the points to which the measurements are taken being often located in the loosest manner; and in any case, the best of these measurements depending solely on the construction of the vessel, whether steel, wood or composite.

To be really effective in a measurement formula for yacht racing, all dimensions must be taken from the outside of the skin, regardless of the construction. It is quite true that in existing boats a measurement of the depth of hold, or some similar dimension, might answer, but before the next keel would be laid, every designer would have settled on some trick of construction that would completely evade the measurement without sacrificing the freak features of the design.

However easy it may be to indicate the general features that are desirable in a rule, it is a very difficult matter to formulate a definite proposition. Even if easily obtainable, which it is not, the displacement would not fit the case entirely; its use as a divisor in something akin to the present length and sail area formulas would lead to the production of yachts of comparatively heavy displacement, thus checking one evil; but if the inducement offered, this displacement might be disposed in a more exaggerated form than that of Vigilant, giving a shallow hull with a deep keel.

On the other hand, by the employment of beam and depth or draft, a compact and shipshape form of section could be obtained; but the final result might be the canoe body minus the deep fin.

The problem of obtaining a fairly large displacement in a compact form of section which shall be structually strong, and shall have its space in a shape available for headroom as well as breadth, has not yet been solved.

### Pilgrim.

The ex-fin-keel Pilgrim was launched at McIntyre & Kirk's yard on Aug. 13 after being converted into a steam yacht. The Boston *Globe* describes her as follows: "She retains most of her former hull, and the long, overhanging bow gives her a peculiar appearance. Her immense single stick and bowsprit are gone. She has been entirely decked over, and when she makes her trial trip few more handsome craft will float in these waters. She is 126ft. over all, 85ft. waterline, 23ft. beam and but 5ft. draft, in place of her great fin-keel. Aft of the pilot house is a large and commodious saloon, which can also be used as a dining room. It is finished in natural wood, carved and polished, and has an elegant sideboard with leaded glass doors, with a large French plate-glass mirror in the center. From this saloon a door leads into the butler's pantry, which is connected with the kitchen by a dumb-waiter and special stairway. Aft of the engine room are three state rooms for the owner's guests. These rooms are supplied with lavatories and other conveniences. The finish is white and gold with richly upholstered mats. Forward of the engine room on the lower deck is the kitchen, which is a model affair, being supplied with a set range, ice chest, etc. Leading off the kitchen is the officers' cabin, which has also an entrance from the pilot house. Next comes the mess room, which has two spare berths, the steward's cabin and the forecastle, with berths for the crew, the entrance to the forecastle being from a hatchway, near which is a steam winch. The deck aft of the main saloon is fitted with seats, and the whole deck is inclosed with netting. She is a twin-screw vessel and has 200-horse power compound engines and two water-tube boilers. She is expected to develop a speed of 14 knots. She also has two light masts, so that if necessary she can reach harbor under canvas. The outside of the steamer is painted white, with a broad gold stripe, and the name Pilgrim appears in gold letters on either side of the pilot house."

### The Blackballing of Mr. Clarke.

A correspondent of the *Boston Herald* sends the following story of the alleged reasons for the recent blackballing of Mr. A. D. Clarke, owner of Satanita, by the Royal Yacht Squadron; after being proposed by the Prince of Wales:

"There is a story behind the blackballing of the owner of the Satanita, Mr. A. D. Clarke, last week by the members of the Royal Yacht Club Squadron, after being proposed by the Prince of Wales.

"The story dates from the collision of the Valkyrie and the Satanita on the Clyde, in which the former was sunk. Lord and Lady Lennox were on board the Valkyrie at the time of the collision, and Lady Lennox was much prostrated by the accident, she barely getting off with her life.

"Lord Lennox and her Ladyship are prominent in British society and have many friends. Lady Lennox is a yachtswoman and enjoyed the honor of being the only lady on board the Valkyrie in her first intended race against the Vigilant in British waters. It was the intention of Lord Lennox and his wife to participate in all the races along the different British coasts in the Valkyrie, and both were fitted out in the way of clothing and valuables for a month's cruise. Lady Len-

nox brought with her valuables of great worth, many being priceless on account of being family relics.

"When the Valkyrie went down, Lord and Lady Lennox lost all the valuables they had with them, and they have not yet been recompensed for them. Mr. Clarke, owner of the Satanita, offered to pay full value for all they lost, but he would do it only on the terms 'without prejudice' That is, he was quite willing to recoup his Lordship in full for all loss, but he insisted that such settlement should not be in any way taken as 'buying his peace' or being used as evidence against him in case of suit either by Lord Dunraven or any one else. Lord Lennox refused to accept this proposition, and the result is that bad blood has been engendered in first-society circles, Lord and Lady Lennox being on the one side, with the owner of Satanita on the other.

"Lord Dunraven, in part, agreed with Mr. Clarke, but he thought the 'without prejudice' clause hardly proper, as in case of litigation for the loss of the Valkyrie it might be prejudicial to the Valkyrie's interest. Lord Dunraven was present at the club meeting when Mr. Clarke's name was acted on, but he declined positively to take any part whatever, leaving the members free, so far as he was concerned, to act for themselves.

"It was generally supposed that Mr. Clarke would be admitted to membership, and no one was more surprised or disappointed at the action of the club members than the Prince of Wales. He took it somewhat in the light of an insult, and when he found out how it was brought about, he considered that differences between personal acquaintances were hardly sufficient for a club to take part in and reject a gentleman's application for membership.

"It now turns out that Lord and Lady Lennox were instrumental in accomplishing Mr. Clarke's defeat. Following the rejection by them of Mr. Clarke's offer, they worked to defeat him for membership in the club. Lady Lennox, it is authoritatively stated, made personal requests of all the leading members and put her side of the matter strongly and positively, stating that her dearest and most choice valuables had been lost and that she had not been reimbursed for them, Mr. Clarke making his offer to recompense her conditional that it should be 'without prejudice,' and that he would offer no redress for being the cause of sinking the Valkyrie and endangering her life.

"She talked with all the leading yachtsmen, it is said, and the prominent members of the Royal Yacht Squadron, and so convincing was her argument that she won over to her side enough of the leading society swells of the club to accomplish Mr. Clarke's defeat, which came in the way of a great surprise to many members who were favorable to the owner of the Satanita.

"The blackballing of Mr. Clarke is looked upon as a victory for Lady Lennox over the Prince of Wales, and is much discussed in clubdom and society circles. On all sides, however, there is great sympathy with the owner of the Satanita, who is a public-spirited and patriotic yachtsman.

"Lord Dunraven, at the time Mr. Clarke made his offer, did not himself know how the underwriters would act, consequently he was unwilling to stand by and impliedly give consent to a settlement the evidence of which he could not use himself should a suit at law be necessary with the owner of the Satanita. His manly conduct in refusing to take any part against Mr. Clarke is most favorably commented upon."

## Vigilant's Centerboard.

THE damage to Vigilant, though less serious than the total loss of her board would have proved, was increased by the fact that no one connected with the yacht had any idea of the construction and hanging of the heavy centerboard. On Monday a diver was sent down and he reported that the iron attachment of the chain to the centerboard was corroded and the board firmly jammed in the trunk. Next day he descended again and the board was forced down out of the trunk until it was partly clear. The lowering of the board allowed something to drop in the mud and on examination by the diver it was found to be a piece of a bronze hook, about 3in. through. The yacht was docked and the lead keel cut away about the fore end of the trunk until it was discovered that the board was hung on a heavy bronze hook cast on to a flat soleplate, which plate was rivetted to the bottom of the keel plate of the yacht. One piece was recovered from the mud and the other piece was taken off from the keel plate, the two being used as a pattern to cast a new hook. The centerboard was removed and straightened and a new chain rigged. By Saturday night the new hook had been riveted in place and the lead recast in the keel.

Up to Monday noon the centerboard had not been shipped, but it was expected that the yacht would be able to get to Dartmouth in time for the race of Friday, and to take part in the three or four final races of the season. The latest news is that the centerboard has been dropped in the mud in the effort to ship it, making it uncertain when the yacht will be ready.

On Aug. 21 Britannia and Satanita raced in the Royal Albert Y. C., off Southsea, Britannia winning; on Aug. 22 Britannia again won and on Aug. 23, in the race from Cowes to Weymouth, Britannia was again the winner. On Aug. 24 the regatta of the Royal Dorset Y. C. was sailed off Weymouth, the principal prize being the cup offered by Lord Wolverton for the Vigilant—Britannia race. Britannia sailed alone, as Satanita did not start.

After the race at Weymouth, on Aug. 25, in which Satanita won in a strong breeze, Britannia anchored at Portland Roads. Sunday was stormy, with rain and a high wind, but Mate Simons, with the steward, Roper, and the engineer of the steam yacht Tabura started for shore. They tried to return to the yacht after rowing some distance, but was unable to do so and the boat was hidden in the rain. Later in the day it was found capsized with no trace of the men.

The Prince of Wales is at Hamburg, from which place he cabled to cancel all entries for the remaining races, and to lay the yacht up unless Mr. Gould wished to sail for the Cape May cup. Mr. George Gould has gone to Paris, Mr. Howard Gould being with the yacht. At last advises it was uncertain when Vigilant would be ready, as it was possible that the centerboard could not be shipped without cutting the deck. If a race should be sailed for the Cape May cup it will come off next week.

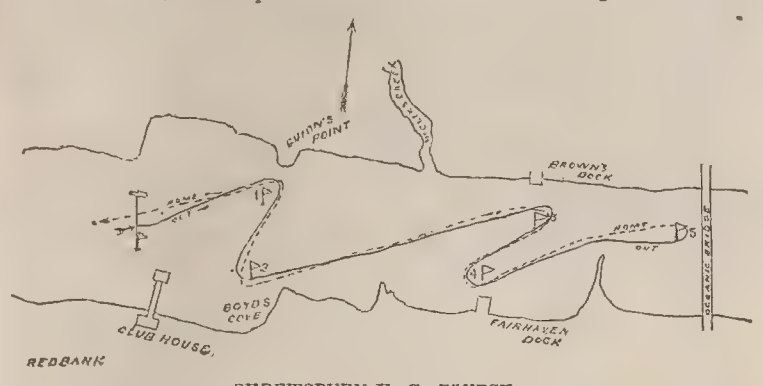
## Shrewsbury Y. C. Regatta.

RED BANK—SHREWSBURY RIVER.

*Saturday, Aug. 18.*

WHAT was called the second annual midsummer regatta of the Shrewsbury Y. C. was held at Red Bank on Aug. 18, and what might have been a serious accident, with loss of life, was avoided through the presence of mind of Clinton R. James and the owner of the Forsyth, Mr. Alexander F. Roe, who did all that possibly could be done after the accident occurred.

From what could be learned of the accident it seems that at flag stake No. 3, off Brown's Dock, in returning, Arrow, owned by John M. Sawyer, Jr., and sailed by Clinton R. James, had overhauled and passed Forsyth and Zulu, both cabin sloops. In going from flag 4 at Fair Haven, to flag 3, all had their booms well off on port side, the wind being about south. In coming up to No. 3 Arrow jibed over, and shortly after, a puff of wind striking her, the boom was jibed again. A little further, however, the final jibe was made, Arrow hauling on a wind on the port tack for the next mark and having all her sand bags up to windward.



Zulu and Forsyth, after being close together all the way over from No. 4, commenced to head up for the 3 mark. Zulu, having trimmed her sail flat aft, preparatory to rounding on a wind, made No. 3, but from what could be learned, Forsyth was sailing off the wind with her mainsail so trimmed, and in this position in rounding the mark between Arrow, which was on her course on the wind, Zulu's captain, seeing a collision was unavoidable, eased her mainsail off, Arrow striking Zulu's boom in the slings. Forsyth being to leeward of the Zulu and close up, as the Arrow was swung round Zulu ran her bowsprit into the port side of Arrow, ripping the traveller out and cutting the stern down about 6in., losing her bowsprit short off at the stem.

When Forsyth struck Arrow it lifted James, Sawyer and Davis overboard. Sawyer was picked up by the Forsyth, but James slid down the bobstay under the Forsyth and became entangled with a rope under the centerboard, believed to have been the mainsheet of Arrow. In trying to get loose from the line James worked it up around his neck, but being unable to get it over his head, reached into his pocket, took out his knife, and cut the rope. Being then clear he came to the surface and a life buoy was immediately thrown from the Forsyth, James getting into it at once; and a few minutes later was picked up by the steam yacht Abbett. The rope had torn off James's shirts and his whole left side was severely chafed, evidently burned by the rope while being towed along under the Forsyth. Sawyer and Davis were also hurt, but not severely, and were about the next day, though rather sore; James will probably be out in a day or two, feeling as well as ever.

The race otherwise was one of the most exciting ever held on the river. At the start reefs were turned in, the wind being from about south and rather puffy, but afterward it calmed down so that full sail could be carried.

The courses were the usual ones for this club, for classes A, C, D and G inclusive, from a red flag off club house to flag No. 1 at Guion's Point, across the river, passing to starboard; then back to No. 2 in Boyd's Cove, leaving on port; thence to No. 3 off Brown's Dock, leaving on starboard; thence to flag stake No. 4 off Fair Haven, leaving on port; thence to No. 5 at head of flats, leaving on port; thence to No. 4 on starboard, No. 3 on port, No. 2 to starboard, No. 1 to port, to finish; distance 10 miles. Classes E and F same start, to No. 1 and 2, thence to white and blue flag at McClee's Creek, leaving on port; thence to No. 2, then No. 1, then between judges' boat and red flag, thence home over following course, to No. 1, 2 and between judges' boat and red flag; 10 miles.

The preparatory signal was given at 2:05 P. M., the starting signal for classes A and B at 2:10, C and D 2:15 and E and F at 2:20. In some of the classes the results were very close, Kathay, the new Stewart & Binney boat (described in the FOREST AND STREAM of July 14), beating Augusta but two seconds. In Class D Mr. Fred Oates was present with Enigma, prepared to retrieve his lost laurels, having lost four races in succession the previous week. For some unexplained reason

SHREWSBURY Y. C. COURSE.

Enigma was beaten by Irma T. In Class E Mr. C. D. McGiehan had brought Frank down prepared to do or die. Frank while making the best elapsed time was beaten, however, by Alice C., an unknown boat built by Walling & Gorman a year ago.

The prizes for first and second in classes D, E and F were particularly valuable, being silver tea sets presented by Commodore Edward Kemp. The full times were:

CABIN SLOOPS.

|---|---|---|---|---|
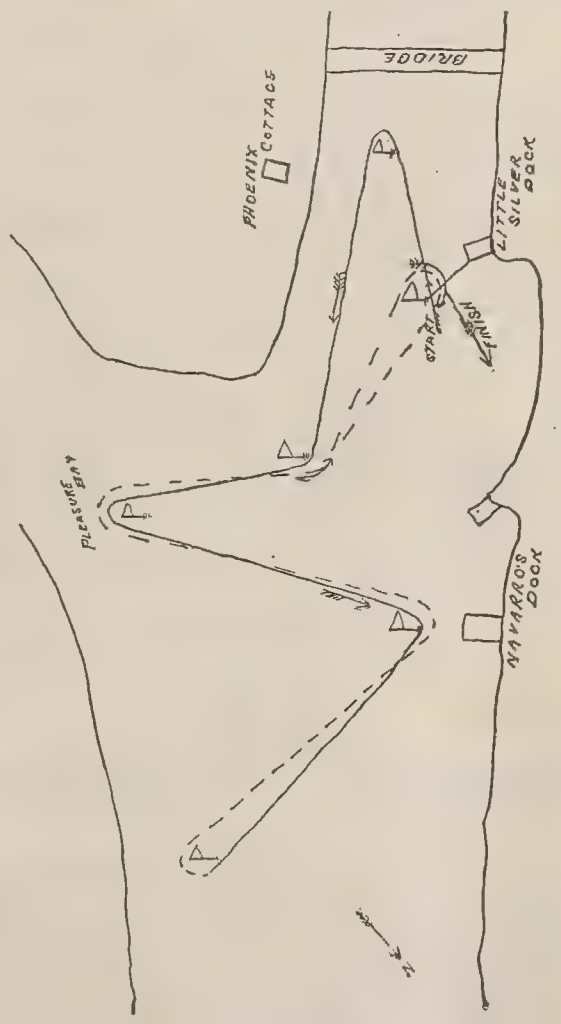
| Win or Lose, F. M. Randall | 2 12 58 | 4 38 03 | 2 25 05 | 1 50 23 |



It will be seen by the above, in Class A Edla wins from Zulu by 4m. 36s.; Zulu was protested, however, for the second prize for fouling Arrow and open sloop Augusta. In Class B Kathay beats Augusta 2s. In Class C Irma T. wins from Enigma by 3m., the latter taking second prize. In Class D Alice C. wins from Pauline by 1m. 59s., the latter taking second prize. In Class E Little Silver wins from Clytie by 15m. 8s. In Class G Win or Lose walk over.

The judges were George E. Gartland, N. J. Y. C.; H. Clay Miner, Jr. and George Williams, S. Y. C. The regatta committee comprised Clinton R. James, H. C. Miner, Jr. and Carl F. Wagner.

THIRD MIDSUMMER REGATTA—LITTLE SILVER.

*Saturday, Aug. 26.*

The third midsummer regatta of the Shrewsbury Y. C. was sailed last Saturday on the South Shrewsbury. This regatta was sailed away from the club house in deference to the wishes and at the re-

quest of many members who reside at Little Silver. It is probable that the club will continue to give regattas on the South Shrewsbury, but a worse place could not be selected to sail a race as the channel is very narrow, and unless one is thoroughly acquainted his boat is apt to go aground; and at best one may be dragging his centerboard along the mud all the time without knowing it.

The courses were as follows for Classes B, C and D: From a line between red flag and dock about southwest to stake No. 1, just north of bridge off Phœnix Cottage, leaving same on port hand, thence northeast to No. 2 at Northwest Passage, leaving same to starboard, thence southeast to No 3 in Pleasure Bay, leaving same on port hand, thence about northwest to No. 4 at Navarro's dock, leaving same on starboard; thence due east to No. 5 at turn of channel, leaving same on starboard; thence back to No. 4, leaving to port, to No 3, to starboard, to No. 2, to port, to No. 1, to starboard, thence across starting line, leaving red flag on starboard, sailing over course twice, finishing between red flag and dock, going to the north. For Classes E and F the course was the same as above except that after leaving Flag No. 2 on port coming back the No 1 mark was cut out, the course being sailed over twice, the finish being the same as Classes B, C and D.

When the preparatory signal was given at 2:55 P. M. there was a good breeze blowing from about south, of enough strength to cause several to turn in single reefs. The signal to start for Class B was given at 3 o'clock, for Classes C and D at 3:05, and E and F at 3:10. The judges were on board Mr. Knapp's launch, anchored just to the east of the red flag. A great deal of interest was taken in this race, the Little Silver dock, from which a good view of the whole race could be obtained, was crowded. In the race most of the interest centered in Enigma and Undine. Mr. Oakes had a new sail on Enigma, and certainly expected to do much better with her after his recent defeats by Nancy and Arrow. He was beaten, however, after a close race by Clinton R. James's Undine by 1m. 15s. Both Undine and Enigma had single-reefed mainsails.

In class 15 on the first turn on the way back after rounding No. 2, the DeGraw boat Kathay carried away her throat halliards, Augusta, her competitor, obtaining quite a lead, Kathay won, however by 2m. 35s.

In class E there was quite an interesting race between Crescent and Cinch, Baby and Anna. Cinch should have won, but did not follow the sailing instructions and leave red flag at finish on starboard, crossing the line by going to the south, the same as starting; then thinking to rectify her error, coming about and crossing the finish line the reverse way.

A protest was made on the ground that Cinch did not sail the course as laid down on the chart, but crossed the finish line in the wrong direction, without leaving the red flag on starboard hand. The regatta committee, after considering the protest, disqualified Cinch, the evidence showing that she had not crossed the line in accordance with directions.

CLASS B, OPEN JIB AND MAINSAIL.

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| Kathay, W. N. DeGrauw, Jr. | 3 00 32 | 5 29 46 | 2 29 14 | 1 52 02 |
| Augusta, E. Kemp | 3 01 01 | 5 38 09 | 2 37 08 | 1 54 37 |

CLASS C, CATS 23FT. AND OVER.

| Princess Aurelia W. A. Seaman | 3 14 30 | Did not finish. | | |

In class A. Kathay beats Augusta 2m. 35s. In class B Cora B. beats E. H. Price 1m. 57s. In class C. Undine wins from Enigma by 1m. 15s, Enigma taking second prize. In class C Anna wins from Baby by 12s., Baby taking second prize. In class D. Alice C. wins from Pauline by 5m. 17s., Patline taking second prize.

The judges were George E. Gartland, New Jersey Y. C., and Henry Clay Miner, Jr., Shrewsbury Y. C. The regatta committee comprised Clinton R. James, H. M. Knapp, Carl Wagner and Forman R. Smith. The race was sailed under the N. Y. Y. R. A. rules. In the evening at the club house the prizes were presented to the winners and a reception was held.

The next or fourth regatta of the season will be held some time next month at Red Bank.

## Duxbury Bay Regatta.

*Monday, Aug. 20.*

A GOOD race was sailed on Aug. 20 by the yachts of Duxbury Bay in spite of a heavy thunder squall which capsized two yachts and compelled others to give up. In a race on Saturday the catboat Fannie D. was beaten by the new Hanley fiver El Paso, whereupon the latter was purchased by Mrs. McDowell, wife of the owner of Fanny D. The new yacht was renamed Cleopatra, and sailed under this name on Monday. The times were:

SPECIAL CLASS, ANY RIG.

| | Length. | Elapsed. | Corrected. |

| Dolphin, H. Morton | 15.03 | 2 27 30 | 1 44 53 |

Zilpha and Waterwitch withdrew.

FIFTH CLASS, KEEL SPRITS.

| | | | |
|---|---|---|---|
| Now Then, J. Mack | 15.00 | 2 30 30 | 1 47 54 |
| Hornet, J. Watson | 16.04 | 2 29 30 | 1 49 22 |

Annie C. Wisor, Mystic and Dude withdrew. Clear the Track ruled out for fouling judges' boat.

## News!

FOLLOWING the lull in the racing due to Vigilant's mishap, the air is full of rumors of all sorts as to coming races, new boats, and other exciting events in yachting. Many of these stories are contradictory, and none have any special corroboration; so we give them in full for what they are worth: Satanita will defend the Cape May cup next month, in place of Britannia; Britannia will defend the Cape May cup herself; both Satanita and Britannia will sail against Vigilant in defense of the Cape May cup; Vigilant will winter on the Clyde and race at Nice next spring; Mr. Gould will build a Herreshoff yacht to defend the America's Cup next year, the challenger to be owned by Lord Dunraven and Lord Lonsdale together, another report being to the effect that Lord Lonsdale will be the sole owner; Mr. Watson has an order from Lord Dunraven for a new challenger, also an order for a design, to be built from in Germany for the German Emperor, size from 20 to 200 rating; Will Fife will build a 40-rater for Mr. Peter Donaldson; Herreshoff will build a 20-rater for English waters; Mr. Brooks's schooner Lasca will sail an ocean race from Cowes to Sandy Hook, starting on Christmas Day, with the old British schooner Selene; Colonia will be fitted out at once to race Navahoe; W. H. Langley will build a 40-footer from an Ellsworth model.

## YACHT NEWS NOTES.

The cabin cat Kittie, Mr. Hazen Morse, and the cabin pole mast sloop Madrine, Mr. F. M. Freeman, both designed and built by T. R. Weber, of New Rochelle, have been doing wonderfully clever work this season. They have proved by far the best boats in their classes, and reflect great credit on the ingenuity of Mr. Weber. On Aug. 18 Madrine easily beat the entire fleet in the Horseshoe Harbor Club regatta off Larchmont. Although but 22ft. l.w.l. she beat Eurybia, Mary C., and other boats 10 and 15ft. longer on the waterline and carrying twice as much canvas. Madrine is sailed by her owner, Mr. Freeman, and her racing crew is composed of T. Fleming Day and ex-Commodore C. M. Connolly.

The much altered sloop Ilderan, Mr. Walter Southwick, has been out at Mumm's yard lately for another rebuilding, this time a new bow being put on. In the course of the last eight years the yacht has been altered in almost every possible way, the last previous alteration being a new counter stern, to which has now been added a modern bow.

Mr. James Gordon Bennett has offered a money prize of $5,000 for half-raters in the Nice regatta next March, and another of the same sum for forty-raters. The expenses of the voyage of the forty-raters are to be paid to the winner up to $1,600, and the freight of the half-raters is to be paid the winner from the port of departure.

We have received the first numbers of *Burgee and Pennant*, a new aquatic journal, a weekly devoted to the Naval Reserve and yachting; a neat-looking paper with a handsome colored cover. Capt. J. C. Summers, publisher of "Who Won," is the editor.

The second supplement to Lloyd's Yacht Register has lately been issued containing a number of recent changes in names and ownership.

Myrtis, cutter, has been purchased by Arthur Letchworth, of the Philadelphia Y. C.

## The 21ft. Class, Newport Races.

FOR over a week the 21-footers have been enjoying some good racing off Newport, five of the fleet being towed there from the Sound, and the prizes being provided by different yachtsmen. The racing opened on Aug. 18 with the first of two races for prizes offered by August Belmont, a silver cup for the winner in each race, with a pewter mug for the second, the last boat to fly a so-called "foolscap pennnant" until she won a higher place in a subsequent race. The competitors were Adelaide, W. P. Douglas; Dorothy, H. P. Whitney; Vaquero, H. B. Duryea; Houri, Butler Duncan, Jr.; Celia, Charles A. Gould. All are Herreshoff fin-keels.

The race was from Bishop's Rock 3½ miles to leeward and return, two rounds making 14 miles. There was a strong breeze and rough water. The times were:

| | Start. | 1st turn. | 2d turn. | 3d turn. | Finish. |
|---|---|---|---|---|---|
| Dorothy | 2 45 15 | 3 14 26 | 4 12 00 | 4 23 30 | 5 47 09 |
| Houri | 3 00 00 | 3 14 20 | 4 12 47 | 4 23 20 | 5 47 05 |
| Vaquero | . .. .. | 3 14 31 | 4 14 41 | 4 23 46 | 5 47 36 |
| Celia | . .. .. | 3 14 35 | 4 15 53 | 4 46 04 | 5 47 20 |
| Adelaide | 2 47 00 | 3 15 55 | 4 17 00 | 4 47 53 | grounded |

The race was managed by Messrs. F. P. Sands, F. W. Hurst and R. Ellis. Adelaide took the ground and was only floated by means of a man at her masthead.

The second race was sailed on Monday, Aug. 20, in a reefing breeze and a rough sea, the times being:

| | Start. | 1st round. | Finish. | Elapsed. |
|---|---|---|---|---|
| Houri | 3 55 00 | 4 59 05 | 6 00 30 | 2 05 30 |
| Celia | 3 55 00 | 4 59 55 | 6 02 15 | 2 07 15 |
| Vaquero | 3 55 00 | 5 00 45 | 6 02 18 | 2 07 18 |
| Adelaide | 3 55 00 | Disabled. | | |
| Dorothy | 3 55 00 | Disabled. | | |

Messrs. Louis M. Rutherford and W. F. Lawrence were the judges. Adelaide broke her gaff.

The third race, for subscription prizes, the first of a series of three, was sailed on Aug. 21 in a fresh N.W. breeze, the course being a triangle lying between Brenton's Cove, Taylor's Cove and Bishop's Rock, two rounds making 13 miles. Houri sailed the race with a broken gaff, the jaws lashed to the mast. The times were:

| | Start. | Finish. | Elapsed. |
|---|---|---|---|
| Houri | 2 46 00 | 5 12 00 | 2 26 00 |
| Celia | 2 46 00 | 5 12 30 | 2 26 30 |
| Adelaide | 2 46 00 | 5 15 51 | 2 28 51 |
| Dorothy | 2 46 00 | 5 15 12 | 2 29 13 |
| Vaquero | 2 46 00 | Disabled. | |

The fourth race, Aug. 22, was for a cup given by Mr. Herman B. Duryea, owner of Vaquero. The course was 6½ miles to windward, with a strong N.W. breeze, and return. Vaquero won after a spirited race, the times being:

| | Start. | Finish. | Elapsed. |
|---|---|---|---|
| Vaquero | 10 49 00 | 1 32 45 | 2 43 45 |
| Celia | 10 49 00 | 1 34 25 | 2 45 25 |
| Houri | 10 49 00 | 1 37 50 | 2 48 50 |
| Dorothy | 10 49 00 | 1 38 20 | 2 49 20 |
| Adelaide | 10 49 00 | 1 37 40 | 2 48 40 |

Messrs. Sands and Rutherford were the judges.

The fifth race, the second of the subscription cup series, was sailed on Aug. 23, the wind still holding strong, but from S.W., the course being between Brenton's Cove and Bishop's Rock. Vaquero fouled the buoy at the end of the first round and retired, while Houri fouled Adelaide. The times were:

| | Finish. | Elapsed. |
|---|---|---|
| Vaquero | Disqualified. | |
| Dorothy | 4 42 00 | 2 37 00 |
| Houri | 4 43 54 | 2 38 54 |
| Adelaide | 4 47 00 | 2 42 00 |

## Bobstay Club Regatta.

*Saturday, Aug. 18.*

ON Aug. 18 an interesting race was sailed off Rocky Nook in connection with the annual outing and clambake of the Bobstay Club, the chief incident being the defeat for the first time of the catboat Fanny D., the victor being Hanley's famous catboat El Paso. The wind was fresh from southwest. The times were:

| | Length. | Elapsed. | Corrected. |

| Maglathelin | 17.00 | 58 38 | .. .. |
| Tolman | 17.00 | .. .. | .. .. |

The regatta committee included John C. Dawes, F. W. Maglathlin and E. A. Ransom.

## Owasco Y. C.

DOLPHIN POINT—OWASCO LAKE.

*Wednesday, Aug. 22.*

THIRD race of the season. Courses, Dolphin Point, north to Brinkerhoff's Point, southwest to Elm Point, southeast to place of starting, distance 8 95-100 knots. Weather clear, wind northerly, very light and puffy.

| | Length. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| El-Chico, W. E. Case | 25.30 | 1 02 44 | 2 58 44 | 2 58 44 |
| Nemadji, C. E. Thorne | 25.20 | 1 02 20 | 3 00 17 | 3 00 12 |
| Asp, E. Beardsley | 24.80 | 1 00 48 | 3 02 13 | 3 01 47 |
| Mystery, H. B. Lewis | 24.60 | 1 01 37 | 3 20 12 | 3 19 36 |
| Bee, N. B. Burr | 17.50 | 1 05 00 | 3 39 34 | 3 31 27 |
| Gull, Stupp Bros. | 17.20 | 1 05 00 | Withdrew. | |

First prize El Chico, second Nemadji, third Asp. Regatta committee, C. E. Thorne, D. Beardsley, N. B. Burr and W. E. Case. Referee, F. T. Peet. Time-keepers, W. P. Beardsley and C. N. C. Brown.

CHAS. I. AVERY, Sec'y.

## Columbia Y. C.

CHICAGO—LAKE MICHIGAN.

*Saturday, Aug. 18.*

THE Columbia Y. C., of Chicago, sailed a hard race on Aug. 18 on Lake Michigan, the wind blowing almost a gale and the yachts being under the snuggest of storm canvas. The times were:

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| **SECOND CLASS.** | | | | |
| Hattie B | 3 52 40 | 6 01 35 | 2 08 55 | 2 08 55 |
| Pinta | 3 57 40 | 6 09 05 | 2 11 25 | 2 10 31 |
| Marion | 3 50 40 | 6 10 25 | 2 19 45 | 2 16 27 |
| **THIRD CLASS.** | | | | |
| Viking | 3 53 00 | 6 20 06 | 2 27 06 | 2 27 06 |
| **FOURTH CLASS.** | | | | |
| Ida K | 3 54 45 | 6 34 40 | | |

## Horseshoe Harbor Club.

LARCHMONT—LONG ISLAND SOUND.

*Saturday, Aug. 18.*

THE annual regatta of the Horseshoe Harbor Club was sailed on Aug. 18 over courses off Larchmont, and proved very successful, thanks in part to a fresh S.W. breeze. The times were:

| | Elapsed. | Corrected. |
|---|---|---|
| **SCHOONERS.** | | |
| Una, T. J. McCahill | Not timed. | |
| **SLOOPS—CLASS A.** | | |
| Mary C., S. C. Baldwin | 2 31 15 | 2 14 51 |
| Eurybia, Chas. Pryer | 2 13 15 | 2 13 15 |
| Beatrice, W. F. Herbert | 2 28 20 | 2 08 36 |
| Conquesco, Bryce Metcalf | 2 30 15 | 2 10 03 |
| **SLOOPS—CLASS B.** | | |
| Madrine, F. M. Freeman | 2 13 15 | 2 13 15 |
| Lucy, G. A. Enell | Did not finish. | |
| Caper, P. Howard | 2 26 45 | 2 14 45 |
| Brenda, F. M. Scott | 2 51 00 | 2 39 12 |
| Nora, G. M. Barretts | Broke down. | |
| Agawam, A. G. Hamilton | 2 24 30 | 2 15 54 |
| **CLASS D—CABIN CATS.** | | |
| Kittie, Hazen Morse | 2 34 40 | 2 19 30 |
| Eloise, C. H. Robbins | 2 28 15 | 2 22 27 |
| Onaway, S. C. Pirie | 2 19 15 | 2 19 15 |
| **CLASS E—OPEN CATS.** | | |
| Violet, G. A. S. Weiners | 1 44 30 | 1 42 48 |
| Fairy, F. E. Towle | 1 33 30 | 1 33 30 |
| Punch, M. H. Clark | 1 49 25 | 1 48 09 |
| **CLASS F—OPEN CATS.** | | |
| Anglesea, H. T. Spence | 1 52 00 | 1 52 00 |
| Constance, J. Wight | 1 49 30 | 1 46 54 |
| Bon Ton, E. M. Post | 1 51 15 | 1 49 21 |
| **CLASS H—OPEN CATS.** | | |
| Caprice, F. F. Proctor, Jr. | 1 16 00 | 1 15 48 |
| Kitten, J. X. Arosawina | 1 43 00 | 1 43 00 |
| **CLASS I—MIXED RIGS.** | | |
| Moses, L. D. Huntington | 2 01 00 | 1 59 18 |
| Goblin, Bart Jacobs | 2 17 30 | 2 15 30 |
| Iris, J. L. Roberts | 1 56 30 | 1 53 48 |

The wiuners were: Class A, Beatrice; Class B, Madrine; Class D, Onaway; Class E, Fairy; Class F, Constance; Class H, Caprice, Class I, Iris.

## Rhode Island Y. C. Annual Regatta.

NARRAGANSETT BAY.

*Wednesday, Aug. 22.*

THE annual regatta of the Rhode Island Y. C. was partially spoiled by a light breeze on Aug. 22, there being more drifting than sailing. The official times were:

| | Elapsed. | Corrected. |
|---|---|---|
| **FIRST CLASS—CUTTERS AND SLOOPS, 33FT. AND UNDER 50FT.; DISTANCE 19 MILES.** | | |
| Memory, W. N. Murray, Jamestown | 3 42 24 | |
| Paralos, W. F. Palmer, Taunton, Mass. | 3 44 25 | |
| Infanta, J. B. Mills, Bristol | 3 49 00 | |
| **SECOND CLASS—YAWLS, 29FT. AND UNDER 33FT.; DISTANCE 19 MILES.** | | |
| Gannet, A. B. Emmons, Newport | 3 42 47 | |
| Hadassan, C. H. Merriam, Nayatt | 3 52 07 | |
| **THIRD CLASS—SLOOPS, 21FT. AND UNDER 27FT.; DISTANCE 18 MILES.** | | |
| Diamond, L. H. Tillinghast, Pawtucket | 3 38 23 | |
| Elite, J. B. Sweet, Pawtucket | 3 43 02 | |
| Venti, J. S. Martin, Newport | 3 43 24 | |
| **FOURTH CLASS—CATS, 24FT. AND OVER; DISTANCE 18 MILES.** | | |
| Surprise, C. W. Branch, East Greenwich | 3 41 06 | |
| Kalera, Benjamin Davis, Providence | 3 42 57 | |
| Flight, Isaac Hiller, Marion, Mass. | 3 46 46 | |
| **FIFTH CLASS—CATS, 21FT. AND UNDER 24FT.; DISTANCE 12 MILES.** | | |
| Ulula, W. H. Winship, Wareham, Mass | 3 27 44 | |
| Edna, A. E. Nickerson, Providence | 3 29 20 | |
| Cygnet, J. W. Martin, Warren | 3 29 21 | |
| **SIXTH CLASS—CATS, UNDER 21FT.; DISTANCE 13 MILES.** | | |
| Zara, J. H. Foster, Riverview | 3 22 38 | |
| Mojave, W. N. Murray, Jamestown | 3 24 01 | |
| Allegro, H. M. Crosby, Osterville | 3 26 45 | |

Surprise was protested by the other boats in her class on the ground that she was not enrolled in any yacht club. The protest has yet to be decided.

## Classification by Sailing Length.

*Editor Forest and Stream:*

I trust you will allow me the privilege of correcting in your columns the wrong impression likely to follow your reference in this week's issue of your paper, to the alleged change of policy of the New York *Times* regarding the classification of American yachts. You must have made your comments hastily or you would have placed the *Times* right by a reference to the change in the yachting editor of the paper, of which change you are fully advised.

I had the honor of being yachting editor of the *Times* at the time that paper protested against a change of classification. The gentleman who succeeded me evidently thinks our American system of classification should be abandoned, and up to date he offers no better argument than the fact that out of a lame fleet of boats, in an "off" year, several yachts should have raced together that didn't. But permit me to say that although the *Times* may appear to have changed front the reason for it somewhat takes the edge off the apparent victory of the "measurement cranks." The same thing applies to the *Sun*. With changes in the personality of the yachting editor it is not so much cause for rejoicing if a paper changes its policy as it would be if you could win over the best element in yachting, which you call the "conservative" element, to your platform.

You will perhaps remember that one of the arguments I used in the *Times* against the proposed change in 1889 was that the only ones who desired it were the members of the measurement committee, all of whom, I believe, were non-yacht owners. There is much of unwritten history about the agitation in 1889 to come to light this winter in case the subject is seriously discussed again, and I trust I may again have the pleasure of saying a few words in praise of the "conservative" element of the New York Y. C. GEORGE CARD PEASE.

NEW YORK, Aug. 22.

# Canoeing.

## FIXTURES.

SEPTEMBER.

3. Holyoke, Ann., Holyoke, Mass.
3-5. Passaic River Meet.
5. Ianthe, An., Passaic River.
15. Red Dragon, Fall Regatta, Delaware River.

## Canoes and Canoe Yawls.

WE have a fair example now in England of the machine type, the Yankee, in which you cannot even stow or unstow a tobacco pouch when once you have got underway. However, as this peculiar craft is now at Salcombe at the B. C. A., we may expect to hear some more about her peculiar ways. Personally, we should say that, even if Yankee ever proves to be really a fast boat all round, wind, run and reach, her fitment drawbacks are so palpable that she and her type must always be thorns in the fair side of canoe sailing and cruising. A man on stilts may be able to see a little more of the country, but it is unpleasant if not dangerous walking.

The meet at Salcombe of the B. C. A. may produce a race between Mr. Howard, the American, and Mr. Brand, as the latter has taken up the American's challenge, but at this time of writing no final arrangement of the course, date, or conditions have been arrived at. In any case, as said before, such a race is most unsatisfactory. It cannot in any way prove of any advantage to canoe sailing, nor to yawl sailing; the size and weight of the two crafts are so different that each must have her weather and water to do her best in, and they cannot be the same. No doubt, if the canoe were to win, a man might be found who would say it showed her superior speed. If a rating of 0.3 on a 30in. beam of boat is capable through superior model to beat on open salt water a craft of 0.5-rating with 5ft. 6in. beam, then the universally accepted rules and tables of time allowance are unnecessary, and, indeed, unfair upon the larger boats, and are a standing blemish on scientific yachting. There are often conditions of wind and water in which a small craft can sail past one six or eight times her rating and size; that is not effective or true speed, and hence the acknowledged necessity of classes and of keeping boats within their respective classes, and of doing away with all time allowances.

The Dragon, the new canoe, which looked so likely, but went so indifferently at Bourne End, is to be at Salcombe. She has undergone some alterations, and has new sails. Now, from Dragon sailing against Yankee on open and perhaps rough water we may learn something interesting, being canoes of a matchable size and type and very much of a match in extreme lightness of displacement.—*The Field.*

## Ottawa C. C. Regatta.

OTTAWA, AUG. 11.

THE twelfth annual regatta of the Ottawa C. C. was held on Aug. 11 in celebration of the opening of the new club house, just completed. The races were as follows:

Single blade paddling, open, ½ mile with turn: F. A. Bickerdike, Lachine, 1; J. B. Duford, Ottawa, 2. Time, 4:40.

Tandem paddling, open, single blades only, ½ mile with turn: Baldwin and Pinard, Ottawa, 1; Bickerdike Brothers, Lachine, 2. Time, 4:10.

War canoe race, open: Whiskers vs. Red Elephant, and the latter won.

Morris cup race, double blades, ½ mile with turn, open to O. C. C. members only: R. Hunton 1, A. Pinard 2. Time, 4:26.

River men's race, open, in driving boats, 4 oars and paddle, length of boat to be between 25 and 28ft., ½ mile with turn: J. A. Lafortune's crew won in 4:58.

Club fours, open, 1 mile, single blades, 4 men, canoes must not exceed 17ft. long and must weigh at least 60lbs.: O. C. C. 1, Lachine 2. Time, 4:20.

Canoe upset race, open, 100yds.: E. C. Woolsey 1, J. B. Duford 2.

Tub race, open, 100yds, with broom: J. Klotz 1, A. Pinard 2.

Swimming race, open, 200yds.: H. B. Carter, Montreal, 1; E. Woolsey, Ottawa, 2.

Diving competition, long dive, open to members of recognized clubs, each competitor to have option of three trials: H. B. Carter 1, Clayton 2.

The regatta was managed by G. P. Brophy, Chairman; Henri Roy, Officer of the Day; R. H. Haycock, Benj. Batson, P. B. Taylor, Judges; F. H. Gisborne, Jacob Smith, Starters; C. Caron Pelletier, Clerk of the Course; James Wilson, Timekeeper; K. F. Clayton, Official Measurer: D'Arcy Scott, Secretary-Treasurer.

In the evening the visitors were entertained by dancing, the club house being illuminated and handsomely decorated.

## Toronto C. C. Paddling Cup.

THE race for the Toronto C. C. paddling trophy on Aug. 25 was comparatively uninteresting, the best of the Toronto paddlers, like Muntz and Johnson, being absent, only H. R. Tilley and R. O. King coming to the line to meet Clarence Euson of Springfield C. C. Tilley led at first, but dropped to third place and finally, in trying to change from a sitting to a standing position, capsized. Euson now took first place, winning by a length in 8m. 45s.

The officers of the day were Geo. Wilkie, referee; Geo. Sparrow, starter; Col. J. Rogers, Peterborough, judge at finish, and T. D. Ellis and A. Shaw, timekeepers.

## CANOE NEWS NOTES.

The annual regatta of the Holyoke and Redcliffe canoe clubs will be held as formerly on Labor Day at the Sans Souci course. An effort will be made to make the fifth anniversary of special interest alike to members and visitors. The Sans Souci Club has given the entire use of their house and grounds, which in themselves are well worth a visit, and the transportation thereto will be simpler than formerly. The steamer will not run from Holyoke, except one trip at 8:30 A.M., but will meet all trains at Smith's Ferry to convey visitors to the grounds. Light lunches can be obtained at camp, thus avoiding the necessity of bringing them. The races commence at 10 A.M. and will contain several novel features, among them a tournament and a tug of war. All are cordially invited to be present. The regatta committee consists of C. F. Schuster, L. H. Lamb, W. C. Brown, F. T. Harris. The programme includes a trophy sailing race, unlimited; standing paddling, tandem paddling, hurry-scurry, single paddling, hand paddling, kindergarten sailing (35sq ft.), upset, tournament, tug of war, club threes and ladies' race.

The Arlington C. C. will hold its seventh annual regatta on Labor Day, the first race being called at 9:30 A. M. sharp. The events will be open to all canoeists.

# Rifle Range and Gallery.

## Zettler Rifle Club.

CYPRESS HILLS PARK, L. I., Aug. 27.—The famous Zettler Rifle Club brought its twenty-first annual festival and prize shoot to a successful close in this park this evening. For two days the park and shooting house have been crowded with members and friends. There were visiting riflemen from New England and from Baltimore.

Fine shooting and high scores were the principal features of the two days' festival.

The programme of cash prizes, aggregating $700, brought out a large number of the local experts, whose expectations were mainly centered upon the hope that luck would abide with them this year.

G. Homerighausen of Baltimore, one of the old-timers who has not been in New York since the big festival in 1888, was present on both days. Harry M. Pope and Stephen J. Lyon of Connecticut were present on the second day.

Nearly all of the prominent shooting societies in and about New York were represented either as guests or active participants in the struggle for prizes.

The premiums for best five scores on the ring target and for the most flags on the bullseye target brought out a fine race between the experts at the close of the shoot. The four high men for the four best tickets were as follows: Fred C. Ross 355, Henry Holges 353, Louis Flach 351, Harry M. Pope 351.

Prize target, three shots per ticket, two best to count for first five, twenty-one prizes from $50 to $1. Scores: F. C. Ross 145, H. Holges 144, L. Flach 143, G. Homerighausen 142, H. M. Pope 142, P. Schmidt 71, I. Morten 71, R. Hamann 71, M. Dorrler 71, M. B. Engel 70, J. Gunther 70, T. J. Lyon 70, R. Busse 70, C. G. Zettler 69, B. Zettler 69, G. Krauss 67, L. P. Hansen 97, C. Horney 67, G. Schlicht 67, B. Walther 66, J. Young 66, C. Hutch 66.

Premiums, five best tickets: F. C. Ross 355, H. Holges 353, L. Flach 351, A. M. Pope 351.

Bullseye Target.—This target is one of the most popular of all among the lay shooters. The ever present element of luck surrounding it causes many a visitor to try his hand, even though he never had fired a shot previous. A 12-inch block with a 4-inch center looks large and inviting, ten shots for $1, with eighteen prizes ranging from $20 to $1, the best center shot to count. Six premiums for the most flags during the festival. Such inducements had a most alluring effect upon both the expert and the novice. Scores: F. C. Ross 65, L. Flach 54, M. Dorrler 34, B. Zettler 29, C. G. Zettler 29, S. J. Lyons 29, L. P. Hansen 29. Best bullseye: L. Flach 16 degrees, I. Martin 21, G. Nowack 21, L. P. Hansen 21, T. Lloyd 24½, G. Wiegman 28, S. J. Lyons 28½, R. Busse 31, C. A. Niemeyer 35, P. Feigel 35½, Homerighausen 36, J. Facklum 38.

Honor Target.—Open only to members of the club for cash and merchandise prizes presented by the club and invited guests. To take the first prize on the honor target is to the Zettler members one of his greatest aspirations. On this occasion Ernest Fisher, the Hoboken representative, secured the honor. Scores: E. Fisher 71, R. Busse 70, I. Martin 69, F. Schmidt 68, C. G. Zettler 68, R. Hamann 67, F. C. Ross 66, M. Dorrler 65, H. Holges 64, B. Zettler 64, L. Flach 63, G. Homerighausen 63, M. B. Engel 62, L. P. Hansen 61, Gus Nowak 61, G. L. Hoffman 61, Ph. Schmidt 59, G. D. Wiegman 59, B. Walther 59, Ph. Feigel 58, G. W. Plaisted 57, H. D Muller 57, J. Blumenborg 54, A. Micke 52, J. G. Gunther 52, G. Joiner 52, G. Krauss 48, W. Hollwedl 48, Dr. Grosch 47, C. J. Watson 44, A. Begerow 42, F. Fabarius 41, G. A. Schurman 40, F. C. Heinz 40, M. Miller 36, F. Helking 35, C. Wissel 34, John Coppersmith 34, A. Klein 30, A. Kohlmetz 23, J. Bouzer 20, W. Krumsieck 20.

Ladies Target.—While the members of the Zettler Club are backing each other for high scores at the 200-yard range it has been customary to put up prizes for the ladies of club to compete for at short range from a rest. A committee of three of the oldest and most reliable of the veterans is generally selected to look after the ladies interests. This year the committee men were J. Günther, G. W. Downs and M. B. Engel. Mr. Downs not being present the labor fell upon Messrs. Günther and Engel. Twenty-one ladies were present and participated, and each lady got a prize. Mrs. Dr. Grosch and Miss Blumenborg tied for high score, each making 36 out of a possible 39, 50yds. Scores:

Mrs. Grosch 36, Miss Blumenborg 36, Mrs. Wissel 35, Mrs. Günther 35, Miss Plaisted 34, Mrs. Ross 34, Mrs. Krauss 33, Mrs. C. G. Zettler 32, Miss Watson 30, Mrs. Hecking 29, Mrs. Banzer 27, Mrs. Miller 26, Mrs. Holwedl 25, Mrs Busse 24, Mrs. Schurman 24, Mrs. Martin 22, Mrs. Engel 21, Mrs. Dorrler 21, Mrs. Flach 18, Mrs. B. Zettler 18, Miss Walther 18.

## Excelsior Rifle Club.

GREENVILLE, N. J., Aug. 27.—Only two members of the Excelsior Rifle Club attended the weekly practice shoot at Armbruster's Schuetzen Park on Friday of last week. The weather was warm and the light good. In a series of 50 shots per man, the following appended scores were made:

| | | | | | | |
|---|---|---|---|---|---|---|
| L P Hansen | 230 | 227 | 221 | 217 | 211 | 1106 |
| O C Boyce | 217 | 209 | 214 | 197 | 215 | 1052 |

## The Sea Girt Programme.

THE fourth annual rifle competition, under the auspices of the New Jersey State Rifle Association, will take place at the State Rifle Range, Sea Girt, N. J., commencing Monday, Sept. 3, and closing Saturday, Sept. 8.

No. 1, Members' match, 200yds., open only to members of the New Jersey State Rifle Association.

No. 2, the Kuser match, 7 shots at 500yds.; position, prone, head toward target; rifle, any military; open to all comers; entries, $1 each, or three for $2, if taken at one time; re-entries allowed.

No. 3, all-comers' military match, open to everybody; distances, 200 and 300yds.; position, standing at 200, kneeling or sitting at 300yds.; 7 shots at each distance; entrance fee, $1, or three tickets for $2, if taken at one time; rifles, any military rifle adopted and issued by any State.

No. 4, the Schuetzen match, all-comers' continuous match, distance 200yds.; position, standing; number of shots, 7 on the standard American target, with 11in. bullseye (the bullseye including the 7 ring); any weight rifle, with any trigger pull, palm or other rest allowed. When firing, the muzzle of the rifle must be kept outside the loop hole of the shelter. The allowance for military rifles will be 4 points on each string. Cleaning allowed between shots. The aggregate of three scores to count for all prizes.

No. 5, Hayes medal match, open to everybody; distance, 500 and 600yds; prone, with head toward target, at 500, any at 600; 7 shots at each distance, rifles, any military adopted or issued by any State. The firing at both ranges must be done on same day or the scores will be void. Scores which would qualify members N. G. N. J. as sharpshooters will be allowed. Entrance fee $1, three for $2, if taken at one time; re-entries allowed.

No. 6, New Jersey National Guard match, open to teams of 6 from each regiment of the National Guard of New Jersey (as fully provided for in circular, Department of Rifle Practice, dated July 7, 1894).

No. 7, regimental team match (interstate), open to teams of 6 from the regimental, battalion and separate company organizations of the National Guard of the United States or of the U. S. Army.

No. 8, the Columbia trophy match, presented by the District of Columbia National Guard to the National Guard of New Jersey. The competition, therefore, will be between teams of 6 men each from the regiments of the National Guard of New Jersey.

No 9, the Perrine memorial match, open to officers and enlisted men National Guard of New Jersey.

No. 10, the Trenton cup, presented by Col. A. R. Kuser; to be shot for annually; to be held by the winner during the year; open to everybody; rifle, any military; distance 500 and 600yds.; 10 shots at each distance; firing at both stages to be done on same day; to be won three times, not necessarily consecutive, to become the property of the winner; entrance fee $1, re-entries allowed.

No. 11, Department of Rifle Practice match, open to all inspectors of rifle practice, either by commission or detail, and to all members of the New Jersey State Rifle Association.

No. 12, revolver match, distance 30yds., 5 shots on American standard target reduced to 100yds.; position, standing; off-hand use of one arm only allowed; revolver not to exceed 2¾lbs. in weight; maximum length of barrel (exclusive of chamber), 7½in.; minimum trigger pull, 3lbs.; plain open sights; ammunition, any; cleaning allowed between scores only; army revolvers, with 3-pound trigger pull and using service ammunition, will be allowed 10 points on three scores; aggregate of three scores to count for all prizes; entries 50 cents, or three for $1 when taken at one time.

No. 13, President's match, for the military championship of the United States of America. Divided into two stages. First stage: 200 and 300yds., 7 shots at each distance; open to all members of the Army, Navy or National Guard of any State; each competitor to appear in the uniform worn by the organization of which he is a member; competitors to shoot with the rifle of the model adopted or issued by the State they represent; entrance fee, $3 to both stages. Second stage: Open to prize winners in the first stage; distance, 500 and 600yds., 7 shots at each distance; rifles same as first stage.

No. 14, Trenton Interstate Fair match, open to everybody, distance 200 and 300yds., carbines allowed one point on each distance; conditions same as No. 9.

No. 15, pool matches, open to everybody, to be shot in groups of ten competitors, entrance fee $1.

MATCHES OF THE NATIONAL RIFLE ASSOCIATION.

No. 1, Wimbledon cup match, open to all citizens and residents of the United States, distance 1,000yds., 30 shots; weapon, any rifle within the rules, cleaning allowed; position, any without artificial rest; entrance fee, $2; 18-point handicap for military rifles, 6-point handicap for special military rifles. First prize, the Wimbledon cup, presented by the National Rifle Association of Great Britain to the National Rifle Association of America, to be competed for on conditions to be decided upon by the National Rifle Association of America, and to be held by the winner till the next fall meeting, when it will be shot for on the same conditions. Value, $500.

No 2. Hilton trophy match, open to teams of 12 from the following: 1. The United States of America. A—The army of the United States, one team from the troops stationed within each of the three military divisions—Atlantic, Pacific and Missouri (three teams in all). B—The United States Navy (one team). C—The National Guard or uniformed militia of the several States and Territories, including the District of Columbia (one from each State or Territory). 2. Other countries. England, Ireland, Scotland and each of the Provinces of Great Britain, and all other countries, one team each from the following: A—The regular army. B—The militia. C—The volunteers. D—The navy of any country.

No. 3, Interstate military match, open to one team from each State or Territory in the United States, consisting of 12 members of the regularly organized and uniformed National Guard or militia of such State or Territory, including the District of Columbia, chosen in such manner as shall be prescribed by the military authorities thereof. They shall appear in the uniform of their corps. Distance, 200 and 500yds; position, at 200yds. standing, at 500yds. prone; weapon, any military rifle which has been adopted, authorized or issued as an official arm by any State or Government; ammunition, any.

Bullseye targets—1. Bullseye targets will be open all the time during the annual meeting. 2. Tickets, entitling the holder to one shot at any bullseye target, will be sold at the office of the financial officer, upon the range, at 10 cents each, or twelve for $1.

## Plattdeutsche Verein Festival.

THE twentieth annual festival of the association of German societies known as the Plattdeutsche Verein, was opened in the Union Hill Schuetzen Park on Sunday of last week and was closed at an early hour on Thursday morning. During the four days it is estimated that 100,000 people visited the park. The association is composed of 111 societies, whose membership aggregates 20,000. The programme for the four days' festival consisted of shooting, bowling and all sorts of games, athletic and otherwise. To one who has never had the opportunity to mix with the Germans in their home life, a day's visit to this festival was equal to a week's travel in Germany. We know of no nationality of people who can concentrate so much solid enjoyment in a day's outing as these German-Americans can. In their daily life they are energetic and thrifty, but when the holiday comes business cares only are left at home; the rest of the family are out for Genuss.

But we are digressing; we started out to tell of that part of the festival which relates to the rifle. To resume: The shooting programme was in the hands of a committee made up principally from the New York Schuetzen Corps. August Grassman was chairman. Among his committeemen who gave him active support were John Tholke, John H. Klee, A. J. Christian, Barney Kumm, John Gobler, Fred Exmeyer, C. D. Rehm, H. Hingslage, H. Radloff and others whose modesty would not admit that they were more than passive members of the committee, the two Zettler brothers, Charles and Barney, had charge of the shooting house, and furnished the rifles and the combination that makes the noise and spoils the looks of a new clean target.

The prize programme was of the liberal order. The ring target contained twelve prizes ranging from $20 to $3, 3 shots for 50 cents. There was a fine gold medal for the shooter making the most points during the festival. There was a gold medal for the 3 best tickets, one for the second 3 best tickets and one for the third 3 best tickets. The prize target contained 18 prizes, ranging from $25 to $1, 3 shots for 50 cents, 2 best tickets to count. There was a special prize of a fine bronze figure with a French clock attached valued at $25, which was to go to the shooter making the best 15 tickets. There was a cash prize of $6 for the best 12 tickets. There was also a cash prize of $4 for the best 10 tickets. There was a special prize of $5 for a score of 40 points, all ties to divide. The range was the short or 50yds. range, the target 18, ¼in. rings, with a 6in. black. The rifles were Winchester single-loaders, .32.20, with open sights.

The competing marksmen who struggled hard during the four days' tournament to reach the first position were comprised of all classes of shooters from the expert to the Indianisch.

One of the inducements to the experts to back the programme was a premium of $10 to the one who succeeded in making a full score of 54 points.

Among the prominent marksmen who were present and participated in shooting during the four days were F. C. Ross, Louis Flach, M. Dorrler, R. Busse, L. P. Hansen, Ignatz Martin, E. Fisher, Emil Berckman, L. Buss, John Rebhan, Henry Mahlenbrock and others.

The contest for the special prize for the best 15 tickets developed a nice little race between Messrs. Ross, Flach, Busse and Marten, and at the close of the shoot the four competitors stood in the order in which they are given above. On a total of over 700 points there was only a difference of 10 points between the first and the fourth.

On Wednesday, the last day, there were several occasions when some of the experts in which were included Messrs. Ross, Marten, Hansen and Busse had an opportunity for a full score in case they made a flag on the last shoot, but in each instance the fates were against the shooter; 52 out of the possible 54 was made by five different individuals, but none could approach the possible. Twelve individuals tied for the special prize of $5 for a score of 40 points, each got 35 cents.

Over 800 tickets were shot during the four days, which gave the shooting committee a small balance to turn into the general fund. After the prizes had been distributed the shooters assembled gave Chairman Gassman and his committee three hearty cheers and a tiger.

Each society belonging to the Association is credited with one or more representatives (delegates), each of whom is entitled to three shots on the king target. The delegate making the highest score is crowned king of the festival and honored with the king medal. It is a matter of much pride among the many societies to have its delegate secure the coveted prize. On this occasion the New York City Schuetzen Corps was the lucky society, and ex-Capt. Christ D. Rehm the happy individual who sported the crown and was adorned with the medal of honor. The scores and premiums will be found appended.

Champion medal—For most points, Ignatz Martin, 1,474.

Special trophy—For best 15 tickets, Fred C. Ross, French clock.

First medal for 3 best tickets, M. Dorrler; second medal, R. Busse; third medal, L. P. Hansen.

Prize target—Three shots per ticket, two best to count, 18 prizes, possible 108:

| | | | | | |
|---|---|---|---|---|---|
| F C Ross | 52 | 52—104 | J Tobler | 50 | 49— 99 |
| L Flach | 52 | 52—104 | L Buss | 49 | 49— 98 |
| I Marten | 52 | 52—104 | E Berckman | 50 | 48— 98 |
| R Busse | 52 | 51—103 | A Stoll | 50 | 48 – 98 |
| L Vogel | 52 | 51—103 | H Radloff | 49 | 48— 97 |
| M Dorrler | 51 | 51—102 | M Haberthur | 49 | 48— 97 |
| G Schlicht | 51 | 50—101 | J Christian | 49 | 47— 96 |
| E Fischer | 50 | 50—100 | M Dusauck | 49 | 47— 96 |
| L P Hansen | 50 | 51—101 | J Tholke | 49 | 47— 96 |

Ring target—Tickets 3 shots, 12 prizes, possible 54; F. C. Ross 52, M. Dorrler 52, J. Rebhan 52, E. Berckman 51, R. Busse 51, L. Flach 51, L. P. Hansen 51, J. Christian 50, M. Gehrder 50, I. Marten 50, A. Stoll 50, J. Tobler 50, L. Vogel 50.

## Golden Gate Riflemen.

SAN FRANCISCO, Aug. 15.—I send you notes from the Golden Gate. Shell Mound range was full of life last Sunday, several hundred shooters, civil and military, being present. The German Schuetzen Club held a public prize shoot, the feature of the day being A. Johnson's luck on his first honorary ticket, viz., three shots, 25, 24, 25—74. A. Strecker was second with 71. A string of 69s, 68s, etc., followed. Some good scores with the Springfield were made in the military shoot, Poulter making 49 and 48 on Blount target in two successive scores.

The Columbia Club held its medal and all-comers' contests. A good many of the pistol cracks participated in the contest for the Blanding medal. Some fine work was also done with the Springfield rifle. Little enthusiasm was expended on the target rifle. In fact it is apparently a difficult feat to do expert work with three, or even two, styles of weapons all on the same day. The honors on the pistol range fell to Mr. Pape and the president. The contest between these enthusiasts afforded some amusement to the other members. Mr. P. arrived bright and early on the range and "piled up" fine scores. The president did not arrive until after lunch. The first squad of men he met on entering the range included Mr. P., who said, "Doctor, you don't need to take your pistol from its case to-day, as I'm on top—90 in members' contest and 93 in all-comers'." "Hard to beat," was the answer. A couple of hours subsequently P. and the other members were invited by the president to partake of liquid refreshments in celebration of his beating P. on 90-93, Creedmooring the latter in each instance. Young made the brilliant score of 90 with target rifle. Scores:

Pistol, 50yds., no re-entry, club medals—Champion class: E. Hovey 86, C. M. Daiss 84, F. O. Young 83, S Carr 80, A. Johnson 78. First class—Dr. L. O. Rodgers 90, A. H. Pape 90, D. McLaughlin 81, J. E. Klein 81, F. Poulter 74, P. Bohr 62. Second class—L. Zimmerman 78, A. Fetz 76, Kennedy 75.

All-comers' pistol, re-entry: Dr. L. O. Rodgers 93, A. H. Pape 93, Daiss 91, F. O. Young 90, S. Carr 90.

Rifle, 200yds., members only, no re-entry—Champion class—A. Johnson 82, Young 80, Hovey 77, Rodgers 74, McLaughlin 73, Brown 71. First class—A. H. Pape 76, H. Hellberg 78, P. Bohr —. Second class—C. M. Daiss 75, A. Fetz 71, C. C. Ludington 63, A. H. Kennedy 55.

Rifle, all-comers', re-entry: F. O. Young 90, A. H. Pape 84, Dr. Rodgers 80, C. M. Daiss 75.

Springfield, 200yds., standard American target: A. H. Pape 81, F. Poulter 80, F. O. Young 79, C. Perry 58. ROEEL.

## New York Central Schuetzen Corps.

THE New York Central Corps, Capt. D. Meerse, held its monthly practice shoot at the Union Hill Park Aug. 14. Thirty-five members were present and participated in the shoot. The weather was fine and some good scores were made.

Henry D. Muller raised his record on the ring target to 73 out of a possible 75. Scores, ring target, 3-shot scores, two to count:

Champion Class.

| | | | | | |
|---|---|---|---|---|---|
| H D Muller | 73 | 63—136 | Capt Meerse | 56 | 52—108 |
| P F Schmidt | 67 | 64—131 | J Reitweisner | 47 | 42— 89 |
| John Schroeder | 59 | 55—114 | | | |

First Class.

| | | | | | |
|---|---|---|---|---|---|
| John Eisenhardt | 69 | 58—127 | F Richards | 53 | 53—106 |

Second Class.

| | | | | | |
|---|---|---|---|---|---|
| Jos Jordan | 64 | 59—123 | M Teschmacher | 60 | 56—116 |
| Emil Berckman | 62 | 60—122 | W Teschmacher | 56 | 47—103 |
| Koch | 61 | 61—122 | F Bauman | 53 | 39— 92 |

Third Class.

| | | | | | |
|---|---|---|---|---|---|
| M Ficken | 61 | 58—119 | J Lowe | 39 | 35— 74 |
| J Forsch | 55 | 52—107 | | | |

Fourth Class.

| | | | | | |
|---|---|---|---|---|---|
| J Jutgens | | | | 38 | 34— 72 |

Man target, 3 shots, possible 60: Schmidt 57, Eisenhardt 56, Ficken 55, Schroeder 55, Jutgens 54, Muller 52, Jordan 51, Berckman 50, Reitweisner 49, Bauman 45.

Bullseye target (flags): Reitweisner 3, Schroeder 2, Muller 2, Eisenhardt 3, Richter 1, Berckman 3, Koch 2, Jordan 1, Grammerman 1, Bauman 1, Ficken 2, Forsch 1, Jutgens 2, Tonjes 1.

Point target (most points): Champion class—Schroeder 79, Reitweisner 74, Schmidt 37. First class—Rohde 38. Second class—Jordan 49, Koch 20, Berckman 14. Third class—Lowe 36, Schneeweiss 29, Forsch 18. Fourth class—Tonjes 12, Jutgens 6.

Medal winners: Champion, Reitweisner; first class, Eisenhardt; second class, Berckman; third class, Ficken; third class, Tonjes.

## Rifle at San Antonio.

THE regular medal shoots of the San Antonio Rifle Club took place at the River avenue range on the 19th as follows: 200yds., muzzle rest, 10 shots per man:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Texas Field | 9 | 10 | 9 | 9 | 8 | 7 | 9 | 9 | 10 | 8—88 |
| A Guenther | 11 | 11 | 10 | 11 | 7 | 8 | 7 | 8 | 8 | 12—95 |
| E Dosch | 7 | 10 | 9 | 9 | 9 | 6 | 8 | 12 | 7 | 9—86 |
| Ad Altman | 11 | 11 | 9 | 10 | 9 | 8 | 9 | 9 | 9 | 9—94 |
| R Neuman | 6 | 9 | 9 | 8 | 7 | 9 | 7 | 9 | 8 | 5—77 |
| C Hummel | 9 | 8 | 8 | 10 | 10 | 7 | 9 | 7 | 12 | 8—88 |

Two hundreds yards, off hand, 10 shots per man:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Texas Field | 10 | 9 | 3 | 7 | 6 | 7 | 6 | 6 | 9 | 10—74 |
| | 10 | 9 | 9 | 8 | 6 | 7 | 7 | 6 | 7 | 4—73 |
| | 10 | 7 | 6 | 7 | 8 | 5 | 8 | 10 | 10 | 10—81 |
| A Guenther | 8 | 9 | 9 | 6 | 6 | 7 | 7 | 9 | 5 | 5—71 |
| | 5 | 9 | 8 | 5 | 5 | 8 | 4 | 7 | 8 | 6—65 |
| | 10 | 8 | 7 | 4 | 8 | 9 | 6 | 5 | 10 | 3—73 |

## Schlicht Rifle Club.

WEST NEW YORK, N. J., Aug. 21.—At the weekly gallery shoot of the Schlicht Rifle Club held at headquarters last night the following scores were made: Medal winners: Geo. Schlicht, champion medal; Jacob Diehl, first-class medal; Geo. Reichert, second class medal; Chas. Meyer, third class medal. Scores: C. Meyer 229, Geo. Lautenberger 214, Geo. Schlicht 214, Geo. Reichert 225, Aug. Meyer 223, Louis Dorr 210, Geo. Dorr 235, Capt. Deidrick 219, Jacob Diehl 233, Mike Daus 230, Wm. Schlicht 238, Fred Lambrix 225, Conrad Schlicht 220.

## Greenville Rifle Club.

FOURTEEN members of the Greenville Rifle Club attended the weekly gallery shoot at headquarters on Friday night. Scores: First class—Collins 238, Scheeline 238, Plaisted 239, C. Boag 236, Dorrler 239, Purkess 239. Second class—Agneau 232, Charlock 227, Gotthardt 208, Chase 232. Third class—E. Wuestner, Jr. 220, E. A. Graef 221, F. Wuestner 198, G. Reuker 21[illegible].

## Wants a Favorite Cleaning Recipe.

*Editor Forest and Stream:*

I have just taken up the .22 rifle (a Colt) and shoot it daily. I feel a triple satisfaction in any skill attained, because I know it means not only increased proficiency with a heavier caliber, but also when one does wing shooting with the shotgun. So far all is pleasant, but there comes a time to settle with the man who manipulates the violin, so to speak, *i. e.*, cleaning time. It is comparatively easy to clean a large caliber, but not so with its dwarf brother. It seems an endless task. Now I will be obliged if some one will suggest an abbreviated process, some "favorite way," that works quick. Another thing, I think there must be lead in the barrel. Will some one suggest a cure in the columns of FOREST AND STREAM? .45-GOVT.

## A New Take Down Repeater.

THE Marlin Fire Arms Co. have put upon the market their new "take down" repeating rifle, which embodies several original features. The device which enables it to be taken apart is simple and possesses all the strength requisite to insure firmness at the joint. An attractive feature is the fact that barrels of different calibers are now interchangeable. Sportsmen may use both the .32-40 and .38-55 barrels on the same stock, and the .38-44 and .44-40 are similarly interchangeable. Smooth-bore barrels for collectors are also furnished, and as the Marlin action permits the use of cartridges of varying length less than the maximum, it will be seen that a great variety of charges may be used.

## New York Rifle Club.

GREENVILLE, N. J., Aug. 25.—Scores of the New York Rifle Club, standard American target, 200yds. Class match:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Herrington | 10 | 8 | 9 | 8 | 8 | 11 | 12 | | 9 | 6—84 |
| Maj Shorkley | 10 | 9 | 9 | 9 | 8 | 7 | 9 | | | 7—82 |
| Young | 8 | 8 | 11 | | 8 | 6 | 8 | 9 | | 6—78 |

Rest Match.

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| F Barker | 12 | 12 | 10 | 9 | 10 | 12 | 12 | 8 | 12 | 9— |
| Young | 8 | 9 | 8 | 9 | 8 | 8 | 9 | 7 | 7 | 10 – |

## RIFLE NOTES.

THAT nitro powder is capable of imparting wonderful force to a projectile is well understood by many of our sportsmen. While attending the practice shoot of the New York Independent Corps at the New Glendale Park, Long Island, recently, an opportunity was presented to witness some shooting made with one of the German military rifles, Mauser 6 M. caliber, model 1888, using Troisdorf nitro. The arm was brought into the park by a representative of the Laflin & Rand Powder Company for the purpose of showing the members the qualities of the Troisdorf powder as well as those of the favorite arm of the Fatherland. Several of the riflemen tried the rifle at the 200yds. range, but owing to its not being properly sighted, or other causes not apparent at the time, no one made much of a success in hitting the bullseye. Finally some one proposed testing the rifle at a target for penetration. So, in company with the representative of the powder company, a party of shooters resorted to the park grounds looking for a suitable target. The park contains many oak and chestnut trees of generous dimensions. After a few preliminary shots at 8 and 12in. trees without stopping the bullets, a large chestnut whose center looked sound and healthy, and whose diameter was 30in. or more in measurement, was selected for a final test. A shot was fired at this tree. It passed through the tree and out on the opposite side, going through 28 to 30in. of what appeared to be solid wood. There is no doubt of the penetration and long-range qualities of the arm and cartridge, but the accuracy of the combination is an unknown quantity. If the military rifle of the future is no more accurate the soldier will bury his dread of its destructive qualities in his contempt for its accuracy.

Nitros in the rifle is a question of much interest to riflemen at this time. The query is put to us almost daily which is the best? and how do you use it? We would be most happy to impart this information to inquiring riflemen provided we carried any in stock, but the truth of the matter is, that our measure of confidence has received such rough usage of late that we are unable to keep the accumulation long enough to make a division with our brother riflemen.

Ferdinand Fabarius used nitro (Troisdorf) in his 32-20 Ballard at the Zettler shoot last week, using 10grs. weight. He says he got his shots about where he expected.

Ross tried the same rifle and ammunition for a 10-shot string, he kept the 10 shots in the black, making a total of 205. B. Zettler tried Dr. Chadbourn's rifle upon the machine rest last week. Our readers will recall a score published some weeks since made by Mr. Zettler, using this same rifle (Stevens 25-10). Zettler's score was so fine that both the doctor and himself became impressed with the desire to try the arm from the machine rest. A series of 50 shots was tried with both Winchester and U. M. C. ammunition, the best group was a little over 8in. in diameter, the widest 11in. The result of this test calls to mind one of Zettler's stock expression, which is that: "A rifle that varies is good for a poor shooter."

During the past week we have given considerable time to the practical trial of nitro in the rifle. The powder used was Troisdorf, and the rifles Ballard .38-55 and Winchester .32-20. Our mode of procedure was to first place the rifle upon the machine rest and target it with the factory ammunition adapted to the arm. Then with the nitro we proceeded to try various loads of the latter, to find if possible the proper quantity that would give the most uniform result in point of accuracy or grouping of the shots. An impression derived from a limited personal experience, and information gained from the experience of others engaged in experimenting with nitro in the rifle, lead us to believe that the best results would be arrived at by using a charge that would give a velocity as little above that of the regular black powder charge as possible. The instructions given by the manufacturers for loading the Troisdorf nitro called for 10grs. (weight) in the .32cal. and 12½grs. in the .38cal., with the additional advice that the unfilled space in the shell should be filled up with felt wads. These loads shot from the rifles, targeted previously with black powder, did not give velocity sufficient to reach the target (200yds.) We then began to increase the charge, using .38-55cal. rifle and 300grs. lead bullet, until we attained the elevation of the black powder charge. This elevation was found when the charge reached 35grs. measure or 27grs. weight. The grouping of the shots was so erratic (scattering) that we then felt compelled to seek for some means to overcome the trouble. Thinking that the heavy wadding might be the "Jonah," we commenced to discard the wads; we followed this line of procedure until the bullet rested upon the powder, with the point barely flush with the mouth of the shell. This mode of loading gave the best results attained during the trial when using lead bullets, and gave us patterns approximating the black powder loads. There was one feature in the action of the powder, which appeared to us unfavorable, and that was that there was a large residuum of unburned powder left in the barrel after each discharge. Subsequent experiments developed the fact that with a minimum charge of 5grs. there was the residuum of unburned powder still to be found in the barrel. Gathering together a quantity of this unburned powder, we found that the graphite finish was gone, leaving it in its original or unfinished state, with much more apparent energy than in its finished state. The query occurred to us, "Has not the manufacturer in trying to make the powder safe, overstepped the mark and made it too safe? Further experiments, using the Winchester copper-covered bullet, 255grs., with 17grs. of powder, developed the same apparent velocity as with the previous charge of 27grs. and the 300grs. lead bullet, and gave a better grouping of the bullets on the target than the black powder load. Experiments with the .32-20 Winchester rifle leads to the belief that the best results will be reached with the smaller caliber caliber. But there is yet a long journey through the field of experiments before our manufacturers will attain the desired end.

The Our Own Rifle Club of Hoboken will move its headquarters to No. 80 Hudson street on Sept. 4. This used to be the headquarters of the Miller Rifle Club. Capt. Haucken and his board of officers are making a strong effort to make the Our Own Club one of the strongest in North Hudson.

The members and friends of the Greenville Rifle Club, numbering nearly two hundred, went down to the Banks on the steamer John Lennox on Aug. 19 for a day's fishing. The excursionists were favored with good weather and succeeded in having a first class time. A large number of fish were secured in which blackfish, sea bass, sea robins and the katzenjammer figured prominently. The latter is best known among German fishermen and is said not to be a desirable catch, although often met with on the Banks.

Dr. E. R. Chadbourne and Maj. Geo. Shalkley started out on Monday for a few weeks' vacation up in Maine. Both gentlemen went prepared for woodchuck and squirrel.

The fall meeting of the New Jersey State Rifle Association opens at Sea Girt next Monday and will be continued during the week. To those who delight in hearing the crack of the rifle a day spent at New Jersey's popular campus will not be lost. The skirmish firing drill as conducted under the new tactics will be one of the interesting features of the meeting.

The Union Hill Schuetzen Park, Union Hill, N. J., was sold under foreclosure proceedings some days since. It is reported that the Plattdeutsche Verein expect to secure the park, in which case it will be refitted for picnics and shooting purposes as well as a home for indigent Germans.

## Newark Shooting Society, 1846—1894.

THE Newark Shooting Society, which is claimed by its members to be the oldest, or at least one of the oldest, shooting societies in the country, has been for a number of years in a condition bordering on dissolution. Some months since, however, a few of the members who yet retain their love for the rifle and the associations connected with the society, determined to reorganize and if possible inject a little new life into the old society. A meeting was decided upon and notices sent out to all the old members. A meeting was held, and it was the means of bringing together a number of old riflemen, who, although they reside in the same city, had not met in years. The result was that the society was reorganized and given a new lease of life. It was also decided to hold a festival on Aug. 21 and have a shoot open to the members. In lieu of the dearth of cash in the society's treasury, it was decided to collect together all of the club trophies won by the society in years past and put them up as prizes to be competed for. The committee appointed for the purpose of hunting up the many trophies known to be in the hands of the members, succeeded in collecting together an interesting lot of silverware. One of the goblets in the collection had been in the possession of the society since 1849. It came originally from Switzerland, being a prize won by one of the members of the society in Switzerland some years previous. Another interesting trophy was the Centennial cup, won by the Newark Society team in Philadelphia in 1876. A silver pitcher and tray was another prize worth winning. Then there was a large cup which would make the heart of any militiaman happy to possess. The above trophies were followed by many others of lesser value.

When the shoot was opened on Aug. 21 all the ancient ware was displayed in a prominent place in the shooting house. It was expected that the value of these trophies as well as their early associations would be the means of bringing out a large number of the old members and friends of the society to compete for their possession. The result, however, was rather disappointing to the management, as only about twenty members put in an appearance, and all of these did no go into the competition.

In order to give all of the members as near an equal chance in the shooting as possible the bullseye target with a 4in. center was brought into use, and the member who made the best center shot got first choice of the prizes, and the next best the second, etc. After the close of the shooting the centers were measured and the lucky competitors were found to stand as follows: G. Weigman 145 degrees, Wm. Hayes 203½, F. C. Watts 247, J. T. B Collins 289, F. Laute 364, A. Fisch 386½, A. Wiss 394, A. Begerow 438½, A. Seitz 524.

Honor target.—In connection with the competition for the trophies was the honor or king target, in which each member was allowed three shots on the ring target for the king's medal. A. Seitz with a score of 69 got the king's medal and the honors for 1894.

Point (flag) target, 12in. bull (blue), 6in. inner (white), and 3in. center (red).—All money shot in on this target was divided into three equal parts and paid out to each competitor according to the flag tickets held by each. The reds paid 43 cents each, the whites 8 cents, and the blues 11 cents.

| | Red. | White. | Blue. | | Red. | White. | Blue. |
|---|---|---|---|---|---|---|---|
| Laute | 1 | 1 | 6 | Wiss | 6 | 5 | |
| E Burns | 1 | 4 | 0 | Fisch | 1 | 9 | 9 |
| Collins | 2 | 7 | 5 | Hansen | 11 | 43 | 15 |
| Hayes | 2 | 5 | 3 | Watts | 2 | 6 | 5 |
| Weigman | 1 | 7 | 9 | Begerow | 1 | 12 | 5 |
| Seitz | | 4 | 4 | Felsburg | | 5 | 5 |

Honor target, 3 shots, possible 75: Begerow 67, Laute 60, Seitz 69, Egner 42, Garick 45, Wiss 43, Watts 61, Burns 47, Collins 61, Felsburg 62, Krueger 53, Weigman 59, Hayes 64, Fisch 44, Rommal 20.

## Revolver Shooting in England.

THE wind blew so hard on Aug. 14, the shooting day of the South London Rifle Club, that the members did not shoot at 50yds., only 20yds. in the revolver competitions. Below are the results, which are exceptionally good considering that it blew harder than members ever remember to have shot in: Walter Winans 38, Rand 37, Capt. Heath 36, Clementi-Smith 35, Howe 33.

Below are the details of the leading scores for the revolver championship of the North London Rifle Club to date:

| | 20yds. | 50yds. | Total. |
|---|---|---|---|
| Walter Winans | 41 41 40 40 40 39 | 30 29 | 300 |
| Rand | 40 40 39 39 38 38 | 28 27 | 293 |
| C F Lowe | 40 39 39 39 38 38 | 27 27 | 289 |
| Skilton | 40 39 39 39 38 38 | 27 27 | 287 |
| Capt. Cowan | 38 38 38 38 37 36 | 27 26 | 278 |
| Maj. Munday | 39 37 38 36 36 37 | 28 27 | 277 |
| Capt. Richardson | 38 36 35 34 34 34 | 27 25 | 263 |
| Carter | 36 36 36 36 35 34 | 24 23 | 260 |
| Ashby | 36 35 34 33 32 32 | 28 25 | 255 |
| Clementi-Smith | 35 34 34 34 31 30 | 29 28 | 255 |

# Trap-Shooting.

**All ties divided unless otherwise reported.**

**If you want your shoot to be announced here send in notice like the following:**

### FIXTURES.

May.—Knoxville (Tenn.) Gun Club's fourteenth annual tournament; $1,500 added to the purses.

## DRIVERS AND TWISTERS.

*Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.*

The following scores were made in a recent team match at 25 targets per man shot at Grand Rapids, Mich.: Captain, Thomas Friant 16, C. B. Kelsey 20, M. J. Walton 21, George H. Davidson 20, H. G. Gilmore 16, H. K Summers 17, J. H. P. Hughart 9, T. Stewart White 10, George Barrs 18, C. S. Elkerton 9, Fred Avery 15—170. Captain, E. Crofton Fox 14, Harry Whiddicomb 14, Ralph H. Widdicomb 17, George A. Gould 12, C. F. Rood 12, W. S. Coleman 15, William Woodworth 14, George W. Nelson 15, W. B. Freleigh 11, Mark Norris 13, E. E. Dryden 7—144.

The trap-shooting contests will be an important feature of the Iowa State Fair, to be held at Des Moines on Sept. 4, 5 and 6, the management having added $100 to the purses. The programme comprises five events each day at 10, 15 and 20 singles and 6 pairs. On the second day there will be a contest for teams of two men each from any county or any gun club in the State, at 50 singles per man, $5 entry with $50 added by the Fair Association.

PHILADELPHIA, Aug. 22.—The Riverton challenge plate for live-pigeon shooting was won again to-day by Robert A. Welch, his opponent this time being Leonard Finletter. Welch won by one bird, the score being 91 to 90. The match was shot on the Riverton (N. J.) Gun Club grounds, and proved to be most exciting. Welch won, but it was not until within plain sight of the last that he captured the lead, after having trailed along behind for nearly nine-tenths of the time. Finletter shot well from the start, and when Welch encountered ugly birds and made two misses in the first three shots, he took the lead. He killed 46 straight, but after that his work was much more uncertain, and as Welch settled down and did grand work toward the end, he gradually overhauled his youthful antagonist. It was a great contest of skill, and the experience of Welch turned the tide in his favor. At the 83d bird he tied the score, and this seemed to dishearten Finletter, who missed at 85 and 89, giving Welch a lead of two at 90. The latter lost a couple in the last ten, but Finletter let an easy one get away and was hopelessly lost. This was the eighth contest for the plate, and Welch now has five victories to his credit. It was the sixth time also that the prize was won by a single bird. After the match G. C. Thomas and T. S. Dando shot a match for the Riverton members' championship plate. It was a handicap, Thomas being allowed to stand at 26yds., while Dando stood at 30, and the former was also allowed to shoot at 54 birds, against 50 for Dando. They tied at 47 each, and in the shoot off Dando won by killing 9 birds to Thomas's 8.

The Emerald Gun Club had a good day's sport at Dexter Park, on Aug. 24, there being 24 members present. In the club shoot at 10 live birds, club handicap rises, the scores were: G. Nowak 5, P. Butz 8, J. Woelfel 7, T. P. McKenna 9, E. Doeinck 8, Dr. G. V. Hudson 8, J. H. Moore 9, Thomas Short 7, C Stuetzle 3, J. H. Voss 8, S. P. Leveridge 9, R. Regan 9, F. W. Place 7. N. Maesel 7, P. Fogerty 8, H. Thau 6, P. J. Fitzgerald 9, C. W. Floyd 8, M. Herrington 8, F. Walters 10, C. Fred Hamilton 3, O. Bowen 7, M. Quinn 5, T. Codey 6. Afterward there was a 6-bird sweepstake event in which 12 shooters took part, and M. Herrington, C. W. Floyd and Dr. G. V. Hudson divided first money, tieing with 6 straight each. The score: M. Herrington 6, C. W. Floyd 6, T. P. McKenna 5, G. Nowak 4, F. Walters 5, Doeinck 5, Col. Vose 5, R. Regan 5, J. H. Moore 3, J. Cohen 4, B. Loeble 4, Dr. G. V. Hudson 6.

The 15-bird match for $50 a side, shot between Morfey and Dunkerly at Paterson, on Aug. 22, proved to be a one-sided affair. The birds were a fine lot of flyers and as usual Morfey out-birded his opponent. Robert Boyle handled for Morfey and Tom Rodgers did likewise for Dunkerly. The match was ended on the 13th round when Dunkerly was shot out as the scores show:

| | ←↗←↖↑↖↗↙←↗↖←← |
|---|---|
| Morfey | 0 1 1 1 0 0 1 1 1 1 1 1 1—10 |
| | ↗↑←↗↖↖↑↗↖←↑←← |
| Dunkerly | 1 0 0 1 0 1 0 0 0 1 1 0 1— 6 |

PEEKSKILL, N. Y., Aug. 21.—The Marlborough Gun Club and the Peekskill Gun Club had a match shoot on the grounds of the Peekskill Club, Union avenue, this city, yesterday afternoon. The following were the total scores: Marlborough—Vail 24, Millard 21, Covert 20, Frost 20, Baxter 16, Bingham 16, Fuller 20, Rhoades 21; total 158. Peekskill—Thomas 25, Everinghim 25, Horton 25, Wygant 23, Southard 25, Perry 23, Halstead 24, Mason 24; total 192.

Frank Class, the major domo of shooting affairs in and about Morristown, N. J., announces an all day shoot at live pigeons, to be held on the Morsistown Driving Park on Labor Day, beginning at 9:30 A.M. The events will be 7 birds, $5 entry, handicap; 5 birds, $3 entry, handicap; 10 birds, $8 entry, handicap, and 13 birds, $10 entry, with handicaps from 25 to 32yds. A gold watch will be awarded to the shooter making the best average in all events.

The Walsrode Gun Club of Newark held a shoot on Aug. 23, the first event being a contest at 25 targets per man between teams of three men each. The result was: Perment 22, Reibold 12, Young 18; total, 52. Leithauesser 16, Dr. Roth 18, Winters 16; total, 51. Sweeps at 10 targets: Roth 9, Perment 8, Winters 8.

The new club house of the Chillicothe (Ohio) Gun Club will be 15×15ft., divided into two rooms, one for a reception room and the other to be used for offices and storeroom. There will be an 8ft. wide verandah extending across the front of the building.

Eugene Pierre, of Boonton, N. J., and T. W. Morfey, of Paterson, will face the trap at Sam Rodgers' shooting grounds on Sept. 11 in a gun-below-the-elbow match at 15 live birds, for $50 a side, 30yds. rise, 80yds. boundary.

In the final contest for the *Sports and Amusements* badge of the Minneapolis Gun Club J. Joyslin was the victor with 87 breaks out of a possible 100. Mrs. Shattuck, the crack lady shot of the State, scored 76.

The final match of the series between the West End, Forester and Highland gun clubs, which took place at Davenport, was won by the Forester team, this giving them the series.

J. A. R. Elliott has challenged Dr. Carver to another series of three 100-bird matches for $100 a side and $100 on the odd match, the series to be completed before Oct. 1.

Don't forget the Endeavor Gun Club tournament to be held on Al. Heritage's Marion grounds on Labor Day. Plenty of good lunch will be on hand.

There will be a rush to New London next week and some hard shooting for the handsome and valuable prizes and trophies.

Targets only will be used at the tournament of the West Jersey Gun Club at Camden, N. J. on Sept. 12 and 13.

There will be a live bird shoot at Scanlon's Hotel, Dunsbach's Ferry, near Troy, on Labor Day.

The Highland Gun Club, of Des Moines, Ia., will hold a tournament on Oct. 16, 17 and 18.

The Paterson Gun Club will hold its monthly shoot at live birds next Tuesday.

The Rahway (N. J.) Gun Club will have an open shoot on Labor Day.

There will be an all day's shoot at Elizabeth on Labor Day.

C. H. TOWNSEND.

### Lynchburg Gun Club.

| R Regan (25) | 1120121221— 9 | T Codey (28) | 12012•2020— 6 |

Twenty-four members faced the traps. The birds were a fair lot for this time of the year and the shooting up to the average.

G. V. HUDSON, M. D., Rec. Sec'y.

### "Trap-Shooter's Ready Reckoner."

THERE has just come from the FOREST AND STREAM press an extremely useful pocket reference book for trap-shooters. Its full title reads: "Trap-Shooter's Ready Reckoner. A series of tables showing at a glance the division of purses under all conditions, simple and complex, with entries from one to fifty. For use by individuals, clubs, and tournaments. Compiled by J. C. Clark, Secretary Kansas State Sportsmen's Association." Price 25 cents, postpaid, by Forest and Stream Pub. Co.

### "Dayton 295, Freehold 274"

WAS the way it read this afternoon, Aug. 25, when the team match between those pugnacious club's was over. Earlier in the week, with Van Dyke in Memphis, and other members out of call, it looked as if Freehold had worked a "snap convention" on poor Dayton, and there was wailing and gnashing of teeth on the old Monmouth battle-ground. But when eight o'clock this morning brought Van Dyke fresh from his Western victories, and the much-sought Phillips showed up with the Princeton delegation, sorrow gave place to rejoicing, and it was conceded that Freehold had no snap, even if they had borrowed Hesse and Throckmorton, of Red Bank, for the occasion. Terms of match were: Teams of 12 men each, 30 targets per man, 15 known, 15 expert, rapid-fire.

The first Dayton squad said: "We are hayseeds, and you don't know us. But watch our smoke." Then they cut loose and broke 54 out of 60, in the first round. Wonder how Fred. Van Dyke, "cock of the walk" at Baltimore and Memphis, felt to be beaten by "farmers" on his own straw pile.

WADS.

### Trap at San Antonio.

THE regular trophy shoot of the San Antonio Gun Club was held on the 19th at the Lakeview grounds, with the following result:

No. 1, trophy shoot, 10 singles and 5 pairs:

| | | | | | |
|---|---|---|---|---|---|
| Samuels | 22 | Black | 23 | Paris | 22 |
| McVickar | 16 | Eppstein | 22 | Grossman | 17 |
| France | 19 | Thiele | 20 | McCormack | 21 |
| Cann | 8 | Rothwell | 27 | Phillips | 18 |
| Shields | 17 | Barr | 17 | Weyel | 16 |
| Vollbrecht | 17 | | | | |

Mr. J. N. Rothwell thus placed another winning to his credit for the trophy of '94, which makes him one ahead of all competitors. Thiele is a close second, with Samuels in third place.

No. 2, 15 singles: Samuels 14, Rothwell 11, Grossman 11, Epstein 6, France 12, Thiele 6, Cann 5, Volbrecht 9, McCormack 9, Black 11.

No. 3. This was a shoot for a handsome silver cup generously donated for that purpose by Mr. McVickar. The second class men were given three dead birds in 30 singles:

First Class.

| | | | | | |
|---|---|---|---|---|---|
| McVickar | 19 | Black | 24 | Samuels | 24 |
| Thiele | 27 | McCormack | 26 | France | 23 |
| Paris | 23 | Rothwell | 26 | | |

Second Class.

| | | | | | |
|---|---|---|---|---|---|
| Barr | 23 | Phillips | 26 | Grossman | 25 |
| Epstein | 27 | Cann | 16 | Shields | 21 |

In the tie shoot Epstein won the shoot.

O. C. G.

### Peekskill vs. Marlborough.

PEEKSKILL, N. Y., Aug. 20.—Team race, 8 men to a team, 25 targets, rapid-firing system:

Marlborough Team.

| | |

A rainy day. The Marlborough Club used a variety of loads and ammunition. Our club used one uniform load of Walsrode.

B. C. EVERINGHIM, Sec'y P. G. C.

### The Millerton Gun Club.

MILLERTON, N. Y., Aug 21.—Three members of our club went out to-day for a little practice at the traps. A strong and fitful wind was blowing from the northwest, causing the birds to fly in a very erratic manner that is sometimes puzzling even to a veteran.

Cline shot at only 10 birds, scoring 8, A. Binton shot at 48, breaking 24 of them. As he had never faced the traps but once before, we think he made a very fine showing under the circumstances. Joe Brinton shot at 105, scoring 96, making his percentage 91 43-100. The last string of ten was shot after sunset, and shadows were so heavy that it was very hard to see the birds, thrown as they were against a dark green background. This is Jones's first season at trap-shooting, and we doubt if any amateur in the country could beat his score of to-day under like conditions. The scores in detail follow:

| | |
|---|---|
| Cline | 1101111101—8 |
| A Brinton | 1101110010101000100100000110110110001011011111001—24 |

### Putney New England Tournament.

PUTNEY, Vt., Aug. 22.—The New England Shooting Association tournament, held under the auspices of the Putney Rod and Gun Club, at Putney, Vt., Sept. 3 and 4, promises to be a decided success, and every effort will be made to present an attractive programme. The principal events the first day will be the individual and team championship matches, open to residents of New England only, the sweepstake events open to all. The second day's principal event will be a merchandise match, at 25 targets, with seven or eight prizes. All shooters coming from southern New England should come via Springfield and Greenfield, Mass., north on B. & M. Railroad, and from the north via Rutland and White River Junction through Bellows Falls, Vt. Every one interested in trap-shooting is invited to come and participate in the various events, and we insure them an equal chance with no favors shown.

Any further information in regard to this tournament will be cheerfully furnished by writing to W. E. Ayer, Putney, Vt.

### Vernon Gun Club.

### A New Jersey Boy Wants to Shoot.

I AM a boy and never shot at a target up to June of this year, but I would like to challenge any boy in New Jersey under sixteen years of age to a match at 25, 50 or 100, or more, bluerock targets, known or unknown angles, or both, the loser to pay for birds. I also challenge any boy of above age to a competitive exhibition of fancy rifle shooting for the junior championship of New Jersey. If you want any reference please write to the secretary of the Princeton Gun Club, of which I am a member.

GEORGE A. RULE.

## WOPSONONOCK.

THE success, or otherwise, of a trap-shoting tournament depends actually on the weather. Let the management plan everything carefully beforehand, and leave no stone unturned to have all things in working order prior to the hour set for the first "pull," if the clerk of the weather is ungenerous, bilious or dyspeptic, and twists the wrong spigot, that particular tournament is bound to be a failure.

There was good reason, therefore, for Manager Shaner to hang his head and mope around the veranda of the Hotel Wopsononock on the morning of Aug. 20. Sunday, Aug. 19, had opened bright and fine, only to close with a heavy thunderstorm, following which a cloud so thick that to see more than 50yds. was an impossibility, settled down on the top of "Wopsy" and stayed there until about 9 A. M. on Monday morning. Shaner, of course, was up at cock-crow. Everything was dripping wet, and the cloud of the previous night was still there. The prospect was discouraging, and Elmer Shaner refused to be comforted. When Ira Williams, the farmer who runs the home farm at Wopsononock, in reply to a question as to how long it might last, answered that it might keep on in that way for a week, Shaner's cranial covering prepared to turn gray. It didn't "last a week," however. Nine o'clock saw the sun out and shining, and weather prophets promised a fine week. These latter were correct.

Had the Altoona Gun Club ordered their weather, they couldn't have asked for anything better than that which lasted during the whole of the four days of the fourth annual tournament of the Pennsylvania State Sportsmen's Association, held at Wopsononock on Aug. 21-24 last.

Monday afternoon, according to promise, practice shooting was indulged in. A 100-target race, 50 known and 50 unknown angles, was the programme. Two full squads took part in the race, some good scores, so far as I can remember, being made. What became of those score sheets I don't know and I can't find anybody else who does. After the decision of the above race a move was made to the shooting park of the Altoona Gun Club, where a "walking match," doubles and other events were shot off. All this was only preparatory to the work of the

*First Day.*

Before going into details as to the shooting on this day, something should be said about the location of the two sets of traps at which all the events on the programme were shot off.

At the Interstate Manufacturers' and Dealers' Association's Pennsylvania tournament, held at the Altoona Gun Club's grounds on June 21 and 22, 1893, a suggestion was made that the proper place for a large shoot would be Lookout Point, the highest point in the Alleghenies and about 1,200yds. distant from Hotel Wopsononock, on the line of the Altoona, Clearfield and Northern R. R. The gun club's grounds proper are about one minute's walk from the hotel, but well appointed as they certainly are they are not suited for a tournament demanding two sets of traps.

From the Lookout on a clear day the view is something that must be seen to be appreciated. A pavilion 40ft. high has been erected at that point, and from it can be seen peaks of mountains whose bases rest in seven counties of the State, one peak almost due south being in Maryland. It was at the Lookout where Wopsononock Mountain descends abruptly into the valley of the "Blue Juniata," that the two sets of traps were located, one on each side of the above mentioned pavilion, right on the edge of the steep declivity. Standing at the 16yds. mark Bald Eagle and Brush mountains, six miles away in an air-line, showed but slightly over the top of the screens, behind which traps and trapper-boys were placed. When a haze filled the valley and shut out those mountains, the background was as perfect as possible. On Monday afternoon a thunderstorm passed down the valley while the sun was shining brilliantly behind the shooters' backs. The result was astonishing. The yellow rings on the Keystones, illuminated by the sunshine, made the task of following the flight of the asphalts dead easy. Those who were shooting then will not soon forget it.

Back of the score were arranged the tents of the Interstate Manufacturers' and Dealers' Association, loaned, together with all the other paraphernalia of the Association, to the Altoona Gun Club for use on this occasion. Behind the No. 1 set of traps, to the left of the pavilion, were the tents of FOREST AND STREAM, E. C. Powder Co. and the U. M. C. tent. Between the two last named was the cashier's house, originally the old building which stood where the pavilion now stands. On the other side were the No. 2 set of traps and the tents of the Standard Keystone Co., S. S. Co., V. L. & D. and Tatham's. All known trap and angle events were shot off at No. 2 set of traps, the new traps manufactured by the Standard Keystone Co. being used at this set. Unknown angles were shot at No. 1, where Manager Shaner had fixed his Association's bluerock traps, Ben O. Bush's pull being utilized for the purpose of springing the traps. Keystone targets were thrown from both sets of traps and did their work well. The placing of the traps and the arranging of the tents, blackboards, etc., was the work of Manager Shaner and his two assistants, "Blinks" and "Jim" Dively. Chris. F. Stoltenberg refereed all the events at No. 2 set of of traps, and did his work acceptably.

The hour set for the opening of the tournament was 9 A.M. It was just 9:10 when "Fuller" called "Pull" and broke the first target thrown in the State shoot of 1894. Event No. 1 had 34 entries, the highest number in any one event of the day, the average being 31. As a proof of how smoothly everything went and how well the traps were working, it is worthy of note that all shooting was over before 5:30 in the evening. By that time everybody was shot to a stand still, several of those present having fired at 290 targets! And that, too, after an enforced delay at lunch time, caused by some misunderstanding on the part of the hotel management. Notwithstanding that delay, and the early hour at which the day's shoot was brought to a close, no less than 8,290 targets were thrown from the two sets of traps.

All events were open on the first day with the exception of the contest for the William Wolstencroft & Sons' trophy, representing the individual championship of the State at targets. Fifty targets per man is the condition of this badge, which was won last year by W. R. Fieles of Christiana. "Billy" Wolstencroft, who seems to have recovered his old time form, won it this year with a total of 48 breaks. "Sullivan" and Shaaber both hustled him pretty hard, making scores of 47, the former dropping his last target.

The rules of the association demand that when a man wins either first or second money in any event, he must shoot at known traps but unknown angles in the next event he takes part. This graduating handicap necessitates a uniformity in the number of targets and entrance money in each event, so as to do away as far as possible with the evil of dropping for place. The system, however, has serious drawbacks and will probably be altered before the State shoot at Philadelphia in 1895. Every open event was at 20 singles, entrance $2.50. Scores:

*Second Day,*

Wednesday, Aug. 22, was just as fine a day as its predecessor. At the Lookout, however, there was a marked difference in the appearance of the Juniata Valley. Instead of being clear, as it was the day before, the valley was shrouded in a haze as thick as is the case when forest fires are raging on the mountains which hem it in. On Tuesday, Tyrone, 16 miles from Altoona, was plainly visible, nestling at the pass in Bald Eagle Mountain through which the Pennsylvania Railroad works its way eastward. On Wednesday it was impossible to see even Altoona with any degree of clearness. The haze was not without its compensations; the background was perfect, and during the afternoon the result was made manifest by the splendid work done by the men from Philadelphia

The programme contained seven open events of the same nature as those in the programme, *i. e.*, 20 targets, $2.50 entrance. It was on this day that "Billy" Wolstencroft gave himself the lie direct. The night before, at the annual meeting, he described himself as a "has been." On Wednesday he proved to himself that he was as good as, if not better, than ever. Out of the 140 targets thrown in the regular programme events he broke 134, dropping his first, 9th, 26th, 55th, 134th and 136th targets, making the great average of 95⅝ per cent. Of his 140 targets the last 120 were at unknown angles, of which he broke 96⅔ per cent. Good work for a "has been!"

The State events were the contests for the Reading Shooting Association's trophy for the five-men team championship; the Harrisburg Shooting Association's trophy for the six-men team championship, and the American Wood Powder Co.'s trophy for the three-men team championship. The first two were won last year by the Harrisburg Club, the six-men team trophy without a contest. This year they both went to Philadelphia, the Independent Gun Club of that city winning from three antagonists—Braddock Gun Club, Harrisburg Shooting Association and the Altoona Gun Club.

In the five-men team race the Philadelphia Club established what is believed to be a record for a similar race. The race was at 25 targets per man, 125 per team; of that number the winners dropped but four, making the wonderful total of 121. The Braddock men beat the Harrisburgers out by one target. The trophy remains this year in the care of the Association, owing to a mistake of the referee, who called Smeck's last target in his five pairs "broken," whereas it was, even according to his companions, a "lost bird." The "break" would have given Philadelphia the trophy by one target, but it being agreed upon between the teams to score the last target as lost, the score is a tie with 94 each. Armstrong, of Braddock, having to leave, it was impossible to shoot off the tie; both teams therefore agreed to divide first and second money, the trophy to remain in the hands of the Associatioa until next year's tournament.

The rapidity with which the day's events were shot off may be gauged by the fact that the seven open events were all disposed of by 1 P. M., 4,500 targets having been thrown by that hour. The highest number of entries in any event was 35, the average being 32. Altogether 7,060 targets were thrown on this day, the interval for dinner being longer than usual. Scores:
